ADDRESS.

A Book to an Editor stands in much the same relationship as a Pupil does to a Tutor. The same anxiety has been felt by both—the same care expended, to send their *protege* into the world, with the requisite qualities to win the good esteem of it.

For ourselves we launched our little bark, on the stream of public favour, with a fluttering at heart. Ours was the first work, of the size and price, entirely devoted to Maritime Affairs. We knew our subject was one that would secure the attention and approbation of the Philanthropic and Benevolent. The sale we have enjoyed, and the many flattering encomiums we have received from various quarters, during the progress of the Work, has afforded us the most satisfactory proof we could desire, and fully convince us that there are thousands who sympathise with the brave, and too often suffering, Sailor, admire his warm, gallant heart, and have appreciated our humble labours in his behalf.

The landsman, after spending a life of ease and indolence, dies—is buried with all the grandeur riches can purchase: a mausoleum is erected over his resting place; the pompous verse telling the admiring crowd of his great benevolence and transcendent virtues. Now "Poor Jack," whose whole life has been marked with strange vicissitudes, chequered with innumerable privations and perils, perishes at last in defence of his country; or, more fearful still, by Shipwreck or Famine. No memory of him cherished, who deserves to be extolled the most. We have used our endeavours to remedy this defect, by gathering together the lives (an instructing memoranda) of those brave men, to whom England is indebted for all its wealth and glory. And, surely, the tale of those who lay slumbering in the depth of the sea, will awaken thoughts of the uncertainty of human life; and admiration be aroused for those men, who, with a courage as noble as it is dauntless, risk, and oftentimes lose their lives, in the cause of humanity.

We have a Sailor's antipathy to the word "Farewell." It seems to express the utter abandonment of all that the heart holds dear. We have gone on so long basking in the sunshine of your smile, Dear Reader, that we cannot—will not, relinquish it. We have said much—have left much unsaid. To obviate this, we have determined on publishing a Companion Work to this; and if the old saying "practice makes perfect" be correct, the only difference in the two will be the SUPERIORITY OF THE SECOND over the first—and will be entitled "TALES OF HEROISM, AND REGISTER OF STRANGE AND WONDERFUL ADVENTURES." A Title, which, whilst it will allow us to give an interesting narrative of the ocean, will also afford us the opportunity of culling from the world those seeds of heroism and intrepidity which have been the glory of it, and which every lover of bravery, courage, and devotion (and who is not?) must admire.

To our Contributors, to whom we are indebted for many talented articles and valuable suggestions, we beg to return our most grateful thanks: and whom we hope to meet, with all our Readers' Friends, in the silent intercourse of thought, in our new work, as we have in this.

TALES OF SHIPWRECKS

AND ADVENTURES AT SEA.

GOING DOWN OF THE BRIGAND STEAMER, OFF THE SCILLY ISLANDS.

LOSS OF THE IRON STEAMER BRIGAND.

THE above sketch is an accurate representation of the loss of the Brigand steamer, on the 12th of October, 1842, off the Scilly Islands. We cannot better convey an idea of this lamentable catastrophe than by giving the following narrative, written by an eye witness of the distressing event:—

"We left Liverpool at two p.m., on Monday last, and proceeded on our voyage, without any thing particular happening until a quarter before five, a.m., on Wednesday, going from 11 to 12 knots an hour, with a strong current, light wind from the north-east, the morning being hazy, when she suddenly ran foul of the breakers, and struck twice; the first time right abreast of the foremast in the bluff of the bow, and the next

blow was of such great force that it carried off her paddle-wheel, and drove it right into the engine-room. We saw the St. Agnes light, but in consequence of the haziness of the weather we considered it was at least 15 miles off. Soon afterwards we saw the breakers, but too late to avoid them. We put the helm hard a port, however, to endeavour to do so, and immediately received the shocks on our broadside. Where she struck was in lat. 49. 56. N., long. 6. 16. W., on the Crim Rock, near the Bishop's Rock, about three miles and a half from the spot where the Thames was lost, and 67 hands, in January, 1841. Both compartments of the vessel were stove in, and she began to fill rapidly. The captain and crew immediately exerted themselves to the utmost to save the vessel. The carpenter placed a board against the side, and placed stays against

the cylinder, and stopped up the crevices with "waste" and grease; but these efforts were ineffectual, as were likewise the endeavours to lighten her by throwing the fuel overboard, which we continued to do till the hold filled with water. The engines had become completely useless, and the fires were out, but the crew continued to exert themselves for nearly two hours, when the captain ordered all hands on the quarter-deck, and ordered out the jolly-boats. At this time she had drifted about seven miles from the breaker, and after waiting a quarter of an hour we got into them, the captain and mate still remaining on the quarter-deck; the boats stood by the vessel another quarter of an hour, and then, as she was sinking fast, the captain and mate got into one of them and we shoved off. In about half an hour after we saw her go down by the head, in

about 45 fathoms of water. We rowed for the Rock, and got on it, to see how the land lay; the other boat came after us, and we joined in a small bay leading to St. Agnes light, where two boats from the shore came out to us, having seen our lights, and took us in tow for the harbour, St. Mary's, which we reached about three o'clock. The same night we went in the Antelope pilot-boat to Penzance, and from thence to St. Ives, where we got a passage to Bristol in the *Herald*."

The *Brigand* had only been built about two years, by Messrs. Grantham, Page, and Co., of Liverpool, for Mr. Redmond, of Wexford, at a cost of £32,000, and intended to trade from Liverpool to Bristol, calling at Wexford, which she continued to do till a short time since, when she was superseded by the *Troubadour*, another iron steamer, of 250 horse-power, and she

was now on her voyage from Liverpool to London, having merely 200 tons of fuel to carry her to St. Petersburg. She was an elegantly-built vessel, and fitted up in the most elegant style. She was 600 tons burden, and 200 horse-power, and built with bulk-heads, having four compartments, and had she not been struck a complete broadside, so as to stave in both compartments, she would have been saved. We understand she was not insured.

The greatest credit is due to both captain and crew for their persevering attempts to save this vessel. We can only regret that their exertions did not meet with the success they deserved. The captain and mates conduct in staying on board the vessel till the last moment, reflects the highest credit upon them both.

A GENUINE ANECDOTE.—On William the Fourth being consulted as to which of his three horses, as connected with Goodwin Races, should be made the winner of the cup, or, to use the phraseology of the turf, *pressed*, his Majesty quickly answered, "Let them all do their best—I'll have no reefed topsails."

Just as the *Charlotte* was closing with the *Montague*, Lord Howe, who was himself conning the ship, called out to Bowen to starboard the helm, to which Bowen remarked, that if they did so, she would be on board the next ship, the *Jacobin*; to this his lordship replied sharply, "What is that to you, sir?" Bowen, a little nettled, said in an under tone, "My eyes, if I care, if you don't; I'll go near enough to singe some of our whiskers." Lord Howe heard him, and turning to his captain, said, "That's a fine fellow, Curtis."

MUTINY ON BOARD THE BOUNTY.

CHAPTER I.

IN the year 1787, being seventeen years after Captain Cook's return from his first voyage, it having been represented to his majesty, by those interested in our West India colonies, that the introduction of the bread-fruit tree into those islands, to constitute an article of food, would prove of very essential benefit to the inhabitants, the king was graciously pleased to comply with their request. A vessel was accordingly purchased, and fitted with the necessary additions for carrying the benevolent objects of the voyage into effect; the whole equipment for the voyage being under the immediate superintendence of Sir Joseph Banks.

The ship was called the *Bounty*, and the command of her was entrusted to Lieutenant Bligh, who had previously sailed with Captain Cook. She was about two hundred and fifteen tons burthen, and her crew consisted of one lieutenant, who was commanding-officer; one master, three warrant officers, one surgeon, two master's mates, two midshipmen, and thirty-four petty officers and seamen, making forty-four in all; to which were added two skilful and careful men, recommended by Sir Joseph Banks, to have the management of the plants intended to be carried to the West Indies, and others to be brought home for his majesty's gardens at Kew. One of these was David Nelson, who had served under Captain Cook in a similar situation; and the other, Wm. Brown, acted as an assistant to him.

On December the 23rd, 1787, the *Bounty* sailed from Spithead, and on the 26th it blew a severe storm from the eastward, which continued until the 29th, during which the ship suffered considerably. One sea carried away the spare yards and spars out of the starboard main-chains, while another heavy sea broke into the ship, and staved all the boats; and besides other damage a large quantity of bread was rendered totally useless, the sea having stove in the stern, and filled the cabin with water. This made it desirable for them to touch at Teneriffe, where they arrived on the 5th of January, 1788; and having put the ship to rights and refreshed, they sailed again on the 10th.

On March the 23rd they made the coast of Terra del Fuego, and had to encounter tremendous weather off Cape Horn. After nine days of incessant gales, accompanied with hail and sleet, the ship suffered so much, that they were obliged to keep pumping; and the decks were so leaky, that the great cabin was appropriated for those who had wet berths to hang their hammocks in: but finding that they were losing ground, and the hopelessness of obtaining a passage to the Society Islands by this route, it was determined, after thirty days struggling in this tempestuous ocean, to bear away for the Cape of Good Hope. The helm was accordingly put a-weather, to the great joy of every person on board.

On the 23rd of May they arrived at the Cape, where they remained for thirty-eight days to replenish their stock of provisions and water. They sailed from thence on July the 1st, and anchored in Adventure Bay, Van Diemen's Land, on the 20th of August. Here they remained, taking in wood and water, till the 4th of September; and on the evening of October the 25th, got sight of Otaheite, and came to an anchor the following day in Matavai Bay, after running a distance, as computed by the log, of twenty-seven thousand and eighty-six miles since they left England.

As soon as the ship was secured, Captain Bligh went on shore, accompanied by the chief Poeno, who had come on board, bringing a small pig and a young plantain tree, as a token of friendship from Otoo, the chief of Matavai, who had changed his name to Tinah. He was treated with great hospitality, and upon leaving, the "ladies," taking some of their finest cloth and a mat, clothed him in the Otaheitean fashion, and afterwards accompanied him to the boat. In the course of two or three days, a friendly intimacy existed between the ship's company and the natives, and with a view of furthering the object they had in view, several presents were given to Tinah; and he was told that King George had sent him these, on account of the kindness of his people to Captain Cook, and a desire to serve him and his country; at the same time asking him whether he would not send something to King George in

return. "Yes," he replied, "I will send him anything I have;" and began enumerating a list of articles, among which was the bread-fruit. This he was immediately told was what King George would like very much, and a number of young trees were promised to be sent on board.

The natives of Otaheite are strongly and finely formed; possessing all the advantages of immense strength, with the comeliness and beauty of the Europeans. The women of superior rank, are tall and majestic; while those of the inferior class rank somewhat below the middle stature of English ladies. The complexion of the superior class is that which we call a brunette. Their skin is soft, and delicately smooth. The shape of the face is round, open, and comely. The cheek bones are not high, nor the eyes hollow, as is generally the case with coloured nations. The nose is a little flattened, but their eyes, and more particularly those of the females, are full of fire and expression—now sparkling with enthusiasm and delight, and anon melting with tenderness and love. They are brave, open, candid, generous, and hospitable to a degree. The feelings of suspicion, treachery, self-love, cruelty, and revenge, which so oft are found in your enlightened, Christian countries, was unknown in ignorant, barbarous Otaheite! The only blot upon this country, is their excessive, and, apparently, unconquerable pilfering propensities. Cook, the celebrated traveller, speaking of them, says, "The people of this country, of all ranks, men and women, are the arrantest thieves on the face of the earth; but we must not conclude that theft is a testimony of the same depravity in them as it is in us, in the instance of which our people were sufferers by their dishonesty." They have an irresistible love for iron; an old nail, rusty and broken, possessing greater charms, in their eyes, than a purse of the brightest gold ever coined. With this brief description of the natives of Otaheite, necessary for the better information of our readers, we pursue our narrative.

The *Bounty* remained from the 26th of October, 1788, till the 4th of April, 1789, and collected during that period one thousand and fifteen plants, which were contained in seven hundred and seventy-four pots, thirty-nine tubs, and twenty boxes, besides several other kinds of curious plants peculiar to Otaheite. At sunset the boat returned from landing Tinah and his wife, and the ship immediately made sail. The next morning they got sight of Huaheine, where one of the natives recognized Captain Bligh, having seen him with Captain Cook in the *Resolution*, in 1780.

On the 23rd they anchored off Annamooka, where they remained till the 26th, carrying on a brisk trade in yams, plantains, hogs, fowls, &c.; but the crowd of natives became so great, that it was judged prudent to get the ship under weigh, which was accordingly done, and they sailed at sunset. From thence the ship stood to the northward all night, and at noon of the following day, the 27th, they were between the islands Tofoa and Kotoo.

Thus far the voyage had advanced in a course of uninterrupted prosperity; but a conspiracy had been formed, which was concerted with so much secrecy and circumspection, that not the slightest suspicion was occasioned of the impending calamity, which was to render all their past labour productive only of extreme misery and distress.

About four o'clock on the morning of the 28th of April, Mr. Stewart called upon Fletcher Christian, who had just fallen asleep, to relieve the deck; but observing him to be much out of order, he strenuously advised him to abandon his previously expressed intention of leaving the ship on a small raft which he had constructed; but Christian, as soon as he had taken charge of the deck, observing Mr. Hayward, the mate of his watch, lie down on the arm-chest to take a nap, and finding that Mr. Hallet, the other midshipman, did not make his appearance, formed the resolution of seizing the ship. He immediately disclosed his intention to Matthew Quintal and Isaac Martin, seamen, both of whom had been flogged by Captain Bligh; and they called up Charles Churchill, master-at-arms, who had also been punished, and Matthew Thompson, seamen, both of whom readily joined in the plot. Alexander Smith (*alias* John Adams), John Williams, and William McKoy, evinced equal willingness, and went with Churchill to the ar-

MUTINY ON BOARD THE BOUNTY, LIEUTENANT BLIGH, APRIL 28, 1789.

mourer, of whom they obtained the keys of the arm-chest, under pretence of wanting a musket to fire at a shark; and finding Mr. Hallet asleep on an arm-chest in the main-hatchway, they roused him and sent him on deck. Charles Norman, the carpenter's mate, unconscious of their proceedings, had in the meantime awakened Mr. Hayward, and directed his attention to the shark which was alongside; and just at the moment he was watching it, Christian and his confederates came up the fore-hatchway, after having placed arms in the hands of several men who were aware of their design. One man, Matthew Thompson, was left in charge of the chest, and he served out arms to Thomas Burkitt and Robert Lamb.

"Just before sun-rising, on Tuesday the 28th, while I was yet asleep," says Mr. Bligh, the captain of the *Bounty*, in his own words, "Mr. Christian, officer of the watch; Charles Churchill, ship's corporal; John Mills, gunner's mate; and Thomas Burkitt, seaman, came into my cabin, and, seizing me, tied my hands with a cord behind my back; threatening me with instant death, if I spoke or made the least noise. I called out, however, as loud as I could, in hopes of assistance; but they had already secured the officers, who were not of their party, by placing sentinels at their doors. I was hauled out of bed, and forced on deck in my shirt. I demanded the reason of such conduct, but received no other answer but abuse for not holding my tongue.

"The boatswain was ordered to hoist the launch out, with a threat that if he did not do it instantly, to take care of himself."

The captain endeavoured, by entreaties and persuasion, to turn the tide of affairs, and induce the people not to persist in such acts of violence; but the only reply was a command to hold his tongue, with a threat of having his brains blown out

if he did not instantly comply, while three men stood round him with bayonets fixed and pieces cocked.

The boatswain and seamen who were to go in the launch, were allowed to collect cordage, canvass, sails, and a twenty-eight gallon cask of water; and Mr. Samuel got one hundred and fifty pounds of bread, a small quantity of rum and wine, and a quadrant and compass. Those of the seamen whom the mutineers meant to get rid of, were forced into the boat, and a dram served to each of the crew who remained in the *Bounty*.

The officers were next called upon deck, and forced over the side into the boat, while Captain Bligh was still kept abaft the mizenmast, surrounded by a guard. It appeared that Christian was in some doubts whether he should keep the carpenter or his mates, but at length he ordered the carpenter into the boat, permitting him, though not without some opposition, to take his tool-chest.

The officers and men who were to leave them, being now in the boat, the master-at-arms informed Christian that they only waited for the captain. Christian then turned and said, "Come, Captain Bligh, your officers and men are now in the boat, and you must go with them; and if you attempt to make the least resistance you will instantly be put to death."

He was then, without further ceremony, forced over the side, when his hands were untied. The boat was veered astern with a rope, and a few pieces of pork, some clothes, and four cutlasses, were thrown to them.

On being forced over the side, Captain Bligh, turning to Christian, said, "Is this treatment a proper return for the many instances you have received of my friendship?" At which the other appeared much disturbed, and answered, with

considerable emotion, "That—Captain Bligh—that is the thing; I am in hell—I am in hell!"

Mr. Bligh again begged of him to desist, and gave his honour never to speak of this, or let it be known in England. He implored him, as their past friendship was disregarded, to think of and show some mercy to his wife and children.

"I say no, no, Captain Bligh," replied Christian; "if you had any honour, or any manly feeling in your breast, things had not come to this. Your wife and family! Had you any regard for them, you would have thought of them before, and not behaved so like a villain! I have been used like a dog all the voyage; I am determined, come what will, to bear it no longer. You have goaded—driven me to desperation, and on you must rest the consequences. It is too late."

The armourer and carpenter's mates called over the side for the captain to remember that they had no hand in the transaction, and were kept contrary to their inclination; and soon after the boat was cast adrift on the open sea.

The launch contained nineteen persons, whose weight, with that of the few articles they were permitted to take, brought the boat's edge so near to the water, that there seemed but little probability of her being able to encounter a moderate swell, much less to survive the length of voyage they were destined to perform over the wide ocean.

Upon examining the quantity of provisions which had been thrown into the boat, it was found to amount to one hundred and fifty pounds of bread, sixteen pieces of pork weighing two pounds each, six quarts of rum, six bottles of wine, twenty-eight gallons of water, and four empty barricoes. As they were near the island of Tofoa, they endeavoured to get a supply of bread-fruit and water, but could only succeed in obtaining about twenty cocoa-nuts; and numbers of the natives beginning to congregate on the beach, they were obliged to leave with precipitation, as the natives attacked them with stones, and killed John Norton, quarter-master, who was casting off the stern-fast, and wounded many of them in the boat. On pushing out to sea, they were followed by several canoes, and only succeeded in eluding the pursuit by throwing overboard some clothes, which induced the canoes to stop and pick them up.

They had now no hope of relief, unless they could reach Timor, a distance of full twelve hundred leagues, and this in an open boat only twenty-three feet in length, and deeply laden with eighteen men; but they all readily agreed to be content with an allowance which, on calculation, Captain Bligh informed them, would not exceed one ounce of bread and a quarter of a pint of water per day. It was about eight o'clock at night, on the 2nd of May, that they bore away under a reefed lug-foresail, and the people being divided into watches, and the boat got into a little order, they returned thanks to the Almighty for their miraculous preservation.

On the 3rd it blew a violent storm, and the sea ran so high that they were obliged to keep constantly baling, and were in great apprehension that the bread which was in bags, would be spoiled: to prevent this, they threw overboard all superfluous clothes, with some spare sails and rope, in order to lighten the boat; and emptying the carpenter's chest, stowed the tools at the bottom of the boat, and the bread in the chest. As they were all thoroughly wet and cold, a tea-spoonful of rum was served to each. Five small cocoa-nuts were distributed for dinner, and a few broken pieces of bread-fruit for supper, after which prayers were performed.

On the night of the 4th, and morning of the 5th, the gale had abated, and the boat was running among some islands; but after their reception at Tofoa, they did not venture to land. Upon examining the state of their bread, they found that a great part of it was damaged and rotten; but even this was carefully preserved for use.

On the 6th, they still continued to see islands at a distance; and this day, for the first time, to their great joy, they hooked a fish; but were miserably disappointed by losing it, as they were trying to get it into the boat. They were dreadfully cramped from the want of room, which they endeavoured to remedy by putting themselves at watch and watch: one half sitting up, while the others lay down in the bottom of the boat,

with nothing to cover them, and so constantly wet, that after a few hours' sleep, they were scarcely able to move.

On the 7th, they passed close to some rocky isles, from which they were pursued by two large sailing canoes; but in the afternoon they gave over the chase. Soon after it began to rain very heavily, when every person in the boat did his utmost to catch some water, by which they increased their stock to thirty-four gallons, besides quenching their thirst for the first time since they had been in the boat.

On the 8th they had an allowance of an ounce-and-half of pork, a tea-spoonful of rum, half a pint of cocoa-nut milk, and an ounce of bread. The afternoon was employed in cleaning out the boat, and getting everything dry and in order. Hitherto Captain Bligh had issued the allowance by guess, but he now made a pair of scales with two cocoa-nut shells, and finding some pistol-balls in the boat, which weighed twenty-five to the pound, he adopted one of these as the weight of bread to be served to each person at one time. He also amused them with describing the situations of New Guinea and New Holland, that in case any accident should happen to him, they might have some idea of what they were about, and be able to find their way to Timor.

On the 9th they experienced a violent storm of thunder and lightning. They collected about twenty gallons of water; but they were so miserably wet and cold, that a tea-spoonful of rum was served to each. The weather continued extremely bad, and the wind so increased that hardly one of them got any sleep that night.

The morning of the 10th brought no relief, except its light. The sea broke over the boat so much, that two men were kept constantly baling; and it was necessary to keep the boat before the wind to prevent its filling. The allowance was now one bullet-weight of bread and a quarter of a pint of water, at eight in the morning, at noon, and at sunset, with the addition of half an ounce of pork for dinner.

On the 11th the weather was not at all improved, and their situation was becoming extremely dangerous from the constant running of the sea over the stern, which kept them baling with all their strength; but at noon they were much enlivened by the appearance of the sun, which gave them great pleasure.

On the 12th it rained towards the evening, and they again experienced a dreadful night. When the day came, they were in no way refreshed by the little sleep they had, as they were constantly drenched by the sea and rain; and though the men were shivering with wet and cold, the captain was under the disagreeable necessity of informing them, that he could no longer afford them the scanty pittance of a tea-spoonful of rum.

On the 13th and 14th the stormy weather and heavy seas continued unabated, and on these days they saw distant land, and passed several islands, the sight of which increased, rather than alleviated the misery of their situation; as an attempt to procure relief was considered to be attended with so much danger, that it was thought advisable to remain as they were, rather than encounter the risk.

On the 15th it was still rainy, both day and night, and it was so dark that not a star could be seen by which the steerage could be directed, and the sea was continually breaking over the boat; which was the case on the 16th, when they passed a truly horrible night, with storms of thunder, lightning, and rain. The dawn of the 17th brought no relief; and the suffering from wet and cold had been so severe, that they were obliged to break their rule, and serve a tea-spoonful of rum to each. The night was again dark and dismal, and nothing but the winds and waves to direct their steerage.

On the 18th the rain abated, when they stripped and wrung their clothes, which greatly refreshed them; but every one of them complained of violent pains in their bones. At night the rain re-commenced, with thunder and lightning, which continued without intermission through the 19th and 20th, keeping the men constantly baling; but at noon the sun broke out and revived them. They began now to suffer from extreme hunger, but the vast quantities of rain that had fallen prevented their being thirsty.

On the 21st they were so drenched with rain and salt-water du-

ring the whole of the afternoon, that they could scarcely see; and on the following day their situation was extremely calamitous. They were obliged to run right before the sea, and keep a strict watch, as the slightest error in the helm would have caused their destruction in an instant. It continued to blow hard, and the sea was constantly running over their stern. During the night the misery they endured was excessive, so much so that they expected another such a night would put an end to the sufferings of several of them.

On the 24th the wind moderated towards the evening, and the night was fair. In the morning they experienced relief from the warmth of the sun, for the first time during the last fifteen days. They stripped and hung up their clothes to dry; but by this time they had been worn so threadbare, that they contributed very little to keep out either wet or cold. In the afternoon they saw several birds, such as boobies and noddies, which are never seen far from land.

As the sea now began to run fair, Captain Bligh took the opportunity to examine their stock of bread, and found there was sufficient, according to their present rate of allowance, to last twenty-nine days, which was about the time they expected to be able to reach Timor: but as this was uncertain, and it was possible they might be obliged to go to Java, they determined to reduce their present scanty rate, so as to make the stock hold out six weeks. This was effected by continuing the same quantity for breakfast and dinner as usual, and discontinuing the supper allowance.

On the 25th, at noon, some noddies came so near to the boat that they caught one of them, about the size of a small pigeon. This was divided, with its entrails, into eighteen portions, and distributed by the following method:—one man stood with his back to the object, while another, pointing separately to each portion, asked aloud, "Who shall have this?" to which the first answered by naming somebody, until the whole number had been served. By this impartial method, each man stood the same chance of obtaining an equal share. They had also an allowance of bread and water. In the evening several boobies came near them, and they were fortunate enough to catch one about as large as a duck. This they killed for supper, and giving the blood to three of the people who were most distressed, the body, with entrails, feet, and beak, were divided into eighteen shares, and distributed as before; and having with it an allowance of bread, the whole made an excellent supper.

On the 26th they caught another booby, which was distributed in the same manner as before, giving the blood to those who suffered most; and this addition to their usual fare, quite overjoyed these miserable people, who hailed it as an interposition of Providence in their favour. The weather was now very fine, but the heat of the sun was becoming so powerful, that several were seized with faintness and langour. In the evening they caught two boobies, which contributed to raise their spirits. The stomachs of these birds contained several flying-fish and small cuttle-fish, which were carefully reserved for the following day, while the remainder were divided and distributed as before. From the appearance of the clouds in the evening, they thought it probable they must be near land.

On the 28th, at one o'clock in the morning, the man at the helm heard the sound of breakers. It was the barrier-reef which runs along the eastern coast of New Holland, through which it now became their anxious object to discover a passage. The sea broke furiously over the reef, but within was so smooth and calm, that they already anticipated the heartfelt satisfaction they should experience as soon as they should pass the barrier. At length they discovered a break in the reef, about a quarter of a mile in width, and through which they passed rapidly, with a strong stream running to the westward, and came almost immediately into smooth water.

They now offered up their thanks to the Almighty for his merciful protection of them, and then with more content than they had yet been able to feel, took their miserable allowance of a bullet-weight of bread, and a quarter of a pint of water for dinner.

They now began to see the coast very distinctly, and in the evening they landed on the sandy point of an island, where they soon discovered that there were oysters: they also found

plenty of fresh water. By the help of a small magnifying glass, a fire was made; and among the things that had been thrown into the boat, was a tinder-box and a piece of brimstone; so that in future they had the ready means of making a fire. One of the men had been provident enough to bring with him from the ship, a copper pot, in which they made a stew of oysters, bread, and pork, and each person received a full pint.

The general complaints among the people were a great dizziness in the head, and weakness in the joints; but notwithstanding their sufferings from cold and hunger, all of them retained marks of strength. The men were cautioned by Captain Bligh not to touch any kind of fruit or berry they might find; but no sooner were they ought of sight, than they began to eat without reserve. The effect of this was, that they soon began to show symptoms of over-eating, which frightened them so much, that they fancied they were poisoned; but, fortunately, the fruit proved to be wholesome and good.

On the 29th of May, being the anniversary of the restoration of Charles II., they named the island they were upon, Restoration Island, as not being inapplicable to their situation, which was a restoration to health and strength.

The people now made excellent meals of oysters and palmtops stewed, without consuming any of their bread. On the 30th, they collected a quantity of oysters, which they put on board the boat, and also filled their vessels with fresh water to the amount of nearly sixty gallons. Upon examining the bread, they found about thirty-eight days' allowance remaining.

Being now ready for sea, every person was ordered to attend prayers; but just as they were on the point of embarking, about twenty naked savages made their appearance, and beckoned to the sailors to come near them; but as they were armed with spears and lances, it was thought most advisable to decline the invitation and proceed on their voyage, which lay to the northward.

On the 31st they landed on an island, to which they gave the name of Sunday, and two parties were sent on shore to seek for supplies; but many of them, overcome by weakness and fatigue, began to show a mutinous spirit, which Captain Bligh immediately quelled by drawing his cutlass, and enforcing obedience. They obtained oysters, clams, and dog-fish; also a small bean, which Nelson, the botanist, pronounced to be a species of *dolichos*.

On the first of June they stopped in the midst of some sandy islands, called *Keys*, where they procured a few clams and beans. Nelson was here taken ill, with a violent heat in his bowels, loss of sight, great thirst, &c.; but by giving him some pieces of bread soaked in a little wine, which had been carefully preserved, he soon recovered. The boatswain and carpenter were also ill, complaining of head-ache and sickness; and, indeed, there were few of them without complaints.

At night a party was sent out to catch birds, but they only returned with twelve noddies. This was through the folly and obstinacy of Robert Lamb, butcher, who separated from them, and disturbed the birds. He afterwards acknowledged that he had eaten nine raw birds after separating from his two companions.

On the 3rd of June, after passing several keys and islands, and doubling Cape York, the north-easternmost point of New Holland, the little boat and her brave crew once more launched into the open ocean. They had been just six days on the coast, in the course of which they had found oysters, a few clams, some birds, and water; but they had derived great benefit from enjoying good rest at night, and relief from the fatigue of constantly sitting.

On the 5th a booby was caught by the hand, and the blood of it being divided among the three weakest, the body was reserved for the next day's dinner; and in the evening of the 6th, the allowance for supper was recommended according to a promise made at its discontinuance.

On the 7th, after a miserably wet and cold night, nothing more could be afforded than the usual allowance for breakfast, but at dinner they had the remainder of the dried clams, being about an ounce to each. The sea was running very high, and breaking over the boat. The next day, however, the weather was more moderate, and they caught a small dolphin, which

gave about two ounces to each man; but in the night it came on to blow again.

Many of them now began to feel the effects of their long sufferings. Mr. Ledward, the surgeon, and Lawrence Leboque, an old and hardy seaman, appeared to be giving way very fast. In two or three days afterwards there seemed a visible alteration for the worse in many of them, and an apparent debility of understanding, that seemed the melancholy presage of an approaching dissolution. One hope alone supported them, that in a very few days more, at the rate they were then sailing, they would arrive at that point, so fondly anticipated as the termination of their miseries.

In the afternoon, birds and branches of trees gave signs of land being near; but the captain cautioned them not to be too sanguine, as there were several islands between New Guinea and Timor.

On the 11th, Captain Bligh announced the pleasing intelligence that an observation of longitude appeared to indicate that they had passed the meridian of the eastern part of Timor. This discovery filled every heart with joy and expectation, and all eyes were intently fixed on that quarter in which the land was expected to be situated. Evening fell without their being able to discover anything except the vast expanse of ocean; but, at three o'clock on the following morning, just as the day was breaking, a cultivated coast, finely diversified with hill and dale, appeared stretching in wide extent before them. This was Timor!

It is almost impossible to describe the tumult of joy, the intense and inexpressible delight, which filled their minds at the blessing of the sight of this land. Their thoughts rapidly reverted to the varied events of their fearful passage, till it appeared scarcely credible even to themselves—that in an open boat, so poorly provided, and under circumstances every way so calamitous, they should have been able to reach the coast of Timor in forty-one days after leaving Tofoa, having in that time run, by their log, a distance of three thousand six hundred and eighteen nautical miles; and that, notwithstanding their extreme distress, without the loss of a single individual.

The crew, who now considered their safety as beyond the reach of vicissitude, were eager to land at the nearest shore without further delay; but Captain Bligh, wisely considering that the Dutch were only in possession of a corner of this large island, directed his course to the south-west part of it, in which he had but an indistinct recollection of hearing the Dutch settlement was situated. They had passed along a coast covered with palm-trees, and afterwards a more open district, where the inhabitants were clearing and cultivating their grounds; but night came on without their discovering any appearance of a settlement, or an eligible landing-place.

On the 13th they continued their voyage, with the same result. About two o'clock, after running through a very dangerous sea, they came to a spacious bay, with an entrance, that appeared to form so eligible a station for shipping, that hopes were conceived that it might be an European settlement. Seeing a hut, a dog, and some cattle, near a sandy beach, the gunner and boatswain landed, but were not long gone, when they returned, accompanied by five of the natives, from whom they met a hospitable reception. They were informed that the governor resided at a place called Coupang, at some distance to the north-east, and one of the men went with them to show the way, but they were not able to reach it that night. At ten o'clock they came to a grapnel, and, for the first time, doubled their allowance of bread, to which was added a little wine.

On the following morning, after the most comfortable and refreshing sleep they had yet enjoyed, they found themselves clear of the island, and soon after, the report of two large guns came booming along the water. They were electrified with joy, by this, the first sound indicative of European existence; and shortly after two square-rigged vessels and a cutter appeared at anchor. They endeavoured to work to windward, but losing ground on each tack, they took to their oars again, and kept rowing till four o'clock, when the hands had an allowance of bread and wine, after which they resumed their oars and plied them

till daylight, when they found themselves opposite the small fort and town of Coupang.

They hoisted a signal of distress by the aid of some signal flags, which they found in the boat, and soon after day-break, a soldier hailed them to land. They immediately obeyed the signal, and were agreeably surprised to find an English sailor, who told them he belonged to a Dutch vessel in the road, commanded by Captain Spikeman, the second person in the town. He received them with great humanity, and gave directions for their immediate reception at his own house, where a comfortable breakfast was provided, while he went to inform the governor of their arrival.

The governor, Mr. William Adrian Van Este, notwithstanding his extreme sickness, received them with great hospitality, and exhibited the fullest proof of his being possessed of humane and generous feelings. He said that he considered it the greatest blessing of his life that they had fallen under his protection; and though such was his infirmity, that he could not perform in person the duties he wished, yet he had full confidence in their being faithfully performed by Mr. Wanjon, his son-in-law, and the second in command. There was only one uninhabited house in Coupang, which he assigned to Captain Bligh, and for the people he offered either the hospital or Captain Spikeman's vessel.

On examining the premises, Captain Bligh found that by taking only one apartment to himself, he could find room for the whole party. He accordingly allotted another room for the master, surgeon, botanist, and gunner, a loft to the other officers, and an outer apartment to the men; the governor generously furnishing them with bedding and other necessaries for all of them.

At noon, they were supplied with a plentiful dinner, and they retired to rest early, after having returned due thanks to the Almighty, who had enabled them to endure such heavy calamities, and to persevere in such rigid economy, that they had eleven days provisions remaining when they arrived, so that had they been unfortunate enough to have missed the Dutch settlement at Timor, they could, on the same scanty allowance, have proceeded to Java.

To secure their arrival at Batavia, in the island of Java, before the October fleet sailed for Europe, Captain Bligh purchased a small schooner, thirty-four feet long, for which he gave 1000 rix-dollars. This they fitted out for sea under the name of his Majesty's schooner *Resource*; and Mr. Wanjon supplied them with four brass swivels and fourteen stand of small arms, as a loan, to be returned at Batavia.

On July 20, Mr. Nelson, the botanist, died of an inflammatory fever; and was the next day interred in the burying-ground behind the chapel appropriated to the Europeans of the town.

The schooner being victualled and ready for sea, they took an affectionate leave of the inhabitants of Coupang, and sailed on the afternoon of August 20, taking the launch with them in tow.

On Sunday, September 6th, they saw the high land of Cape Sandana, in the north-east part of Java, and on the 10th, anchored off Passourwang, a Dutch settlement on the coast.

On the next day they sailed, and anchored in Sourabaya-road, where they were received by the governor with great friendship and civility, and hospitably entertained.

They sailed on the 17th, and made Samarang, which, next to Batavia, is the most considerable settlement which the Dutch have in Java. After experiencing the hospitality of the inhabitants, and receiving medicines and attention from Mr. Aegg, the surgeon of the hospital, they sailed on the 26th with a galley, mounting six swivels, which the governor had ordered to accompany them to Batavia, where they arrived on the 1st of October. Here they found a Dutch man-of-war riding at anchor, besides twenty sail of Dutch East India ships, and many smaller vessels.

In a few days Captain Bligh was seized with a fever, occasioned by the suffocating heat of the atmosphere; and as he could get no relief, he resolved to leave Batavia as soon as possible: for this purpose he took a passage in a packet about to sail to Europe, for himself, his clerk, and a servant, which were all the vessel could accommodate.

On Friday, the 9th of October, the General Elliott arrived, having saved a quantity of treasure that was on board the Vansittart, an English East Indiaman, which had been lost in the straits of Banca.

On the following day the Resource was sold by Dutch auction; that is, the vessel put up at 2000 rix-dollars, from which deductions were made until some person bid; unfortunately no one offered, until it had been lowered to 295 dollars, at which she was sold to an Englishman commanding a ship from Bengal.

On the 16th of October, Captain Bligh embarked in the packet, which was commanded by Captain Peter Couvret, and bound for Middleburgh. The governor promised that those of the company who remained behind, should follow in the first ship, and be as little divided as possible. Mr. Fryer, the master, had been previously authorised to supply the men and officers left under his command with one month's pay, to enable them to purchase clothing for their passage to England.

On the 18th the packet spoke with the Rambler, an American brig, bound from Boston to Batavia. After passing the Straits of Sunda, they steered to the northward of Cocos Isles.

Nothing of consequence occurred during the voyage to the Cape of Good Hope, from whence they sailed in company with the Astree, French frigate, and on the 21st came in sight of Ascension Island. On the 13th of March, 1790, they were off the Bill of Portland, and on the evening of Sunday, the following day, Captain Bligh left the packet, and was landed at the Isle of Wight.

Those who had been left at Batavia, were provided with passages by the earliest ships; but though apparently in good health at the time they were left by the captain, they did not all live to quit Batavia. Thomas Hall died before the departure of the packet, and Peter Linkletter and the master's mate, Mr. Elphinstone, within a fortnight after, as the hardships they had experienced rendered them unable to support so unhealthy a climate as that of Batavia; but of nineteen who were forced into the launch by the mutineers, it pleased God that twelve should surmount the difficulties and dangers of this unparalleled voyage, and live to re-visit their native land.

Various causes have been assigned by the different persons interested for such an unparalleled mutiny as that described in the foregoing narrative; but it must be borne in mind, that each of those who have given any insight into the details, and described the actions of themselves or others, have naturally been biased by the particular position in which they have been placed, and the feelings they would naturally imbibe from their peculiar situation. Lieutenant Bligh speaks of the mutineers as harsh, unfeeling wretches, deaf to every principle of humanity, but chiefly instigated to their purpose by the prospect of changing the toil and hardships of a sailor's life, for the slothful indolence and luxurious ease which they observed to be enjoyed by the natives of Otaheite; whereas, on the other hand, the conduct of Bligh towards his officers, as related in a manuscript journal kept by Morrison, the boatswain's mate, was so arbitrary, brutal, and disreputable, as to be the chief, if not the sole, cause of the rebellion of Christian and his colleagues.

From the evidence it is apparent that at all events, something more than Captain Bligh, set forth in his statement, passed between him and Mr. Christian; we give one incident (of which Mr. Bligh took no notice) from Morrison's Journal.

"On the afternoon of the 27th, Lieutenant Bligh came on deck, and missing some of the cocoa-nuts, which had been piled up between the guns, said they had been stolen, and could not have been taken away without the knowledge of the officers, all of whom were sent for and questioned on the subject. On their declaring they had not seen any of the people touch them, he exclaimed 'Then you must have taken them yourselves!' and proceeded to inquire of them separately, how many they had purchased. On coming to Mr. Christian, that gentleman answered, 'I do not know, Sir, but I hope you do not think me so mean as to be guilty of stealing yours.'—Mr. Bligh replied, 'Yes, you d—d hound, I do—you must have stolen them from me, or you would be able to give a better account of them.' Then, turning to the other officers, he said God d—n you scoundrels, you are all thieves alike, and combine with the men to rob me. I suppose you will steal my yams next, but I'll

sweat you for it you rascals.—I'll make half of you jump over board, before you get through Endeavour Straits.' About as pretty a specimen as could be given of this man's capabilities of governing a ship's crew! and his language,—which would disgrace the frequenter of a pot-house—was addressed to gentlemen, nearly or quite his equal in birth, and if his language may be taken as a criterion, his superior in everything else.

This is but one of the number of anecdotes produced, to show that he indulged his every ebullition of a passionate irritable temper, in wounding and disgusting the feelings of his officers, in a manner so totally unfitting a gentleman, bearing his Majesty's commission, that it could not fail to disgust and estrange the mind of every one from him. The accounts, however, are very contradictory, and it is very evident that the conduct of the mutineers was both unjustifiable and unpardonable.

'Tis mine to tell their tale of grief,
Their constant peril, and their scant relief;
Their days of danger, and their nights of pain;
Their inanly courage, e'en when deemed in vain;
The sapping famine, rendering scarce a son
Known to his mother in the skeleton;
The ills that lessened still their little store,
And starved e'en Hunger till he wrung no more;
The varying frowns and favours of the deep,
That now almost engulfs, then leaves to creep,
With crazy oar and shattered strength, along
The tide, that yields reluctant to the strong;
Th' incessant fever of that arid thirst
Which welcomes, as a well, the clouds that burst
Above their naked bones, and feels delight
In the cold drenching of the stormy night;
And from the outspread canvass gladly wrings
A drop to moisten life's all-gasping springs;
The savage foe escaped, to seek again
More hospitable shelter from the main;
The ghastly spectres which were doomed at last
To tell as true a tale of dangers past,
As ever the dark annals of the deep
Disclosed for man to dread, or woman weep.

CHAPTER II.

INDEPENDENT of the object of the preceding voyage being rendered abortive, so audacious and criminal an act of insubordination as that committed by Christian and his associates, could not pass unnoticed. Lieutenant Bligh was promoted to the rank of commander, and a second time sent out to transport the bread-fruit to the West Indies, which he succeeded in accomplishing. The British government having resolved to adopt every possible means to apprehend the mutineers and bring them to punishment, and also to obtain a survey of Endeavour Straits, for the purpose of facilitating the passage to Botany Bay, sent out the Pandora frigate, of twenty-four guns, and one hundred and sixty men, under the command of Captain Edward Edwards: with orders to proceed in the first instance, to Otaheite, and if he did not find the mutineers there, to visit the different groups of the Society and Friendly Islands, and others in the neighbouring parts of the Pacific; and to use his best endeavours to seize and bring home in confinement, the whole or such part of the delinquents as they might be able to discover.

In January, 1791, the Pandora passed the Straits of Magellan, and anchored in Matavai Bay the 23rd of March. Before the ship had anchored, Joseph Coleman, the armourer of the Bounty, attempted to come on board; and several questions were put to him about the Bounty and her people, to which he gave ready replies. Soon afterwards he was followed by Mr. Peter Heywood and Mr. Stewart, midshipmen, who were brought down into the cabin; when, after some conversation, Heywood asked if Mr. Hayward, midshipman of the Bounty, but then Lieutenant of the Pandora, was on board, and who was sent for. After further conversation, Captain Edwards called in the sentinel to take them into custody, and to put them in irons. Soon after this, four others arrived, and from them and some of the natives, he learned that several of the mutineers were still on the island; but that Christian and nine men had long since left it in the Bounty, saying to the natives, that

LOSS OF THE PANDORA.

Captain Cook was living, and that Captain Bligh had gone to settle at Whytutakee along with him. He also learned that some of the people of the *Bounty* had built a schooner, with which they had sailed the day before from Matavai Bay to the N.W. part of the island.

On this intelligence, he despatched the two lieutenants Corner and Hayward, with the pinnace and launch, to intercept her. They soon got sight of her and chased her out to sea; but night coming on and the chase gaining on them, they were compelled to give up the pursuit. They learned, however, that she had returned to Paparré, on which they were again despatched in search of her. Lieutenant Corner succeeded in taking three of the mutineers, and Hayward, on arriving at Paparré, found the schooner, but the mutineers had fled to the mountains. He carried off the schooner, and returned next day, when hearing they were coming down, he drew up his party in order to receive them; and when within hearing called to them to lay down their arms, which they did, and they were brought prisoners to the ship.

The following persons were received on board the *Pandora*:—Peter Heywood, George Stewart, midshipmen; James Morrison, boatswain's mate; Charles Norman and Thomas McIntosh, carpenter's mates; Joseph Coleman, armourer; Richard Skinner, Thomas Ellison, Henry Hilbrant, Thomas Burkitt, John Millward, John Sumner, William Muspratt, Richard Byrne, seamen; being fourteen in all.

From various statements of the mutineers, and from journals that had been kept by some of them, it appeared that after the departure of Captain Bligh in the launch, they proceeded to Toobouai, in lat. $20^{\circ} 13'$ S. long. $149^{\circ} 35'$ W., a solitary island

discovered by Captain Cook in 1777, and which has since received the name of Pitcairn's island, where they anchored on May 25th, 1789. They had thrown overboard the greater part of the bread-fruit plants, and divided among themselves the property of the officers and men whom they had so inhumanly turned adrift. They intended to have formed a settlement at this island, but the opposition of the natives, quarrels among themselves, and the want of many necessary materials, determined them to go to Otaheite for what they might require to effect their purpose. They accordingly sailed from Toobouai about the latter end of the month, and arrived at Otaheite on the 6th of June.

After receiving a large stock of provisions, with which the Otaheiteans liberally supplied them, under the belief that it was for Captains Cook and Bligh, who waited for them at Whytutakee, they left Otaheite on the 19th of June, taking with them eight men, nine women, and seven boys, and returned to Toobouai, where they arrived on the 26th.

They immediately commenced building a fort of fifty yards square, but disagreements among themselves, and continual disputes and skirmishes with the natives, rendered their situation so disagreeable and unsafe, and the work went on so slowly, that it was agreed to discontinue the building of the fort. The men, instead of that voluptuous indolence, the hope of which had impelled them to this guilty course, found nothing but hard work and hard fighting. Christian very soon perceived that his authority was on the wane, and a consultation was therefore held as to the most advisable step to be taken. After much angry discussion, it was determined, contrary to the advice of Christian, to return to Otaheite.

that those who chose to go on shore might do so, and that those who preferred to remain in the ship could then proceed to whatever place they should agree upon among themselves.

They accordingly sailed from Toobonai on the 15th, and arrived at Matavai Bay on the 20th September, 1789. Sixteen of the mutineers were put on shore, where they were received by the natives with their usual fond cordiality; but Christian, justly apprehensive of the consequences of remaining in Otaheite, slipped cable in the night, and made off with all who were on board, amounting to nine English, six Otaheitean men, and eleven women.

Of the sixteen who came on shore at Otaheite, Churchill and Thompson, two of the most active in the mutiny, perished by violent deaths. These two men had accompanied a chief, the *tayo* or sworn friend of Churchill; who having died without children, this mutineer succeeded to his property and dignity, according to the custom of the country. Thompson, for some real or fancied insult, took an opportunity of shooting his companion. The natives assembled, and to avenge the murder, literally stoned Thompson to death; and his skull was brought on board the Pandora.

The remaining fourteen were received on board the Pandora, as before-mentioned, and immediately placed in confinement. A round-house was built on the after-part of the quarter-deck, for their more effectual security, and to prevent their having any communication with, or crowding the ship's company. This round-house was only eleven feet long, built as a prison, and aptly named "Pandora's Box," which was entered by a scuttle in the roof, about eighteen inches square. Instead, however, of two thirds allowance, to which prisoners are legally limited, they were victualled in every respect the same as the ship's company. Their families were also allowed to visit them; a permission which gave rise to the most affecting scenes. Every day the wives came down with their infants in their arms; the fathers weeping over their babes who were soon to be orphans, and husband and wife mingling cries and tears at the prospect of so calamitous a separation.

It appears, that when the little schooner before-mentioned had been finished, six of the fourteen mutineers that were at Otaheite embarked in her, with the intention of proceeding to the East Indies, and actually put to sea; but meeting with bad weather, and suspecting the nautical abilities of Morrison, the boatswain's mate, who had first undertaken the construction of the vessel (assisted by the two carpenters, the cooper, and some others), and whom they had elected as commanding officer, they resolved to return to Otaheite. Stewart and Heywood took no part in this transaction, as they had made up their minds to remain at Otaheite, and there await the arrival of a king's ship, as they deemed it morally certain that one would be sent out in search of them; and this is confirmed by the alacrity which they displayed in getting on board the Pandora the instant of her arrival.

The main objects of their expedition being thus fulfilled, and an ample sea-store laid in, the Pandora left Otaheite on the 8th of May, 1791, accompanied by the little schooner which the mutineers had built. In point of size she was not much larger than Lieutenant Bligh's launch, her dimensions being thirty feet length of keel, thirty-five feet length on deck, nine feet and a half extreme breadth, and five feet depth of hold.

The Pandora touched at Huahine and Bolabola; but when they came to Whytutakee, they made particular inquiries, without obtaining any information; the natives declaring, that till now they had never seen a white man. They accordingly made sail, and on the 22nd of May, reached Palmerston's Islands, where they had no sooner landed, than Lieutenant Corner found a yard and some spars with the broad arrow upon them, and marked "Bounty." This induced the captain to cause a minute search to be made in all these islands, in the course of which the Pandora, being driven out to sea by blowing weather, and it being very thick and hazy, lost sight of the little schooner and a jolly-boat with a midshipman and four men on board, the latter of which was never more heard of. They cruised for two days, discharging great and small guns, and burning false fires, but without success, and they were obliged to leave them to their fate.

The Pandora now proceeded, and on the 29th arrived at Annamooka, the principal of the Friendly Isles, where they remained till the 8th of August, when they set sail, following nearly the track of Captains Carteret and Bligh.

The vessel soon got into the track of Bougainville, whose narrative had represented it as a dangerous route. For some time they lay to during the night; but afterwards conceiving that it was not consistent with the despatch now necessary, they imprudently dropped that precaution. On the 25th they saw breakers, and more towards noon, extending in such a direction as to bar their progress southward. They then stood to the westward, but soon discovered another reef, which appeared to close all progress. The boat was sent out to look for an opening, and about five o'clock the signal was made that one had been found, when they made signals for the boats to return, from the dread of losing her like the tender and jolly-boat.

Night had just closed, the boat was on board, and the sails were trimmed; but scarcely had the Pandora begun to move, when the alarm was given that she had struck on a reef. They had a quarter less two fathoms on the larboard side, and three fathoms on the starboard side; the sails were braced about different ways to endeavour to get her off, but to no purpose; they were then clewed up and afterwards furled, the top-gallant-yards got down, and the top-gallant-masts struck. Boats were hoisted out with a view to carry out an anchor, but before that could be effected the ship struck so violently on the reef, that the carpenter reported she made eighteen inches of water in five minutes; and in five minutes more there were four feet water in the hold. In this dreadful crisis all hands were turned to the pumps, and to bale at the different hatchways, and a number of prisoners were released from irons and put to this work; but the leak continued to gain upon them so fast, that in little more than an hour and a half after she struck, the water was nine feet deep in the hold. About ten o'clock they perceived that the ship had beaten over the reef, and was in ten fathoms water; they therefore let go the small bower-anchor, cleared away a cable, and also let go the best bower-anchor in fifteen and a half fathoms water under foot to steady the ship. Some of her guns were thrown overboard, and the water gaining upon them only in a small degree, they flattered themselves that, by the assistance of a thrummed topsail, which they were preparing to haul under the ship's bottom, they might be able to lessen the leak, and to free her of the water; but these flattering hopes did not last long; for as she settled in the water, the leak increased to such an extent, that there was every reason to apprehend she would sink before daylight. The night was dark and stormy, and they were everywhere encompassed by rocks, shoals, and breakers, and unfortunately two of the pumps were for some time rendered useless; one of them, however, was repaired, and they continued baling and pumping, between life and death, without being able to prevent the continual ingress of the water. At length the ship began to heel: one man was killed by a gun running to leeward, and another by the fall of a spare topmast. The people at the pumps became faint, but were supported by rations of excellent strong beer, which served the purpose much better than spirits; and they continued intrepid and obedient to the last.

About half an hour before daybreak, a council of officers was held when it was unanimously decided, "that nothing more could be done for the preservation of his Majesty's ship." It then became necessary to provide for the preservation of the people. The four boats, consisting of one launch, one eight-oared pinnace, and two six-oared yawls, with careful hands in them, were kept astern of the ship; a small quantity of bread, water, and other necessary articles, were put into each; two canoes which they had on board were lashed together and put into the water; rafts were made, and spars, booms, hencoops, and everything buoyant, were cut off, as means of safety, which might be clung to in the last extremity.

The double canoe, that was able to support a considerable number of men, broke adrift with only one man, and was bulged upon a reef, affording no assistance when she was so

much wanted on this melancholy and trying occasion. Two of the boats were laden with men and sent to a small sandy island, or key, about four miles from the wreck, while the other two boats remained near the ship to pick up all the men that could be seen.

Three of the Bounty's people, Coleman, Norman, and McIntosh, were let out of irons, but no notice was taken of the other prisoners, although Captain Edwards was entreated to have mercy on them, as he passed over their prison in effecting his own escape; but, fortunately, the master-at-arms, when slipping from the roof of "Pandora's Box" into the sea, let the keys of the irons fall through the skuttle, which he had just before opened, and enabled them to effect their own liberation.

Scarcely was this effected when the ship went down, leaving nothing visible but the topmast cross-trees. The master-at-arms, and all the sentinels sunk to rise no more. The cries of them, and the other drowning men, were awful in the extreme; and more than half an hour elapsed before the survivors could be taken up by the boats.

On mustering the people that were saved, it appeared that eighty-nine of the ship's company answered to their names, and ten of the mutineers that had been prisoners on board; but thirty-one of the ship's company and four mutineers were lost.

They now hauled up the boats, and examined the stock of provisions that had been saved. They were found to consist of two or three bags of bread, two or three breakers of water, and a little wine, with which they were to find their way from the eastern extremity of New Guinea to the settlement in Timor.

A day was passed in putting the boats into the best order they could, and distributing the crew and prisoners among them. Thirty were put into the launch, and the pinnace and the red and the blue yawls had twenty-three in each. The ten prisoners were divided by twos and threes.

They left the island at twelve o'clock on the 1st of September. They soon found themselves on the coast of New Holland; and the red yawl made the agreeable discovery of a fine bay, where there was a spring of excellent water at the foot of the beach. They drank, and filled a tea-kettle and two great bottles; but the other boats were, unfortunately, too far a-head to be called back. The necessity of keeping together being urgent, as their supplies were in the launch, they towed each other during the night. At midnight they were alarmed by the cry of "breakers a-head," but fortunately they succeeded in getting clear of them.

Next day they came to an inhabited island, but the natives making a hostile appearance, and letting fly a shower of arrows among them, they made no further attempt to procure relief. In the evening they reached one which they called Laforey's Island, where they landed and slept during the night. In the morning they succeeded in discovering a spring, with which they filled to the brim every article on board that would hold liquid, including the carpenter's boots, which were first emptied from the fear of leakage.

After leaving Laforey's Island, they entered the vast abyss of the Indian Ocean, of which they had a thousand miles to cross. They soon encountered so heavy a swell, that it threatened destruction to their little fleet. Apprehensive of their being separated, as they had not the means of dividing the water, their first resource was to take each other in tow; but the swell ran so high, that in the middle of the night a new tow-line broke, and after being made fast, broke a second time, which obliged them, after several trials, to give up the towing system, as it would have torn the boats to pieces.

Notwithstanding the supply of water which they had procured, their allowance was still so short, and their thirst so severe, that several in desperation drank their own urine, and many drank salt water, but in both cases with fatal results. They also endeavoured to procure coolness by applying wet cloths, dipped in salt water; but so great an absorption took place, through heat and fever, that the fluids were tainted with the salt, and the saliva in the mouth became intolerable.

In this miserable state they remained from the 2nd to the 13th of September, when land was discovered, but a dead calm prevented them from nearing the coast until the following day, and there was such a prodigious surf, that landing could not be attempted. At length, about twelve o'clock, the red yawl run into a creek, upon which the other boats divided the remainder of the water, and, animated with fresh spirits, dashed manfully across a somewhat formidable reef which interposed, and found a fine spring of water, which afforded immediate relief.

They were very hospitably treated by the natives, who brought them large supplies, giving them as much pork and fowls as they wanted for a few buttons. They sat down and made a very hearty dinner, but the weak state of their minds and bodies made them so alarmed, and caused such a general gloom to steal upon them, that the night was spent in a succession of groundless panics and unnecessary fear.

They set sail at one o'clock on the following day, and at five in the succeeding afternoon, they landed at Coupang. The former governor was dead, and was succeeded by Van-ion, his son-in-law, the same as called Wanjon by Bligh. He received them with the same hospitality and generous kindness that was so fully experienced by their unfortunate predecessors, and not only supplied all their wants, but did everything in his power to regale them, and make them spend their time agreeably.

On the 6th of October, the party embarked in the Rom-bang, Dutch East-Indiaman, and sailed through the Straits of Allas. At the island of Flores, they encountered a most dreadful storm, with thunder and lightning; the pumps were choked, and the ship was driven impetuously on a barbarous shore that lay on their lee. The Dutch mariners were affrighted at the storm, and the vessel was saved by the skill and intrepidity of the British tars.

On the 30th they arrived at Samarang, where they had the delightful surprise of meeting the little schooner so long given up for lost. All the sympathies of human nature, in their utmost warmth, were called forth on both sides; and with eyes streaming with joy, they recounted to each other the mutual tale of shipwreck, famine, peril, and disaster.

The crew of the tender, on the unfortunate night when they parted with their companions, were attacked by the natives in a numerous and powerful body, but being possessed of fire-arms, they succeeded in keeping them off. On the next day the ship was missing, and was sought for in vain; and their situation now became critical in the extreme. The distress for want of water was so excessive, that one young man became deranged, and did not recover for several months. In endeavouring to make for Annamooka, they stumbled upon Tofoa, the scene of Captain Bligh's disaster, and experienced a similar treacherous attempt, which was defeated, in consequence of their being well armed; thus they, with due precaution, could afterwards carry on a trade with the natives for necessary supplies.

They had now to enter on the same career as Captain Bligh, with one very important advantage, however, that being provided with fire-arms, they could venture to land at the different islands on their route, and procure that which they most urgently wanted. They, however, neglected his precaution of steering southwards in order to clear New Guinea; the consequence of which was that they encountered the same reef upon which the Pandora had perished, and traversed long from shore to shore, without being able to find a passage. At length they were placed between the dreadful alternative of shipwreck or famine; and, as a last resource, they boldly pushed forward, and succeeded in beating over the reef.

After passing Endeavour Straits, they were picked up by a small Dutch vessel, where they were received on board, and treated with great humanity; but as no officer under the rank of lieutenant bears a commission, they had no document to show, and fell under the suspicion of being the mutineers of the Bounty. They were therefore kept under a short, though humane, surveillance, until the appearance of their fellow-seamen dispelled all suspicion.

This little schooner was a remarkably swift sailer, and being

afterwards employed in the sea-otter trade, is stated to have made one of the quickest passages ever known from China to the Sandwich Islands. This memorable little vessel was purchased at Canton, by the late Captain Broughton, to assist him in surveying the coast of Tartary, and became the means of preserving the crew of his Majesty's ship *Providence*, amounting to one hundred and twelve men, when wrecked to the eastward of Formosa, in the year 1797.

On the 7th of November, Captain Edwards and his party arrived at Batavia, where it was agreed with the Dutch East-India Company, to divide the whole of the ship's company and prisoners among four of their ships proceeding to Europe. The latter the captain took with him in the *Vreedenburgh*; but finding his Majesty's ship the *Gorgon* at the Cape, he transhipped himself and prisoners, and proceeded in her to Spithead, where he arrived on the 19th of June, 1792.

On the second day after their arrival at Spithead, the prisoners were transferred to the *Hector*, commanded by Captain (late Admiral Sir George) Montague, where they were treated with the greatest humanity; and every indulgence allowed that could with propriety be extended to men in their unhappy situation, until the period when they were to be arraigned before the competent authority, and put on their trials for mutiny and piracy, which did not take place till the arrival of the remainder of the prisoners.

The court assembled to try the prisoners on board his Majesty's ship *Duke*, on September 12th, 1792, and continued, by adjournment from day to day (except Sunday), till the 18th of the same month. Vice-Admiral Lord Hood, president; Captains Sir Andrew Snape Hamond, bart., John Colpoys, Sir George Montague, Sir Roger John Bazeley, Sir Andrew Snape Douglas, John Thomas Duckworth, John Nicholas Inglefield, John Knight, Albemarle Bertie, Richard Goodwin Keats, were present.

The charges set forth, that Fletcher Christian, who was mate of the *Bounty*, assisted by others of the inferior officers and men, armed with muskets and bayonets, had violently and forcibly taken that ship from her commander, Lieutenant Bligh; and that he, together with the master, boatswain, gunner, and carpenter, and other persons, being nineteen in number, were forced into the launch, and cast adrift. That Captain Edwards, in the *Pandora*, was directed to proceed to Otaheite, and other islands in the South Seas, and to use his best endeavours to recover the said vessel, and to bring in confinement to England the said Fletcher Christian and his associates, or as many of them as he might be able to apprehend, in order that they might be brought to condign punishment;—that Peter Heywood, James Morrison, Charles Norman, Joseph Coleman, Thomas Ellison, Thomas M'Intosh, Thomas Burkitt, John Millward, William Muspratt, and Michael Byrne, had been brought to England, and were now put on their trial, under the 19th article of war, which states,—

"If any person, in or belonging to the fleet, shall make, or endeavour to make, any mutinous assembly, upon any pretence whatsoever, every person offending herein, and being convicted thereof, by the sentence of the court-martial, shall suffer DEATH."

After hearing the evidence that was offered, both for and against the prisoners, and the prisoners having made their defence, the court met on the sixth day, viz., the 18th of September. The prisoners were brought in and audience admitted, when the president having asked the prisoners if they or any of them had anything more to offer in their defence, the court was cleared, and agreed,—

"That the charges had been proved against the said Peter Heywood, James Morrison, Thomas Ellison, Thomas Burkitt, John Millward, and William Muspratt; and did adjudge them, and each of them, to suffer death, by being hanged by the neck, on board such of his Majesty's ship or ships of war, and at such time or times, and at such place or places as the commissioners for executing the office of Lord High Admiral of Great Britain and Ireland, or any three of them for the time being, should, in writing, under their hands direct; but the court, in consideration of various circumstances, did humbly and most earnestly recommend the said Peter Heywood and James Morrison to his

Majesty's mercy; and the court further agreed, that the charges had not been proved against the said Charles Norman, Joseph Coleman, Thomas M'Intosh, and Michael Byrne, and did adjudge them and each of them to be acquitted.

On the 24th of October, the king's warrant was despatched from the Admiralty, granting a full and free pardon to Heywood and Morrison, and respite for Muspratt, which was followed by a pardon; and for carrying the sentence into execution upon Ellison, Burkitt, and Millward, which was done on the 29th, on board his Majesty's ship *Brunswick*, in Portsmouth harbour. A party from each ship in the harbour, and at Spithead, attended the execution, and the example seemed to make a great impression upon the minds of all the ships' companies present.

Twenty years had passed away, and the *Bounty*, and Fletcher Christian, and the piratical crew that he had carried off with him in that ship, had long ceased to occupy a thought in the public mind. The fate of those who had escaped continued to be involved in mystery, and only vague rumours reached Europe, till light was unexpectedly thrown upon it by the following voyage.

On the 31st of December, 1813, Sir Thomas Staines, captain of his Majesty's frigate the *Briton*, was ordered to sail with a fleet for the East Indies. In twenty-five days they arrived off Madeira, and on the 28th of March entered the harbour of Rio de Janeiro. During their stay at this place, the *Briton* received a new destination. Intelligence had been received, that the *Essex*, a frigate belonging to the United States of America, with whom England was then at war, after committing great depredations on our southern whale fishery, was then refitting in the port of Valparaiso, and Sir Thomas was ordered round Cape Horn to endeavour to capture this vessel. The crew, inspired with the true spirit of British sailors, joyfully hailed the prospects of glory and adventure which this destination opened; yet they anticipated, and experienced, at this advanced season, a boisterous passage round Cape Horn. Besides the tempests, the cold was also very severe, especially to persons who had only been provided with the thin clothing requisite in a tropical voyage.

On the 21st of May they reached the port of Valparaiso, where they saw his Majesty's ships the *Phoebe* and the *Cherub*, in possession of the object of their pursuit, which they were carrying a prize to England. The purpose of their voyage was therefore accomplished without their interposition; but as the crew were considerably harassed with their stormy passage, and a great deal of sickness prevailed, the captain determined, by way of a little relaxation, to visit Lima, and sailed for that city in company with the *Tagus*.

Lima answered most completely the purposes intended. The inhabitants were particularly fond of the English sailors, and led them a continual round of feasting and gaiety. After having spent the ten days allotted for their amusement, and which seemed to pass very rapidly, so pleasantly was their time employed, they were obliged to bid adieu to these gay quarters. They touched at several points on the coast, and then proceeded to examine the group of the Gallapagos. These islands were found dark, gloomy, and mountainous, and almost covered with the traces of volcanic eruption.

This gloomy scene was soon gladly exchanged for the more cheerful aspect of the Marquesas, where the crew met with that somewhat too cordial welcome, which always await European navigators. Here a party of them landed, and were received by the natives with every testimony of the most extravagant joy, and were presented with cocoa-nuts, slings, spears, and everything which the natives themselves accounted most valuable.

On the 2nd of September, the *Briton* sailed from the Marquesas, and steered to the southward to regain the port of Valparaiso. In the second watch of the night, land was unexpectedly discovered, and daylight discovered to them a fertile shore, varied with huts, cultivation and people. Among the latter there appeared an alacrity much greater than usual to come out and hail the Europeans. The people were making signs, launching their little canoes through the surf, and as soon as they were afloat, pulling towards the ship with the

most eager despatch. The captain was mustering the few words of the Marquesan tongue which he had picked up, to hail them with, when to the utter amazement of himself and all present, a voice came from the nearest canoe, asking in good English, "What is the ship's name?" and on receiving an answer, added, "Who is the commander?" A regular intercourse now commenced, and they were requested to come on board. They were ready to do so, but had no boat-hook to hold on by; they were offered a rope, but had nothing to make it fast to; their zeal, however, mastered every difficulty, and in a few minutes they were on board the ship. They seemed perfectly at ease, and under no apprehension; but, the crew were still lost in wonder, when one of their visitors said, "Do you know William Bligh, in England?" The veil immediately fell from their eyes, and they saw themselves about to fathom the depths of that mystery, which had hitherto involved the fate of Christian and his unhappy comrades. The question was instantly put, "Do you know one Christian?" "Oh, yes, there is his son coming up in the next boat; his name is Friday Fletcher October Christian; his father is dead now." Anxiety was now raised to the highest pitch, to learn everything relating to this mysterious transaction; question was put upon question, and from the answers which were readily given, we may trace the further career of Christian and his associates.

After leaving sixteen of their number on shore, at Matavai Bay, as before-mentioned, he again steered for Pitcairn's Island, and rejoined the establishment there, which the natives seem to have made no further attempts to oppose; but a more deadly evil afflicted the rising colony. A mortal jealousy arose between the English and the Otaheiteans; for which, on the part of the latter, there seems to have been but too good ground. Christian's wife having died in childhood soon after the birth of their eldest son, he forcibly seized on the wife of one of the Otaheiteans: which so enraged the injured and justly incensed husband, that in the fury of resentment, characteristic of savages, he determined on a bloody revenge. Taking advantage of the moment when Christian was busy in his yam plantation, he shot him in the back; the wound was mortal, and the unhappy man at once expiated his crimes with his life.

This was the signal for a general rising of the Otaheiteans. The English were surprised and overcome; two were killed, and John Adams, wounded, fled into the woods. This dreadful scene was followed by another still more tragical, and which seems almost to realise the dark traditions of ancient fable. The Otaheitean females, like those of most savage races, had almost felt a strong partiality in favour of the Europeans; and this preference, so cruel and mortifying to their own countrymen, had been one main cause of the deadly enmity between the two races. Spectators of the late fatal contest, their feelings wrought to such a pitch of regret and indignation, that, believing all that gentleness which is proper to the female character, they rose in the depth of night, and, like the too celebrated daughters of Danaus, murdered, in their sleep, their unsuspecting husbands and countrymen.

In this dreadful manner, Adams, and the few surviving English were saved: yet out of this abyss of horror, there has, by a happy Providence, arisen a society bearing no stamp of the guilty origin from which it sprung. A new race arose, removed from the scenes of violence in which they had received their birth, and carefully instructed, as far as their teachers were capable, in the duties of religion and the ties of social life. The only survivor of the original body, at the time of the arrival of the Briton, was John Adams, a man of a mild and amiable disposition, of about sixty years of age, and who denied any participation in the crime of the mutineers. He was revered as the father of the colony, and ruled with a paternal sway over this little community. Their numbers had now increased to forty-eight, of whom six were the Otaheitean females who had accompanied the Europeans in their first establishment in the colony: a great proportion of them were still in childhood; but they were eleven fine young men, grown up, and about as many of the other sex.

The islanders always spoke English, though they understood the Otaheitean. The men appeared to be a fine race,

about five feet ten inches in height, with manly features, and long black hair. Their only attire was a mantle, which went over the shoulders and hung down to the knee, being tied round the waist by a girdle, both produced from the bark of trees growing on the island. On the head they wore a straw hat, with a few feathers stuck in it by way of ornament. The young women had invariably beautiful teeth, fine eyes, and open expression of countenance, with an engaging air of simple innocence and sweet sensibility.

As soon as the first burst of curiosity on both sides had been gratified, the islanders were invited to share the breakfast which had been served up in the cabin, where, before sitting down to table, they fell on their knees, and with uplifted hands implored the blessing of heaven on the meal which they were about to partake of: at the close of the repast they resumed the same attitude, and breathed a fervent prayer of thanksgiving for the bounty which they had just experienced. Upon the whole, the crew of the Briton were highly gratified by the intercourse with these simple natives, whose deportment displayed an active intelligence and a liberal curiosity, coupled at the same time with very amiable dispositions.

In consequence of the short supply of provisions, the Briton was only enabled to remain two days off the island; but before leaving the island, the captain went on shore to visit Adams. After passing through groves of cocoa-nut and bread-fruit trees, they came to a beautiful picturesque little village: the houses were small, arranged in an oblong square, with trees interspersed; they were regular, convenient, and excessively clean. The captain was immediately introduced to Adams, whom he found a fine-looking old man approaching to sixty. In a long private interview which he had with him, they conversed fully on everything relating to the mutiny of the Bounty. He solemnly disavowed all previous knowledge of, or consent to the conspiracy formed by Christian; but at the same time admitted that, by following the fortunes of that unhappy man, he had lost every right to his country, and that his life was even forfeited to the laws. He was now at the head of a little community by whom he was adored, and whom he carefully instructed in the duties of religion, industry, and friendship.

The greatest want of this little family was that of the means of reading and writing. Adams, though very little skilled in writing, had been at great pains to preserve the chronology of the period during which he resided at Pitcairn's Island. After having exhausted his little stock of paper and ink, he used a slate and stone pencil, and had kept such a careful record of each day, with the week, month, and year to which it belonged, that there was only one day's difference between his calculation and that of the Briton, which may be accounted for by their having each half circumnavigated the globe from an opposite direction. Sir Thomas accommodated them with all the paper he could spare, and received in return a copy of Captain Cook's first voyage which had belonged to Captain Bligh, and contained a number of marginal notes in his writing.

Nothing more was heard of Adams and his family for nearly twelve years; when, in 1825, Captain Beechey, in the Blossom, who was bound on a voyage of discovery, paid a visit to Pitcairn's Island. They found that a whale-ship had been there in the meantime, and left a person of the name of John Buffet. He proved to be an able and willing school-master, and had taken upon himself the duty of clergyman. They found the inhabitants as well-disposed as described by Sir Thomas Staines, but still greatly in want of many necessities in wearing-apparel, and implements of agriculture. In consequence of a representation made by Captain Beechey to this effect, his Majesty's government sent to Valparaiso for the necessary articles, which arrived in his Majesty's ship *Seringapatam*, commanded by Captain the Hon. William Waldegrave, who arrived there in March, 1830.

The ship had scarcely anchored, when George Young was alongside in his canoe; and soon after, Friday Fletcher October Christian, with several others in a jolly-boat, who were invited to breakfast. They announced the death of John Adams, which took place in March, 1829.

Thus ended the mutiny of the *Bounty*, pregnant with loss of life, whose origin might be traced to the imaginary loss of some half dozen cocoa-nuts. Oh! that sailors from its perusal might learn the virtue of strict obedience to their commanders, and the fearful result of wandering from the path of rectitude and honour; and that captains, with their mighty power, may treat their subordinates, not as slaves and brutes, but as *men*!

BEN'S YARN.

BY HARRY BLUFF.

Ir ever there was a brave man, that man was Ben Carter. If ever there was a chap deservedly respected, and welcomed anywhere and everywhere, for his kind, open heart, and free, jovial disposition, his name was Ben Carter, too. A mighty fine treat we all considered it, when we could get Ben to indulge us with one of his seafaring adventures. But somehow, Ben was like the ladies, always required a great deal of pressing and coaxing, but always conceded at last. Ben always used to tell us it was hard enough to bear it, without preaching about it for ever. A crowd of—"Oh! but Mr. Carter!" "You can't refuse this time, sir." "Do; only this once." "Come, Mr. Carter, no gammon; at it at once," completely drowned his concluding sentence.

"Mister Carter!" reiterated the merry old tar. "I all'ays heard out as how I was sprinkled Benjamin Carter. According to the old 'oman's account, there warn't no Mister in the affair. I ain't none of yer Sacker do,* winch-organ chaps; I don't want a handle, an' a precious deal of grinding, afore yer gets any noise at all. Not I! my name's Ben—Ben Carter, an' if yer speaks properly—why—"

"Well, Ben, then, my hearty—Ben, my man, go it."

"Silence, you young rascal; if I'd only had you when I was bo'swains mate—don't disturb your respected mother there, who's mixing a glass o' grog—not too strong ma'am, please; I ain't used to it, an' my constitootion's delicate. Here's to your werry good health, and may you never drink nothing weaker than water, or stronger than brandy. There!" he added, putting the glass down, its contents considerably reduced in quantity, "that puts me in mind (from its being so extremely unlike it) of a blow out o' sham-pain I had once. I was quite a youngster, just come out o' my time. Well, there was a little brig lying in the Indy Docks, about a going to take a trip to St. Michael's for oranges; an' as my cargo o' tin was getting precious short, and as my old mess-mate—Dick, ma'm; I don't suppose you knows him, and you never need want to—was in the same mighty unpleasant circumstances, we thought as how we couldn't do better than earn a few pounds in this here brig Nancy. So we goes aboard and enters, and then discovers as how we was, saving a boy, an' him less use than nothing, the whole of the crew. The captain, an' it was a funny kid, with a very liquorish tooth, mighty stern in his way, but that was a rum 'un. Well, we gets on pretty middling, with the exception of the grog, which was mighty weak. The captain was lussy every night, as reg'lar as the night came, and in the morning began to swear at summat or other he didn't like; we didn't take much notice of the ravings of a lushington, except just now and then telling him, if he'd a little less grog, and we'd a little more, we should manage it better. Well, we gets to St. Michael's at last, after many a blow out, but very few in; and the captain goes ashore, leaving us a few biscuits and the brig. Well, he was gone two or three days, so one day Dick sings out to me, 'Ben—Ben Carter, you lubber, come here!' Well, down I goes, and there sits my gentleman, with a bottle of wine, drinking mighty freely. 'Hallo!' says I, thrown on my beam ends with surprise, 'what the —' 'Will you take a glass of wine, my man?' said Dick, coming the landsman over us in fine style. 'Much obliged to yer, yer honour,' said I, making a salam, keeping the game alive. 'Take a seat, my fine fellow,' said he; 'and have yer ever tasted shampain?' 'I had got the rheumatiz terribly bad, and it giv' me such a twinge just that moment, that,' says I, 'no; but, by gosh, I've got a pretty strong taste of real pain!' 'Well,' said

* We presume Ben meant "Sacre-dieu."

he, handing me a bumper, in one of them long, slender, tapering glasses, that, somehow or other, all'ays puts me in mind of a gal, 'try which is the best.' Well, I did try; and as the parson says, 'tried ag'in too,' till the 'shampain' made me forget all about the course I was steering, rheumatiz, and all. How much we drank, or how long we sit, God knows; but in the morning I wakes up, and finds a bottle under my head, as a pillow, and one in my harms, I had been hugging all night. Lord, how my head did hake! Well, I gets up and looks, and there lays Dick, as comfortable as a biddy, with his head in a tar-bucket, and his feet resting on one of the captain's best feather pillows. 'Dick,' says I. 'Hollo,' he says. 'Now, gemmen, for a song.'

"Keep it up, boys, there's nothing like fun, We're jolly Britons every one."

"The Captain swears he'll give you a rope's-ending," says I, 'if you are a Briton.' 'A what!' and up he jumps. 'My eye! didn't he swear. Well, by-and-bye he comes to reason a bit; and there we sits, consulting what we should do, whether we should drive the ship to the devil, and go with her, or whether we should speak the truth. We was rather averse to the latter, for we felt certain the capten wouldn't only stop our pay, but would make a felony job of it as soon as ever we reaches land. Well, we sits there quiet enough, except Dick's keeping on d—g the shampain up hill and down. Presently, up he jumps, like a quaker when the spirit moves him, and, says he:—'By God I've hit it! Will you stick to me?' 'Won't I, by jingo!' says I, 'like pitch; what you say, I'll swear to.' 'You're a sailor,' says he, 'every inch of you—and that's no mean compliment. Now then, operations number one,' says he, opening the cabin window, and putting in all the bottles full and empty, he ties 'em down securely, and drops 'em in the sea. 'You fool!' cries I. 'Gently, my fine fellow!' says he; 'its a long way to the bottom, and if the captain wants 'em he's welcome to go and fetch 'em. If I'd a kept one bottle he'd a ferreted about till he got it; now,' he says, 'there's no fear of his making a disco' very that way; and besides,' he says, 'I means to bounce the captain he give 'em away.' He seemed mighty certain of success, but somehow, I didn't think it quite so certain.—Well, night came at last, and we heard the boat pulling alongside, and up comes the captain and two or three fellows with as much hair on their faces, as their heads, with him. He was as drunk as blazes. Dick shoves my elbow after the kids was gone, and pointing to the captain as he went staggering down, whispered, 'All right!' Well, as we'd got our cargo, and a fair wind springing up, we steers for home. When we'd got fairly out at sea, I hears the captain storming away: he'd just made a discovery of his loss. We was both on deck, Dick and me; so up he comes, foaming at the mouth, calling Dick all the pretty names that ain't in the dictionary. Dick turns round to him as cool as a snowball:—'You're a very nice man, you are; what the devil do you think I know about your wine?' 'All I know is,' says the captain, getting into a calm passion, 'I left it in the vessel three days ago, and left you in charge of it; and by God,' said he, 'unless you produce it I'll indict you at the first port, for the robbery.' 'Why, you old scoundrel!' said Dick; 'you're worse than the bishop that burnt his own mother for witchcraft! How the devil am I to know what you left?—if I had, old cock, I should have felt considerable pleasure in drinking your health; but worse luck, I didn't. But I say, was it a oak box, iron'd down?' 'It was.' 'Well, then, for your own particular satisfaction, I give it away.' 'Gave it away!' cried the captain, his eyes almost out of his head. 'Yes,' said Dick, in the same comfortable tone, 'and by your orders, too.' 'You lie, you thief! you—' 'Gently does it, my man; if I was captain of this ship, instead of mate, I'd confess to all you call me. You came on board last night, drunk—of course you don't recollect that, though. One of your friends—him with the 'tikler sort of tile,—says to me, when I was waiting on you, 'Your capten has made me a present of that case of wine; will you place it in my boat?' He was such a werry pleasant looking gentleman, and tipped me such a pretty present, that I asks you if I was to do it, and you very politely replied, 'yes, and be d—d!' that I executed the for-

mer, but must beg your pardon for not having done the latter.' 'This is mysterious to me,' said the captain. 'There's a witness as was present at the time says Dick, pointing out your humble servant. 'What did he say?—Eh Ben?' 'Why, told you to take; of course he did!' 'There,' said Dick, 'I suppose I'm a wine-stealer, a thief, a liar—now ain't I?' 'No,' said the captain, 'I know I was touched; but, upon my soul, had no idea I was so bad as you make out.' 'I'm bad enough, but I'd no idea I was so bad as you made out,' said Dick, drily. 'For that,' said the captain, 'I beg your pardon; a passionate man will say anything.' 'Then, according to your account,' said Dick, by way of a clincher, 'all passionate men ought to be muzzled. I should recommend that you keep clear of the straps.' 'That afternoon,' said Ben, finishing his yarn, 'we had, strange to say, pure grog; and, when we got ashore, Dick got a sovereign extra for drinking the captain's shampain. Mid-dling, wasn't it?'

THE SEAMAN'S WIDOW.

Aye, press them to thy widow'd breast,
No longer now the place of rest,
Where free from grief, from danger free,
They slept the sleep of infancy.
With yon tempest-stricken bark,
The billow's sport, the lightning's mark,
Weak and weary, faint and worn,
Their father, friend, their all is borne.
The storm is lowering from the sky,
The furious waves run madly high;
Loud and fearful is the roar—
Oh, God! protect him to the shore.
'Tis vain—through many a danger past,
This scene of peril is the last;
Dear as he is to thy young heart,
The hour hath come, which bids you part.

A NEW ENGINE OF WAR: NOT WARNER'S.

WE were exactly in the latitude of Guadeloupe, with the usual breeze, when, at day-light, a rakish-looking brig was seen in chase. Captain Digges took a long survey of the stranger with his best glass, one that was never exhibited but on state occasions, and then he pronounced him to be a French cruiser; most probably a privateer. That he was a Frenchman, Marble affirmed, was apparent by the height of his top-masts and the shortness of his yards; the upper spars, in particular, being mere apologies for yards. Everybody who had any right to an opinion, was satisfied the brig was a French cruiser, either public or private.

The Tigris was a fast ship, and she was under top-mast and top-gallant studding-sails at the time, going about seven knots. The brig was on an easy bowline, evidently looking up for our wake, edging off gradually as we drew ahead. She went about nine knots, and bade fair to close with us by noon. There was a good deal of doubt, aft, as to the course we ought to pursue. It was decided in the end, however, to shorten sail and let the brig come up, as being less subject to cavils, than to seem to avoid her. Captain Digges got out his last letters from home, and I saw him showing them to Captain Robbins, the two conning them over with great earnestness. I was sent to do some duty near the hencoops where they were sitting, and overheard a part of their conversation. From the discourse, I gathered that the proceedings of these picaroons were often equivocal, and that Americans were generally left in doubt, until a favourable moment occurred for the semi-pirates to effect their purposes. The party assailed did not know when or how to defend himself until it was too late.

"These chaps come aboard you, sometimes, before you are aware of what they are about," observed Captain Robbins.

"I'll not be taken by surprise in that fashion," returned Digges, after a moment of reflection. "Here, you Miles, go forward and tell the cook to fill his coppers with water, and

to set it boiling as fast as he can; and tell Mr. Marble I want him aft. Bear a hand, now, youngster, and give them a lift yourself."

Of course I obeyed, wondering what the captain wanted with so much hot water as to let the people eat their dinners off cold grub, rather than dispense with it; for this was a consequence of his decree. But we had not got the coppers half filled, before I saw Mr. Marble and Neb lowering a small ship's engine from the launch, and placing it near the galley, in readiness to be filled. The mate told Neb to screw on the pipe, and then half a dozen of the men, as soon as we got through with the coppers, were told to fill the engine with sea water. Captain Digges now came forward to superintend the exercise, and Neb jumped on the engine, flourishing the pipe about with the delight of a "nigger." The captain was diverted with the black's zeal, and he appointed him captain of the firemen on the spot.

"Now, let us see what you can do at that forward dead-eye, darky" said Captain Digges, laughing. "Take it directly on the strap. Play away, boys, and let Neb try his hand."

It happened that Neb hit the dead-eye at the first jet, and he showed great readiness in turning the stream from point to point as ordered. Neb's conduct on the night of the affair with the proas had been told to Captain Digges, who was so well pleased with the fellow's present dexterity, as to confirm him in office. He was told to stick by the engine at every hazard. Soon after, an order was given to clear for action. This had an ominous sound to my young ears, and though I have no reason to suppose myself deficient in firmness, I confess I began to think again of Claw-bonny, and Grace, and Lucy; ay, and even of the mill. This lasted but for a moment, however, and as soon as I got at work, the feeling gave me no trouble. We were an hour getting the ship ready, and, by that time, the brig was within half a mile, luffing fairly up on our lee-quarter. As we had shortened sail, the privateer manifested no intention of throwing a shot to make us heave-to. She seemed disposed to extend courtesy for courtesy. The next order was for all hands to go to quarters. I was stationed in the main-top, and Rupert in the fore. Our duties were to do light work, in the way of repairing damages; and the captain, understanding that we were both accustomed to fire-arms, gave us a musket a-piece, with orders to blaze away as soon as they began the work below. As we had both stood fire once, we thought ourselves veterans, and proceeded to our stations, smiling and nodding to each other as we went up the rigging. Of the two, my station was the best, since I could see the approach of the brig, the mizen-top-sail offering but little obstruction to vision after she got near; whereas the main-top-sail was a perfect curtain, so far as poor Rupert was concerned. In the way of danger, there was not much difference as to any of the stations on board, the bulwarks of the ship being little more than plank that would hardly stop a musket-ball; and then the French had a reputation for firing into the rigging.

As soon as all was ready, the captain sternly ordered silence. By this time the brig was near enough to hail. I could see her decks quite plainly, and they were filled with men. I counted her guns, too, and ascertained she had but ten, all of which seemed to be lighter than our own. One circumstance that I observed, however, was suspicious. Her fore-castle was crowded with men, who appeared to be crouching behind the bulwarks, as if anxious to conceal their presence from the eyes of those in the Tigris. I had a mind to jump on a back-stay and slip down on deck, to let this threatening appearance be known; but I heard some sayings touching the imperative duty of remaining at quarters in face of the enemy, and I did not like to desert my station. Tyros have always exaggerated notions both of their rights and their duties, and I had not escaped the weakness. Still, I think some credit is due for the alternative adopted. During the whole voyage, I had kept a reckoning, and paper and pencil were always in my pocket, in readiness to catch a moment to finish a day's work. I wrote as follows on a piece of paper, therefore, as fast as possible, and dropped

the billet on the quarter-deck, by enclosing a copper in the scrawl, cents then being in their infancy. I had merely written—"The brig's fore-castle is filled with armed men, hid behind the bulwarks!" Captain Digges heard the fall of the copper, and looking up—nothing takes an officer's eyes aloft quicker than to find anything coming out of a top!—he saw me pointing to the paper. I was rewarded for this liberty by an approving nod. Captain Digges read what I had written, and I soon observed Neb and the cook filling the engine with boiling water. This job was no sooner done than a good place was selected on the quarter-deck for this singular implement of war, and then a hail came from the brig.

"Vat zat sheep is?" demanded some one from the brig.

"The Tigris of Philadelphia, from Calcutta home. What brig is that?"

"La Folie—corsair Français. From vair you come?"

"From Calcutta. And where are you from?"

"Guadaloupe. Vair you go, eh?"

"Philadelphia. Do not luff so near me; some accident may happen."

"Vat you call accident? Can nevair hear, eh? I will come tout pres."

"Give us a wider berth, I tell you! Here is your jib-boom nearly foul of my mizen-rigging."

"Vat mean zat, bert' vidair? eh! Allons, mes enfans; c'est le moment!"

"Luff a little, and keep his spar clear," cried our captain. "Squirt away, Neb, and let us see what you can do!"

The engine made a movement, just as the French began to run out on their bowsprit, and by the time six or eight were on the heel of the jib-boom, they were met by the hissing hot stream, which took them *en echelon*, as it might be, fairly raking the whole line. The effect was instantaneous. Physical nature cannot stand excessive heat, unless particularly well supplied with skin; and the three leading Frenchmen finding retreat impossible, dropped incontinently into the sea, preferring cold water to hot—the chances of drowning, to the certainty of being scalded. I believe all three were saved by their companions in-board, but I will not vouch for the fact. The remainder of the intended boarders, having the bowsprit before them, scrambled back upon the brig's fore-castle as well as they could, betraying by the random way in which their hands flew about, that they had a perfect consciousness how much they left their rear exposed on the retreat. A hearty laugh was heard in all parts of the Tigris, and the brig, putting her helm hard up, wore round like a top, as if she were scalded herself.

We all expected a broadside now; but of that there was little apprehension, as it was pretty certain we carried the heaviest battery, and had men enough to work it. But the brig did not fire, I suppose because we fell off a little ourselves, and she perceived it might prove a losing game. On the contrary, she went quite round on her heel, hauling up on the other tack far enough to bring the two vessels exactly *dos à dos*. Captain Digges ordered two of the quarter-deck nines to be run out of the stern ports; and it was well he did, for it was not in nature for men to be treated as our friends in the brig had been served, without manifesting certain signs of ill-humour. The vessels might have been about three cables' lengths asunder when we got a gun. The first I knew of the shot was to hear it plunge through the mizen-top-sail, then it came whistling through my top, between the weather-rigging and the mast-head, cutting a hole through the main-top-sail, and proceeding onward, I heard it strike something more solid than canvass. I thought of Rupert and the fore-top in an instant, and looked anxiously down on deck to ascertain if he were injured.

"Fore-top, there!" called out Captain Digges. "Where did that shot strike?"

"In the mast-head," answered Rupert, in a clear, firm voice. "It has done no damage, sir."

"Now's your time, Captain Robbins—give 'em a reminder."

Both our nines were fired, and, a few seconds after, three cheers arose from the decks of our ship. I could not see the brig now, for the mizen-top-sail; but I afterwards learned that we had shot away her gaff. This terminated the combat, in

which the glory was acquired principally by Neb. They told me, when I got down among the people again, that the black's face had been dilated with delight the whole time, though he stood fairly exposed to musketry, his mouth grinning from ear to ear. Neb was justly elated with the success that attended this exhibition of his skill, and described the retreat of our enemies with a humour and relish that raised many a laugh at the discomfited privateer's man. It is certain that some of the fellows must have been nearly parboiled. I have always supposed this affair between La Folie and the Tigris to have been the actual commencement of hostilities in the *quasi* war of 1798-9 and 1800. Other occurrences soon supplanted it in the public mind; but we, of the ship, never ceased to regard the adventure as one of great national interest. It did prove to be a nine days' wonder in the newspapers.—*Cooper's Afloat and Ashore.*

I LOVE THE SEA.

I love the sea,
The blue, the free,
The roar of its mighty minstrelsy;
The foam of its waves,
That madly raves,
Is the dearest sight my bosom craves.
With thee, my bark,
O'er the waters dark,
With the summer moon our course to mark;
How proud we ride,
O'er the dancing tide,
While the white foam laves thy heaving side.
We cut our way
Thro' the shining spray,
While the crowding billows round us play;
And our shouts of glee,
Rung wild and free,
On the mighty waste of the boundless sea.
The mariner's dirge,
Is thy sounding surge,
As it rings its knell on the grave's dark verge;
And his last long sleep,
In the quiet deep,
Is as calm as when billows o'er him sleep.
I love the sea,
The blue, the free,
And the roar of its mighty minstrelsy;
Where the wild waves roam,
In their caps of foam,
The mariner finds his chosen home.
Then spread thy wing,
Thou bounding thing,
And far o'er the waves like a sea-gull spring;
Our trust on high,
In the smiling sky,
And we rove 'neath the light of a watching eye.

DURING the gale which proved so fatal to the Thomas and Mary and her crew, three boats were seen in Chiswell Cove, with the crews in the most imminent danger from the fury of the waves, which, rising in terrific majesty, frustrated every attempt of the people on shore to render them assistance. At this critical juncture, a dog of the Newfoundland breed, but bred in the island, plunged into the water, and, surmounting the tossing billows, succeeded in reaching the nearest boat. The crew immediately put a line into his mouth, and the sagacious and brave animal returned with it in safety to the shore. This line was eagerly grasped by the sailors on the beach, a rope was fastened to it, and, by dint of great exertion and presence of mind, as well of those in the boat, as those on the land, all the three boats were safely pulled on the beach, one by one, the boats having a communication with each other by means of a long rope. This is not a solitary instance of the vast utility of the dogs bred in Portland, in cases of marine distress.

THE BOMBARDMENT OF ALGIERS.

For many years the pirates on the coast of Barbary had carried on their inhuman trade of seizing the cargoes, burning the vessels, and murdering the crews of all ships inferior in size and metal to their own, sailing in those seas.

So long had these crimes been perpetrated, and so great had become their hardihood, that they even offered insult to the British flag, which had hitherto been respected by this horde of pirates: so bold and desperate became their attacks, that it was found absolutely necessary to stop them at all risks. Preferring an amicable settlement to violent measures—either of which alternatives must have been adopted—Sir Thomas Maitland, the governor of Malta, was commissioned to negotiate with the deys of the several forts, to obtain a cessation of

hostilities, and a guarantee of their conduct for the future. He proceeded to Tripoli to effect that purpose, the government of which place immediately conceded to his views. At Tunis, also, everything was amicably settled by negotiation.

These arrangements, however, proving ineffectual, Admiral Lord Exmouth, with a portion of the Mediterranean fleet, proceeded, in the early part of the year 1816, first to Tunis, and then to Tripoli. At both these places the deys appeared disposed to accede to any terms; and his lordship proposed a treaty, for ever prohibiting the making of Christian slaves, and that such prisoners as might be taken in war, should be treated according to the practice of civilised Europe. These stipulations were readily agreed to, treaties were signed, and the fleet returned to Algiers, where Lord Exmouth proposed to the dey a similar treaty, against which, however, he made a firm and reso-

THE BOMBARDMENT OF ALGIERS, BY THE BRITISH FLEET, UNDER THE COMMAND OF LORD EXMOUTH, 1816.

lute stand. Lord Exmouth, therefore, departed from the interview with a determination to commence hostilities; on which the dey ordered the British consul, McDonald, to be confined, and all the English vessels at Oran to be seized. Negotiations, however, were resumed, which ended in an agreement, that three months should be allowed for obtaining the sanction of the Grand Seignior to the proposed treaty, and the Tagus frigate was appointed to take the dey's ambassador to Constantinople. Scarcely, however had Lord Exmouth reached England, when intelligence arrived of a new and horrible outrage; between three and four hundred Corsican, Neapolitan, and Sicilian fishing-boats, employed in the coral fishery, near Tunis, having been attacked by an Algerine frigate, the fortress of Bona also firing upon them. At the same time, a corps of cavalry from Bona charged them furiously, and the slaughter amongst these poor defenceless creatures was most dreadful.

No. II.

Finding it impracticable to bind the barbarians by treaties, it was at length resolved to take severe vengeance for their cruelty and perfidy; and Lord Exmouth accordingly sailed from Plymouth on the twenty-eighth of July, in the Queen Charlotte, of a hundred and ten guns, with four other ships of the line, five frigates, and several sloops, bombs, &c. Having rendezvoused at Gibraltar, where he was joined by a Dutch squadron, his lordship proceeded on his voyage on the fourteenth of August. The Algerines, it appears, had, ever since the end of May, been preparing for the expected attack of our fleet, by removing every article of value from the town, which was well defended by about one thousand pieces of ordnance. The batteries were above one another, strongly constructed and fortified; and along a tongue of land, which defends the entrance into the inner part of the harbour, and also the approach to it, was a range of strong batteries, which our ships were obliged to

pass, to take their station near the town, for the purpose of bombarding it. Lord Exmouth arrived on the twenty-seventh of August; and, all proposals for conciliation having proved ineffectual, the fleet passed the batteries, and at three o'clock in the afternoon, the firing commenced. The Queen Charlotte took her station off the extreme point of the tongue, by which she enfiladed the whole line of batteries along it; and so near was she, that every part of the mole, and what is called the Marine, was visible from her quarter-deck. Both were crowded with spectators, and Lord Exmouth waved his hat to them to retire, and signified that he was about to begin hostilities; but they did not attend to, or perhaps did not comprehend the meaning of, his humanely intended warning, and the consequence was, that our first broadside swept off from five hundred to one thousand of them. The most advanced of the Algerine navy

was a brig, to which the Queen Charlotte lashed herself: closer in with the shore, in the bosom of the harbour, were two frigates, and the rest of the Algerine vessels behind them. The fury and tremendous nature of the bombardment will never be forgotten. It continued till nearly eleven; the Algerines fighting all the time with the utmost fury, but yet with great skill and effect. About ten the land-breeze came on, and it was deemed advisable to take a larger offing during the night. It was extremely dark; but the darkness was illuminated by a violent storm of lightning, with thunder, and by the incessant fire of the batteries. Next morning the city and harbour exhibited a terrible scene of desolation, four large Algerine frigates, five corvettes, a great number of smaller vessels of all descriptions, the magazines, arsenals, and a large quantity of marine stores, being destroyed; whilst their loss in

raen was between six and seven thousand: the assailants had also to lament a loss in killed and wounded of more than eight hundred. Lord Exmouth now repeated with effect the proposals which had before been rejected; and the result of this splendid achievement was, that the dey agreed totally to abolish Christian slavery; to deliver up all the slaves in his dominions, to whatever nation they might belong; to return all the money that he had received for the redemption of slaves since the commencement of the year; and to make reparation and a public apology to the British consul, for the wrong and indignities to which he had been subjected.

After the treaties had been negotiated, and the dey had refunded three hundred and eighty-two thousand five hundred dollars to the government of Naples and Sardinia, and had released ten hundred and eighty-three Christian slaves, it came to the knowledge of Lord Exmouth, that two Spaniards, the one a merchant, and the other the vice-consul of that nation, were still held in custody, on pretence that they were prisoners

for debt. His lordship immediately insisted on their unconditional release, and prepared for the recommencement of hostilities; in consequence of which they were set at liberty, and not one Christian prisoner remained in Algiers. Our gallant squadron quitted on the third of September, and Lord Exmouth, who was twice slightly wounded during the action, was raised from the dignity of baron to that of viscount, for his services on this occasion. A considerable promotion also took place amongst the officers, who had so nobly participated in the chastisement of an unprincipled tyrant.

The following is Lord Exmouth's official account, which records many interesting particulars relative to this memorable transaction, written in a style which reflects the highest honour on the noble and gallant admiral:

“Queen Charlotte, Algiers Bay,
August 28, 1816.”

“SIR—In all the vicissitudes of a long life of public service, no circumstance has ever produced on my mind such impres-

sions of gratitude and joy as the event of yesterday. To have been one of the humble instruments, in the hands of Divine Providence, for bringing to reason a ferocious government, and destroying for ever the insufferable and horrid system of Christian slavery, can never cease to be a source of delight and heartfelt comfort to every individual happy enough to be employed in it. I may, I hope, be permitted, under such impressions, to offer my sincere congratulations to their lordships on the complete success which attended the gallant efforts of his Majesty's fleet in their attack upon Algiers of yesterday; and the happy result produced from it on this day by the signature of peace.

"Thus has a provoked war of two days' existence been attended by a complete victory, and closed by a renewed peace for England and her ally, the King of the Netherlands, on conditions dictated by the firmness and wisdom of his Majesty's government, and commanded by the vigour of their measures.

"My thanks are justly due for the honour and confidence his Majesty's ministers have been pleased to repose on my zeal on this highly important occasion. The means were by them made adequate to my own wishes, and the rapidity of their measures speak for themselves. Not more than one hundred days since, I left Algiers with the British fleet, unsuspicious and ignorant of the atrocities which had been committed at Bona; that fleet, on its arrival in England, was necessarily disbanded, and another with proportionate resources created and equipped; and although impeded in its progress by calms and adverse winds, has poured the vengeance of an insulted nation, in chastising the cruelties of a ferocious government, with a promptitude beyond example, and highly honourable to the national character, eager to resent oppression or cruelty, whenever practised upon those under their protection.

"Would to God, that in the attainment of this object, I had not deeply to lament the severe loss of so many gallant officers and men: they have profusely bled in a contest which has been peculiarly marked by proofs of such devoted heroism as would rouse every noble feeling, did I dare indulge in relating them.

"Their lordships will already have been informed, by his Majesty's sloop *Jasper*, of my proceedings up to the 14th inst., on which day I broke ground from Gibraltar, after a detention, by a foul wind, of four days.

"The fleet complete in all its points, with the addition of five gun-boats fitted at Gibraltar, departed in the highest spirits, and with the most favourable prospect of reaching the port of their destination in three days; but an adverse wind destroyed the expectation of an early arrival, which was the more anxiously looked for by myself, in consequence of hearing, the day I sailed from Gibraltar, that a large army had been assembled, and that very considerable additional works were throwing up, not only on both flanks of the city, but also immediately about the entrance of the mole; from this I was apprehensive that my intention of making that point my principal object of attack had been discovered to the dey by the same means he had heard of the expedition. This intelligence was, on the following night, greatly confirmed by the *Prometheus*, which I had despatched to Algiers some time before, to endeavour to get away the consul. Captain Dashwood had with difficulty succeeded in bringing away, disguised in midshipman's uniform, his wife and daughter, leaving a boat to bring off their infant child coming down in a basket with the surgeon, who thought he had composed it, but it unhappily cried in the gateway, and, in consequence, the surgeon, three midshipmen, in all, eighteen persons were seized and confined as slaves in the usual dungeons. The child was sent off the next morning by the dey, and as a solitary instance of his humanity, it ought to be recorded by me.

"Captain Dashwood further confirmed, that about forty thousand men had been brought down from the interior, and all the janissaries called in from distant garrisons, and that they were indefatigably employed in their batteries, gun-boats, &c., and everywhere strengthening the sea-defences.

"The dey informed Captain Dashwood, he knew perfectly well the armament was destined for Algiers, and asked him if it was true; he replied, if he had such information, he knew as

much as he did, and probably from the same source—the public prints.

"The ships were all in port, and between forty and fifty gun and mortar-boats ready, with several more in forward repair. The dey had closely confined the consul, and refused either to give him up, or promise his personal safety: nor would he hear a word respecting the officers and men seized in the boats of the *Prometheus*.

"From the continuance of adverse winds and calms, the land to the westward of Algiers was not made before the 26th, and the next morning at day-break the fleet was advanced in sight of the city, though not so near as I had intended. As the ships were becalmed, I embraced this opportunity of despatching a boat under cover of the Severn, with a flag of truce, and the demands I had to make, in the name of his royal highness the Prince Regent, on the dey of Algiers, directing the officer to wait two or three hours for the dey's answer, at which time, if no reply was sent, he was to return to the flag-ship: he was met near the mole by the captain of the port, who, on being told the answer was expected in one hour, replied, that it was impossible: the officer then said he would wait two or three hours; he then observed two hours was quite sufficient.

"The fleet at this time, by the springing up of the sea-breeze, had reached the bay, and were preparing the boats and flotilla for service until near two o'clock; when, observing my officer was returning with the signal flying, that no answer had been received, upwards of three hours, I instantly made the signal to know if the ships were all ready, which being answered in the affirmative, the Queen Charlotte bore up, followed up by the fleet, for their appointed stations; the flag, leading in the prescribed order, was anchored in the entrance of the mole, at about fifty yards distance. At this moment not a gun had been fired, and I began to suspect a full compliance with the terms which had been so many hours in their hands: at this period of profound silence, a shot was fired at us from the mole, and two at the ships to the northward then following; this was promptly returned by the Queen Charlotte, who was then lashing to the mainmast of a brig, fast to the shore in the mouth of the mole, and which we had steered for as the guide to our position.

"Thus commenced a fire as animated and well supported, as I believe, was ever witnessed, from a quarter before three until nine, without intermission, and which did not cease altogether until half-past eleven.

"The ships immediately following me were admirably and coolly taking their stations, with a precision even beyond my most sanguine hope; and never did the British flag receive, on any occasion, more zealous and honourable support. To look further on the line than immediately round me was perfectly impossible, but so well grounded was my confidence in the gallant officers I had to command, that my mind was left perfectly free to attend to other objects, and I knew them in their stations only by the destructive effect of their fire upon the walls and batteries to which they were opposed.

"I had about this time the satisfaction of seeing Vice-admiral Van Capellan's flag in the station I had assigned him, and soon after, at intervals, the remainder of his frigates keeping up a well-supported fire on the flanking batteries he had offered to cover us from, as it had not been in my power, for want of room, to bring him in the front of the mole.

"About sunset I received a message from Rear-admiral Milne, conveying to me the severe loss the Impregnable was sustaining, having then one hundred and fifty killed and wounded, and requesting I would, if possible, send him a frigate to divert some of the fire he was under.

"The Glasgow, near me, immediately weighed, but the wind had been driven away by the cannonade, and she was obliged to anchor again, having obtained rather a better position than before.

"I had, at this time, sent orders to the explosion vessel, under the charge of Lieutenant Fleming and Mr. Parker, by Captain Reade, of the engineers, to bring her into the mole, but the rear-admiral having thought she would do him essential service if exploded under the battery in his front, I sent

orders to this vessel to that effect, which were executed. I desired also the rear-admiral might be informed, that many of the ships being now in flames, and certain of the destruction of the whole, I considered I had executed the most important part of my instructions, and should make every preparation for withdrawing the ships, and desired he would do so as soon as possible with his division.

"There were awful moments during the conflict which I cannot now attempt to describe, occasioned by firing the ships so near us, and I had long resisted the eager entreaties of several around me, to make the attempt upon the outer frigate, distant about one hundred yards, which at length I gave in to, and Major Gossett, by my side, who had been eager to land his corps of miners, pressed me most anxiously for permission to accompany Lieutenant Richards in this ship's barge. The frigate was instantly boarded, and in ten minutes in a perfect blaze; a gallant young midshipman, in rocket-boat, No. 8, although forbidden, was led by his ardent spirit, to follow in support of the barge, in which he was desperately wounded, his brother officer killed, and nine of his crew. The barge, by rowing more rapidly, had suffered less, and lost but two.

"The enemy's batteries around my division were about ten o'clock silenced, and in a state of perfect ruin and dilapidation, and the fire of the ships was reserved as much as possible, to save powder, and reply to a few guns now and then bearing upon us, although a fort on the upper angle of the city, on which our guns could not be brought to bear, continued to annoy the ships by shot and shell during the whole time.

"Providence at this interval gave to my anxious wishes the usual land-wind, common in this bay, and my expectations were completed. We were all hands employed warping and towing off, and by the help of the light air, the whole were under sail, and came to anchor out of reach of shells, about two in the morning, after twelve hours' incessant labour.

"The flotilla of mortar, gun, and rocket-boats, under the direction of their respective artillery officers, shared, to the full extent of their power, in the honours of this day, and performed good service; it was by their fire all the ships in the port (with the exception of the outer frigate) were in flames, which extended rapidly over the whole arsenal, storehouses, and gun-boats, exhibiting a spectacle of awful grandeur and interest no pen can describe.

"The sloops of war which had been appropriated to aid and assist the ships of the line and prepare for their retreat, performed not only that duty well, but embraced every opportunity of firing through the intervals, and were constantly in motion.

"The shells from the bombs were admirably well thrown by the royal marine artillery; and although thrown directly across and over us, not an accident that I know of, occurred to any ship.

"The whole was conducted in perfect silence, and such a thing as a cheer I never heard in any part of the line; and that the guns were well worked and directed, will be seen for many years to come and remembered by these barbarians for ever.

"The conducting this ship to her station by the master of the fleet and ship, excited the praise of all. The former has been my companion in arms for more than twenty years.

"Having thus detailed, although but imperfectly, the progress of this short service, of myself and the officers and men of every description I have the honour to command, will be received by his royal highness the Prince Regent, with his accustomed grace. The approbation of our services by our sovereign, and the good opinion of our country, will, I venture to affirm, be received by us all with the highest satisfaction.

"If I attempted to name to their lordships the numerous officers who, in such a conflict, have been at different periods more conspicuous than their companions, I should do injustice to many; and I trust there is no officer in the fleet I have the honour to command, who will doubt the grateful feelings I shall ever cherish for their unbounded and unlimited support. Not an officer or man confined his exertions within the precise limits of their own duty; all were eager to attempt services which I found more difficult to restrain than excite; and no

where was the feeling more conspicuous than in my own captain, and those officers immediately about my person. My gratitude and thanks are due to all under my command, as well as to the Vice-admiral Capellan, and the officers of the squadron of his majesty the king of the Netherlands; and I trust they will believe that the recollection of their services will never cease but with my life. In no instance have I ever seen more energy and zeal; from the youngest midshipman to the highest rank, all seemed animated by one soul, and of which I shall with delight bear testimony to their lordships, whenever that testimony can be useful.

"I have confided this despatch to Rear-admiral Milne, my second in command, from whom I have received, during the whole service entrusted to me, the most cordial and honourable support. He is perfectly informed of every transaction of the fleet, from the earliest period of my command, and is fully competent to give their lordships satisfaction on any points which I may have overlooked, or have not time to state. I trust I have obtained from him his esteem and regard, and I regret I had not sooner been known to him.

"By accounts from the shore, I understand the enemy's loss, in killed and wounded, is between six and seven thousand men.

"I have the honour to be, &c."

"EXMOUTH."

Total British loss, one hundred and twenty-eight killed, and six hundred and ninety wounded.

Total Dutch loss, thirteen killed and fifty-two wounded.

Grand total loss, eight hundred and eighty-three.

The following is a memorandum of the destruction in the mole of Algiers, in the attack of the 27th of August, 1816:—Four large frigates of forty-four guns; five large corvettes, from twenty-four to thirty guns; all the gun and mortar boats, except seven—thirty destroyed; several merchant-brigs and schooners; a great number of small vessels of various descriptions; all the pontoons, lighters, &c.; storehouses and arsenal, with all the timber and various marine articles, destroyed in part; a great many gun-carriages, mortar-beds, casks, and ships' stores of all descriptions.

CHARLES HAMILTON,

THE HERO OF VIGO.

THERE cannot be a pleasanter theme for an old sailor to dwell upon than the personal heroism, and intrepidity of one of his own craft. Recalling to his mind as it does, as tho' events of yesterday, scenes and adventures long past, and nearly forgotten.

It is now with sincere pleasure and admiration, we lay before our readers, the brilliant achievements of the youth whose name heads this article.

Charles Hamilton was the only son of a gentleman of considerable fortune, and we believe a relative of the Duke of that name. In early life he was intended (but as Master Charles thought doomed,) to the profession of a lawyer.

His daring and adventurous spirit, never quiet or at rest little suited the dry, musty, tedious, preamble of law parchments. A book full of fights and exploits, was in his opinion, far preferable to what he had not inaptly styled—"the dry, incomprehensible, prosy prose—the laws of England." His parents called into operation all their powers of persuasion, to induce him to embrace this, "desirable opportunity." What the threats of his father had failed in, the tears of his mother had nearly, and doubtless would have effected; when the rumour went abroad of the preparations for the expedition against Cadiz.

Many a youth, who for months and months had been pining for a profession, which, from its danger, was repugnant to the feelings of their parents, were decided with the impetuosity of youth, but the firmness of manhood, to join this expedition. Among them was Charles Hamilton. Proof against all persuasion and entreaty, and resolutely bent on going, his parents (though with evident pain and reluctance) gave their consent. To the care of Vice-Admiral Hopson, a friend of the Hamilton family, Charles was confided. With a proud, happy heart,

and imagination glowing with prospects of glory and of rank, young Charles departed on this dangerous enterprise.

The disastrous end of this adventure is too well known to need recital here. The conduct of both soldiers and sailors, in plundering a quiet and inoffensive people, was deserving of the highest censure. But, when added to the destruction of property, came the maiming and insults inflicted on the people by the brutal and intoxicated soldiery, that this conduct should meet with the resistance it did, cannot but be considered as a natural consequence.

The fleet was subsequently compelled to set sail for England; the commanders in despair, at the disgraceful result of their mission.

On their way to England, they heard the joyful news that the French men-of-war, and Spanish galleons, were riding safely at Vigo. Sir George Rooke immediately forwarded the news to the Dutch Admiral Vaudergals, at the same time dropping a hint, that it would be well to exercise as great alacrity as possible, if only to atone for their last failure. All sails were set, in order to join as speedily as possible their mutual French friends; and one thick, hazy morning, they were safely riding off Vigo. A council of war was called; and it having been decided that the Duke of Ormond, with the troops

under his command, should land and endeavour to effect the reduction of the fort, the troops were landed; and it was, after a short but desperate resistance, taken. The combined English and Dutch fleets now bore down upon the French and Spanish vessels lying in the bay. Vice-Admiral Hopson opened his fire on the Spanish men-of-war, running his ship completely between the two. Charles Hamilton, ardent and sanguine, had felt their late disappointment bitterly; but he knew that the time had come for them to retrieve and atone for it, and his gallant heart beat high at the prospect of an engagement.

The din of war had now commenced in dreadful earnest, between the Torbay and the Spanish, who were now attempting to board the admiral's ship. Such was the quietude with which they had made their attack, that some actually gained the deck of the Torbay before they were noticed. Young Hamilton, his eyes flashing fire, but cool and collected, placed himself between the admiral and the boarders, and called upon the (for the instant) panic-stricken sailors, to stand firm. A Spanish officer, with a cheer, rushed forward, but instantly fell dead, struck in the breast with Charles's bullet. The next shared the same fate; and Charles, drawing his cutlass, laid it about with such fearful earnestness and vigour, that the Spaniards astonished, drew back. But two, with an oath, sprang at him.

the first, to meet his death; the second, with a well-directed blow, laid our young hero bleeding and insensible at his feet. The English now, in their turn, became assailants, and speedily drove the Spaniards back; two of whom, stooping, seized the insensible Charles, as a precious prize, and bore him to their own vessel. A fire-ship had been so dexterously placed alongside the Torbay, that all the exertions of the men could not turn it adrift. Their situation was perilous in the extreme, in momentary danger of being all destroyed. Face was raised to face, pale as death, in hopes of reading some hope or comfort: none; nothing but a dreadful death faced the apparently devoted crew. At this moment the fire-ship blew up; and the rebound was so great as to free her from the Torbay, which, although thus providentially saved from the intended and anticipated destruction, still received considerable damage, attended with dreadful loss of life. Young Hamilton, who had now recovered his sensibility, looked around him with an inquiring eye, failing for the instant to comprehend his critical, and by no means pleasant situation. In an instant, the truth flashing on him, and the desperate design of leaving the ship, was no sooner designed, than executed. Taking advantage of the confusion caused by the explosion of the fire-ship, he sprang on the bulwarks, and with the utmost rapidity from thence into the sea.

Fortunately, at this moment, a boat was conveying Admiral Hopson from the Torbay, which now lay a complete wreck upon the water, to the Monmouth, whose crew had, at the moment, succeeded in hoisting the colours of England on the mast-head of a French man-of-war, with whom they had been fiercely engaged. They picked up our hero with three cheers, such cheers as British seamen can give. The Spaniards, aggravated by the loss, and further by the derision, brought again to bear upon them, with no more effect than wetting a sailor's jacket as the shot splashed in the sea. The admiral pressed the hand of his young protégé to his lips, and thanked him for his life; for he felt assured had it not been for his devoted heroism and bravery, he must have fallen a victim to the fury of their assailants. The victory now decided in their favour; and after having been joined by the vessels under command of Sir Cloudesley Shovel, taking in convoy their richly-laden prizes, they sailed for England. When they arrived there, young Hamilton was received with all the admiration and enthusiasm which actions like his deserved. Youth as he was, he had gained unfading laurels; for the hero of Vigo shall never be forgotten! It was destined that his life of glory, though bright, and exceeding the wildest imaginings of a romantic brain, should be short.

Three weeks had hardly passed since his return to the arms

of his friends, when he was seized with a sudden fever. From danger it mounted to death, from earth he mounted to heaven!

Poor youth! too bright and beautiful to last! We look back upon the memory of him that's gone with feelings of admiration, of love; and think if such were the actions of a boy, what would be those of the man, had God spared him!

In a splendid mausoleum raised to record his proud achievement at Vigo, lies in the calm solemn sleep of death—Charles Hamilton.

A NAVAL DUEL.

At Malta Jack got into another scrape. Although Mr. Smallsole could not injure him, he was still Jack's enemy; the more so as Jack had become very popular; Vigors also submitted, planning revenge; but the parties in this instance were the boatswain and purser's steward. Jack still continued his fore-castle conversations with Mesty; and the boatswain and purser's steward, probably from their respective ill-will towards our hero, had become great allies. Mr. Easthupp now put on his best jacket to walk the dog-watches with Mr. Biggs, and they took every opportunity to talk at our hero.

"It's my peculiar opinion," said Mr. Easthupp, one evening, pulling at the frill of his shirt, "that a gentleman should behave as a gentleman, and that if a gentleman professes opinions of equality and such liberal sentiments, that he is bound as a gentleman to hact up to them."

"Very true, Mr. Easthupp, he is bound to act up to them; and not because a person, who was a gentleman as well as himself, happens not to be on the quarter-deck, to insult him because he only has professed opinions like his own." Hereupon Mr. Biggs struck his rattan against the funnel, and looked at our hero.

This was too plain for our hero not to understand; so Jack walked up to the boatswain, and, taking his hat off with the utmost politeness, said to him, "Mr. Biggs, I shall go on shore directly we arrive at Malta. Let you and this fellow put on plain clothes, and I will meet you both—and then I'll show you whether I am afraid to give satisfaction."

"One at a time," said the boatswain.

"No, sir, not one at a time, but both at the same time—I will fight both or none. If you are my superior officer, you must descend," replied Jack, with an ironical sneer, "to meet me, or I will not descend to meet that fellow, whom I believe to have been little better than a pickpocket." This accidental hit of Jack's made the purser's steward turn pale as a sheet, and then equally red. He raved and foamed amazingly, although he could not meet Jack's indignant look, who then turned round again. "Now, Mr. Biggs, is this to be understood, or do you shelter yourself under your *forecastle*?"

"I'm no dodger," replied the boatswain, "and we will settle the affair at Malta."

The second day after they had been anchored in Valette harbour, the parties all went on shore, and put up at one of the small inns to make the necessary arrangements. Mr. Tallboys then addressed Mr. Gascoigne, taking him apart, while the boatswain amused himself with a glass of grog, and our hero sat outside, teasing a monkey. "Mr. Gascoigne," said the gunner, "I have been very much puzzled how this duel should be fought, but I have at last found it out. You see that there are three parties to fight; had there been two or four there would be no difficulty, as the right line or square might guide us in that instance; but we must arrange it upon the triangle in this." Gascoigne stared; he could not imagine what was coming. "Are you aware, Mr. Gascoigne, of the properties of an equilateral triangle?"

"Yes," replied the midshipman, "it has three equal sides—but what the devil has that to do with the duel?"

"Everything, Mr. Gascoigne," replied the gunner, "it has resolved the great difficulty: indeed, the duel between three can only be fought upon that principle. You observe," said the gunner, taking a piece of chalk out of his pocket, and making a triangle on the table, "in this figure we have three points, each equi-distant from each other; and we have three combatants—so that placing one at each point, it is all fair play for the three: Mr. Easy, for instance, stands here, the boatswain

here, and the purser's steward at the right corner. Now, if the distance is fairly measured, it will be all right."

"But then," replied Gascoigne, delighted at the idea, "how are they to fire?"

"It certainly is not of much consequence," replied the gunner; "but still, as sailors, it appears to me that they should fire with the sun; that is, Mr. Easy fires at Mr. Biggs, Mr. Biggs fires at Mr. Easthupp, and Mr. Easthupp fires at Mr. Easy, so that you perceive that each party has his shot at one, and at the same time receives the fire of another."

Gascoigne was in ecstasies at the novelty of the proceeding, the more so as he perceived that Easy obtained every advantage by the arrangement. "Upon my word, Mr. Tallboys, I give you great credit: you have a profound mathematical head, and I am delighted with your arrangement. Of course, in these affairs, the principals are bound to comply with the arrangements of the seconds, and I shall insist upon Mr. Easy consenting to your excellent and scientific proposal."

Gascoigne went out, and pulling Jack away from the monkey, told him what the gunner had proposed, at which Jack laughed heartily. The gunner also explained it to the boatswain, who did not very well comprehend, but replied, "I dare say it's all right—shot for shot, and d— all favours."

"The parties then repaired to the spot with two pairs of ship's pistols, which Mr. Tallboys had smuggled on shore; and, as soon as they were on the ground, the gunner called Mr. Easthupp out of the coo-perage. In the meantime, Gascoigne had been measuring an equilateral triangle of twelve paces—and marked it out. Mr. Tallboys, on his return with the purser's steward, went over the ground, and, finding that it was "equal angles subtended by equal sides," declared it was all right. Easy took his station, the boatswain was put into his, and Mr. Easthupp, who was quite in a mystery, was led by the gunner to the third position.

"But, Mr. Tallboys," said the purser's steward, "I don't understand this—Mr. Easy will first fight Mr. Biggs, will he not?"

"No," replied the gunner, "this is a duel of three. You will fire at Mr. Easy, Mr. Easy will fire at Mr. Biggs, and Mr. Biggs will fire at you. It is all arranged, Mr. Easthupp."

"But," said Mr. Easthupp, "I do not understand it. Why is Mr. Biggs to fire at me? I have no quarrel with Mr. Biggs."

"Because Mr. Easy fires at Mr. Biggs, and Mr. Biggs must have his shot as well."

"If you have ever been in the company of gentlemen, Mr. Easthupp," observed Gascoigne, "you must know something about duelling."

"Yes, yes, I've kept the best of company, Mr. Gascoigne, and I can give a gentleman satisfaction; but—"

"Then, sir, if that is the case, you must know that your honour is in the hands of your second, and that no gentleman appeals."

"Yes, yes, I know that, Mr. Gascoigne, but still I've no quarrel with Mr. Biggs, and, therefore, Mr. Biggs, of course you will not aim at me."

"Why, you don't think that I'm going to be fired at for nothing," replied the boatswain: "no, no, I'll have my shot anyhow."

"But at your friend, Mr. Biggs?"

"All the same, I shall fire at somebody; shot for shot and hit the luckiest."

"Vell, gentlemen, I purtest against these proceedings," replied Mr. Easthupp; "I came here to have satisfaction from Mr. Easy, and not to be fired at by Mr. Biggs."

"Don't you have satisfaction when you fire at Mr. Easy," replied the gunner; "what more would you have?"

"I purtest against Mr. Biggs firing at me."

"So you would have a shot without receiving one," cried Gascoigne; "the fact is that this fellow's a confounded coward, and ought to be kicked into the coo-perage again."

At this affront Mr. Easthupp rallied, and accepted the pistol offered by the gunner.

"You hear those words, Mr. Biggs; pretty language to use to a gentleman. You shall hear from me, sir, as soon as the ship is paid off. I purtest no longer, Mr. Tallboys; death before dishonour—I'm a gentleman, damme!"

At all events, the swell was not a very courageous gentleman, for he trembled exceedingly as he pointed his pistol. The gunner gave the word, as if he were exercising the great guns on board ship.

"Cock your locks!" "Take good aim at the object!" "Fire!" "Stop your vent!"

The only one of the combatants who appeared to comply with the latter supplementary order was Mr. Easthupp, who clapped his hand to his trousers behind, gave a loud yell, and then dropped down; the bullet having passed clean through his seat of honour, from his having presented his broadside as a target to the boatswain as he faced our hero. Jack's shot had also taken effect, having passed through both the boatswain's cheeks, without farther mischief than extricating two of his best upper double teeth, and forcing through the hole of the farther cheek the boatswain's own quid of tobacco. As for Mr. Easthupp's ball, as he was very unsettled, and shut his eyes before he fired, it had gone the Lord knows where. The purser's steward lay on the ground and screamed—the boatswain spit his double teeth and two or three mouthfuls of blood out, and then threw down his pistols in a rage.

"A pretty business, by —" sputtered he; "he's put my pipe out. How the devil am I to pipe to dinner, when I'm ordered, all my wind 'scaping through the cheeks?"

In the meantime, the others had gone to the assistance of the purser's steward, who continued his vociferations. They examined him, and considered a wound in that part not to be dangerous.

"Hold your confounded bawling," cried the gunner, "or you'll have the guard here; you're not hurt."

"Hain't hi?" roared the steward: "Oh, let me die, let me die; don't move me!"

"Nonsense," cried the gunner; "you must get up and walk down to the boat; if you don't we'll leave you—hold your tongue, confound you. You won't! then, then I'll give you something to halloo for."

Whereupon Mr. Tallboys commenced cuffing the poor wretch right and left, who received so many swinging boxes of the ear, that he was soon reduced to merely pitiful plaints of "Oh, dear! such inhumanity—I purtest—oh, dear! must I get up! I can't, indeed."

"I do not think he can move, Mr. Tallboys," said Gascoigne; "I think the best plan would be to call up two of the men from the cooperage, and let them take him at once to the hospital."

The gunner went down to the cooperage to call the men. Mr. Biggs, who had bound up his face as if he had a toothache, for the bleeding had been very slight, came up to the purser's steward.

"What the — are you making such a howling about? Look at me, with two shot-holes in my figure-head, while you have only got one in your stern: I wish I could change with you, by —, for I could use my whistle then—now, if I attempt to pipe, there will be such a wasteful expenditure of his majesty's stores of wind that I shall never get out a note. A wicked shot of yours, Mr. Easy."

"I really am very sorry," replied Jack, with a polite bow, "and I beg to offer my best apology."

During this conversation the purser's steward felt very faint, and thought he was going to die.

"Oh dear! oh dear! what a fool I was; I never was a gentleman—only a swell: I shall die; I never will pick a pocket again—never—never—God forgive me!"

"Why, confound the fellow," cried Gascoigne, "so you were a pickpocket, were you?"

"I never will again," replied the fellow in a faint voice: "Hi'll hamend and lead a good life—a drop of water—oh! lagged at last!"

Then the poor wretch fainted away: and Mr. Tallboys coming up with the men, he was taken on their shoulders and walked off to the hospital, attended by the gunner and also the boatswain, who thought he might as well have a little medical advice before he went on board.

"Well, Easy," said Gascoigne, collecting the pistols and tying them up in his handkerchief, "I'll be shot, but we're in a pretty

scrape; there's no hushing this up. I'll be hanged if I care, it's the best piece of fun I ever met with."

At the remembrance of it Gascoigne laughed till the tears ran down his cheeks. Jack's mirth was not quite so excessive, as he was afraid that the purser's steward was severely hurt, and expressed his fears.

"At all events, you did not hit him," replied Gascoigne; "all you have to answer for is the boatswain's mug—I think you've stopped his jaw for the future."—*Mr. Midshipman Easy.*

FRED LYNTON.

BY "HARRY BLUFF."

It was in the fourth year of my life at sea, and my fourth voyage, that I became acquainted with Fred Lynton. The reader must not misunderstand the "acquaintance," for its signification on land, and its meaning at sea, is somewhat different. There is but little sympathy and little friendship between those whom fortune has placed on the quarter deck, and misfortune has placed before the mast.

The rule of a ship is, for all "gentlemen" (commissioned or non) "to preserve a gentlemanly behaviour."

I must confess I have often wondered what the meaning of the term "gentlemanly behaviour" was; for at first, I could not comprehend, that oaths, blows, and harsh language, so plentifully bestowed upon the subordinates, was maritime gentility! At length I came to understand, that as the sailors were rough chaps, they appreciated rough treatment. I have often thought that the man who at your orders, or to fulfil your slightest wish, would willingly risk his life, certainly deserves something better than dog's treatment.

Lynton was at the time I first knew him, the favourite of the whole ship's company. He had the quickest eye, the nimblest foot, the clearest head, and the happiest heart, of any before the mast, aye, and aft either.

My greatest pleasure used to be when on watch at night, to get as near Fred as possible, without trespassing over the boundaries, and listen to his yarns.

He had a rich, humorous, way of reciting his adventures, that infallibly set his hearers in a roar, which was usually nipped in the bud by the stern voice of the captain of the watch, as he enforced "silence, for'ard there." We also had on board a supercilious, affected, puppy, with more refinement than sense, who had he moved in his proper sphere, would doubtless have shone brilliant enough in the task of "shaving the ladies," in some draper's shop. His effeminate manners, and soft silken tones, being evidently more fitted to sound in a shop than a ship; and his white, delicate fingers, to exhibit the beauties of ribbons, of all sorts and colours," than to handle the rough and tough "indicate" ropes.

Such was Mr. Ambrose Smith, who for some trifling fault, or offence, bore the most deadly enmity to Fred Lynton. No opportunity was lost by him, to complain, and misrepresent his conduct to the captain. To the captain's credit be it spoken, he knew his nephew's disposition too well to heed his remarks. I had often heard Lynton express his utter abhorrence and detestation of the system of flogging, a punishment at that time bestowed for the most venial offence. "Shoot a man," he would say, "and he's dead; his faults and imperfections are cured. Flog a man, and ye murder all that's good, and with the same weapon, call up, (or if he was pure before, *plant*) all the bad qualities that ever raged in the breast of a devil." This opinion so freely spoken, put the fiendish design into Ambrose Smith's head, to make him suffer what he so thoroughly detested.

One morning Lynton was charged with having been drunk and disorderly on watch, and with having in the heat of passion, at being remonstrated with, struck his officer, Lieutenant Ambrose Smith. His answer was, "Not Guilty, so help me God." It was proved by the evidence of his companions of the watch, that he was perfectly sober at one o'clock, a.m., whilst Smith alleged, that at half-past, the violence was committed. Of course the word of an officer and a "gentleman" could not be doubted. Fred was sentenced for this crime to receive two hundred lashes. He turned towards his

judges, and solemnly swore that it was a base fabrication and falsehood. That at the time spoken he was in his hammock. He begged if he might suffer for a crime of which he was innocent, that they would confine him, shoot him, anything in preference to this dread degradation. No! The sentence was passed and must be executed, and it was. I shall never forget that morning. Amidst all the torture inflicted on him, not a groan, cry, or word came from his parched lips. "Give it him, loosen your whip, man," was the order of the man who presided over this brutal exhibition. And they did give it him, till he hung an insensible, mutilated, bleeding, lump of flesh. At this juncture he was removed and taken below, and for weeks lay hovering on the verge of death. At length, and by slow degrees, he got better. Heavens! what a change! The contentedness and happiness which formerly decked his cheek with a ruddy bloom, and curled his lip with joy, had flown, and in his pale face was shown, the deep determination of a dread resolve.

He performed his duty certainly, not with his hitherto accustomed celerity and cheerfulness, but still he performed it. He was sullen, reserved, and melancholy; seldom speaking, and then only in monosyllables. His face was pale, and eye dim'd; save when his eye met that of Smith's, then they sparkled with a fierce unnatural light.

It was one calm starlit night that I rose from my hammock, preferring the quietude of the air on deck to my sultry berth below. I could not sleep. My mind was full of frightful imaginings and forebodings. I came up the ladder, and looked around. In the aft-part of the vessel were two figures in conversation with each other. One, from a peculiar cap he wore, I knew to be Ambrose Smith; the other I failed to recognize; but his voice sounded strangely like that of poor Fred Lynton.

"You know you lied—basely lied, like a cowardly, treacherous hound as you are! Me strike you! Can you look me in the face, and speaking truly, say I did? No, you cannot. You dare not do it *now* that face to face we stand, with no witness or judge but the God of heaven."

"Do you dare to threaten me?" asked Ambrose, turning his face in the direction where I stood unseen. It was as pale as death.

"No," replied the other, with bitterness; "not I. A tiger seizes first, and growls afterwards. I am of that breed."

"I bid you begone; your place lies forward: your insolence and conduct shall be reported. I'm not to be insulted with impunity."

"Nor I ruined with impunity. Stay," he added, as the other walked away; "you hear some wholesome truths. To-night you listen to me; to-morrow may find you away, may be at the bottom of the sea, revelling with your friends the sharks. I insulted you, I presume; but how, when, or where, as God is my judge, I know not. For this I must suffer such pain and degradation, that death would be far preferable. What does such conduct as this deserve? I ask you! you! the executor of this manly action; what does it deserve?"

"Silence! I'll hear no more. Help, there!"

"Peace," was the stern reply, "or, by the God above, this knife lies buried in your lying heart; your time has come. The passive snake, on which you trod with such impunity, has turned. Behold its sting." And he brandished in the air his glittering knife. "Now, on your knees, scoundrel, clear your breast of one foul stain, nor face your maker with a lie upon your tongue. Was I innocent or guilty?"

I shall never forget his pallid face and tremulous voice, as he said—"innocent." I felt that the crisis of a sad catastrophe had arrived. With a beating heart and stifled breath I crept from my hiding-place towards them. Smith noticed my coming, and uttered a cry of joy at his deliverance—a cry which ended in a dreadful shriek of agony. Lynton had stabbed him to the heart. I sprang forward with a cry of anguish, and caught the murderer's arm, as it was about to repeat the fearful blow. With the strength of a giant he threw me back, and instantly buried the crimsoned steel in his own breast. Horror-stricken and fainting at this dreadful spectacle, I called for help. They came and lifted up the murdered man; he was dead—dead. His features were contracted with all the anguish of a dreadful death. An old seaman turned to Fred, and lifted up his head.

It fell back on the deck with a dull senseless sound—the man was dead.

The murdered, and the murderer, were buried in one grave.

I found the above recorded in a journal I kept many years ago. Since then, the "cat," I am most happy to say, has fallen into great disrepute. Our greatest naval commander of the present day * has added his testimony (the testimony of a life spent amongst seamen), that its use, instead of correcting, adds to the vice of the punished. In my humble life, strange and unnatural as it may sound, I have always felt something like joy, at hearing that the man who suffered this punishment was dead. I knew, from sad experience, if he survived it, he was no longer a good seaman, a good husband, a good father, nor a good man, but bad, irreclaimably bad, to all intents and purpose.

THE MARINER'S ADIEU.

"Our bark is on the waters—her flag waves fair and free.
And her bow is bounding proudly on the bright and boundless sea:

The surge is driving cheerily along the billows blue;
And our hearts are beating wearily to bid the shore adieu.

"The merry dolphin dances in the golden summer day;
And the rainbow, like a cherub, laughs among the diamond spray.

The mighty whale, in awful sport and pride, goes tumbling by;
And, 'To sea! to sea! my gallant lads! ten hundred voices cry.

"The foam is on the mountain side—the bark is on the wave—
The sun shines o'er the summer tide, to cheer and lead the brave:

Oh! who that's cradled on the sea would perish on the shore?
Away! away! the breeze is up! and the foaming billows roar!

"Farewell, bright land! romantic land! a long farewell to thee!
Three cheers, brave lads! unfurl the sails—heave—weigh—and put to sea!

Away she flies! her timbers creak! how merry we shall be!
Since the free were made for the winds and waves—the winds and waves for the free!"

SCYLLA.—As the breadth across this celebrated strait has been so often disputed, I particularly state that the Faro Tower is exactly six thousand and forty-seven English yards from that classical bugbear, the rock of Scylla, which, by poetical fiction, has been depicted in such terrific colours, and to describe the horrors of which Phalerion, a painter celebrated for his nervous representation of the awful and the tremendous, exerted his whole talent. But the flights of poetry can seldom bear to be shackled by homely truth, and if we are to receive the fine imagery that places the summit of this rock in clouds brooding eternal mists and tempests—that represents it as inaccessible, even to a man provided with twenty hands and twenty feet, and immerses its base among ravenous sea-dogs, why not also receive the whole circle of mythological dogmas of Homer? who, though so frequently dragged forth as an authority in history, theology, surgery, and geography, ought in justice to be read only as a poet. In the writings of so exquisite a bard, we must not expect to find all his representations confined to a mere accurate narration of facts. Moderns of intelligence, in visiting this spot, have gratified their imaginations, already heated by such descriptions as the escape of the Argonauts and the disasters of Ulysses, with fancying it the scourge of seamen, and that, in a gale, its caverns "roar like dogs;" but I, as a sailor, never perceived any difference between the effect of the surges here, and on any other coast, yet I have frequently watched it closely in bad weather. It is now, as I presume it ever was, a common rock of bold approach, a little worn at its base, and surmounted by a castle, with a sandy bay on each side.

* Sir Charles Napier.

LOSS OF THE PROSERPINE.

The ice-bound ship long struggled in vain,
 From the rude embrace to set herself free;
 Her crew, in despair, an isle to regain,
 Tracked the pathless wilds o'er a frozen sea:
 But Death's rigid hand had mark'd some for his own,
 And rejoiced, in his pride, o'er the spirit that's flown.

His Majesty's frigate Proserpine, commanded by Captain James Wallis, sailed from Yarmouth on Monday, January 28, 1799, having on board Mr. Grenville, who was charged with an important mission. Nothing of consequence occurred from that time until Wednesday morning, when being close in with Heligoland, they made a signal for a pilot, and very soon received one on board; and it being a fine day, with the wind at N.N.E.,

they proceeded for the red buoy, where they anchored for the night. Here they found that the buoys had been taken up, upon which a consultation was held with the Heligoland pilot and the two belonging to the ship, who professed a thorough knowledge of the river, and maintained the practicability of ascending it without the buoys; and were unanimously of opinion, that they might get into Cuxhaven without the smallest danger, if the captain would only proceed between half-ebb and half-flood; that the pilots would then be able to see the sands, and at the same time declaring that they were perfectly satisfied with their marks.

In the morning they got under weigh, having a very fine day, with a gentle breeze at N.N.E., and proceeded up the river with the Prince of Wales packet, which had accompanied them from Yarmouth, standing on a-head. About four o'clock in

LOSS OF THE PROSERPINE, CAPTAIN J. WALLIS, FEBRUARY 1, 1799.

the afternoon they were within four miles of Cuxhaven, when it came on very thick and began to snow, which obliged them to come to an anchor: at that time they saw very little ice in the river.

At nine o'clock in the evening the wind shifted to E. by S., and blew the most dreadful snow-storm that can well be imagined. This brought on such immense quantities of heavy ice within the ebb, that with all hands upon deck, it was with the greatest difficulty they could prevent their cables from being cut, and preserve their station till the morning. By eight o'clock the ice was nearly carried up by the flood-tide, which left an opening a-head; but seeing the river entirely blocked up above them, the packet which had accompanied them on shore, and the captain being convinced of the utter impossibility of either landing Mr. Grenville or proceeding higher up, judged it

most prudent to lose no time in making their retreat out of the Elbe. They accordingly got under weigh and stood out to sea with the intention of endeavouring to effect a landing on some part of the coast of Jutland, which Mr. Grenville assured the captain the importance of the service on which he was despatched, rendered absolutely necessary.

It happened, unfortunately, however, that after the pilots had informed the captain that they were clear of all the sands, at half-past nine the ship struck upon nearly the extremity of the sand extending from Newark Island. The wind at that time blowing a heavy gale, she went on with great force, though they had nothing but the fore-topmast-staysail set: there was but ten feet water under the keel. They immediately hoisted out a boat, with the intention of carrying out an anchor; but as it was high water, the ice returned upon them so soon, that

they found it impracticable. The ice-boats were again hoisted in, and all hands were employed to shore the ship and heel her towards the bank, in order to prevent her from falling into the stream, which must have been followed by their inevitable destruction. After considerable exertions they succeeded in the attempt, and as the tide ebbed away she took to the bank. The first run of the tide, however, brought down such heavy ice upon them, that it immediately carried away the shores, tore all the copper from her larboard quarter, and cut the rudder in two, the lower part of which lay on the ice under the counter. Nevertheless, they did not despair of being able to get the ship off the next high water; and for that purpose, in order to lighten her, they threw her guns and stores overboard, all of which being borne by the ice will give some idea of its thickness.

On Friday at ten o'clock, it being then high water, the heavy gale from the S.E. kept out the tide to that degree, that they had three feet less water than when she struck, which put an end to all their hopes; and their state, on the return of the ebb, and during the whole of it, was so dreadful, that it is impossible to do justice to it by description. They were in momentary expectation of being torn to pieces by the ice; added to which, the excessively cold weather, the darkness of the night, and the heavy snow-storm, altogether contributed to render their situation one of the most deplorable and miserable that the imagination can well conceive.

On Saturday morning the gale increased to such a degree, that the ice reached up to the cabin-windows, the stern-post was broken in two, and the ship was otherwise very considerably damaged. It was then proposed by Mr. Grenville and the officers to try and get over the ice to Newark Island, as the only means that presented themselves, whereby they might save the lives of the ship's company, and especially as remaining on board any longer was useless, and might be attended with the most fatal consequences.

The captain's first impression was, that not only was the attempt dangerous, but that from the thickness of the weather, the extreme cold, their total ignorance of the way, and various other reasons, there seemed to be little probability of its success; yet, as it was the general wish of the company, and the ship was irrecoverably lost, he at length consented to quit her. At half-past one o'clock, it being the last quarter's ebb, the ship's company commenced their march on the ice in subdivisions, attended by their respective officers. By three o'clock the whole of them had left the ship, when they were followed by the captain, who was accompanied by Lieutenant Ridley of the marines. At half-past six o'clock in the evening, after a journey of six miles over high flakes of ice, in the severest weather that was ever experienced, and sometimes up to the waist in snow and water, they arrived at Newark Island, where the captain had the satisfaction to find Mr. Grenville and the whole of the ship's company in safety, with the exception of eight seamen, four marines, and one woman and her child, who were frozen to death on their journey. A few others had their legs and fingers frozen, but by the mercy of Providence, which alone had enabled them to effect their miraculous escape, they were all in a fair way of doing well.

From the time of their arrival until the following Tuesday night, the storm continued without the slightest intermission. On the morning of Wednesday the 6th, the weather became more moderate, and the scarcity of provisions rendered it necessary to send part of the ship's company to Cuxhaven, some of the inhabitants having undertaken to accompany them as guides; and the great anxiety of Mr. Grenville to proceed caused this plan to be put into immediate execution. At eight o'clock, the tide suiting, Mr. Wright, the first lieutenant, and one half of the officers and men, with Mr. Grenville, Mr. Wynne, Mr. Fisher, secretary to the embassy, the three messengers, Messrs. Shaw, Detry, and Mason, with servants, guides, &c., set off at nine o'clock, and after a passage as dangerous and difficult as that which they had already experienced from the ship, they arrived safely at Cuxhaven. The captain remained at Newark Island with the rest of the ship's company, in the hope, if it should be possible, of saving the ship's stores.

On Friday, the 8th of February, Mr. Anthony, the master,

volunteered to go on board the ship with a party of men, and endeavour to bring on shore some bread, of which they stood in great need, and also to ascertain the exact position of the wreck. They managed to effect their purpose with great difficulty, and on their return Mr. Anthony made the following report:—"That the ship lay on her beam-ends, with seven feet water in her; that she appeared to be broken asunder, with the quarter-deck separated about six feet from the gangway, and was apparently only kept together by the vast quantity of ice which surrounded her." In consequence of this account, it was resolved to have no further communication with her; but on the morning of Sunday the 10th, the clearness of the day induced Mr. Anthony to set off again for the ship, accompanied by Mr. Kent, the surgeon, Mr. W. Johnson Bowes, midshipman, Mr. W. Sait, boatswain, and William Fox and Andrew Augrain, seamen. They reached the vessel and got on board, but unfortunately neglected to return until too late in the tide, which left them no alternative but that of remaining on board till the following day. About ten o'clock at night the wind came on at S.S.E., and blew a most violent storm; the tide, though at the neap; rose to a most unusual height; the ice was set in motion, and in the morning, to the horror of the captain and those who remained, not a vestige of the wreck was to be seen, and not the slightest doubt remained on their minds, that the officers and men above-mentioned had been lost; though their hope was, that that Providence which had so bountifully assisted them in their recent dangers and difficulties, had by some means preserved them; but their hopes were not founded on the most distant probability. However, on their arrival at Cuxhaven, on the morning of the 28th of February, they found that Mr. Anthony, the surgeon, &c., with the boat's crew, had arrived there on the preceding evening. The account which Mr. Anthony gave of their providential escape was, that the ice which adhered to the ship and surrounded her in such a heavy body, after she had floated in the manner before described, on the 11th instant, supported the vessel without quitting her, as it continued to freeze hard for several days, till at length the wreck was fortunately cast on shore on the island of Baltrum, from which they all providentially made their escape.

A STORM AT SEA.—For the first time I now witnessed a tempest at sea. Gales, and pretty hard ones, I had often seen; but the force of the wind on this occasion as much exceeded that in ordinary gales of wind, as the force of these had exceeded that of a whole-sail breeze. The seas seemed crushed, the pressure of the swooping atmosphere, as the currents of air went howling over the surface of the ocean, fairly preventing them from rising; or, where a mound of water did appear, it was scooped up and borne off in spray, as the axe dubs inequalities from the log. In less than an hour after it began to blow the hardest, there was no very apparent swell—the deep breathing of the ocean is never entirely stilled, and the ship was as steady as if hove half out, her lower yard-arms nearly touching the water—an inclination at which they remained as steadily as if kept there by purchases. A few of us were compelled to go as high as the futtock-shrouds to secure the sails, but higher it was impossible to get. I observed that when I thrust out a hand to clutch anything, it was necessary to make the movement in such a direction as to allow for lee-way precisely as a boat quarters the stream in crossing against a current. In ascending it was difficult to keep the foot on the ratlines, and in descending it required a strong effort to force the body down towards the centre of gravity. I make no doubt had I groped my way up to the cross-trees, and leaped overboard, my body would have struck the water thirty or forty yards from the ship. A marlin-spike falling from either top would have endangered no one on deck. When the day returned, a species of lurid, sombre light was diffused over the watery waste, though nothing was visible but the ocean and the ship. Even the sea-birds seemed to have taken refuge in the caverns of the adjacent coast, none re-appearing with the dawn. The air was filled with spray, and it was with difficulty that the eye could penetrate as far into the humid atmosphere as half a mile.—*Cooper's Afloat and Ashore.*

ARCTIC DISCOVERY EXPEDITION.

The lively interest which the British public have for such a length of time manifested in the further discovery of the arctic regions, induced the Hudson's Bay company to determine on equipping an expedition, solely at their own expense, and composed of their own officers and servants, with the view of endeavouring to complete the survey of the northern shores of the American continent.

The formation and equipment of the expedition were entrusted to Mr. Simpson, the resident governor, in the spring of 1836. That gentleman, on his arrival from England, at Norway-house, Lake Winnipeg, in the month of June of the same year, beat up for volunteers for this arduous service; two active and enterprising leaders, Messrs. P. W. Dease and Thomas Simpson, and twelve men were immediately selected and forwarded with the necessary supplies to Fort Chipewayan, Athabasca Lake, where they passed the winter of 1836 and 1837. Immediately after the opening of the navigation, on the 1st of June, 1837, the party started from Fort Chipewayan in two small boats, which they had constructed in the course of the winter, descended the Slave River, passed the western end of Great Slave Lake, where they were detained several days by ice, and descended Mackenzie's River to Fort Norman, where they arrived on the 1st of July. From Fort Norman they despatched two of their party, with two other men belonging to Fort Norman, to the eastern end of Great Bear's Lake, for the purpose of erecting a small establishment at which they might take up their quarters for the following winter, and of laying up a stock of provisions preparatory to an extension of their survey in the summer of 1838. These arrangements being made, Messrs. Dease and Simpson, with the remainder of their people, forming a party of twelve in all, continued their route down the Mackenzie, and reached Fort Good Hope, the most northern establishment belonging to the company, on the 4th, where they found an assemblage of Hare and Lauchoux Indians, from whom they learned that the Esquimaux had killed three of their party a short time previous, which prevented the discoverers taking an interpreter from that tribe.

On the 9th of July they reached the ocean, by the most westerly mouth of the Mackenzie, making its situation in lat. $68^{\circ} 49' 23''$ N. long. $136^{\circ} 36' 45''$ W. They had proceeded but a short distance to seaward, when a party of nineteen Esquimaux went off to them from Tent Island, who showed a disposition to be troublesome, but returned to their encampment when they found the party prepared to defend themselves if necessary. The progress of the party along the coast was very slow, owing to frequent obstructions from ice, cold, dense fogs, and strong head-winds. On the afternoon of the 11th they reached Point Kay, where they found another encampment of Esquimaux, and where they were detained by a compact body of ice, occupying Phillips Bay until the 14th. They continued their route till the 17th, when an unbroken pack of ice, extending to seaward, made them seek the shore in Camden Bay, near a large camp of Esquimaux, who received them kindly. In the afternoon there appeared a narrow passage of water through the ice stretching outwards, and they immediately embarked; but had not proceeded above three miles from the land, when the ice suddenly closed upon them, squeezing one of their boats, which, with their provision and baggage, they had much difficulty in saving; and by means of portages from one piece of ice to another, the oars serving as bridges, they finally got on a large floe, where they passed an inclement and anxious night. On the 20th they reached Foggy Islands Bay, when they were stopped, by ice and a violent north-east wind, until the 23rd, having on the preceding day made an ineffectual attempt to weather Point Anxiety, in which they narrowly escaped with a thorough drenching. The latitude ashore was $70^{\circ} 9' 48''$. From this situation they had the satisfaction of discovering a range of the rocky mountains to the westward of the Romanzoff chain, and not seen by Sir John Franklin, but being within the limit of his survey, called it the Franklin Range, as a just tribute to his character and merits. That evening they reached Sir John Franklin's Return Reef, where their survey commenced, that officer having got no further.

Return Reef is one of a chain of reefs which run for twenty miles parallel to the coast, at the distance of about half a league, affording sufficient water within for their small craft. The mainland is very low. From Point Berens to Cape Halkett it forms Harrison's Bay, fifty miles broad by about a third of that distance in depth. At the bottom of this bay another picturesque branch of the Rocky Mountains Range rears its lofty peaks above these flat shores, which they named Pelly's Mountains, in honour of the governor of the company. At their base flows Colville's river, two miles broad at its mouth, to the south-west of which stands Cape Halkett, where they were detained by a north-east gale the whole of the following day. The country extending to the foot of the mountains appeared to consist of plains covered with short grass and moss, a favourite resort of reindeer, of which they saw numerous herds. Observations were obtained, determining Cape Halkett to be in lat. $70^{\circ} 43' N.$; long. $152^{\circ} 14' W.$; the variation of the compass $43^{\circ} 8' 33'' E.$

Next morning, 26th July, they passed the Gany, a river about one mile broad.

From Cape Halkett, the coast turned suddenly off to the W.N.W. It presented to the eye nothing but a succession of low banks of frozen mud. In the evening they passed the mouth of a large stream, which they named Smith's River. From thence, for about nine miles, the coast line is formed of gravel reefs, near the extremity of which, at Point Pitt, the land tends more to the westward. Here they were detained by ice until the following afternoon (27th), when an opening presented itself, and they resumed their route. It blew a cutting blast from the north-east, and then salt water froze upon the oars and the rigging. Point Drew, seven miles distant from their last encampment, is the commencement of a bay of considerable size, but extremely shallow, and much encumbered with ice. To seaward the ice was still smooth and solid, as in the depth of a sunless winter. At midnight they reached a narrow projecting point, across which the peaks of some high icebergs appeared. This point they named Cape George Simpson, as a mark of respect for the governor of the company's territories, to whose excellent arrangements the success of the expedition is, in a great measure, indebted.

This point was destined to be the limit of their boat navigation, for during the four following days they were only able to advance a many miles. The weather was foggy, and dismally cold; the wild fowl passed in long flights to the westward, and there seemed little prospect of their being able to reach Beechey's Point Barrow by water. Boat Extreme is situated in lat. $71^{\circ} 3' 24'' N.$, long. $154^{\circ} 26' 30'' W.$; variation of compass, $42^{\circ} 36' 18'' E.$

Under these circumstances, Mr. Thomas Simpson undertook to complete the journey on foot; and, accordingly, started on the 1st of August with five men, Mr. Dease and the other five men remaining in charge of the boats.

The pedestrians carried with them their arms, some ammunition, pemican, a small oiled canvass canoe for crossing the rivers, the necessary astronomical instruments, and a few trinkets for the natives.

It was one of the worst days of the whole season, and the fog was so dense that the party were under the necessity of rigidly following the tortuous outline of the coast, which for twenty miles formed a sort of irregular inland bay (being guarded without by a series of gravel reefs), the shore of which was almost on a level with the water, and intersected by innumerable salt creeks, through which they waded, besides three considerable rivers which they traversed in their portable canoe. Next day the weather improved, and at noon Mr. Simpson had an observation of lat. in $71^{\circ} 9' 45''$. The land now inclined to the south-west, and continued very low and muddy, and, as on the preceding day, abounding in salt creeks, whose waters were at the freezing temperature. The party had proceeded about ten miles, when to their dismay the coast suddenly turned off to the southward, forming an inlet as far as the eye could reach.

At the same moment they desisted at no great distance a small camp of Esquimaux, to which they immediately directed their steps. The men were absent hunting, and the women and

children took to their boat in the greatest alarm, leaving behind them an infirm man, who was in an agony of fear. A few words of friendship removed his apprehensions, and brought back the fugitives, who were equally surprised and delighted to behold white men. They placed before the party fresh reindeer meat and seal oil.

Mr. Simpson now determined to adopt a more expeditious mode of travelling, by obtaining a loan of their "oomiaks," or family skin canoes, to convey the party to Point Barrow, with which, from a chart drawn by one of the women, it appeared that these people were well acquainted.

Four oars were fitted with lashings to this strange craft. Before starting the hunters arrived, and presents of tobacco, awls, buttons, &c., were made to all the inmates of the encampment, with which they were highly gratified.

Dease's Inlet is five miles broad at this place, yet so low is the land that the one shore is just visible from the other in the clearest weather. It now again blew strongly from the north-east, bringing back the cold dense fog; but the traverse was effected by the aid of the compass. The waves ran high, and the skin-boat surmounted them with great buoyancy. The party encamped on the west-side of the inlet. The banks there were of frozen mud, ten or twelve feet high; the country was perfectly flat, abounded in small lakes, and produced a very short grass; but nowhere had the thaw penetrated more than two inches beneath the surface, while under water along the shore the bottom was still impenetrably frozen. Not a log of wood was to be found in this land of desolation; but our party followed the example of the natives, and made their fire of the roots of the dwarf willow in a little chimney of turf. Next morning, August 3rd, the fog cleared for awhile, but it was still bitterly cold, and the swell beat violently on the outside of a heavy line of ice which lay packed upon the shore.

To weather this was a work of danger, but the good qualities of their boat, after a severe trial, carried them safely through. The land ran out for five miles to the northward, then turned off to the north-west, beyond which, at Point Christie, the lat. $71^{\circ} 12' 36''$ was observed. From thence the coast trended more westerly for ten miles, forming two points and a bay, which Mr. Simpson named after chief factors Charles and Rowland, and chief trader Ross. The party then came up to what appeared a large bay, where they halted for two or three hours to await the dispersion of the fog, not knowing which way to steer. In the evening their wish was gratified, and the weather from that time was sensibly ameliorated. The bay was now ascertained to be only four miles in width; the depth half-way across was one fathom and a half, on a bottom of sand; that of Dease's Inlet was afterwards found to be two fathoms, muddy bottom, being greatest depth between Return Reef and Point Barrow, except at ten miles S.E. from Cape Halkett, where three fathoms were sounded on their return. After crossing Mackenzie's Bay, the coast again trended for eight or nine miles to the W.N.W. A compact body of ice extended all along, and beyond the reach of vision; to seaward; but the party carried their light vessel within that formidable barrier, and made their way through the narrow channels close to the shore.

At midnight, they passed the mouth of a fine deep river, a quarter of a mile wide, to which Mr. Simpson gave the name of Bellevue, and in less than an hour afterwards the rising sun gratified him with a view of Point Barrow, stretching out to the N.N.W. They soon crossed Elson Bay, which, in the perfect calm, had acquired a tough coating of young ice; but had much difficulty in making their way through a broad and heavy pack, that rested on the shore. On reaching it, and seeing the ocean extending away to the southward, they hoisted their flag, and with three cheers took possession of their discoveries in his Majesty's name.

Point Barrow is a long low spit, composed of gravel and coarse sand, which the pressure of the ice has forced up into numerous mounds, that, viewed from a distance, assume the appearance of huge boulder rocks. At the spot where the party landed, it is only a quarter of a mile across, but is broader towards its termination. The first object that presented itself on looking round the landing-place, was an immense cemetery.

The bodies lay exposed in the most horrible and disgusting manner, and many of them appeared so fresh that the men became alarmed that the cholera, or some other dreadful disease, was raging among the natives. Two considerable camps of the latter stood at no great distance on the point, but none of the inmates ventured to approach till our party first visited them, and, with the customary expressions of friendship, dissipated their apprehensions.

A brisk traffic then began, after which the women formed a circle, and danced to a variety of airs, some of which were pleasing to the ear. The whole conduct of these people was friendly in the extreme; they seemed to be well acquainted with the character, if not the persons of white men, and were passionately fond of tobacco.

To the northward, enormous icebergs covered the ocean; but on the western-side there was a fine open channel, which the Esquimaux assured the party extended all along to the southward, and so inviting was the prospect in that direction, that, had such been his object, Mr. Simpson would not have hesitated a moment to prosecute the voyage to Cook's Inlet in his skin canoe. The natives informed him that whales were numerous to the northward of the point, and seals were everywhere sporting among the ice.

It was high water between one and two o'clock, A.M., and P.M.; the rise of the tide was fourteen inches, and the flow came from the westward. Observations were obtained, which determine the position of the landing-place to be in lat. $71^{\circ} 23' 33''$ N., long. $156^{\circ} 20'$ W., agreeing closely with the observations of Mr. Elson. After bidding adieu to their good-humoured and admiring entertainers, the party set out on their return.

They reached the western mouth of the Mackenzie on the 17th of August, and Fort Norman on the 4th of September, from whence their report is dated on the following day. From Fort Norman they were about to proceed to the eastern end of Great Bear's Lake, there to pass the winter, from thence haul their boats across to the Coppermine River, and resume their survey to the eastward at the opening of the navigation in July following, with the view of connecting the discoveries of Sir John Franklin and Captain Back, from Point Turnagain to Great Fish River, in which, from the activity and perseverance of the leaders, it is confidently hoped they will be successful.

SHIPWRECK OF THE CŒUR DE LION, ON THE COAST OF DUNDRUM, SEPTEMBER, 1837.

THE Cœur de Lion, of Liverpool, bound for Quebec, with a general cargo, was completely wrecked at Tyrella Watchhouse, during a violent storm. As soon as the inhabitants along the coast observed the vessel in distress, they assembled for the purpose of rendering any assistance in their power to the unfortunate crew, who were at this time to be seen here and there clinging to the rigging. The vessel was not more than about a quarter of a mile from the shore, and though the wind was not now so high, yet the agitation of the sea after the storm was such, that any attempt to reach the unfortunate vessel in safety was considered hopeless. By this time the sad news had reached St. John's Point, a life-boat station, when Mr. P. R. M. Browne, justice of the peace, directed the life-boat to be taken out; but as the crew were absent at the herring fishery, the boat had to be manned by four of the coast-guard, and two of Captain Browne's labouring servants, who were humanely taken charge of by Mr. Strain, chief officer of the coast-guard. This gentleman having handsomely volunteered his services on the occasion, at the same time representing the attempt as hopeless, and dangerous in the extreme. They put off, however, with much courage, and after the laborious exertions of upwards of an hour, they got within a few yards of the unfortunate vessel, when the boat upset, and every man in it was precipitated into the sea; they, however, with the assistance of the masts and rigging floating about the vessel, providentially succeeded in getting on board the Cœur de Lion. Some of them were very much exhausted. When Mr. Strain, to whom the highest meed of praise is due for his gallant conduct in thus periling his life, had recovered a little, he found a great lack of exertion manifesting itself on the part of the captain; for instance, not

all anchor had been cast, which he immediately recommended to be done. On seeing the life-boat approach the wreck, two Clannaghery boats made an effort to gain the vessel also, when one of them was upset, but no lives lost: the other succeeded in reaching the vessel, and on her returning with some of the crew, was upset also, when, unhappily, seven persons perished, five belonging to the vessel, and two of the brave fellows who went out under the hope of rescuing their fellow-creatures from a watery grave. Their names were George Starkey and Patrick M'Goolaghan; the latter leaving a wife and five children to deplore his loss. But for the exertions of Mr. John Hogg, son of Mr. J. Hogg, of Rathmullen, who had by this time got his boat in readiness, several of those who had been upset in the first boat would have certainly perished also. After picking them up, he brought them ashore, and again put off with his four men, and, in the most courageous and praiseworthy

manner, succeeded in landing a number of the crew safely on shore. As undaunted as ever, he a second time returned, and with an intrepidity truly astonishing, reached the vessel in safety, and took another cargo on board, all of whom he succeeded in landing. His courage seemed only to acquire strength with his unparalleled success; and, contrary to the wish of some of his relatives and others present, this young gentleman ventured his life a third time; and though, on his return, his boat was half filled with water, and all the oars gone but one, he brought his last cargo triumphantly to land, amidst the cheers of all present. The *Cœur de Lion* was 350 tons register, and was, on this occasion, freighted with a valuable cargo. Several chests of tea, boxes of soap, and casks of brandy and rum were washed ashore. The vessel was the property of Messrs. Fisher and Son, of Liverpool. Mr. Fisher, a nephew of the proprietor, was one of the five who unhappily perished.

LOSS OF THE NOTTINGHAM GALLEY, CAPTAIN DEAN, DECEMBER 11, 1710.

LOSS OF THE NOTTINGHAM GALLEY.

"Her keel had struck on a hidden rock—
Her planks were torn asunder;
And down came her masts with a reeling shock,
And a hideous crash like thunder.
Her sails were dragged in the brine,
That gladden'd late the skies;
And her pennant that kissed the fair moonshine,
Down many a fathom lies."

The Nottingham galley, of 120 tons, and mounting ten guns, commanded by John Dean, having taken in cordage in England and butter, cheese, &c. in Ireland, sailed for Boston, in

New England, on September the 25th, 1710, having on board a crew of fourteen men.

Having met with contrary winds and bad weather, it was the beginning of December when they first made land, which was to the eastward of Piscataqua. They then proceeded southward for the Bay of Massachusetts, under a hard gale of wind at north-east, accompanied with rain, hail, and snow, having had no observation for ten or twelve days.

On the 11th December they handed all the sails, with the exception of the foresail and main-topsail double reefed, ordering one hand forward to look out. About eight or nine o'clock, upon the captain going forward, he discovered breakers a-head, and instantly called out to put the helm hard a-starboard; but

before the ship could wear, she struck upon the east end of the rock called Boon Island, four leagues to the eastward of Piscataqua. The second or third sea hove the ship alongside of it, and the sea running very high, the ship laboured so excessively, that they were not able to stand upon deck; and the weather was so thick and dark, that though they were not above thirty or forty yards distant from the rock, they could not see it. The captain called all hands down to the cabin, where they continued a few minutes, earnestly supplicating the mercy of heaven; yet knowing that prayers, without endeavours, were vain, all hands were ordered up again to cut away the masts, but several of the men were so oppressed by the terrors of conscience, that they were incapable of any exertion. They, however, cut the weathermost shrouds, and the ship heeling towards the rock, the force of the sea soon broke the masts, so that they fell towards the shore.

One of the men went out on the bowsprit, and thinking he saw something black a-head, determined to venture on shore, in company with another, and to give notice by their calls, if they succeeded in gaining the rock. While they were gone, the captain, recollecting some money and papers that might be of use, went down and opened the place in which they were; but the ship bulging, her decks opened, her back broke, and her beams gave way, so that the stern sunk almost under water; he was, therefore, obliged to hasten forward to escape instant death.

Having heard nothing of the men who had gone before, he concluded they were lost; but, notwithstanding, he was under the necessity of making the same adventure upon the foremast, moving gradually forward between every sea, till at last quitting it, he threw himself, with all the strength he had, towards the rock; but it being low water, and the rock extremely slippery, he could get no hold, and tore his fingers, hands, and arms, in the most deplorable manner, every wash of the sea carrying him off again, so that it was with the utmost peril and difficulty that he got safe on shore at last. The remainder of the crew ran the same hazard, but through the mercy of Providence they all escaped with their lives.

The captain, after endeavouring to discharge the salt water, and creeping a little way up the rock, heard the voices of the men who had first ventured on the bowsprit, and by ten o'clock the whole were assembled, when, with grateful hearts, they returned their humble thanks to Providence for their deliverance from such imminent danger. They then endeavoured to gain shelter to the leeward of the rock, but found it so small and inconsiderable that it would afford none, and so very craggy, that they could not walk to keep themselves warm, the weather continuing extremely cold, with snow and rain.

As soon as daylight appeared, they went towards the place where they came on shore, with the expectation of meeting with some provisions from the wreck, enough for their support, but found only some pieces of the yards and masts among some old junk and cables which the anchors had prevented being carried away. Out of the ship's stores, were some pieces of plank and timber, old sails, canvas, &c. driven on shore, but nothing eatable, except some small pieces of cheese, which they picked up among the rock-wood.

They now used their utmost endeavours to get a fire, having a flint and steel with them, and also by a drill, with a very swift motion; but having nothing but what had long been soaked with water, all their attempts proved ineffectual; and at night they were stowed one upon another under the canvas in the best manner they could, to keep each other warm.

The next day, as the weather cleared a little, and was inclining to frost, they went out, and perceiving the main land, they knew where they were, and comforted themselves with the hope of being discovered by fishing shallops. The captain desired the men to search for, and bring up what planks, carpenter's tools, and stores they could find, in order to build a tent and a boat. The cook then complained that he was almost starved, and his countenance discovering his illness, he was ordered to remain behind, with two or three more whom the frost had seized; but he died about noon, upon which they laid the body in a convenient place for the sea to carry away. At this time no mention was made of eating him, although several afterwards acknowledged that they had thoughts of doing so.

After they had been two or three days in this situation, the weather was so extremely cold, that the hands and feet of some of the crew were affected to such a degree, as to take away the sense of feeling, and render them almost useless; and the numbing and discolouration was such, as to give them reason to apprehend mortification. They pulled off their shoes, and cut off their boots; but in getting off their stockings, many of them, whose legs were blistered, pulled off skin and all, and some the nails of their toes. They then wrapped up their legs and feet, as warmly as they could, in oakum and canvass.

They now began to construct a tent in a triangular form, each side being about eight feet, and covered it with the old sails and canvass that came on shore, and fixed a staff on the top, upon which, as often as the weather would permit, they hoisted a piece of cloth in the form of a flag, in order to discover themselves to any vessel that might approach. Within the tent there was only room for each man to lie down on one side, so that none could turn excepting all turned, which was done about every two hours, upon notice being given.

Their next operation was building a boat, with the planks and timber belonging to the wreck; their only tools being a hammer, a mallet, and the blade of a cutlass, which they made into a saw with their knives. They found some nails in the clefts of the rock, and obtained some others from the sheathing. They laid three planks flat for the bottom, with two upon each side, fixed to stanchions and let into the bottom timbers, with two short pieces at each end, and one breadth of new Holland duck round the sides to keep out the spray of the sea, and caulked all they could with oakum drawn from the old junk, and the remainder they filled up with long pieces of canvass. They then fixed a short mast and square-sail, with seven paddles to row, and a longer one to steer. But the carpenter, whose services were now most wanted, was, through illness, incapacitated from affording either assistance or advice, and with the exception of the captain and two more, the remainder were so benumbed and feeble, that they were unable to stir.

After remaining about a week upon the rock, with no other provisions than the pieces of cheese before mentioned, and some beef bones, which they ate after beating them to pieces, they saw three boats at about five leagues distance, which, it may easily be imagined, made them rejoice with the pleasing hope that their deliverance was near. The captain directed all the men to creep out of the tent, and halloo together as loud as their strength would permit; they also made what signals they could; but all was in vain, for those in the boats neither saw nor heard them. It was, however, some alleviation to the bitterness of their disappointment to presume, that as the boats came from the south-west, and the wind was north-east when they were cast away, that their distress might have been made known by the wreck driving on shore, and that the boats were come out in search of them. Thus they buoyed themselves up with the pleasing, but delusive, hopes of deliverance.

Just before they had finished the boat, the carpenter's axe was fortunately cast upon the rock, by which they were enabled to complete their work; but they had scarcely sufficient strength to get her into the water.

The following day, which was the 21st of December, the weather being fine, and the water smoother than they had yet seen it, they consulted as to who should attempt to launch the boat. The captain, who was the strongest of the party, and therefore most capable of undergoing the fatigue, volunteered as one, and the mate offering himself was accepted, together with the captain's brother and four more. Thus commending their enterprise to Providence, all that were able came out, and with great difficulty got their patched-up boat to the water's-edge, where, the surf running very high, they were obliged to wade some distance to launch her; upon which the captain and another got in, when in an instant the swell or the sea drove the boat on shore and overset her, whereby the miserable adventurers narrowly escaped drowning. Their frail boat was dashed to pieces, their enterprise totally disappointed, and their hopes utterly destroyed.

What added to their distress, and served to aggravate the miserable prospect before them, was the loss of their axe and hammer, which were in the boat, and which might have been

of great use, should they afterwards attempt to construct a raft. Yet they had reason to admire the goodness of God in thus providing for their safety through their disappointment, for in the afternoon it blew so hard a gale, that had they been at sea in their poor apology for a boat, they must inevitably have perished; and those that remained on the rock being helpless from weakness, must very soon have shared the same fate.

They were now reduced to the most melancholy and deplorable condition that can well be imagined; almost every man was weak to an extremity, nearly starved with hunger, and perishing with cold; their hands and feet frozen and mortified, with large and deep ulcers on their legs, the smell of which was intolerable to those who could not creep into the open air, and nothing with which to dress them but a piece of linen that was cast on shore. They had no fire, their small stock of cheese was exhausted, and the only support for their feeble bodies, was rock-weed and muscles; and of these the supply was so scanty, that they had never more than two or three a day for each man, so that their bodies were perishing, while their disconsolate spirits were overpowered by the deplorable prospect of starving, without any appearance of relief; and, as if to add to this accumulation of calamities, they apprehended the approaching spring-tide would overflow them. Description fails in attempting to pourtray the horrors of such a situation; the pinching cold and hunger; the extremity of weakness and pain; the racking tortures of conscience in many; and the prospect of a certain, painful, and lingering death, without even the most remote chance of deliverance. This is, indeed, the height of misery, and such, alas! was their case; insomuch, that the greater part of the company were ready to die of horror and despair.

The captain, however, did his utmost to encourage himself and exhort the crew to put their trust in the Almighty, and with patient resignation to await their deliverance; when, as a slight alleviation of their distress, and an encouragement of their faith in Providence a sea-gull came near their quarters, which the mate struck down, and joyfully brought to them. The captain immediately divided it into equal portions, which though raw, and and scarcely affording a mouthful for each, yet they ate it with heartfelt gratitude.

The last method of rescuing themselves which they could possibly devise, was the construction of a raft, capable of carrying two men, and this proposal was strongly supported by one of the men, a Swede, who was a stout brave fellow, but who had, since the disaster, lost the use of both his feet by the frost. He frequently importuned the captain to attempt their deliverance in the way he proposed, offering to accompany him, or if the captain refused he would go alone. After deliberate consultation, they resolved to try the experiment; but found great difficulty in clearing away the junk from the fore-yard, of which it was chiefly to be made, as their working hands were so few and weak.

Having at last accomplished this they split the yard, and with the two parts made side pieces, to which they fixed others, and added some of the lightest planks they could find, first spiking, and afterwards making them firm. The raft was four feet in breadth, upon which they fixed a mast, and out of two hammocks that came on shore, they made a sail; they also made a paddle for each man, and a spare one in case of necessity. This difficulty being thus surmounted, the Swede inquired of the captain whether he intended to accompany him, at the same time giving him to understand, that in case he declined, there was another ready to offer himself for the enterprise; but just at this time they saw a sail come out of the Piscataqua river, about seven leagues to the westward. They again made all the signal they could; but the wind being north-west, and the ship standing eastward, to their bitter disappointment, she was very soon out of sight, without having come near them.

The next day the weather was moderate, and in the afternoon, a light breeze blew right on shore. As the raft was finished, the two men were very anxious to have it launched, but this the mate strenuously opposed, on account of the lateness of the day, it being two o'clock in the afternoon. The men urged the lightness of the nights, and, after some delay, the captain at length consented to their proceeding. They

both got upon the raft, when the swell of the sea, which was rolling very high, overset it, as it had before done the boat; but the Swede, nothing daunted by the accident, swam on shore, while the other, who was no swimmer, was for some time under water, till the captain caught hold of him and saved him; but he was so discouraged, that he would not make a second attempt.

The Swede was resolute in his purpose, and offered to go alone if no one would adventure with him; but another man came down and volunteered to accompany him, upon which they departed on the raft, desiring those who remained to go to prayers, and also to watch what became of them. By sunset they judged them to be half-way to the main, and concluded they might reach the shore by two o'clock in the morning. They, however, fell in with some breakers, or, probably, were over-set by the violence of the sea, and perished; for two days afterwards, the raft was found on shore, and one man dead about a mile from it: but the Swede, who was so forward to adventure, was never heard of more.

Those who remained upon the rock being ignorant what had befallen the others, waited daily for their deliverance; and their expectations were the more raised, by observing a smoke in the woods about two days afterwards, which was the signal appointed to be made if they arrived safe; but seeing no appearance of approaching relief, they supposed that the delay was occasioned by their not being able to procure a vessel so soon as they desired, and this idea served greatly to buoy up their spirits.

Their principal want was that of provisions, as they had nothing to eat but rock-weed, and a very few muscles, and when the spring-tide was over, they could scarcely get any at all. Upon their first arrival, they saw several seals upon the rock, and supposing they might harbour there in the night, the captain, who was the only one among them capable of exertion, walked round at midnight, but could never meet with anything. They likewise saw a great number of birds, but they were never able to catch any. This was a severe disappointment, and tended to aggravate their miseries still more; but it was particularly afflicting to the captain's brother, and another young gentleman, neither of whom had before been at sea, or endured any kind of hardship; and they were now reduced to the last extremity, having no one but the captain capable of assisting them.

Part of a green hide, which was fastened to a piece of the main-yard, being thrown up by the sea, they divided it among them, and, after mincing it small, they swallowed it. About this time the captain set the men to open the junk, and when the weather would permit, he thatched the tent with rope-yarn, in the best manner he was able, which proved of so much service, as to keep out two or three hours' rain, and saved them, in a great measure, from the cold pinching wind, which was very severe.

About the latter end of December, the carpenter, a fat man, and naturally of a dull, heavy, phlegmatic disposition, about forty-seven years of age, and who from their first coming on shore, had been constantly very ill, and lost the use of his feet, complained of excessive pain in his back, and stiffness in his neck: he was likewise almost choked with phlegm, for want of strength to discharge it, and appeared to be drawing near his end. They prayed over him, and used their utmost to be serviceable to him in his last moments, for which he showed himself sensible, though he was speechless, and at night he died. They suffered the body to remain till morning, when the captain desired those who were most able to remove it, and went out by himself to see whether Providence had sent them anything to satisfy the excessive craving of their appetites: but returning before noon, and not seeing the body outside the tent, he inquired why they had not removed it, to which they answered, they were not able: upon this, he fastened a rope to the body, and giving them his assistance, they with some difficulty, dragged it out of the tent. The captain was so overcome by fatigue, and the consideration of their misery, that, being ready to faint, he crept into the tent; but was no sooner there, than, as if to add to his trouble, the men began to request his permission to eat the dead body, the better to support their own lives,

This was, to him, of all the trials he had undergone, the most grievous and shocking—to see himself and company, who, but three weeks before, had come there laden with provisions, now reduced to such a deplorable situation; two of them absolutely starved to death, while, ignorant of the fate of two more, the remainder, though still living, were reduced to the last extremity, and requiring to eat the dead for their support.

After mature consideration of the lawfulness or sinfulness on the one hand, and absolute necessity on the other, judgment and conscience were obliged to submit to the more prevailing arguments of their craving appetites. They, at length, determined to satisfy their hunger, and support their feeble bodies, with the carcase of their deceased companion. The captain ordered the skin, head, feet, hands, and bowels to be thrown into the sea, and the body to be quartered for the convenience of drying and carriage; but again received for answer, that none of them were able to do it, and an earnest entreaty that he would perform that duty for them. This was a hard task, but their incessant prayers and entreaties at last prevailed over his reluctance, and by night he completed the operation.

Part of the flesh he cut into thin slices, and washing it in salt water, brought it into the tent, and obliged the men to eat rock-wood with it instead of bread; but the mate and two others refused to eat any that night, although the next morning they complied, and earnestly desired to partake with the rest.

The captain soon found that they all ate with the utmost avidity, so that he was obliged to carry the quarters further from the tent, to be out of their reach, lest, by over-eating, they should injure themselves, and likewise expend their small stock too soon; he also limited each man to an equal portion, that they might not quarrel, or have cause to reflect on one another; and this method he was the more obliged to adopt, for in a few days he found their dispositions entirely changed, and the affectionate, peaceable temper they had hitherto manifested totally lost. Their eyes looked wild and staring, and their countenances fierce and barbarous. Instead of obeying his commands, as they had universally and cheerfully done before, he now found that even prayers and entreaties were in vain, and nothing was to be heard but brutal quarrels, with horrid oaths and imprecations, instead of that quiet and submissive spirit of prayer and supplication which they had previously manifested.

This dreadful state of things, coupled with the dismal prospect of future want, obliged the captain to keep a strict watch over the remainder of the dead body, lest any of them should get to it; as, if that were spent, they would be compelled to feed on the living, which they certainly must have done had they remained a few days longer; but the goodness of God began now to appear, by putting it into the hearts of the good people on the shore to which their raft was driven, to come out in search of them, which they did on the morning of the 2nd of January.

Just as he was creeping out of the tent, the captain observed a shallop, about half-way from the shore, standing directly towards them. It is impossible for imagination to conceive, or language to express, the joy and satisfaction which they felt at the prospect of such a speedy and unexpected deliverance.

The boat came to an anchor at the distance of about one hundred yards, the swell preventing her from approaching nearer; but her anchor coming home, obliged the crew to stand off till about noon, waiting for smoother water upon the flood.

Upon the boat bearing the shore, the captain gave her crew an account of all their miseries, excepting their want of provisions, which he did not mention, lest the apprehension of bad weather might prevent the people in the shallop from coming on shore. He earnestly entreated them to attempt their immediate deliverance, or, if possible, at least to furnish them with the means of obtaining a fire, which, with great difficulty and hazard, they at last accomplished, by sending one man in a small canoe, who, after great exertion, got on shore.

After helping him up with his canoe, and seeing nothing to eat, the captain asked him if he could give them fire; to which he answered in the affirmative, but was so affrighted at the thin and meagre appearance of the other, that for some time he could scarcely speak, till recollecting himself, he accom-

panied the captain to the tent, where he was surprised and shocked to see so many in such a deplorable condition. Their flesh was so wasted, and their looks so ghastly and frightful, that it was really a dismal spectacle.

With some difficulty they made a fire, after which, as the captain determined to go on board with the man, and send for the rest one or two at a time, they both got into the canoe; but the sea immediately drove them against the rock with such violence, that they were upset, and the captain being very weak, it was a considerable time before he could recover himself, so that he had a very narrow escape from drowning. The man, in the mean time, got on board without him, intending to return the next day with better conveniences, if the weather should permit.

It was an afflicting sight to see the shallop now standing away from the shore without them, whose appearance, a few hours before, had raised in them such flattering hopes; but the Almighty, who orders every thing for the best, had, doubtless, designed their preservation, in denying what appeared to be present deliverance; for soon after her departure, the wind blew so hard, that the shallop was lost; and the crew, with great difficulty, saved their lives. Had these poor miserable creatures been with them, as they had wished and expected, it is more than probable they must have all perished, as they had not strength sufficient to help themselves.

When the crew of the shallop reached the shore, they immediately sent an express to Portsmouth, in Piscataqua, where the people hastened to their deliverance as soon as the weather would allow; but, to their great sorrow, and a further trial of their patience, the next day was stormy; and though they had no doubt that the people on shore were acquainted with their condition, and would assist them as soon as possible, yet it was uncertain how long the present unfavourable weather might continue, which made their situation extremely miserable.

The wind, however, abated during the night, and early the following morning a shallop came for them, on board which was Captain Dean's much-esteemed friends, Captain Long and Captain Purver, with three men, who brought a large canoe, and in two hours got them all on board, being obliged to carry them all from the tent to the canoe, and fetch them off by two or three at a time.

When they got on board the shallop, they each eat a piece of bread, and drank a dram of rum, which made them extremely sick; but after their stomachs had tasted some warm nourishing food, they became so exceedingly hungry and ravenous, that had not their friends restricted their diet for two or three days, they must have killed themselves with over-eating.

Two days after their coming on shore, the apprentice lost the greater part of one foot; the rest recovered their limbs, though not the perfect use of them. Very few, excepting the captain, escaped without losing the benefit of fingers and toes, though otherwise all were in perfect health.

A droll adventure some time ago occurred, at Naples, before the Café d'Italie, near the Royal Palace. An English sailor, animated by the juice of the grape, happened to run foul of a soldier, who in return began to abuse him with all the usual invective of a Neapolitan vocabulary. A dialogue ensued, from which neither of the disputants derived much edification, each carrying it on in his own national dialect. In a few minutes afterwards about half a dozen other soldiers arrived from the neighbouring cavalry guard-house, and joined their comrade. The sailor protested that he had been quite innocent of any intention to give offence; but the soldiers, confident in their superior numbers, insisted upon his going to the guard-house. After some further altercation, two of them attempted to lay hands upon him, when Jack, losing all patience, had his jacket off in a twinkling, and challenged the whole set to come on, and show what they were made of. Those who were nearest to him received instant proofs of the vigour of his arm, whereupon the whole set scampered off in quick time, whilst Jack, after adjusting his costume, walked leisurely away, but not without stopping to discharge a volley of oaths into the guard-house; but none of the inmates, however, manifested the slightest wish to renew the altercation.

THE LIFE BOAT.

On the north-eastern coast of England are several dangerous banks or shoals, upon which the most melancholy wrecks frequently occur in stormy weather; and, perhaps, no part is more dangerous than the shore between Yarmouth and Lowestoff, where the violence of the sea has repeatedly caused considerable damage, and made appalling irruptions. Upon occasions of imminent danger, where the energies of man are called into action by the voice of humanity, to save our fellow-creatures from the yawning tombless grave, nothing can exceed the noble and gallant daring of the Yarmouth and Lowestoff boatmen, as they put off, heedless of all personal danger, to attempt the rescue of crews in distress. Hundreds of human

beings are annually saved by the successful exertions of those noble fellows; who, from their constant occupation of fishing, naturally acquire a skill in the management of their frail barks in tempestuous weather, not to be surpassed by boatmen on any part of Britain's iron-bound coast. The calm intrepidity with which these men launch their boats into the tempestuous ocean, with the furious threatenings of death in their ears, and the greatest perils before their eyes, all around them, creates a stirring interest in the bosom of the anxious beholder.

In the early part of the year 1823, particular attention was arrested by the violence of the breakers dashing over the banks, so dangerous to mariners, upon this part of the coast. The wind was high, but not boisterous, though the aspect of the weather, even to an unpractised eye, was anything but fa-

THE LIFE BOAT.

vourable. The rising wind now began to increase to a fearful degree, and the sudden gusts were not only more frequent, but louder and more continuous. The sea was becoming gradually ruffled, and the foam was gathering upon the crest of every billow as they rolled towards the shore. The breakers whitened more and more as they dashed their heavy and ponderous masses over the fatal spot which had been the cause of so many disastrous wrecks. The sun glared through the uneven sections of the gathering clouds, as they passed rapidly over this beautifully radiating orb. The wind now boomed loudly, and the clouds began to collect in deeper hues. As evening advanced the storm increased with awful rapidity and equal violence—the chafing waters were already white with continual and angry collision. How thrillingly was heard the first portentous harsh moan of the wind, which rapidly rose and roared

over the expanse of waters with the voice and threatening of omnipotent terror! The rushing torrent seemed to leap up to meet its rude embrace, from which it immediately receded with an appalling fierceness, as if driven back by some mysterious but overpowering agency. By this time the sun gleamed luridly through the brief intervals into which the clouds occasionally broke, as they swiftly careered over its dimly-enveloped disk. The impenetrable masses of vapour which by this time had overspread the sky, produced a supernatural darkness; and the golden edges with which the setting sun had adorned them, presented a singular contrast with the deep varying tints which they were constantly assuming, as they evolved their huge but fantastic shapes over the horizon, like the hideous fiction of a dream, or the creation of a capricious imagination. In a few hours the sea had swollen from a state of gentle un-

dulation to one of appalling disorder, resembling a monster writhing in agony, and, uniting with the roar of the elements in such dreadful commotion, that made the beholder tremble. Ere the sun had sunk below the horizon, it was blowing a complete hurricane. The fishing-boats made for shore with the utmost speed, and were soon hauled upon the beach, with the assistance of the wives, children, and relatives of those whose safety had now become a subject of painful anxiety. The sea rolled upon the shore with frightful violence, and dashed against any opposing object, with a force which carried a sheet of spray almost to the sky, and flinging it over the land like a huge shroud uplifted from the billows, where the minister of

death appeared to be preparing to enter upon a mission of awful devastation. When evening set in, the tempest had nearly reached its climax, and the darkness was so intense that nothing was to be seen but the frothy surface of the waters, illuminated by its own igneous illusory gleaming, exhibiting its ponderous heaving body, that seemed a huge spectre of the deep arising from a disturbed repose, and labouring under the throes of some supernatural convulsion. Shortly after midnight the impetuosity of the wind appeared to moderate; but early in the morning there was a thick heavy mist upon the sea, which was so dense that the eye could not pierce it. The glorious orb of day alone was visible through the impenetrable

vapour; and that looked as if suspended from the sky. The effect was singularly painful, as there was something altogether ominous in the strange aspect.

As the morning advanced the wind rapidly rose and dispersed the mist, the clouds once more gathered over the sun, and before noon the tempest raged as fiercely as on the preceding night. As soon as objects in the distance became at all visible, it was perceived that a ship had run upon the furthestmost and most dangerous shoal. She lay quite upon her beam ends, not a sail set, and the sea dashing over her hull with frightful impetuosity. It was evident that she could not long withstand such a terrible assault. By the aid of a glass, the crew were seen clinging to the wreck in a state of agonising distress. The rigging and tackle of the vessel were in the greatest disorder, as if it had suffered extremely from the hurricane of the preceding

night. The sails had been furled, but hung in loose bags from the masts. It became manifest, at the first glance, that there was no hope of saving the ship, and that great peril must be incurred in attempting to rescue the crew. This, however, was determined upon the moment their danger was ascertained.

To be prepared for casualties, like the present, a life-boat had been built, upon a new and singularly safe construction. It was capable of containing eighty persons. The whole of the outside was faced with cork, which projected from the wood to a thickness of, at least, four inches. The outer surface of the cork was covered with tarpaulin, well secured, and the whole protected by a thick coat of white lead. This preparation not only rendered the boat so buoyant as to secure her against upsetting, but, should she strike against any hard substance, the elastic nature of the cork caused her to rebound, and by yielding

to the force of the shock, escape staving. Also, in order to increase her buoyancy, and render her upsetting next to an impossibility, copper pipes, eight inches in diameter, filled with air, were passed from head to stern, in the inside, just below the gunwale. Above these pipes was the bench for the accommodation of those persons who might be fortunate enough to be saved from shipwreck. She carried two masts and two square-sails, and was generally manned by from twelve to sixteen picked men. The security of her construction considerably diminished the danger attendant upon occasions like the present, though it was still a work of very great peril.

The moment it was perceived that there was a vessel in distress, the crew assembled with great alacrity, and launched the life-boat into the turbulent sea. The anxiety depicted upon every countenance, to save the lives of their fellow-creatures, was extreme. The feelings of humanity expressed in the rough features of those kind hearted fishermen, claimed the admiration of those who witnessed their intrepidity and earnestness in the cause of suffering fellow-mortals. They launched from the beach, accompanied by the fervent prayers of all present. The wind had somewhat subsided, but the sea was in awful commotion; nevertheless, the lightness of their bark caused it to leap over the waves, as if it defied their fury, and was secure from the peril which they threatened. Notwithstanding her extreme buoyancy, the billows frequently rolled over her bows, completely filling her with water, a large portion of which escaped as she yielded her side to the leeward, burying her gunwale, for a moment, in the tumultuous flood, then rising with the lightness of a gull upon the convulsive waters. She was instantly bailed out by the crew, with an activity that gave little time for accumulation. On they went, bounding through the foaming surges; yet the crew, in spite of all their skill, were exposed to considerable peril from the occasional dashing of the sea over the boat's bow, which threatened to wash them overboard, and which required the greatest caution to prevent. The sudden lurching of the boat would have been fatal to any less accustomed to the storms so frequent off this coast, and which they continually encounter in their small open fishing-boats.

As they approached the shallows, the cross ground-swell rendered the boat much more exposed to ship water, and kept many of them constantly employed in baling. Sea after sea poured over her, but still she rode triumphant. The crew, however, had now more difficulty than ever in securing themselves from being washed overboard. They were obliged to lower the mainsail, and keep her under just sufficient canvass to steady her, and give her an impulse towards the object of their dangerous undertaking. The breakers as they rolled over the bank, presented a fearful object of peril. How to approach the stranded ship was an undetermined difficulty. One part of the bank was so shoally, that the boat could not venture near enough to be of any service; the crew were, therefore, obliged to keep her upon that side of the wreck, where the depth of the water enabled her to float with some degree of safety. When within the immediate influence of the breakers, it being impossible to keep her steady, she was, of course, subject to the dangerous contingency which now perpetually happened, of being filled with water; and it required all their activity to get rid of their liquid burthen. The promptness and decision of the men were above all praise; yet, notwithstanding the skill with which the helmsman met the billow, and rode over its crested bosom, the wave frequently, for a moment, buried her within its briny womb; but she rose out of the unwelcome embrace, with the freedom and lightness of a swan in its pastime.

By this time they were within twenty yards of the ship. Her crew were clinging to her bulwarks on the weather side. Every wave that struck against her swept her deck from stem to stern, and rendered it a great difficulty for the unfortunate seamen to maintain their hold. She was a merchant vessel of about three hundred tons burthen, and, being heavily laden, had already sunk deep into the sand-bank on which she had struck. Every moment increased the peril of the unhappy crew; and their cries came upon the ear through the crashings of the tempest, beseeching despatch, as they were in the greatest

extremity. The hoarse scream of supplication roused the energy of the boatmen to still greater exertions. It was an awful situation. The surf broke over the bank with such terrific fury, that they had the greatest difficulty to avoid being cast upon the engulfing shoal.

They were now within about ten yards of the vessel, and being to the leeward, they lowered the remaining sail, as the elevated position of the hull broke the force of the wind, and arrested the impetus of the breakers. Thus, having got into what seamen call the lull of the sea, they found themselves better able to steady the boat, though the cross-swell was so troublesome, that it required great skill and caution to prevent her being forced upon the bank. There was no possibility of getting nearer the wreck, without incurring the hazard of being dashed to pieces against her hull; they were, therefore, obliged to keep off the boat. As they had now no sail set to steady her, and send her over the chafing surges, she was continually filled with water; and all their efforts to keep her free were unavailing. At this moment one of the crew on board the wreck, who had been clinging to an anchor at the bow, was washed off by a sea with a force that sent him several yards from his hold. In an instant he was swept past the boat with the velocity of a cannon-ball. He rose upon the surface with evident difficulty, struggled fiercely, then sank to sleep his last sleep within the ocean's bosom, before the boat could possibly reach him.

The boat regained its former position, and one of her crew, standing at the bow, flung a small rope on board, which was instantly caught by one of the sailors, who, having observed the action, was prepared to receive it. Without a moment's delay he fastened the rope round his body, and then sprang into the sea; and was instantly hauled on board, but in a state of insensibility.

By this time, from the repeated shocks of the breakers, the ship had sprung several planks, and the water poured into her hold, which was filled in a short time. It had now become quite evident that she would soon go to pieces; and the danger, therefore, of the unhappy crew became every instant more and more imminent. As yet only one had been rescued, and there still remained fourteen on the wreck, besides the captain's wife and her infant child.

A crash was now heard in the stranded ship, and the main-mast fell by the board. It was almost immediately followed by the mizen and foremasts, which fell, likewise, with an ominous splash into the foaming deep. The cord was again flung to the wreck, and the captain seized it, in order to fix it round the body of his wife, who clasped her infant to her bosom with a despairing look; the babe being fastened to its agonising mother by a shawl wrapped round her waist. At this moment she was swept from the gangway, together with her husband, who was in the act of fixing the rope. Both instantly disappeared, but almost immediately rose amid the convulsed waters, which broke over them with alarming impetuosity. One of the fishermen, with heroic resolution, having dragged the line on board the boat, tied it round himself, and, plunging into the sea, swam towards the hapless woman just as she was sinking. With desperate energy she clung to her preserver, and both were hauled into the boat, the former in a state of dreadful exhaustion. The unhappy husband sunk to rise no more, in the sight of the wretched partner of her toils, whose screams rose above the clamour of the elements; and had she not been restrained by the powerful arm of her preserver, would have leaped into the angry flood. The infant, though senseless when rescued from the billows, was eventually restored to animation by the warmth of its distracted mother's bosom.

With extreme labour, and at considerable hazard, several of the seamen were released from their perilous situation, and the cord was again flung to the wreck, and secured by one of the unhappy sufferers: but so many of the ship's planks had sprung, that it was every instant apprehended the hull would go to pieces. Every sea that broke over her, added to the danger. She groaned terribly, and her whole frame vibrated with the concussion that every sea caused to her shattered hull. At length a terrific breaker struck her upon the weather quarter—a tremendous crash followed—a second and a third breaker

followed in succession, and struck her—she reeled for a moment—the spray hid her from sight, and after a short interval, nothing was to be seen but her planks floating upon the convulsed expanse of waters. Before the rope could be fastened round the body of the sailor who had caught it, the shock came—the deck opened—the frame of the vessel was rent asunder—and the remaining three unhappy men were whirled into eternity.

The crew of the Life-boat had succeeded in saving ten out of fifteen of the hapless crew, besides the bereaved mother and her fatherless infant. These lives had been preserved by the intrepid fishermen at the imminent hazard of their own; and though they had the melancholy misfortune to behold so many of their fellow-beings descend to their premature and unhalloved graves, they had, nevertheless, the conscious satisfaction of having rescued twelve of the unfortunate sufferers from the wreck.

Having done all that either human skill or intrepidity could do, in the hour of peril, for the salvation of human life, they turned the prow of their boat towards the shore. Their progress was rapid, having both wind and tide in their favour, though the storm continued to rage with unabated fury. They ran, however, before the wind, and the gallant Life-boat, with its precious burthen, leaped over the billows, which opposed the buoyant fugitive with their frothy crests reared and threatening to overwhelm her; however, she bounded lightly onward, and at length reached the beach, without the slightest accident, and having scarcely shipped a sea during her return, where they were received by the hearty congratulations of those assembled on the shore.

Every attention that the kindest sympathies of our nature could dictate, was paid to the hapless widow and her orphan child; whilst all vied in supplying the wants of the seamen, who were thus providentially saved from an unconsecrated grave.

Provision was soon made for restoring the shipwrecked mariners to the bosom of their respective families; but the *lonely one* still continues to inhabit the hospitable shores of Lowestoff; and the delicate bud that Providence fostered in the hour of peril, is now fast expanding to a beauteous flower; ever grateful that the divine attributes of ingenuity and humanity combined to construct and establish the Life-boat.

PERILOUS SITUATION OF THE AMERICAN, CAPTAIN STANDIGE, DECEMBER 1749.

On the 25th of September, 1749, the American, commanded by Captain, afterwards Sir Samuel Standige, having completed her lading, which consisted of coals, grindstones, bale goods, and hemp, the captain received his instructions from the owner at Hull, to drop down the Humber the next tide, and then to proceed to Newport, in Rhode Island, the place of his destination, with all possible expedition.

In pursuance of these instructions, Captain Standige repaired on board, when all things being in readiness, preparations were immediately made for sailing; but in hauling out of the harbour, the ship met with an unfortunate accident, occasioned by another vessel which cut the rope by which she was secured, and caused her to take the ground near the Dolphin. It being high water when the ship took the ground, and the neap-tides coming on, the ship was detained for four days in this disagreeable situation; and when she floated again, it was found that from her straining so heavily, she had sustained considerable damage, and before she could be got off to an anchor, the men were obliged to rig both pumps, and several hours elapsed before they could be worked. The crew found the ship to be so very leaky that all hands left her, when the captain went on shore to inform the owner of her condition; he told the captain, that he could not consent to have her repaired at home, if he could by any means possibly avoid it, he had much rather that it should be done at any other port.

Captain Standige thus unsuccessful in his application to the owner, resolved at all events to get the ship away if possible; and accordingly, notwithstanding it was then eight o'clock at night, he went in search of fresh seamen to man the ship, and

having soon procured a competent number of hands, got them on board by four o'clock the following morning; they immediately weighed anchor, and both wind and tide being favourable, they were in a very short time out of the Humber.

By this time, however, he too plainly perceived that the ship had settled considerably in the water; but fearful that the men should be too much alarmed, he secretly conveyed away the pump-log and hid it. After the sailors had all received a comfortable refreshment, Captain Standige gave orders for the pumps to be rigged, and got to work to pump her out, at which he exerted himself in common with the rest of the men. After both pumps had been at work for about an hour, the men began to express strong apprehensions that the ship was too old to suck, and in a great degree to slacken their exertions. The captain, however, endeavoured to encourage them as much as lay in his power, and then told them, that they were now so far embarked with a fair wind, without any chance of regaining the port they had left, that the only alternative that was left them under the circumstances, was to pump or to drown—that he had orders from the owner to put into any port in England to repair—and that he hoped the ship would soon close her rents; but that if, contrary to his expectations, she continued so leaky that one pump would not be sufficient to keep her free, he would then put into Harwich, where they might have a good winter's employment. The men now went cheerfully to work, and with unwearied exertions at the pumps for about four hours longer, they so far reduced the quantity of water in the hold, that the labour of one pump constantly going was sufficient.

The next day, as the wind was fair, they ran through Yarmouth Roads; but as soon as they had got over the Stamford, and before they could reach Orford Ness, a strong gale came on from the E.N.E. The sea ran extremely high, and the night was very dark; the captain then steered a course for the Foreland, with the intention of going into Dover Pier. The next day, however, being without the Goodwin Sands, and the wind blowing strong from the E.S.E., with thick rainy weather, there was no looking at the land with any degree of safety; so that they were obliged to steer a course right down the channel without ever once seeing land; and a strong gale continuing to blow, they were hurried in a very little time about a hundred leagues to the westward. Although the weather proved so tempestuous, yet, during the whole run, the ship was kept free with only one pump constantly working; and the captain found means by the promise of five shillings a month advance, in each man's wages, to keep them tolerably easy and in good spirits.

They were now fairly embarked on the wide Atlantic Ocean, in a very leaky, crazy ship, that wrought and strained excessively; and as the winter season was advancing apace, the wind hung for a considerable time to the S. and S.W., which kept them a long time to the northward; and continuing to stand to the westward, prevented their running for the trade winds: hence it happened that the whole voyage proved remarkably tedious and turbulent, with frequent heavy gales. When they had advanced between five and six hundred leagues, they experienced for several days together uncommonly severe *jack-northwesters*; and the sea running extremely high, often broke over the ship with great violence. Every favourable change of wind, however, which enabled them to pursue either a direct or an oblique course, was embraced with the utmost eagerness and alacrity.

On the 21st of December, they first struck soundings, in thirty-five fathoms, with a green ooze at bottom; being then, as the captain imagined, in Block Island channel, about ten leagues S.W. of Rhode Island, as the ship was in that parallel of latitude. Stretching to the west in cold, hazy, winter weather, they discovered a schooner about four hours after, bearing down upon them. On being hailed, Captain Standige told the master of her, that they had been out fourteen weeks from England; and that they had sounded thirty-five fathoms in Block Island Channel. The master of the schooner told them, that he had been out only three days from Boston, bound, as they were, for Rhode Island, and that they were then in Saint George's Channel, to the eastward of Nantucket Island; to

this, Standige replied, that as he had before experienced these soundings, that he was sure they were in Block Island Channel. At this reply, the master of the schooner seemed a good deal piqued, and asked Captain Standige if he, who had been out fourteen weeks from England, could pretend to know better than he who had been out only three days from Boston; but they parted company soon after, during a heavy gale of wind, accompanied with a great fall of snow, and an intense frost.

As the schooner's account differed at least forty leagues from their own reckoning, the captain consulted with the mate, as to which they should adopt; for if they adopted that of the schooner's, and their own should prove the most correct, their course, which would then lay to the westward, would entangle them with Nantucket's shoals; while their own course would keep them in safety under Long Island. As the schooner had been so short a time out of port, they unfortunately preferred her reckoning to their own, and the ship's head was laid to the eastward with as much wind and sea as enabled them to carry a foresail: the wind at the time blowing strong from the N.E., and the frost very severe with frequent and heavy showers of snow. The cables were bent, and the anchors kept clear, so as to be ready to let go, in case any danger should threaten, and the lead was going every half hour.

Having stood upon this tack for about eighteen or twenty hours, they gradually shoaled their water, inasmuch that at eight o'clock in the evening, they had decreased from thirty-five to nine or ten fathoms. The night wore a terrible aspect, and for snow and ice, proved as dismal as men could be exposed to. The captain had another consultation with the mate, and they were both under strong apprehensions, that if they wore the ship and stood upon any other course, they might run into unforeseen and fatal dangers; for they now, too late, discovered that they had been completely misled in their reckoning by the master of the schooner.

All hands were now called—the foresail hauled up, and handed with much difficulty; the best bower-anchor was let go, and all the cable veered out, so that the ship rode with a whole cable before her. The hawse was now served, and all made snug; and then all hands turned to the pumps and freed the ship. In this dreadfully tempestuous night, the whole crew, divided into two watches, relieved each other alternately through the whole night, as the frost was so intense, they were fearful of the pumps freezing.

The ship rode it out much better than could reasonably have been expected, considering her situation in the middle of the Atlantic and in the depth of winter, it being the night between the 29th and 30th December, and increased in length by their miserable condition. At length the welcome morning dawned upon them, when the wind became somewhat more moderate. At seven o'clock, being then day-light, and a lucid interval between showers of snow, the man at the mast-head called out, "Broken water to windward, and on the starboard bow." It was then they perceived the imminent danger to which they had been exposed, and from which they had been so providentially saved. This broken water they soon found to be the great shoals and sands of Nantucket Island; for, soon afterwards, they could distinctly see over the sands the masts of the vessels in the harbour of Nantucket; and the captain perfectly recollected the place.

On the 30th of December they weighed anchor. Nantucket Island bearing N. by W., and the wind at N. by E., they set the foresail close, reefed the main-top-sail, and stood to the westward. At four o'clock they altered their course to N.W., St. Martha's Vineyard bearing N.N.E., distance one league. They stretched all night W. by N., a heavy gale blowing, with severe frost and snow; the lead was kept going every half-hour, the soundings being from twelve to twenty fathoms. At six the following morning they were close in with the light-house on Point Judith, and only about ten miles from Newport, which they were anxious to reach as soon as possible, and kept working the ship in the wind's eye, tack and tack; but the gale continued so strong, that with their utmost exertions they were unable to gain any ground.

On the 31st, at six o'clock in the evening, they handed the

sails, and finding a sandy bottom, they let go the anchor, in thirty-five fathom water. Although they were then on a rocky and dangerous coast, open to the Atlantic Ocean, and the weather continuing excessively tempestuous, yet the ship rode it out very comfortably. There was a heavy fall of snow during the night, but the weather became more moderate in the morning. After clearing the decks of the snow and ice, they weighed anchor, and worked the ship safe into the harbour of Newport, in Rhode Island, to the no small amazement of Mr. Joseph Harrison, the merchant to whom they were consigned, and all the gentlemen of the place. Upon being informed of their situation on the preceding night, they observed that it was the first and only instance that had ever come to their knowledge of a ship anchoring on that coast; but when told that the American had been at anchor in the heavy gale three days previous, under Nantucket's shoals, they could scarcely believe it to be possible.

They learned afterwards that the schooner, whose erroneous reckoning had completely misled them, was blown off to the West Indies.

LOSS OF THE FLORA, CAPTAIN THOMAS BURROWS, OCTOBER, 1804.

"I saw a ship, in the gloom defined,
With cordage wet, and bare poles, rush past,
Like an infant's toy on the billow vast;
It fell in the channel's gloomy black—
It rose in the lightning's lurid track—
Where the curling wave seemed to wall the sky,
As it blacken'd and swell'd on the sailor's eye."

THE brig Flora, commanded by Thomas Burrowes, sailed from Philadelphia, on Friday, September 28, 1804. Besides the master, she had on board William Davidson, supercargo; Jacob Oldenberg, mate; Josiah Anderson, steward; Samuel Badcock, John Nevan, Joseph Wilder, and William Storey, seamen; Josiah Smith and William Cameron, boys; being ten persons in all.

On October 1, they discharged their pilot, and took their departure from Cape Henlopen, with a pleasant breeze from the N.W. Nothing of consequence occurred until the 8th, when the wind hauled to the northward, and continued in that direction until the 10th, with a heavy swell from the N.N.E. On the 12th, they were in lat. 28° 50' N., long. 54° 54' W., when, observing the appearance of a storm coming on from the N.E., they took in their jib, square-mainsail, top-gallantsails, and staysails. At about four o'clock in the afternoon, the gale increased, upon which they close-reefed their topsails, sent the top-gallant-yards down, and took in two reefs of the fore and after staysail; and at midnight, as the gale was still increasing, they handed the top-sails, and hove-to under the foresail and main-staysail.

At one o'clock in the morning of the 13th, they handed the foresail and main-staysail, and hove-to under the balance-reefed mainsail, the gale increasing with a heavy sea, accompanied with thunder and lightning, and violent rain; and at two o'clock they handed the balance-mainsail, and hove-to under bare poles.

As it continued to blow without intermission, all hands were employed on deck, and their pumps kept constantly going; but, finding it was impossible that the brig could lie-to any longer, all hands were called aft, as it was determined, for the preservation of the vessel, to cut away the mainmast, and scud before the wind, and everything being prepared, they divided accordingly; but before they could get to the mast, they were struck by a whirlwind, which hove the ship on her beam-ends. Every one now rushed to the windward side of the vessel, with the exception of Joseph Wilder, who, being in the fore-castle at the time, was drowned. They immediately cut the lanyards of the main-rigging, and the mainmast went by the board. Soon after the hatches were blown up, the vessel filled with water, and the cargo was floating out at each hatch-way.

All hope of saving the ship was now at end, and self-preservation became the only object with every one; they accord-

ingly lashed themselves to the main-chains, when a heavy sea breaking over, carried away William Davidson, William Storey, and the two boys, and soon afterwards the foremasts went by the board.

As daylight broke, a most dismal and tremendous sight presented itself to their view: the vessel was an entire wreck, with masts and spars hanging to it, while different parts of the cargo, as it floated out of the hold from time to time, washed over them. At length they shipped a heavy sea abaft, which stove in the stern, and made so large an opening, that the cargo in the cabin was washed out, and the wreck thereby considerably lightened.

They remained on the main-chains till about eight o'clock in the morning, when they took to the bowsprit, thinking that to be the safest part of the wreck; and about an hour afterwards, William Storey, and one of the boys, William Cameron, drifted on board on the caboose-house; but about noon the boy died through fatigue, and they committed his body to the deep. They now lost all hope, and resigned themselves to their fate, expecting every wave to swallow them; for, though the gale abated, a heavy sea continued running during the latter part of the day.

On the 15th, William Storey died for want of subsistence, and the mate, from extreme hunger, actually devoured a part of his leg; but the rest of the crew refused to share with him in his disgusting repast, and the remains were committed to the deep. In this dreadful situation they continued until the 17th, when the gale considerably abated. It now occurred to them that, by diving into the half-deck, they might obtain something on which they could subsist: but all their attempts to do so proved ineffectual, and they had then no other resource but to chew the lead from the boxes.

On the 19th, they discovered a large ship to leeward, and made all the signals they were able, but in vain, for she passed without taking the least notice of them. On the following day a strong breeze sprung up, and a heavy sea running, several kegs of butter came up from the fore-castle, upon which they plunged in on the deck, and were so fortunate as to save five of them, one of which was opened, and they fed one another; but they soon found that the salt butter increased their thirst, instead of relieving it.

On the 21st, a schooner passed them to leeward, within less than a mile; and although they hoisted every signal they could make, she took no notice of them, though they could see every man on deck. Jacob Oldenberg now became delirious, and continued in that state until the 23rd, when he died; but instead of throwing his body overboard, the remainder of the crew, now, reduced to the last extremity from want of water and food, agreed to eat his flesh for their own preservation. They accordingly dissected the body, and found considerable relief from drinking the blood. The wreck at this time was surrounded by numerous sharks, which seemed waiting for the miserable creatures upon it: but Providence had so far ordered it otherwise, that the men caught one of the largest of them, by means of a piece of Oldenberg's flesh, attached to a rope. They then committed the remainder of the mate's body to the deep; and having got the shark on the bowsprit, split him open, and divided the blood among them, which proved a most happy and seasonable relief to all.

On the 24th, at sunrise, when despair had left them almost without hope, to their unspeakable joy, they saw a brig standing towards them, the sight of which filled them with hopes, and raised their drooping spirits. They immediately hoisted signals of distress, and, to their great delight, saw the brig haul up towards them. At ten, a.m., she hove-to, and hoisted out a boat to their assistance, when these wretched sufferers were released from their pitiable condition, and taken on board the vessel, which proved to be the Thames, of London, commanded by Charles Burton, and bound from Madeira to New Providence.

They were now in the most feeble and emaciated condition possible for human nature to endure, and the legs of all were most dreadfully ulcerated. The captain was so weak that, on being brought on board, he several times fainted, and it was long before any symptoms of his recovery were appa-

rent. A bed was made for them on the quarter-deck, an awning set over it, and every assistance given that was necessary; but the officers were particularly careful to prevent these poor miserable objects from gratifying their eager desire to assuage the burning thirst they had so long endured, by drinking too copiously, which would soon prove fatal; they therefore supplied them with fresh water only, sparingly and cautiously at first. Two ladies, who were passengers on board the Thames, with that sympathy and tenderness which ever distinguish their sex, were most assiduously attentive in doing every thing in their power to contribute to their comforts; they gave them some sago, and made them some chicken-broth, and were so far successful in their humane exertions, that the men soon began to recover their spirits and strength. As their clothing was in a very wretched plight, from the distress they had suffered, their kind deliverers furnished them with new clothes, and had the happiness to see daily a rapid progress in the re-establishment of their health.

When the wreck was discovered, the captain of the Thames found the lat. to be $25^{\circ} 5' N.$; from which it appeared that this vessel had been carried, by some current or unknown cause, eleven miles to the northward of their account. By this providential deviation from the cause they intended to steer, they were brought to the spot where the wreck lay; and as such a deviation had never occurred to them in any former voyage, they could only ascribe it unto him, whose tender mercies are over all his works, that they had been the instruments of His merciful goodness in rescuing from their dreadful situation the four poor souls they had taken from the wreck. So true it is, that "those who go down to the sea in ships, and who do business in great waters, see the works of the Lord and his wonders in the deep."

A FOX YARN.

I RECOLLECT once when I was very near eaten alive by foxes, and that in a very singular manner. I was then mate of a Greenland ship. We had been on the fishing ground for three months, and had twelve fish on board. Finding we were doing well, we fixed our ice-anchors upon a very large iceberg, drifting up and down with it, and taking fish as we fell in with them. One morning as we had just cast loose the carcass of a fish which we had cut up, when the man in the crow's nest, on the look-out for another "fall," cried out that a large polar bear and her cub were swimming over to the iceberg, against the side of which, and about half a mile from us, the carcass of the whale was beating. As we had nothing to do, seven of us immediately started in chase; we intended to have gone after the foxes, which had gathered there also in hundreds, to prey upon the dead whale. It was then quite calm: we soon came up with the bear, who at first was for making off; but as the cub could not get on over the rough ice, as well as the old one, she at last turned round to bay. We shot the cub to make sure of her, and it did make sure of the dam not leaving us till either she or we perished in the conflict.

I never shall forget her moaning over the cub, as it lay bleeding on the ice, while we fired bullet after bullet into her. At last she turned round, gave a roar and a gnashing snarl, which you might have heard a mile, and, with her eyes flashing fire, darted upon us. We received her in a body, all close together, with our lances to her breast; but she was so large and so strong, that she beat us all back, and two of us fell; fortunately the others held their ground, and she was then an end, three bullets were put into her chest, which brought her down. I never saw so large a beast in my life. I don't wish to make her out larger than she really was, but I have seen many a bullock at Smithfield which would not weigh two-thirds of her. Well, after that, we had some trouble in dispatching her; and while we were so employed, the wind blew up in gusts from the northward, and the snow fell heavy. The men were for returning to the ship immediately, which certainly was the wisest thing for us all to do; but I thought that the snow storm would blow over in a short time, and not wishing to lose so fine a skin, resolved to remain and flay the beast; for I knew if left there a few hours, as the

foxes could not get hold of the carcass of the whale, which had not grounded, that they would soon finish the bear and cub, and the skins be worth nothing. Well, the other men went back to the ship, and as it was, the snow storm came on so thick, that they lost their way, and would never have found her, if it was not that the bell was kept tolling for a guide to them. I soon found that I had done a very foolish thing; instead of the storm blowing over, the snow came down thicker and thicker; and before I had taken a quarter of the skin off, I was becoming cold and numbed, and then I was unable to regain the ship, and with every prospect of being frozen to death before the storm was over. At last, I knew what was my only chance. I had flayed all the belly of the bear, but had not cut her open. I ripped her up, tore out all her inside, and contrived to get into her body, where I lay, and having closed up the entrance hole, was warm and comfortable, for the animal heat had not yet been extinguished. This manoeuvre, no doubt, saved my life; and I have heard that the French soldiers did the same in their unfortunate Russian campaign, killing their horses, and getting inside to protect themselves from the dreadful weather.

Well, Jacob, I had not lain more than half-an-hour, when I knew by sundry jerks and tugs at my new invented hurricane-house, that the foxes were busy—and so they were, sure enough. There must have been hundreds of them, for they were at work in all directions, and some pushed their sharp noses into the opening where I had crept in; but I contrived to get out my knife and saw their noses across whenever they touched me, otherwise I should have been eaten up in a very short time. There were so many of them, and they were so ravenous, that they soon got through the bear's thick skin, and were tearing away at the flesh. Now I was not so much afraid of their eating me, as I thought that if I jumped up and discovered myself, they would have all fled. No saying, though: two or three hundred ravenous devils take courage when together; but I was afraid that they would devour my covering from the weather, and then I should perish with the cold; and I also was afraid of having pieces nipped out of me, which would of course oblige me to quit my retreat. At last daylight was made through the upper part of the carcass, and I was only protected by the ribs of the animal, between which now and then their noses dived and nipped my seal-skin jacket. I was just thinking of shouting to frighten them away, when I heard the report of half-a-dozen muskets, and some of the bullets struck the carcass, but fortunately did not hit me. I immediately hallooed as loud as I could, and the men hearing me, ceased firing. They had fired at the foxes, little thinking I was inside of the bear. I crawled out, the storm was over, and the men of the ship had come back to look for me. My brother, who was also on board of the vessel, who had not been with the first party, had joined them in the search, but with little hopes of finding me alive. He hugged me in his arms, covered as I was with blood, as soon as he saw me. He's dead now, poor fellow!—That's the story, Jacob.

A HURRICANE.

THE wind was from the north-west—the water, as it blew on board, and all over us, was warm as milk; the murkiness and close smell of the air was in a short time dispelled: but such was the violence of the wind, that on the moment of its striking the ship, she lay over on her side with her lee guns under water. Every article that could move was danced to leeward; the shot flew out of the lockers, and the greatest confusion and dismay prevailed below, while above deck things went still worse; the mizenmast and the fore and main-topmast went over the side; but such was the noise of the wind that we could not hear them fall, nor did I, who was standing close to the mizenmast at the moment, know it was gone until I turned round and saw the stump of the mast snapped in two like a carrot. The noise of the wind “waxed louder and louder” it was like one continued peal of thunder; and the enormous waves as they rose were instantly beheaded by its fury, and sent in foaming spray along the bosom of the deep; the storm stay-sails flew to atoms: the captain, officers, and men, stood agast,

looking at each other, and waiting the awful event in utter amazement.

The ship lay over on her larboard side so heavily as to force in the gun-ports, and the nettings of the waist hammocks, and seemed as if settling bodily down; while large masses of water, by the force of the wind, were whirled up into the air; and others were pouring down the hatchways, which we had not time to batten down, and before we had succeeded, the lower deck was half full, and the hammocks were all floating about in dreadful disorder. The sheep, cows, pigs, and poultry, were all washed overboard, out of the waist, and drowned. No voice could be heard, and no orders were given—all discipline was suspended—every man was equal to his neighbour—captain and sweeper clung alike to the same rope for security.

The fore and mainmasts still stood, supporting the weight of rigging and wreck which hung to them, and which, like a powerful lever, pressed the labouring ship down on her side. To disengage this enormous top-hammer, was, to us, an object more to be desired than expected. Yet the case was desperate; and a desperate effort was to be made, or, in half an hour, we should have been past praying for, except by a Roman Catholic priest. The danger of sending a man aloft was so imminent, that the captain would not order one on this service, but, calling the ship's company on the quarter-deck, pointed to the impending wreck; and, by signs and gestures, and hard bawling convinced them, that unless the ship was immediately eased of her burden, she must go down.

At this moment every wave seemed to make a deeper and more fatal impression on her. She descended rapidly in the hollows of the sea, and rose with dull and exhausted motion, as if she felt she could do no more. She was worn out in the contest, and about to surrender, like a noble and battered fortress, to the overwhelming power of her enemies. The men seemed stupefied with the danger; and, I have no doubt, could they have got at the spirits, would have made themselves drunk, and, in that state, have met their inevitable fate. At every lurch, the mainmast appeared as if making the most violent efforts to disengage itself from the ship: the weather-shrouds became like straight bars of iron, while the lee-shrouds hung over, in a semi-circle, to leeward, or with the weather-roll, banged against the mast, and threatened instant destruction, each moment, from the convulsive jerks. We expected to see the mast fall, and with it the side of the ship to be beaten in. No man could be found daring enough, at the captain's request, to venture aloft, and cut away the wreck of the main-topmast, and the main-yard, which was hanging up and down, with the weight of the topmast-topsail-yard resting upon it. There was a dead and stupid pause, while the hurricane, if anything, increased in violence.

I confess that I felt gratified at this acknowledgment of a danger which none dare face. I waited a few seconds, to see if a volunteer would step forward, resolved, if he did, that I would be his enemy for life, inasmuch as he would have robbed me of the gratification of my darling passion—unbounded pride. Dangers, in common with others, I had often faced, and been the first to encounter; but to dare that which a gallant and hardy crew of a frigate had declined, was the climax of superiority, which I had never dreamed of attaining. Seizing a sharp tomahawk, I made signs to the captain that I would attempt to cut away the wreck, follow me who dared. I mounted the weather-rigging; five or six hardy seamen followed me; sailors will rarely refuse to follow, where they find an officer to lead the way.

The jerks of the rigging had nearly thrown us overboard, or jammed us with the wreck. We were forced to embrace the shrouds with arms and legs; and anxiously, and with breathless apprehension for our lives, did the captain, officers, and crew, gaze on us, as we mounted, and cheered us at every stroke of the tomahawk. The danger seemed passed when we reached the catheads, where we had foot room. We divided our work; some took the lanyards of the topmast rigging, I, the slings of the main-yard. The lusty blows we dealt were answered by corresponding crashes; and at length down fell the tremendous wreck over the larboard gunwale. The ship felt instant relief; she righted, and we descended amidst the cheers,

the applauses, the congratulations, and, I may add, the tears of gratitude of most of our shipmates, the work now became lighter, the gale abated every moment, the wreck was gradually cleared away, and we forgot our cares.

LOSS OF THE HALSEWELL.

THE Halsewell, East Indiaman, of 758 tons burthen, and commanded by Captain Richard Pierce, having been taken up by the directors of the East India Company, to make her third voyage to Coast and Bay, dropped down to Gravesend on November 16th, 1785, and there completed her lading. Having taken the ladies and other passengers on board at the Hope, she sailed through the Downs on Sunday, January 1, 1786, and the

next morning, being abreast of Dunnose, a portentous calm came on.

The Halsewell was one of the finest ships in the service, and was supposed to be in the most perfect condition for her voyage. The commander was a man of distinguished ability, and exemplary character; who, to professional merit, added the higher distinction of moral excellence, in whatever view he was placed: his officers possessed unquestioned knowledge of their profession; and the crew, composed of the best seamen that could be collected, was as numerous as the establishment admits. The vessel, likewise, contained a considerable body of soldiers, which were destined to recruit the Company's forces in Asia.

Among the passengers, several of whom were of great re-

LOSS OF THE HALSEWELL, CAPTAIN PIERCE, JANUARY 6, 1786.

spectability, were Miss Eliza and Mary Anne Pierce, two daughters of the captain; Miss Amy and Mary Paul, relations of Captain Pierce; Miss Elizabeth Blackburne, a daughter of Captain Blackburne in the East India Company's service; Miss Mary Haggard, sister to an officer of the Madras establishment; Miss Ann Mansell, a native of Madras, who had received her education in England; and John George Schutz, Esq., returning to India, to collect a part of his fortune which he had left behind.

On Monday, January 2, at three, p.m., a breeze springing up from the south, they ran in shore to land the pilot; but the weather coming on very thick in the evening, at nine o'clock they were obliged to anchor in eighteen-fathom water. They furled their topsails; but were unable to feel their courses, as the snow was falling thick, and freezing as it fell.

On the following day, at four, p.m., a violent gale came on from east-north-east, and the ship driving, they were obliged to cut their cables and run out to sea. At noon they spoke with a brig bound to Dublin, and having put their pilot on board of her, bore down the channel immediately. At eight in the evening, the wind freshening, and coming to the southward, they reefed such sails as were judged necessary; but at ten o'clock it blew a violent gale from the south, when they were obliged to carry a press of sail in order to keep the ship off shore. In this situation, the hawse-plugs, which, according to a recent improvement, were put inside, were pushed in, and the hawse-bags washed away; in consequence of which, they shipped a great quantity of water on the gun-deck, and on sounding the well, they found that the vessel had sprung a leak, and had five feet water in the hold, upon which all hands were set to

work at the pumps: they clued up the main-topsail, hauled up the mainsail, and immediately endeavoured to furl both, but failed in the attempt.

On Wednesday, January 4, at two in the morning, they endeavoured to wear the ship, but without success; and judging it necessary to cut away the mizen-mast, this operation was immediately performed, and a second attempt made to wear, but they were again unsuccessful. The ship having now seven feet water in the hold, and the leak gaining fast upon the pumps, it was thought expedient, for the preservation of the ship, which appeared to be in imminent danger of foundering, to cut away the mainmast; which in its fall, carried overboard the coxswain, Jonathan Moreton, and four men, who were drowned. By eight o'clock the wreck was cleared, and the ship got before the wind; in which position she was kept about two hours, and the pumps reduced the water in the hold about two feet. At this period the ship's head was brought to the eastward with the foresail only.

About ten, the wind considerably abated, and as the ship laboured very much, the fore-topmast rolled over on the larboard side, and in the fall tore the topsail to pieces. At eleven in the forenoon, the wind veered round to the westward, and the weather clearing up, they could distinguish Berry Head, at about four or five leagues distance. They immediately bent another foresail, erected a jury mainmast, and set a top-gallantsail for a mainsail, under which they bore up for Portsmouth, and employed the remainder of the day in getting up a jury mizen-mast.

Early on the morning of the 5th, the wind blew fresh from the south, and the weather was very thick. At noon Portland was seen, bearing north and by east, distant two or three leagues. In the evening a strong gale set in, when the Portland lights were seen bearing north-west, about four or five leagues, on which they wore ship, and got her head to the westward; but finding they lost ground on that tack, they were her again, and kept stretching to the eastward, in the hope of weathering Peveril Point, in which case they intended to have anchored in Studland Bay.

At eleven at night it became clear when they saw St. Alban's Head, about a mile and a half to leeward, upon which they immediately took in sail, and let go the small bower-anchor, which brought up the ship at a whole cable, and she rode for about an hour, but then drove. They now let go the sheet-anchor, and wore away a whole cable: the ship rode about two hours longer, when she drove again.

In this alarming situation the captain sent for Mr. Henry Meriton, the second mate, in whom it appears he placed great confidence, and asked his opinion as to the probability of saving their lives; to which he replied, with all the composure which could be expected under such trying circumstances, that he feared there was little hopes, as they were driving very fast on the shore, and might expect every moment to strike. It was agreed that the boats at that time could not be of any use; but in case an opportunity should present itself of rendering them serviceable, it was proposed that the officers should be confidentially requested to reserve the long-boat for the use of the ladies and themselves, and this precaution was accordingly taken.

On Friday, the 6th, at about two o'clock in the morning, the ship still driving and approaching the shore, Mr. Meriton had another conference with the captain, who expressed extreme anxiety for the preservation of his beloved daughters, and earnestly asked the mate if he could devise any means of saving them. On his expressing his concern, that he feared it would be impossible, and that their only chance would be to wait till morning, the captain lifted up his hands in silent agonizing ejaculation.

At this dreadful moment the ship struck with such violence, as to dash the heads of those who were standing in the cuddy, against the deck above them; and the fatal blow was accompanied by a shriek of horror, which burst at the same instant from every quarter of the ship.

Many of the seamen had been remarkably inattentive and remiss in their duty during a great part of the storm, and had actually skulked in their hammocks, leaving the exertions of

the pumps, and the other labours required by their situation, to the officers and soldiers; but roused to a sense of their danger, they now rushed upon the deck, to which the utmost endeavours of their officers could not keep them while they might have been useful; and, in frantic exclamations, demanded of heaven, and their fellow-sufferers, that succour which their timely efforts might probably have succeeded in procuring. But it was now too late; the ship continued to beat on the rocks, and soon bulged, falling with her broadside towards the shore. When she struck, several of the men caught hold of the ensign-staff, under the apprehension of her going to pieces immediately.

At this critical juncture, Mr. Meriton offered to his unhappy companions the best advice that he could possibly give. He recommended that they should repair to that side of the ship which lay lowest on the rocks, and take the opportunity which might offer of escaping singly to the shore. Having thus attended to the safety of the desponding crew, he returned to the round-house, where all the passengers, and most of the officers, were at this time assembled; the latter employed in offering consolation to the unfortunate ladies, and with unparalleled magnanimity, suffering their compassion for the fair and amiable companions of their misfortunes to overcome the sense of their danger, and the dread of almost inevitable death. What must have been the feelings of a father—of such a father as Captain Pierce, at this dreadful moment!

In this humane work of offering comfort to the fair sufferers, Mr. Meriton now joined, by assurances of his opinion, that the ship would hold together till the morning, when they would all be safe: but these assurances were damped by the untimely, and, perhaps, imaginary apprehensions, of one of the young gentlemen, who was loud in his expressions of terror; and in contradiction to Meriton, frequently exclaimed, that the vessel was going to pieces; till the captain, mortified at his precipitate conduct, which only tended to increase the fears of the timid sex, told him, with an appearance of composure, to hold his peace; observing to him, that though the vessel should go to pieces, he would not, but be safe enough.

It will now be necessary to describe the situation of the place which proved fatal to so many valuable lives, in order to convey a more correct idea of the melancholy and deplorable scene.

The ship had struck on the rocks near Seacombe, on the island of Purbeck, between Peveril Point and St. Alban's Head, at a part of the shore where the cliff is of immense height, and rises almost perpendicularly. In this particular spot the cliff is excavated at the base, presenting a cavern of ten or twelve yards in depth, and equal in breadth to the length of a large ship, the sides of the cavern so nearly upright as to be extremely difficult of access; the roof formed of the stupendous cliff, and the bottom strewn with sharp and uneven rocks, which appear to have been rent from above by some convulsion of nature.

It was at the mouth of this cavern that the unfortunate vessel lay stretched, almost from side to side, offering her broadside to the horrid chasm; but at the time the ship struck, it was too dark to discover the extent of their danger, and the extreme horror of their situation. Mr. Meriton, who scorned to flatter people in this dreadful situation, conceived a hope that she might keep together till daylight: he accordingly endeavoured to cheer his drooping friends, particularly the unhappy ladies, with this comfortable expectation, in answer to the captain's repeated inquiries, as to how they went on, or what he thought of their situation.

At this time, the number in the round-house was increased to nearly fifty, by the admission of three black women, and two soldiers' wives, with the husband of one of the latter; although the sailors, who had demanded entrance to get a light, had been opposed, and kept out by Mr. Rogers and Mr. Brimer, the third and fifth mates. Captain Pierce was seated on a chair, or some other moveable, between his two daughters, whom he pressed alternately to his bosom. The rest of the melancholy assembly were seated on the deck, which was strewn with musical instruments, and the wreck of furniture-boxes and packages.

Here Mr. Meriton, having lighted several wax candles, which he stuck up in various parts of the round-house, and all the

glass lanterns he could find, took his seat, intending to wait till daylight, in the hope that it would afford him an opportunity of effecting his own escape, and also of rendering assistance to the partners of his danger: but observing that the unhappy females appeared parched and exhausted, he fetched a basket of oranges from some part of the round-house, with which he prevailed on some of them to refresh themselves. At this time they were, in general, tolerably composed, trusting to the delusion of hope, which humanity had painted in brighter colours than reason could justify, with the exception of Miss Mansell, who was in hysteric fits on the floor deck of the round-house.

On Mr. Meriton's return to the company, he perceived a considerable alteration in the appearance of the ship. The sides were visibly giving way, the deck seemed to heave, and he discovered other evident symptoms that she could not hold together much longer. On attempting to go forward to look out, he instantly perceived that the ship had separated in the middle, and that the fore part had changed its position, and lay rather further out towards the sea. In this awful emergency, when the next moment might be charged with his fate, he determined to seize the present, and follow the example of the crew and soldiers, who were leaving the ship in numbers, and making their way to a shore, with the horrors of which they were as yet unacquainted.

Among other measures adopted to favour these attempts, the ensign-staff had been unshipped, and endeavoured to be laid from the ship's side to the rocks, but it snapped in pieces before it reached them. By the light of a lantern, however, which a seaman named Burmaster handed through the skylight of the round-house to the deck, Mr. Meriton discovered a spar, which appeared to be laid from the ship's side to the rock; and on this he attempted to effect his escape: he, however, soon found that the spar had no communication with the rock, for, on reaching the end, he slipped off, and received a violent contusion in his fall; and before he could recover his legs, he was washed off by the surge, when the returning wave dashed him against the back of the cavern. Here he laid hold of a small projecting piece of the rock, but was so benumbed that he was on the point of quitting it, when a seaman, who had already gained a footing, extended his hand and assisted him till he could secure himself on a little shelf of the rock, from which he clambered still higher out of reach of the surf.

Mr. Rogers, the third mate, remained with the captain and the ladies nearly twenty minutes after Mr. Meriton had left the ship. The latter had not long quitted the round-house, before the captain inquired what was become of him, when Mr. Rogers replied that he had gone upon deck to see what could be done. A heavy sea soon afterwards broke over the ship, upon which the ladies expressed the most feeling concern at the apprehension of his loss. "Oh, poor Meriton!" they cried, "he is drowned. Had he stayed with us he would have been safe." Poor mistaken souls!

The sea now broke in at the fore part of the ship, and reached as far as the main-mast. Captain Pierce and Mr. Rogers then went together, with a lamp, to the stern-gallery, where, after viewing the rocks, the captain asked Mr. Rogers if he thought there was any possibility of saving the girls. He replied, he feared not; for they could only discover the black face of the perpendicular rock, and not the cavern which afforded shelter to those who had escaped. They then returned to the round-house, where Captain Pierce again seated himself between his two daughters, struggling to repress the parental fear which then started into his eye.

The sea continuing to break in very fast, Mr. Manns, a midshipman, and Mr. Schutz, asked Mr. Rogers what they could do to escape: he replied, "Follow me," which they did to the stern-gallery, and from thence, by the weather upper-quarter-gallery, upon the poop. While they were there a heavy sea fell on board; and the round-house giving way, they heard the ladies shriek at intervals, as if the water had reached them, the noise of the sea at other times drowning their voices.

Mr. Brimer, the fifth mate, had followed Mr. Rogers to the poop, where they had remained together about five minutes, when, on the coming of the last-mentioned sea, they jointly seized a hencoop; and the same wave which they apprehended

proved fatal to some of those who remained below, happily carried them to the rock, on which they were dashed with such violence as to be miserably bruised and hurt.

There were twenty-seven upon this rock, but it was low water; and being convinced that, upon the flowing of the tide, they must all be washed off, many endeavoured to get to the back or sides of the cavern, beyond the reach of the returning sea; but, excepting Mr. Rogers and Mr. Brimer, scarcely more than six succeeded in this attempt. Of the remainder, some experienced the fate which they sought to avoid, and others perished in their efforts to get into the cavern.

Mr. Rogers and Mr. Brimer, however, having reached the cavern, climbed up the rock, on the narrow shelves of which they fixed themselves. The former got so near to his friend Mr. Meriton, as to exchange congratulations with him; but he was prevented from joining him by at least twenty men who were between them, not one of whom could stir, but at the hazard of his life. When Mr. Rogers reached this station, his strength was so nearly exhausted that, had the struggle continued a few minutes longer, he must inevitably have perished.

They soon found, that although many who had reached the rocks below, had perished in attempting to ascend, yet, that a considerable number of seamen and soldiers, and some of the inferior officers, were in the same situation as themselves. What that situation was they had still to learn. At present they had escaped death; but they had yet to encounter a thousand hardships—cold, nakedness, wind, rain, and the perpetual beating of the spray of the sea—for a difficult, precarious, and doubtful chance of escape.

Some part of the ship was still discernible; and they soled themselves in this dreary situation, with the hope that it would hold together till day-break. Amidst their own misfortunes, the sufferings of the females filled their minds with anguish; and every returning sea increased their apprehensions for the safety of their amiable and helpless companions.

But, too soon, alas! were these apprehensions realised! In a very few minutes after Mr. Rogers had gained the rock, a general shriek, in which the voice of female distress was lamentably distinguished, announced the dreadful catastrophe! In a few moments all was hushed, except the warring winds and the dashing of the waves! The wreck was buried in the remorseless deep, and not an atom of her was ever after seen.

Thus perished the Halsewell!—and with her, honour, worth, skill, beauty, and accomplishments!

What dreadful sensations must this tremendous blow have excited in the trembling and scarcely half-saved wretches, who were hanging about the sides of the horrid cavern! They were themselves in the most imminent danger; but their dearest friends, the pleasing companions of their voyage, were now no more. They felt for themselves, but they wept for wives, parents, brothers, sisters—perhaps lovers—all cut off from their dearest, fondest hopes!

Nor were they less agonised by the subsequent events of this ill-fated night. Many of those who had gained precarious situations, exhausted with fatigue, weakened by bruises, and benumbed with cold, quitted their holds, and falling headlong, either on the rocks below or into the surf, perished beneath the feet of their wretched associates; and, by their dying groans and unavailing calls for help, awakened terrific apprehensions in the survivors, of their own approaching fate.

At length, after the bitterest three hours which misery ever lengthened into ages, the day broke on them; but far from bringing with it the expected relief, it served only to discover to them all the horrors of their situation. They now found that not even the country had been alarmed by the guns of distress which they had fired, but which from the violence of the storm, had been unheard. Neither could they be observed by the people above, as they were completely engulfed in the cavern; nor was there any part of the wreck remaining, to point out their probable place of refuge. Below no boat could live to search them out, and had it been possible to acquaint those that were willing to assist them, with their exact situation, they were at a loss to conceive how any ropes could be conveyed into the cavern to facilitate their escape.

The only method that offered any prospect of success, was to creep along the sides of the cavern to its outward extremity; and on a ledge, scarcely as broad as a man's hand, to turn the corner, and endeavour to clamber up the almost perpendicular precipice, whose summit was nearly two hundred feet from the base. In this desperate effort did some succeed, while others, trembling with apprehension, and exhausted by fatigue, lost their footing, and perished in the attempt.

The first men who gained the summit of the cliff, were the cook, and James Thompson, a quarter-master. By their own intrepid exertions they reached the top, and instantly hastened to the nearest house, to make known the situation of their fellow-sufferers.

The house at which they first arrived was Eastington, the habitation of Mr. Garland, steward or agent to the proprietors of the Purbeck quarries, who immediately got the men together under his direction, and with the most zealous humanity, exerted every effort for the preservation of the surviving crew of the unfortunate ship. Ropes were procured with all possible despatch, and every precaution taken that assistance should be speedily and effectually given to deliver them from their perilous situation.

Mr. Meriton made the attempt to gain the summit of the cliff, and almost reached the edge of the precipice. A soldier who preceded him, stood upon a small projecting rock or stone, upon which Mr. Meriton had fastened his hands to assist his progress. Just at this moment the quarrymen arrived, and seeing the soldier so nearly within their reach, they dropped a rope, on which he immediately laid hold, and by a vigorous effort to avail himself of the advantage, loosened the stone on which he stood, which giving way, Mr. Meriton must have been precipitated to the bottom; had not a rope been lowered to him at the instant, which he seized while in the act of falling, and was safely drawn to the summit.

The fate of Mr. Brimer was peculiarly severe. He had been married only nine days before the ship sailed to a beautiful lady, the daughter of Captain Norman, R.N., in which service Mr. Brimer was a lieutenant, but was then on a voyage to visit an uncle at Madras; he came on shore, as it has been observed, with Mr. Rogers, and, like him, got up the side of the cavern, where he remained till morning, when he crawled out, and a rope being thrown to him, he was either so benumbed with cold as to fasten it about him improperly, or so agitated as to neglect to fasten it at all. Whatever was the cause, the effect was fatal, for at the moment of his supposed preservation, he fell from his stand, and was dashed to pieces, in the sight of those who could only lament the deplorable fate of an amiable man and skilful officer.

As the day advanced, more assistance was obtained; and as quickly as the life-preserving efforts of the survivors would admit, they crawled to the extremities of the cavern, and presented themselves to their preservers above, who stood prepared with the means to help them to the summit.

The method of affording this help was singular, and does honour to the humanity and intrepidity of the quarrymen. The distance from the top of the rock to the cavern, over which it projected, was at least a hundred feet, ten of which formed a declivity to the edge, and the remainder was perpendicular. On the very brink of the precipice stood two daring fellows, with a rope tied round them, and fastened above to a strong iron bar fixed in the ground; behind them, in like manner, stood others, two and two. A strong rope, properly secured, passed between them, by which they might hold and support themselves from falling. Another rope, with a noose ready fixed, was then let down below the cavern, and the wind blowing hard, it was sometimes forced under the projecting rock, so that the sufferers could reach it without crawling to the edge. Whoever laid hold of it put the noose round his waist, and after escaping one element, committed himself full swing to another, in which he dangled till he was drawn up, with the utmost care and caution, by his intrepid deliverers.

In this attempt, however, many shared the fate of the unfortunate Mr. Brimer; and unable through cold, weakness, or perturbation of mind, to avail themselves of the succour that was offered, were precipitated from the stupendous cliff, and

were dashed to pieces on the rocks, or, falling into the surge, perished in the waves.

Among these unhappy sufferers, the death of a drummer was attended with circumstances of peculiar distress. Being washed off the rocks by the sea, or falling from above into the surf, he was carried off by the counter sea, or returning waves, beyond the breakers, his utmost efforts to regain which were ineffectual; he was drawn farther out to sea, and being a remarkably good swimmer, continued to struggle with the waves, in the view of his commiserating companions, till his strength was exhausted, and he sunk to rise no more.

It was not till late in the day that the survivors were conveyed to a place of safety; but one, William Trenton, a soldier, remained on his perilous stand till the morning of Saturday, the 7th of January, exposed to the united horrors of extreme personal danger, and the most acute disquietude of mind; nor is it easy to conceive how his strength and spirits could have supported him for such a number of hours, under distress so severe and complicated.

Though the remains of the wreck were no longer discoverable among the rocks, yet the surface of the sea was covered with fragments, almost as far as the eye could reach; and even so late as ten o'clock on Friday morning, a sheep, part of the live stock of the passengers, was observed buffeting the angry waves.

The surviving officers, seamen, and soldiers, being assembled at the house of their benevolent deliverer, Mr. Garland, they were mustered, and found to amount to seventy-four, out of rather more than two hundred and forty, crew and passengers, that were in her when she sailed from the Downs. All those who reached the summit survived, with the exception of two or three who expired while being drawn up, and a black who died a few hours after he was brought to the house. Many, however, were so miserably bruised, that their lives were doubtful, and it was a considerable time before they perfectly recovered their strength.

On Saturday morning, Mr. Meriton and Mr. Rogers, having been liberally assisted by Mr. Garland, with the means of making the journey, set out for London, to carry the melancholy tidings to the directors of the East India Company; and humanely took the precaution to acquaint the magistrates of the towns through which they passed, that a number of shipwrecked men would soon be on their road to the metropolis.

These officers arrived at the India House on Sunday, at noon, where the sad tale was no sooner told, than the directors, with their usual munificence, ordered a handsome gratuity to the quarrymen, and also made such acknowledgments to Mr. Garland as his benevolence merited.

The praiseworthy generosity of the master of the Crown Inn at Blandford, should not be omitted to be mentioned. When the distressed seamen arrived in that town, he sent for them all to his house; and having refreshed them with a comfortable dinner, he presented each man with half-a-crown to help him on his way.

A SAILOR ON SHORE.

I REMEMBER once on going up by the mail, in 1807, from Devonport to London, we stopped to take up a passenger at a public-house at Plymouth. He was a seaman who had just been discharged, through the intercession of his friends, from one of his Majesty's ships, then lying in the Sound, in consequence of his having tumbled unexpectedly into a property of five hundred a-year. Jack made his appearance in his new character of a gentleman, rigged out in his long togs, evidently, if one might judge, from the broad yawning in his course, trimmed a little too much by the head, surrounded by at least a dozen of his late shipmates, to whom he had been giving a farewell treat; the plenitude of which might be plainly inferred from the unsteady motions and loving kindness displayed by them to their more fortunate messmate in taking leave of him, a process which sadly put the patience of both guard and coachman to the test. He had paid six guineas for an inside place—the guard, tired with waiting, called out:—

"Now, sir, get in; we can't wait a moment longer."

"Haven't I engaged my passage in this here craft?"

"Yes; but we are past our time, and we must be off. Come, get in, my good fellow."

"I'll be d—d if I do! I say, Mr. Quartermaster, or whoever you are, do you fancy I am going to stow my carcass away in such a cramped up hold as that? No, no, I am for the upper-deck;" and up he started on the roof of the coach. "Tip us your daddles, my hearties;" and all stretched out their arms to take the proffered hand. "God bless you, boys! remember me to—" But before the sentence was concluded, the horses had started, amidst a deafening round of cheers from his companions, which were echoed by Jack, who was standing without any support on the top of the coach, in imminent danger of very speedily allowing his good fortune to devolve to his next heir, by slipping his own cable before he had taken possession of it.

A turning of the street closed this dangerous display of friendly feeling, and he brought himself safe to an anchor in the rear of coaches. It was noticed on changing horses at Ivy Bridge (where he insisted upon treating all the ostlers and bystanders), that the poor fellow had at least from sixty to seventy pounds about him: the gentlemen in the inside recommended the guard to take charge of his pocket-book for safety, which he willingly gave into his custody, on condition that he would give him a one-pound note. As night drew on, the sailor's generosity had no means of finding objects upon which to vent itself; but after six o'clock in the morning, the pound-note rapidly dwindled away, so that by the time we had passed Taunton, the last shilling had been expended, and Jack's liberal feelings appeared to increase as the fumes of the various draughts he had quaffed, mounted, and took possession of his upper works. Another pound-note was demanded, which the gentlemen strongly advised the guard not to supply; every method was resorted to for the purpose of persuading him to remain quiet, but all was to no effect.

"Give me my money, Mr. Guardo," exclaimed Jack.

"But, my good fellow, we have had quite enough to drink, we don't want any more."

"Who asked you for your opinion? give me the money."

"No, no, I'll take care of it for you till we get to Bath, and then you shall have it."

"Here's a pretty humbug! Hand over, you sharking land-lubber, or I'll be d—d if I don't bung up those top-lights of yours. Clap a stopper upon your jaw-tackle, and give me my money."

It was in vain the passengers endeavoured to appease the fears which had evidently taken possession of his mind, that a conspiracy existed to deprive him of his wealth; all they could say only strengthened the false idea; and to prevent a disagreeable *fracas* by his commencement of hostilities upon the guard, the pocket-book was delivered over to his own keeping.

He had no sooner got possession of it than he jumped down from the coach, swearing he would not sail another mile in company with such a set of privateer's-men. It was folly to argue with him, and he was therefore left behind. Before we had reached the next stage, Jack had overtaken us in a chaise-and-four, waving his hat, with his body more than half out at the window, singing out at the full pitch of his voice,—

"Go along, you beggars!—make more sail, you lubberly hounds, and catch me if you can."

In this way did he continue till we reached London, mail, and chaise-and-four occasionally passing and repassing each other, where we lost sight of him, he having, to his great delight, preceded us in his *entree* into the metropolis.

LOSS OF THE LYRA, CAPTAIN HIGGINS.

JANUARY 7, 1838.

THE brig *Lyra*, of Kincardine, of 220 tons, belonging to Messrs. Drysdale, of London, and commanded by John Higgins, sailed from the Bosphorus, in ballast, bound to Odessa, on December 27, 1837, in company with the brig *Trio*, of Sunderland, Captain Kemp, and the *Rother*. On leaving, the wind was at north-west, but next day it veered to north, and came

on to blow. The ships, in a few days, were covered with ice, from the bobstays to each cathead.

On January 6, 1838, the *Lyra* made Cape Fontane, eighteen miles from Odessa, with the *Trio* still in company. From this spot, one frozen mass extended towards the north. About four, p.m., the captains of the *Lyra* and *Trio* agreed to bear up for the Bosphorus, and accordingly ran about a hundred miles in that direction. At this time the showers of snow were so heavy, that it became necessary to clear the decks every four hours, and each watch had not less than a foot of snow to remove. When the weather cleared up a little, the *Trio* was not in sight; and as the wind changed to east-north-east, the *Lyra* hauled upon the starboard tack, laying thus north and north-by-east, but at five o'clock the next morning she struck; and, when daylight appeared, was found to be about two miles off shore, close to the northernmost cape of Anada Bay; the village of Anada being about nine miles to the southward.

The ship soon beat over the reef upon which she had struck, but carried away her rudder. The masts were now cut away, and the vessel continued driving towards the beach till she grounded and bilged, about half a mile from it. Rocks could be seen on each side of her, at about twenty fathoms distance: had she been driven upon them, instead of the spot where she was, it is more than probable that every one on board would have perished. The sea was now making a clear breach over the brig; no snow was falling, but the cold was so intense, that several birds were seen to fall dead! The captain now consulted with the crew, on the best means of preserving life, and seeing that the ship was completely a wreck, asked for a volunteer to swim ashore. As no answer was given, the captain himself (an old man) was about to take off his boots and jacket, when John Jones, a Welshman, immediately stepped forward, and throwing off all his clothes, except a pair of flannel drawers and stockings, offered to make the attempt. A lead-line was made fast round his waist, and watching an opportunity, he jumped overboard, and, after a severe struggle, succeeded in effecting a landing. By means of the lead-line a warp was hauled ashore, and made fast to a spar, the other end reaching to the vessel. Robert Drysdale (the mate, and a relation of the owners), then went ashore by the warp, working himself along it by his hands and feet, and carrying a second lead-line. When near the beach, the spar slipped, and the mate fell into the surf, but Jones ran in, and succeeded both in getting hold of him and bringing him ashore. The land being here covered with trees, the warp was now secured around the trunk of the nearest, and Drysdale and Jones again hauled on board the wreck. The clothes were so frozen on their backs, that they could hardly be stripped. After putting on dry clothes, the captain and all hands succeeded in getting safely ashore, and proceeded to ascend the hills. They walked for about two miles, and then found a shepherd and his two sons (Turks), in whose hut they remained that night, and by whom they were next day guided to Anada. In this march they crossed six hills and six valleys, walking in snow knee-deep, and at four, p.m., reached the village. There they were lodged in a wine-shop, close to the sea. The Turks immediately assisted in stripping the men, gave them shoes, and lent them dry clothing. They also rubbed their feet with lemon-juice and some sort of ointment which they themselves use when frost-bitten. The kindness which all the captains and crews saved from the several wrecks agree in stating they everywhere received from the Turks, ought not to be passed over in silence. No language can convey an idea of the feelings of gratitude of the shipwrecked seamen towards the Turks. In rendering assistance these Mussulmen expected no reward; and no sooner was the crew of the *Lyra* arrived at Anada than seven Turkish captains came on shore from their little vessels, and offered to take the whole to Constantinople, gratis, the moment the weather became moderate. The arrival, however, of the Russian steamer, *Nicholas*, commanded by Captain Pillar (an Englishman), prevented their offers being accepted. The *Nicholas* had attempted to reach Odessa and Sebastopol, but failed, and had come into Anada for wood, all her coals having been expended in a seventeen days' buffeting in the Black Sea. This is the

steamer which runs regularly between Constantinople and Odessa. Captain Pillar brought down the whole of the crew of the *Lyra*, who were provided with lodgings by the consul.

SHIPWRECK OF JEAN-JACQUES AYME,

JANUARY, 1800.

JEAN-JACQUES AYME having been, with several others in France, arrested during the troubles that attended the French revolution, was one of the *deported* persons sent to the pestilential climate of Cayenne. Previous to his embarkation, he was lodged in the same prison where the unfortunate Louis XVI. and his family had been immured; and from thence, having been removed to other places of confinement, in carts, the prisoners, to the number of one hundred and ninety-three, of whom two-thirds were priests, were embarked on board *La Charente*, Captain Breuillac, for Cayenne, on March 12, 1798, and on the 25th April were removed to *La Décade*.

Nothing very particular occurred during the voyage, except the severe treatment which the deported met with from Captain Villeneuve, who commanded *La Décade*. When they had gained the tropic, many of them were attacked with fever, and some with scurvy, which was caused by the infected air which they breathed in their dungeon. The captain, becoming alarmed for his ship's company, determined that after they had passed the tropic, twenty-five of the prisoners should go upon deck every two hours during the night; but this indulgence did them but little good, for the continual going out and coming in of the twenty-five, added to the ordinary noise of the ship, prevented the remainder from enjoying any repose the rest of the night.

On June 13, and two following days, they landed at Cayenne, and were transferred to a guard of blacks, with bayonets fixed, who conducted them to a house where they were confined, and which, although in a ruinous state, had the air of a palace, when compared to the frigate which they had quitted.

After being an exile for upwards of a year in this hot country, with no other company than blacks, monsters, reptiles, insects, &c., Jean-Jacques Ayme was attacked by illness, and, apprehensive that he should share the fate of many other exiles, whose graves surrounded him, he formed the resolution of seeing Captain Gardner, the master of an American vessel, who was to sail in a few days for Gottenburg, in Sweden. The captain having acceded to the proposal of taking him on board his vessel, Ayme was determined to effect his escape with Charles Frederic Perlet, and the canon Parizot.

While engaged in the necessary preparations, the agent suddenly ordered Ayme to quit Cayenne, and procure another habitation; which circumstance, though the cause of alarm at first, served to facilitate Ayme's project. The next day he set off, and found an asylum at Madame Dandifreddy's habitation; and at the time appointed, Perlet came for him in a boat, conducted by two negroes, whose silence they had purchased. They afterwards took up Parizot, in the neighbourhood, and then rowed with all their might towards the *Phaeton*, a brig of about two hundred tons, which was lying in the harbour of Cayenne. They were received on board by the boatswain, whom the captain had apprised of the matter, and who showed them the place of concealment in which they were to remain, until the vessel had gained an offing. It was a very roomy place, but encumbered with baggage, which was placed on purpose to hide them.

M. Berthollon, a merchant settled at Cayenne, to whom M. Ayme had been an utter stranger, till his arrival there, had been particularly kind to him during his banishment. This gentleman's wife had been attacked by a pulmonary consumption, which had resisted every remedy; and a change of climate having been advised by the physicians, M. Berthollon had resolved on taking her and his daughter, who was a child about two years and a half old, to Europe. He accordingly agreed with the American captain for their passage, and it was the approaching departure of this benevolent merchant, which first prompted M. Ayme to make his escape, in which he and his companions were assisted by M. Berthollon, who shipped their

trunks and baggage, as belonging to himself, and laid in a stock of provisions for all.

During this concealment, Ayme and his companions were under many apprehensions of being discovered, particularly as Perlet had a violent fit of the ague. At length, at four o'clock, October 27, 1799, they weighed anchor, and sailed out with a favourable tide, and a pretty fresh breeze; and bade a hearty and last farewell to that execrable land. Ayme, Parizot, and Perlet, being now out of danger, came forth from their retreat, and embraced each other as men who had miraculously escaped from death.

They crossed the tropic on November 9, and were that day becalmed, the weather being remarkably hot; but the wind sprang up again the following morning. In the course of the day they perceived three vessels, which gave them some uneasiness, as they were afraid of being plundered, or at least of being carried back to Cayenne; but in the evening they entirely lost sight of them, and their fears subsided.

About a fortnight afterwards, they were in latitude 60°, when the captain assured them that, with a good wind, he should reach Gottenburg in five days, through the passage to the northward of the Orkneys; but the wind beginning to blow fresh from the eastward, it was no longer possible to attempt this passage. For twelve days they did nothing but ply to windward, between the sixtieth and sixty-third degree; a parallel with the isles of Ferro and Shetland, till the wind having come round again to the westward, they shaped their course towards the same passage; but, having mistaken the longitude, they were several days without reaching it. At length land was discovered, amid the acclamations of the crew, but next day, after losing sight of it, they doubled the Orkneys, and entered the north part.

About the latter end of December, they made the coast of Norway, which was covered with snow; and in two days' time, every thing on board the vessel was frozen, which made them afraid of being locked in by the ice. What a transition from heat to cold!

In the whole of their passage they had seen nothing besides the three vessels already mentioned, except flying fishes, beyond the tropic, a few shoals of porpoises in different latitudes, a whale about the fifty-third degree, a vast number of aquatic birds from the banks of Newfoundland, and lastly, a very great quantity of that species of sea-weed called *fucus natans*, which they met with from the twentieth and fortieth degree.

They were now quite becalmed, but the currents occasioned them to make a little progress, and drifted them towards the rocks of Norway, upon which they were fearful of striking, as if so, they would have been irrecoverably lost; the coast at this part being barren and inaccessible. Fortunately, they contrived, by dint of manœuvring, to reach the Cattegat, there to run new dangers; for at dawn of the second day after, they were not three ships' lengths from the Seaw; and scarcely had they time to put about, when the wind became contrary to them; they being, at that time, only twelve leagues from Gottenburg, whose harbour they thought to have entered on the following day.

The captain attempted to put into Christiana. They approached very near this town, which was concealed from them by a fog, and as the wind had freshened, the fear of being wrecked on the coast, thickly strewn with rocks in this narrow channel, determined the captain to regain the German ocean, and to take shelter in some port in Scotland, whither he was carried by the wind.

They had just twice escaped the most imminent dangers, and were now one hundred leagues from the port which they wished to gain. The weather was dreadful, and they were almost continually in the dark, having no more than six hours daylight; and, to complete their misfortunes, they were almost in want of everything. The captain had affirmed that the passage would be completed in about six weeks; Berthollon had laid in provisions for himself, family, and friends for three months; but the captain had a very slender stock. He had reckoned upon that of the passengers; and it was at their expense that he, his servant, and boatswain, still subsisted. During the first

forty days, he flattered the crew with the hopes of having a short passage, and they, consequently denied themselves nothing—no frugality was attended to, even with respect to the water. At the end of two months, therefore, they had no fresh meat left, and but a small quantity of *tafia*, which they kept to refresh the sailors when on hard duty. At last they were reduced to a daily allowance of a biscuit, a bit of salt pork, and a glass of water. During this distress, which lasted above a fortnight, they were running, in the midst of a most terrible storm, towards the coast of Scotland, with which no person on board was acquainted; and had before them the miserable prospect of perishing for want, or being driven on shore.

After running thus for about five days, they made the land in the morning, and as they were carried towards it by a violent gale, they put the vessel's head to the northward, to range along it, so as to avoid coming too near, till they had been able to discover some port; and having continued their course, they discovered a-head of them a vessel towed by four boats, that were conducting her towards a place, which the captain took for the harbour of Montrose, but which was that of Fraserburg.

The captain now ordered several guns to be fired, and hoisted a signal for a coasting pilot, but no one having appeared, and night coming on, he stood into a bight on the larboard land, in which he thought himself safe. They let go the anchor, in hopes of entering the harbour the next morning. In the meantime, the sea continued very boisterous; and the vessel was tossed about almost as much as before.

About two o'clock the following morning, the captain ordered the second anchor to be let go; when the sea struck the vessel with so much violence, that the water broke in upon the deck, and frequently found its way, down the scuttle, between decks. This, at first, took place only every quarter of an hour; but about four o'clock, it became so frequent, that the captain, apprehensive of foundering, ordered the cables to be cut, approached within musket-shot of the shore, and the sheet-anchor, which was the only one they had left. This manœuvre did not much better their condition; the waves were as frequent, and became so violent, that about seven o'clock this last cable parted, and they were driven on shore. They struck repeatedly, and every instant expected the vessel to go to pieces; but, fortunately, this did not happen; if it had, though they were very near the land, not one of them could have escaped.

The vessel having opened in several places, and the water rushing in, they were obliged to go upon deck, whence they discovered, at day-break, the inhabitants of Fraserburg about fifty yards from them; but none of them durst come to their assistance: indeed, it was impossible to cross this space, full of rocks, against which the sea was breaking with the greatest violence; and not one of the sailors had courage enough to expose himself to its fury. The sea was perfectly white with foam; the waves, which rose to a prodigious height, as they were impeded by the vessel, broke over her with a terrible noise, covering them with water, notwithstanding all their exertions to shelter themselves from it.

The waves, which had been continually striking the vessel on the starboard side, now imperceptibly heeled her, and obliged the crew to take refuge on the higher side. As long as the deck presented only a gentle declivity, they could, without very much difficulty, keep their places; but, about noon, some fresh waves having entirely laid the vessel down on her beam-ends, so that the mainmast was in a horizontal position above the water, and might have served as a brow to get near the shore, had it not been continually covered by the waves, their situation became frightful. They were all hanging to the ropes and rings on the starboard side of the vessel, and it was only by incredible exertions that they avoided falling down into the water.

Ayme happened to be, at first, near the companion, to which he held fast by a rope, but being near an open port, the waves breaking through, covered him every instant from head to foot, so that he was as completely soaked as if he had been wholly in the sea. To avoid this inconvenience, he endeavoured to pass beyond this port; and though the distance was not quite six feet, had he not met with the capstern, to which he clung fast,

he must have fallen on the lower side, and inevitably have perished.

He had scarcely remained a moment in this place, when a sailor, who had come there, in all probability, from the same motive, incommoded him exceedingly. Conscious that all remonstrance with the sailor would be as fruitless as unjust, Ayme again endeavoured to reach the starboard side, by the ropes which were upon deck; but this attempt was as unsuccessful as the former. He was carried away by the slope of the deck, but had the good fortune to get fast hold of the pump, which served him for some time as a point of rest. But as the shaft of the pump had already started nearly three feet from its place, and the weight of his body helping to draw it still further out, he quitted this dangerous post, and leaned against the mainmast, which was close by, and which, by its weight and position, made the planks where he was lying, crack every instant.

Such was Ayme's last asylum; where, being no longer sheltered by the weather-boards, he was washed by all the waves that struck the vessel. Twenty times in the course of the morning he had drained the water out of his boots; but here he was up to his knees in it, and the upper part of his body was as wet as his legs.

The sailors, who spoke English, were imploring the assistance of the numerous spectators on shore—but, alas! it was not in their power to afford them the required aid.

Ayme now felt himself exhausted by fatigue and faintness. On glancing his eyes round him, he saw two negro sailors dead, floating at his feet! On the left he perceived Bertholon's wife and child—now no more! Turning his eyes then to the right, he beheld Parizot, with his head thrown back, and the waves breaking over him—alas! he was also a floating corpse!

Ayme, who now began to envy the departed, was soon thrown into convulsive agitations, which threatened a speedy dissolution; but, about three o'clock, amidst the approaching signs of death, and at a time when he neither expected nor wished for assistance, he perceived on the beach, a young man, naked, who plunged into the sea, which was become somewhat smoother. In a little time he was in the midst of the sufferers, having swam off with a rope, fastened to a boat which had been recently brought to the beach. The sailors, by means of this rope, hauled on board the boat, in which several persons were put; and another rope being fixed to the shore, served to draw back the boat in a diagonal direction, and to prevent her from driving on the rocks which were opposite the vessel.

The boat having made a second trip, Ayme was then put into her. He was brought on shore senseless, and six men carried him like a corpse into an inn. With much difficulty they forced open his mouth, to make him swallow some cordial: they then cut off all his clothes, which clung close to his body, and put him into a warm bed, with two naked men by his side, in order to regenerate vital heat; and by every exertion which humanity could dictate, he was at length restored to life.

Lord Invernay was particularly kind to these wretched sufferers. As soon as Ayme had recovered his senses and strength, his lordship had the goodness to procure him clothes, to support him during the walk, and to conduct him to his friends Bertholon, Perlet, and Baradeau, whom he found extremely fatigued. The first was sunk into the most profound grief for the loss of his wife and child; and although he was, at this time, sensible only to this loss, it was aggravated by that part of his fortune, which had perished in their shipwreck.

These wretched men lost almost all their property; as what little was rescued from the wreck was extremely damaged. The captain saved a cask, containing his money and papers, and Ayme had his money in a girdle, which he wore in order to conceal it from the crews of the privateers, whom they were afraid of meeting.

The captain died in consequence of the fatigues and hardships which he had endured. His brig also went entirely to pieces: the coast of Scotland being at the time covered with the wrecks of vessels cast away during this gale, which continued near a fortnight.

After some stay in Scotland, they set out for London. Perlet and Bertholon went by the mail-coach. Ayme and Baradeau

took shipping at Leith, and, after a voyage of ten days, entered the Thames. On landing, Ayme went to the Duke of Portland's, where he was received with the greatest politeness by Mr. Flint, who officiated during his grace's absence. The temporary peace between France and England had now taken place, and after a stay in London of about a fortnight, having engaged with a vessel bound to Calais, Amye obtained a passport, went to Gravesend and embarked, and arrived safe at Calais, on March 20th, 1800.

THE STRANDED BARK AND THE LIFE-BOAT.

Sea strikes, and she reels, and her high towering mast,
Like the forest-oak, bends in the hurricane-blast,
And the billows, whose awful tops seen in the clouds,
Dash high o'er the wretches that fly to her shrouds.
Again she hath struck, and the turbulent air
Is filled with wild horror, and shrieks of despair:
Few moments must free her from breakers and spray,
Or entomb them in ocean for ever and aye.
Forsaken her helm, that, the dark waters o'er,
Had oft steered her safe to the sheltering shore;
And her beautiful pennant, that streamed ever bright,
Like the sunbeam by day, and a meteor by night,
Now twines round her topmast (how changed since the morn!)
Or, piecemeal, the sport of the tempest, is torn.
No peal of alarm was discharged from her deck;
But the voice of despair from the perishing wreck
Found an echo in hearts, that, in every wild form,
Have encountered the demon that yells in the storm;
And that spirit which makes them in danger more brave,
Only rose with the scene; on the tempest-tost wave
They launched their light bark, and, in gallant array,
Dashed from shore, with a true hearty British huzza.
Far, far as the eye of the gazer could roam,
There was nothing but breakers and billows of foam!
One moment she seemed in the boiling surge lost,
The next, we beheld her still struggling, but tost
At the merciless power of the deep-booming sea;
But still forward she kept on her perilous track—
Oh, sailor-boy! sailor-boy! many for thee

Are the sighs and the tears that will welcome thee back.
Now high o'er the billows majestic she rides,
With her twelve noble rowers all lashed to her sides;
Relax not one effort—one moment may save,
Or entomb them for ever beneath the dark wave;
For, hark! the last cry of despair is ascending,
As slithering they cling to the topmast, and rending
The heavens with their outcry—one effort, one more,
And 'tis gained,—like a thunder-cloud, burst upon shore
The gazer's applause, as the life-boat steered round them.

But who shall describe the poor rescued, or tell
With what feelings these greater than conquerors found them,
As half-naked, half-dead, from the rigging they fell;
Or lifelessly sunk on their foreheads, as though
The last torment was past—drained the last cup of woe?
And now, with the shipwrecked and destitute crew,
The billows are foaming around them, and loud,
Like the roar of artillery, the tempest-charged cloud
Breaks o'er them in thunder; still o'er the dark sea

They push their light bark in its perilous track—
Oh, sailor-boy! sailor-boy! many for thee
Are the sighs and the tears that will welcome thee back.
The sea-gull flew wildly and mournfully round,
As if on the deep shoreless ocean she'd found
Some exiles, condemned o'er the wide world to roam;
Then light as the billow, and white as the foam,
Winged her way on the breeze to her tempest-rocked home
On the tiptoe of hope and of fear we beheld,
As their bark through the billows the rowers impelled;
But, at length, in smooth water we saw her safe moored,
And what was the boon for the danger endured?
Avaunt, selfish hearts! what at first had inspired
Brought its own bright reward, all the boon they desired;
'Twas enough to have saved, from the jaws of the grave,
Hearts that beat like their own, true, undaunted, and brave,

STEM AND STERN ALIKE.

WHEN the brave Admiral Kempenfelt, who was unhappily lost in the Royal George, was coming into Portsmouth to have his ship paid off, one of his barge's crew eyed a gold-laced velvet waistcoat which his commander wore, and with great earnestness, and in his best sea fashion, begged his honour would tell him who made it. The admiral, guessing his intention, gave him the necessary information. When Jack went ashore he forthwith applied to the admiral's tailor, who, knowing the humours of such customers, went with him to buy the materials, and at last asked him what he would have the back made of. "Made of," exclaimed Jack, "why the same as the front to be sure." The tailor remonstrated, but to no purpose, so the waistcoat was made and put on with an old tarry jacket over it, to the no small amusement of his messmates. The admiral, a few days after, passing up the High-street, met his man in this curious dress, rolling along and singing—

"How pleasant a sailor's life passes,
Who roams o'er the watery main;
No treasure he ever amasses,
But cheerfully spends all his gain."

The strange appearance of Jack caused the admiral to laugh most heartily, and the merry fit was not a little increased, when Jack, coming up to him, lifted the hind part of his jacket, and showed his gold-laced back, roaring out, at the same time, "Damme, old boy, no false colours for Jack, stem and stern alike, your honour!"

ANECDOTES OF AMERICAN SEAMEN.—The late gallant Decatur, who loved to tell anecdotes of the common sailors, related the following:—"In one of the actions before Tripoli, whilst fighting hand to hand with the captain of a gun-boat, Decatur came near being cut down by a Turk, who attacked him from behind. A seaman named Reuben James, who was already wounded in both hands, seeing the risk of his commander, rushed in and received the blow of the uplifted sabre on his own head. Fortunately, the honest fellow survived to receive his reward. Some time afterward, when he had recovered from his wounds, Decatur sent for him on deck, expressed his gratitude for his self-devotion, in presence of the crew, and told him to ask for some reward. The honest tar pulled up his waist-band, and rolled his quid, but seemed utterly at a loss what recompense to claim. His messmates gathered around him, nudging him with their elbows, and whispering in his ear, 'He had all the world in a string, and could get what he pleased;' 'the old man could deny him nothing;' &c. One advised this thing, another that; 'double pay,' 'double allowance,' 'a boatswain's berth,' 'a pocket full of money, and a full swing on shore,' &c. Jack elbowed them all aside, and would have none of their counsel. After mature deliberation, he announced the reward to which he aspired; it was, *to be excused from rolling up the hammock clothes!* The whimsical request was, of course, granted; and from that time forward, whenever the sailors were piped to stow away their hammocks, Jack was to be seen loitering around, and looking on, with the most gentlemanlike leisure. He always continued in the same ship with Decatur. 'I could always know the state of my bile by Jack,' said the commodore. 'If I was in good humour, and were a pleasant aspect, Jack would be sure to heave in sight, to receive a friendly nod: if I was out of humour, and wore, as I sometimes did, a foul-weather physiognomy Jack kept aloof, and skulked among the other sailors.' It is proper to add, that Reuben James received a more solid reward for his gallant devotion, than the privilege above-mentioned, a pension having been granted to him by government. On another occasion, Decatur had received at New York the freedom of the city, as a testimonial of respect and gratitude. On the following day, he overheard this colloquy between two of his sailors: 'Jack,' said one, 'what is the meaning of this 'freedom of the city, which they've been giving to the 'old man?' 'Why, don't you know? Why, it's the right to rollick about the streets, as much as he pleases; kick up a row; knock down the men, and kiss the women!' 'O ho!' cried the other; 'that's something worth fighting for!'

THE SHIP AT ANCHOR.

Is she not beautiful? reposing there
On her own shadow, with her white wings furled,
Moveless, and in the sleepy, sunny air,
Rests the meek swan in her own quiet world.

Is she not beautiful? her graceful bow
Triumphant rising o'er the enamoured tides;
That, glittering in the noonday sunbeam, now
Just leap and die along her polished sides.

A thousand eyes are on her; for she floats
Confessed a queen upon the subject main;
And hark, as from her decks delicious notes
Breathe, softly breathe, a soul-entrancing strain.

Music upon the water! pouring soft
From shore to shore along the charmed wave;
The seaman's dreariest toils beguiling off,
And kindling high the ardour of the brave.

Yet wafted by the morning's favouring breeze,
Far from the slumbering flood and leaf-hung bay,
That matchless bark upon the faithless seas
Shall wind her wild and solitary way.

There haply tempest-borne, far other sounds
Than those shall tremble through her quivering form;
And as from surge to mightier surge she bounds,
Shall swell, toned infinite, the mighty storm!

In vain! she spurns the ignoble calm, and loves
To front the tempest in his gathering hour;
Waked as to life, the fleet-winged wonder roves,
Where loudest lift the winds a voice of power.

Then go, deceitful beauty! bathe thy breast
For ever, where the mountain billows foam,
E'en as thou wilt. The hour of peace and rest
Is not for thee—the ocean is thy home.

AN ANECDOTE OF THE BATTLE BETWEEN THE
SHANNON AND THE CHESAPEAKE, JUNE 18TH, 1812.

BY JACK JACKSON.

It was my good fortune to be a sharer in this victory, which showed, that let the Yankees brag ever so, that England still deserved the title of "Queen of the Sea!" Some, probably, would have thought that the late disastrous defeats of the British navy by the Americans would have damped the spirits and courage of the seamen. Not so, however, never were higher spirits or more glorious anticipations than burnt in the breast of our gallant crew. It did not appear like the quarrels of nations, but more like personal animosity, as though each man felt his honour at stake, and determined to stretch every sinew to save it. Captain Broke's challenge met with a speedy reply, and the time of meeting was arranged. She laid a precious long time in offing though, till many of us began to think that a messenger in the shape of a shot might, probably, arouse the Yankee's indignation and quicken his movements. Presently, however, out comes the ship with all its colours flying as though on a party of pleasure, and a beautiful vessel she was. "Sure, an' she's a beauty anyhow," said Tim Sullivan, a Dublin boy; "mighty fine that flag looks flying there. I wonder how that 'ud look in its place," pointing to the colours of old England, as they fluttered triumphantly in the air. "You'll see presently," said a gunner, who stood with a sponge in his hand. "Faith an' I hope so," was his reply. "Hope so," repeated the old tar. "Why, you precious Greek, its safe! You'll see it, unless, mayhap, a shot should spile them daylight of yours, an' if it should I'll pull down that there striped rag and make a bandage for you." "You're very kind!" "Very, ain't I? But here comes a chap I'll exercise my tender feelings on," as the Chesapeake hove to on the starboard quarter, within

about half pistol shot. A number of little skiffs and pleasure-boats put off from the town to witness "the fun." The old gunner looked at them as he put a few extra shots into his already well-loaded gun, and muttered "Pleasure, too! If I might only just let them taste yer quality, my fine fellow," said he, addressing the gun, as though it possessed all the organs of sense. "'Tis a pleasant journey to the devil we'd treat 'em with." My duty now called me aloft, and having mounted the rattlins, took my station opposite to Tim, who was busily engaged loading a small rifle. "Look at that fine fellow," said some one at my elbow, pointing to a young American officer who, dressed as spruce as though attending a ball, sprung nimbly on the bulwarks of the Chesapeake. "Faix, look at him now," said Tim, who levelled his rifle at the moment, and the poor fellow, struck in the forehead with the bullet, fell headforemost in the sea. "'Tis the leetle pill he couldn't digest," said Tim, with a self-congratulating chuckle. "Sure, mine was the first shot!" This I believe to be a fact, that Tim's was the first shot fired in this memorable action. The Shannon now opened her fire from the aft-guns on the main deck, which was quickly responded to by the enemy, and the action then commenced in right good earnest. However brilliant the Yankees might have been heretofore, with long odds in their favour, it soon became apparent that fairly, hand to hand, they showed their base extraction.* One broadside literally swept the upper deck of the Chesapeake, and another, entering her port-holes, strewed her main-deck with dead and dying. At this moment an unlucky (or, rather for us, a lucky) shot struck an open cask of musket cartridges, which instantly exploded, dealing death around, and ere the smoke had cleared away, Captain Broke, with twenty brave fellows, stood upon the deck of the Chesapeake! Others instantly followed, myself and Pat among the number. We met with a desperate but futile resistance, for in less than twenty minutes from the first shot that was fired the striped bunting of America had disappeared, and the proud standard of England waved in triumph aboard the Chesapeake! Poor Tim! we found him after the action, his head smashed to atoms, and that done after the ship was taken, by a man whom the mercy of Captain Broke had spared. He did not escape though, for an old messmate of Tim's, who witnessed the catastrophe, dashed his brains out with a marlin-spike.

SPECIMEN OF HOW A VOYAGE ACROSS THE ATLANTIC MAY OPERATE ON AN ENGLISH SERVANT.—"Says the skipper to me one day (he is a lieutenant in the navy), says he, 'are you Captain Haltfront's servant?' Without getting up or touching hats, but setting at ease, says I, 'I didn't know he had a servant, sir.' 'Didn't know he had one, sir?' said he; 'pray what the devil do you call yourself, if you are not his servant?' 'Why, sir,' said I, cocking my head a one side, and trying to come Yankee over him, 'he receives the Queen's pay, sir, and wears her regimentals; he has an allowance for an assistant, which I receive, and wear her Majesty's cockade, too. We serve her Majesty, sir, and I am under the captain's command. Do you take, sir?' 'Why, you infernal conceited rascal,' said he, 'if you were under my command, sir, instead of his, I'd let you know d—d quick whose servant you were.' 'Ah! very like, sir,' said I, keeping my seat, and crossing one leg over the other, free and easy, and swinging my foot; 'very like, sir, but you don't happen to have that honour, sir, and my passage money is paid to your masters, the owners of this boat, at Bristol, which happens to alter the case a bit; you can go, sir.' 'Go, sir!' said he; 'why d— your eyes, sir, what do you mean? do you want to be triced up, sir?' and he walked away in a devil of a hurry, as if he was going to do something, but he didn't honour me again with his company. I have put up with a good deal in my time, Tummus, but I puts up with no more. No man calls me servant again, unless at eight dollars a day, as a public one at Washington, or Van Buren, or Webster, or some of the large cities, where, as I here, no one lives, but every one passes through, and don't no you again."—*Letters of the Great Western.*

* The Americans are descendants of convicts.—COBBETT.

LOSS OF THE KENT INDIAMAN.

It is not surprising, when the ocean itself is so fitted to awaken images of awe and wonder, that we should listen to the adventures of mariners with a deep and intense interest. No romance can ever be so full of rich imaginative eloquence as the relations of our olden navigators. While writing their simple statements, the awful associations in their memories seem to have infused a new spirit into their hearts; and we follow their recitals as those of men who have seen creation in its strangest forms. Of the fearful accidents and perils to which these wanderers on the pathless ocean are liable, we have naturally had fewer details since the modern improvements in navigation; and it is, therefore, seldom that we now meet with those appalling pictures of desperate hardihood and patient

suffering, of which the chronicles of our early naval history abound.

Among the few memorials of this kind, which relate to events in our own times, none, perhaps, is more fearfully interesting than that of the burning of the Kent East Indiaman; the circumstances attending which, though few, are terrible. The Kent, a fine new ship, of thirteen hundred and fifty tons, commanded by Captain Henry Cobb, left the Downs, on Saturday, Feb. 19, 1827, bound for Bengal and China, having on board a crew of one hundred and forty-eight men, including officers; with twenty officers, three hundred and forty-four soldiers, forty-three women, and sixty children, belonging to the 31st regiment, and twenty private passengers: making a total of 641 souls.

On the night of the 28th of February, when the Kent was in

LOSS OF THE SHIP KENT, CAPTAIN HENRY COBB, WHICH WAS DESTROYED BY FIRE, IN THE BAY OF BISCAY, FEB. 28, 1827.

lat. $47^{\circ} 30'$, long. 10° , they experienced a violent gale from the west, which gradually increased till the morning. About midnight, the rolling of the vessel became tremendous; so that the best fastened articles of furniture, in the principal cabin, were dashed about with great violence; and at every lurch the main chains were under water. It was a little before this period, that one of the officers of the ship, with the well-meant intention of ascertaining that all was fast below, descended, with two of the sailors, into the hold, carrying with them, for safety, a light in the patent lantern; but seeing that it burned dimly, the officer took the precaution to hand it up to the orlop-deck to be trimmed. Having afterwards discovered that one of the spirit-casks was adrift, he sent the seamen for some billets of wood to secure it; and, in their absence, the ship having made a heavy lurch, the officer unfortunately dropped the lamp, and in his

eagerness to recover it, let go the cask, when it suddenly stove, and the spirits communicating with the light, the whole was instantly in a blaze.

As long as the devouring element appeared to be confined to the spot where the fire had originated, and which they were assured was surrounded on all sides by water casks, they ventured to cherish hopes that it might be subdued; but when the light blue vapour arose, succeeded by dense volumes of thick dingy smoke, which speedily ascended through all the four hatchways, and rolled heavily over every part of the ship, all further concealment became impossible; and almost all hope of preserving the vessel was abandoned. "The flames have reached the cable tier!" was exclaimed by some individuals, and the strong pitchy smell which pervaded the deck, confirmed the truth of the exclamation.

The struggle of the perilous hour was one of rapid and withering anxiety; it is hardly possible to conceive a situation in which human nature could be surrounded with greater horrors—horrors which must have appeared to start up from the wild caverns of the deep itself; for there was no preparation for the thoughts, none of those signs of approaching peril which precede the whirlwind or the tempest; but, almost in an instant, the crew of the lonely vessel found themselves assailed by an enemy, against which human foresight could have provided no protection. In these awful circumstances, Captain Cobb, with an ability and decision of character which seemed to increase with the imminence of the danger, resorted to the only alternative that was now left him, and ordered the lower deck to be scuttled, the combing of the hatches to be cut, and the lower ports to be opened, for the free admission of the

waves. These instructions were speedily executed, by the united efforts of the soldiers and seamen, but not before some of the sick soldiers, one of the women, and several children, had perished. On some of the officers descending to the gun-deck to assist in opening the ports, they found the bodies of several, who must have died from suffocation; and the smoke was so dense and oppressive that it was with the greatest difficulty they could remain below long enough to fulfil Captain Cobb's wishes; which were no sooner accomplished, than the sea rushed in with resistless rapidity, carrying with it, in its progress to the hold, the largest chests, bulk-heads, &c.

Their dilemma was now fearful in the extreme; on the one hand stood death by fire, on the other death by water; and, preferring always the more remote alternative, the unfortunate crew were at one moment attempting to check the fire, by

means of water, and when the water became the most threatening enemy, they turned their efforts to the exclusion of the waves, and left the fire to rage with all its fury.

The scene of horror that now presented itself baffles all description; the upper deck was covered with between six and seven hundred human beings, many of whom, from previous sea-sickness, were forced, on the first alarm, to flee from below in a state of absolute nakedness, and were now wildly running about in search of husbands, children, or parents.

While some were standing in silent resignation, or stupid insensibility to their impending fate, others were yielding to paroxysms of frantic despair. Some, on their knees, were earnestly imploring, in noisy exclamations and significant gesticulations, the mercy of Him whose arm, they exclaimed, was at length outstretched to smite them; others were hastily cross-

ing themselves, and performing the various external acts required by their particular professions of belief; while a number of the older and more stout-hearted sailors calmly seated themselves over the magazine, in the hope that the explosion, which they momentarily expected, might put a speedier termination to their sufferings.

Captain Cobb wisely ordered the deck to be scuttled forward, with a view to draw the fire in that direction, as between it and the magazine were several tiers of water-casks; while he hoped that the wet sails and other things which had been thrown into the after-hold, would prevent it from spreading to the spirit-room abaft.

Several of the wives and children of the soldiers, who had fled for temporary refuge into the after-cabins, on the upper deck, were engaged in prayer and reading the Scriptures, with

the ladies, some of whom were enabled, with wonderful self-possession, to offer those spiritual consolations to others, which a firm and intelligent trust in the Redeemer of the world appeared, at this awful hour, to impart to their own breasts.

All hope had departed, and the employment of the different individuals indicated an utter despair of rescue; one was removing a lock of hair from his writing-desk to his bosom—some were awaiting their impending fate with manly fortitude, others in death-like stupor—some were bewailing it with loud and bitter lamentations, while others were engaged in prayer and mutual encouragement. It was at this appalling instant, when all hope of being saved was taken away, that it occurred to Mr. Thompson, the fourth mate, to send a man to the fore-top, rather with the ardent wish that some friendly sail might be descried on the face of the waters, than with any expectation that it would be realised; for a moment, the sailor who ascended threw his eyes around the horizon—a moment of unutterable suspense—and then, waving his hat, exclaimed, “A sail, on the lee-bow!” The joyful announcement was received with heartfelt thanksgivings, and answered by three loud cheers from those on deck; the signals of distress were instantly hoisted, minute-guns fired, and endeavours made, under three top-sails and fore-sail, to bear down upon the stranger, which proved to be the *Cambria*, a small brig of two hundred tons burthen, commanded by Captain Cook, and bound to Vera Cruz, having on board about twenty or thirty Cornish miners, and some agents of the Anglo-Mexican Company.

While Captain Cobb, Colonel Fearon, and Major McGregor, of the 31st regiment, were consulting on the necessary preparations for getting out the boats, the major was asked, by one of the officers, in what order it was intended the officers should move off; to which he immediately replied—“Of course, the funeral order;” which was instantly confirmed by Colonel Fearon, who said:—“Most undoubtedly, the juniors first; but see that any man is cut down who presumes to enter the boats before the women and children.”

Arrangements having been made by Captain Cobb, previously to letting the boat down, for placing in it all the ladies, and as many of the soldiers' wives as it could safely carry, they hurriedly wrapped themselves in whatever articles of clothing they could first lay their hands on; and, at about half-past two o'clock, a most mournful procession advanced from the after-cabins to the starboard cuddy-port, from the outside of which the cutter was suspended. Not a sound was heard—not a syllable was uttered—even the infants ceased to cry, as though conscious of the unspoken anguish that was then rending the hearts of their pining parents; nor did aught occur to break the solemn stillness of the scene, save in one or two instances, when the ladies plaintively entreated to be left behind with their husbands; but being assured that every moment's delay might occasion the sacrifice of human life, they successively suffered themselves to be torn from the tender embrace; and, with a fortitude which never fails to characterise and adorn their sex, on occasions of overwhelming trial, were placed, without a murmur, in the boat, which was immediately lowered into so tempestuous a sea, as to leave them only to hope against hope that it should live in it a single moment. Twice the cry was heard from those on the chains, that the boat was swamping; but He who enabled the apostle Peter to walk on the face of the deep, was graciously attending to the silent, but earnest aspirations of those on board, and had decreed its safety.

After one or two unsuccessful attempts had been made to place the little frail bark fairly upon the surface of the water, the command was given to unhook: the stern tackle was immediately cleared, but the ropes at the bow having got foul, the sailors there found it impossible to obey the order. In vain was the axe applied to the entangled tackle; and the moment inconceivably critical, as the boat, necessarily following the motions of the ship, was gradually rising out of the water, and must in another instant have been hanging perpendicularly by the bow, and its helpless passengers precipitated into the sea, had not a wave providentially struck the stern and lifted it up, so as to enable the seamen to clear the tackle; and the boat was soon seen battling with the billows in its progress to the brig—one instant like a speck upon their summit, and then

disappearing for several seconds, as if engulfed in the horrid vale between them.

Two or three soldiers, to relieve their wives of a part of their families, sprang into the water with their children, and perished in their endeavours to save them. One young lady who had resolutely refused to leave her father, whose sense of duty kept him at his post, was very near falling a sacrifice to her filial devotions, not having been picked up by those in the boats until she had sunk five or six times. Another individual, who was reduced to the frightful alternative of losing his wife or his children, hastily decided in favour of his duty to the former; his wife accordingly was saved, and four fine children, alas! left to perish. One fine fellow, a soldier, who had neither wife nor child of his own, but who evinced the greatest solicitude for the safety of those of others, insisted on having three children lashed to him, with whom he plunged into the water; but not being able to reach the boat, he was drawn back again into the ship; but not before two of the children had expired. One man fell down the hatchway into the flames, and another had his back so completely broken, that he was observed to fall overboard quite doubled. But the numerous instances of individual loss and suffering were not confined to the commencement of the perilous voyage between the two vessels; one man, who fell between the boat and the brig, had his head literally crushed, while some were lost in their attempts to ascend the sides of the *Cambria*.

When the greater part of the men had been disposed of, the gradual removal of the officers commenced, and was marked by a discipline the most rigid, and an intrepidity the most exemplary; none appearing to be influenced by a vain and ostentatious bravery, which, in cases of extreme peril, affords rather a presumptive proof of secret timidity than manly fortitude; nor any betraying of unsoldier-like impatience to quit the ship: but, with the becoming deportment of men, neither paralysed by the accumulating dangers that surrounded them, nor profanely insensible to the awful peril of their situation, they progressively departed with the soldiers in the different boats; those who happened to proceed first leaving behind an example of coolness that could not be unprofitable to those who followed. Each individual was desired to tie a rope round his waist; and while they were busily employed in adopting this recommendation, it was surprising to witness the singular delicacy of one of the Irish recruits, who, in searching for a rope in one of the cabins, called out that he could find none, except the cordage belonging to an officer's cot, and wished to know if there would be any harm in his appropriating it to his own use; and another agreeable proof of the subordination and good-feeling which governed the poor soldiers in the midst of their sufferings, was in the evening, when a melancholy group, exhausted by fatigue, anxiety, and fasting, were beginning to suffer intolerable thirst, a box of oranges was accidentally discovered by some of the men, who, with a degree of mingled consideration, respect, and affection, hardly to have been expected at such a moment, refused to partake of the grateful refreshment till they had shared it with their officers.

In so large a ship as the *Kent*, the spanker-boom, which projects about sixteen or eighteen feet over the stern, rests, on ordinary occasions, about twenty feet above the water; but in the position in which she was then placed, from the great height of the sea, and consequent pitching of the vessel, it was frequently lifted to a height of thirty or forty feet above the surface: to reach the rope, therefore, that hung from its extremity, was an operation of no ordinary difficulty, and required the aid of as much dexterity of hand as steadiness of head; for it was not only the nervousness of creeping along the boom itself, or the extreme difficulty of afterwards seizing on the rope, and sliding down by it, that was all there was to dread, and which occasioned the loss of some valuable lives by deterring the men from adopting this mode of escape, but as the boat, which one moment was probably under the boom, might by the force of the waves be carried fifteen or twenty yards from it the next instant, the unhappy individual whose best calculations were thus defeated, was generally left swinging for some time in mid-air, if he was fortunate enough to escape being repeatedly plunged several feet under water, or dashed

with dangerous violence against the sides of the returning boat, or forced to let go his hold of the rope altogether—a misfortune which not unfrequently happened; as, however, there seemed no alternative, many did not hesitate to commit themselves to such means of deliverance, confidently trusting in Him who had so far preserved them through such a terrible calamity, most of whom reached the boat, after being either severely bruised or immersed in the water. Colonel Fearon was not quite so fortunate as many; for after swimming for some time, and being repeatedly struck against the side of the boat, and at one time drawn completely under it, he was at last so utterly exhausted that he must instantly have let go the rope and perished, had not one in the boat seized him by his hair, and dragged him in, almost senseless, and alarmingly bruised.

Captain Cobb, in his immovable resolution to be the last, if possible, to quit the ship, and, in his generous anxiety for the preservation of every life entrusted to his charge, refused to seek the boat until he had again endeavoured to urge onward the few who were still around him, and who seemed struck dumb and powerless with dismay; but finding all his entreaties fruitless, and hearing the guns, whose tackle had been burst asunder by the fast-spreading flames, successively exploding in the hold, into which they had fallen, this gallant officer, after having nobly pursued, for the preservation of others, a course of exertion that has been rarely equalled, either in its duration or difficulty, at last felt it right to provide for his own safety, by laying hold of the topping-lift, or rope that connects the driver-boom with the mizen-top, and thereby getting over the heads of the infatuated men who occupied the boom, unable to go either backward or forward, and ultimately dropping himself into the water, when he was picked up by the boat, and the whole party got safely on board the Cambria.

Thus perished the Kent; and all that remains of that once gallant ship is the tale of her misfortunes—how, on the wildest track of the wild ocean, the fire-spirit overtook them—how, in the helplessness of despair, they heard the signal of their distress reverberating among the mountainous waves—how, as the waters were let in, the vessel grew steady amid the uprushing flames—and how, when the Cambria came in sight, and her boats were hove into the ruddy glare of the burning ship, hope grew fierce in its doubtfulness, till at last they stood upon the deck of the friendly vessel, and, looking back on their short but fearful track, they saw the majestic bark, which had passed over the waters like a conqueror, become a mighty pillar of fire in the vast desert of the ocean!

She went through an echo of voices,

Respondent that spoke to the sea,

Like the sound of a number whom pleasures rejoices,

Light-hearted and dreaming of glee.

She went, but no eye has e'er known her

Return, though her season is o'er;

And the numbers that hailed, ere the tempest had
blown her,

Shall look on her beauty no more!

NARRATIVE OF THE SUFFERINGS AND DELIVERANCES OF MESSRS. CARTER, SHAW, & HASKETT,

PART OF THE CREW OF THE CHESTERFIELD WHALER,

From the Coast of New Guinea, to Timor Island, in an open boat, in 1793.

On the 29th of June, 1793, the ship *Shah Hormazier*, of Calcutta, in company with the *Chesterfield* whaler, sailed from Norfolk Island, bound to Batavia, with a resolution to explore a passage between New Holland and New Guinea, in which they succeeded, and discovered an island in latitude $9^{\circ} 39' 30''$, longitude $142^{\circ} 59'$, which they called *Fate Island*. Two boats were despatched to make a survey; they found it inhabited, and the natives making very friendly signs for the seamen to come on shore, but not being armed, they did not then land; afterwards, the natives came themselves on board, and bartered bows, arrows, and spears, for penknives, beads, &c., and, from their behaviour on board, seemed hos-

pitable and humane. During their visit they stole a hatchet, which, eventually, proved nearly fatal to Mr. Carter, the chief officer of the *Chesterfield*, who was sent on shore, on the 2nd of July, with a boat, with Captain Hill, Mr. Carter, Mr. Haskett, and four seamen, to make observations on the soil, products, and inhabitants of the island, carrying with them articles for presents and trade. And also arms for protection. At first, the natives showed them much apparent kindness and hospitality, assisting them in landing, and kissing their hands frequently; but, as it afterwards proved, with a view of getting them into their power, to rob and kill them; for the natives treacherously surrounded the gentlemen on shore, and the people in the boat, and attacked them. Mr. Carter received a blow on the head, without provocation, and was felled to the ground, with the hatchet that had been stolen; and Mr. Shaw, also, got wounded; but Mr. Haskett discharged the musket, and the natives fled. The party reached their boat, calling out to those on board to fire, but the natives had killed Captain Hill and one seaman, and soon after two others were found floating on the water with their throats cut. Mr. Shaw, Mr. Carter, and Mr. Haskett, with difficulty got on board their boat, which they found plundered of all their provisions and boat cloaks, the water all started, and the fourth sailor lying dead, his body mangled in a most shocking manner.

Fortunately, these gentlemen got off with the boat, though with much difficulty, after keeping the natives off with their muskets; and by means of a sail, which had escaped the plunder, they made the best of their way. Mr. Carter, from the loss of blood, was obliged to lie at the bottom of the boat, his wounds having been bound up with handkerchiefs. They committed the body of the murdered seaman to the deep, and then fervently returned their thanks to the Almighty for their providential deliverance.

They found that they had that night drifted out to sea, and that their boat had been plundered of their compass as well as supplies, nothing having been left them but a great coat, and some knives and scissors; but Mr. Shaw, who was the only navigator, stated they might, as the wind was fair, reach the island of Timor in about ten days; they therefore committed themselves to Providence.

On the third day of their escape from the cannibals of *Fate Island*, Mr. Carter's wound had become so painful, that he wished it examined. On cutting away his hat and his hair, which were clotted together, they found the wound on the back part of his head, which appeared to have been done with the hatchet, and having well washed it in salt water, it was tied up with a piece of shirt, and Mr. Carter felt himself much relieved.

Soon after this, they discovered an island and natives, but the melancholy fate of their companions was too fresh in their recollection for them to have any intercourse, or even to accept the offer of a fish from one of the negroes, although they had been fifty-two hours without breaking their fast. Mr. Shaw and Mr. Haskett relieved each other every two hours at the steer oar.

On the fifth day, they caught two small birds; one was divided into three parts, and devoured with the utmost avidity; the other was reserved for another meal; and even with this miserably small share of subsistence, their spirits were considerably raised. They still continued to steer to the westward, the sun being their guide by day, and the stars by night; but this night, being near shoal water, and fearful of breakers, they resolved to come to, and rest themselves for the night, in five fathom water.

On the morning of the sixth day, they discovered land on both sides, which at first greatly discouraged them; but perceiving a current, they found a passage between those islands, but no inhabitants. Mr. Shaw and Mr. Haskett landed in search of water, and finding a hole full, drank heartily of it; but, when they had filled their keg, they discovered it was as brackish as the water alongside. Mr. Carter's wound becoming very painful, it was again dressed with salt water, when they found three pieces of the skull had worked out; they, however, did not inform him of it, but

gave him every assurance he was doing well: they then cut the throat of the remaining bird, and applied it to Mr. Carter's mouth: it yielded a few drops of blood, which gave him great relief, and the body was then divided.

On the seventh day they were so much reduced, as to be under the necessity of drinking their own urine, which, though disagreeable, they found relief from. About nine o'clock at night, Mr. Shaw and Mr. Haskett found themselves so weak, and so overcome with sleep, that they lashed the oar, and found the boat went steady; and, after joining in prayer to the Almighty, to whose protection they committed themselves, they laid down and had a refreshing sleep; occasionally, however, they could not help starting up, and looking out for land or danger.

On the eighth day they resumed their labour at the oar, which was increased by a heavy swell; and Mr. Shaw held out hopes of seeing land in a day or two. They discovered shoal water, with breakers, and the sea frequently broke over them, which rendered Mr. Carter's situation truly deplorable; as, from his extreme weakness and inability, he could not move from the bottom of the boat, which was so full of water, that it was with the utmost difficulty he could keep his head above it; and, to add to their distress, Mr. Haskett was knocked overboard; but he was fortunately saved by the exertions of Mr. Shaw, by putting an oar under his arm, and lifting him up, until he was taken on board again.

On the ninth day they got clear of the shoals, and launched once more into the ocean, relying on Providence for their deliverance. Mr. Carter's wound was again dressed and washed, and four pieces more taken from his skull. Being in greater distress than ever for water, they grew very disconsolate, and were making up their minds to meet death with fortitude, having given up every hope of surviving another day, when Mr. Haskett eagerly exclaimed that he saw "land;" this revived their hopes, and they made for it, conceiving it to be the island of Timor. On their approach, the natives beckoned them to come on shore, but past experience made them fearful of landing, till Mr. Shaw told them they might as well trust to their reception on shore, as perish at sea, which would be the inevitable consequence of remaining in the boat another day; they agreed to run in for the bay, and that Mr. Haskett should remain in the boat, while Mr. Carter and Mr. Shaw went on shore in search of water. Mr. Carter, on being helped out, not being able to stand, was helped in again, and the other two advanced to the natives—one with the water-keg, and the other with the musket. They were overjoyed, when they heard the natives call out "Bligh! Bligh!" and recollecting that Captain Bligh was very humanely treated at Timor, they had no doubt but that they had the good fortune to land at the same place. The natives gave Mr. Shaw a baked yam, which he found it impossible to eat, on account of his throat being parched, until he had quenched his thirst at a spring, to which they carried him; they then filled their keg, and carried it to Mr. Carter, who was calling for water with the greatest eagerness, the natives looking on the whole time, with the most intense astonishment.

On the word Timor, which the natives repeated, they pointed to the southward, and then to a prow on the beach, intimating that they would convey them thither; in consequence of which, two muskets and a number of scissors, which remained in the boat, were given them. In their passage to Timor, they were chased by a prow, on which they hoisted sail, and stood over the reef with their boat, and escaped her. Night approaching, and the party finding themselves much fatigued, they hauled their sheet aft and lashed their oar, as customary, when they went along very steadily. They then lay down to sleep, and were much refreshed in the morning by the smell of spices, conveyed by the land wind. Mr. Carter was so much revived, that he several times exclaimed "Keep up your hearts, my boys; we shall dine with the Governor of Compang to-day;" but from shoals and points they were disappointed; the water they had drank had increased their appetites, and they were forced at night to pursue the method they had previously adopted, in order to obtain sufficient rest to enable them to go through the fatigues of the day.

On the eleventh day, Mr. Shaw, from the force of the sea on the steer oar, in his weak state, fell overboard, but by holding on the gunwale until Mr. Haskett came to his assistance, he was, with great exertion, got in again. As they were unable to weather the point which they saw a-head, they determined to run into a small bay, with an intention to land, when the natives came running towards them exclaiming, "Bligh! Bligh!" and helped them out of the boat, and made them sit down, giving them cocoa-nuts, yams, and Indian corn, which they received with gratitude: while the natives, in silent astonishment, were gazing upon the famished sufferers, and by signs inviting them to eat. Mr. Carter begged that his wound might be dressed with fresh water, which, when unbound, was found to be nearly healed.

With assistance, the party were led up into the town, on the top of a steep hill, accessible only by two ladders, up which they were lifted by their guides, and taken to the chief's house, amidst an immense concourse of people, who came to view these strangers; they were presented with corn, yams, and toddy to drink: after which the chief pressed them to their rest. They were a little alarmed at seeing two men watching at the door, notwithstanding the chief had placed himself between them and the men, and had a spear by his side; and Mr. Shaw got up at night, and went out at the door, to see if they would prevent him going further, but was agreeably surprised to find that they only waited lest anything should be wanted.

On the morning of the fourteenth day, they were again presented with yams, Indian corn, and toddy; and, upon inquiry, found they were upon Sarrett Island, which was separated from Timor-land, and which was the island where they had first refreshed themselves; that Tanabor was to the north, and that a prow came there yearly, to trade; which information greatly relieved them, and they found the natives humane and hospitable. For one fortnight nothing particular occurred, except the loss of a pair of scissors, which one of the children had stolen; and as they were very serviceable in cutting the hair round Mr. Carter's wound, they informed the chief of the circumstance; upon which he immediately called a council of the elders of the community, who withdrew, after an hour's debate, and the next day the scissors were returned.

On the 25th of July, Mr. Carter's wound was entirely healed, after having had thirteen pieces of the fractured skull taken out. They remained in perfect health, until the 25th of November, when Mr. Carter caught a fever, and died on December 10, 1793, to the great regret of his friends, Mr. Shaw and Mr. Haskett, and of the natives of Timor-land.

The survivors waited for the annual trading prow from Banda, which to their great joy, arrived on the 12th of March, 1794. They sailed from Timor on the 10th of April, and arrived at Banda on the 1st of May, where the governor received them with the utmost hospitality, and procured them a passage to Batavia, where they arrived on the 10th of October.

It appears that the two ships, after waiting six days for their boat, making signals and firing guns, sent two armed boats on shore after their companions. The natives came down, but indicated a different disposition from that which they displayed on their first interview, and gave the people in the boats to understand that the other boat had gone to the westward; at the same time endeavouring to decoy them to come on shore; one of their leaders wielded an axe, the handle of which being painted red, was identified as belonging to Mr. Shaw, and left no doubt as to the fate of him and his friends.

The two boats rounded the island, which is about eight miles long and five broad, but without making any discovery; and on their wishing to get one of the natives, in order to gain intelligence, they were attacked with a shower of arrows which they returned by discharging a blunderbuss, and killing one man and dispersing the remainder; but night coming on, they returned to the ship.

In order to punish treachery, and to deter these savages, for the future, it was resolved to detach three boats, with forty-two men, including lascars, upon which the natives re-

tired. In their searches on shore, they found the great coats, lanterns, and pieces of linen, of their friends, and several human skulls and strings of dried hands, which left no doubt of the fate of their companions; and, as a punishment for their brutal conduct, they destroyed their houses and huts, and burnt sixteen large canoes.

ADVENTURE IN THE ENDYMION.

BY CAPTAIN B. HALL, R.N.

ON the 13th of October, 1811, we were cruising in the *Endymion*, off the north of Ireland, in a fine clear day, succeeding one in which it had almost blown a hurricane. The master had just taken his meridian observation, the officer of the watch had reported the latitude, the captain had ordered it to be made twelve o'clock, and the boatswain, catching a word from the lieutenant, was in the full swing of his "Pipe to dinner!" when the captain called out—

"Stop! stop! I meant to go about first."

"Pipe away! Mr. King!" smartly ejaculated the officer of the watch, addressing the boatswain. Which words being heard over the decks, caused a sudden cessation of the sounds peculiar to that hungry season. The cook stood with a huge six-pound piece of pork uplifted on his tormentors, his mate ceased to bale out the pea-soup, and the whole ship seemed paralysed. The boatswain having checked himself in the middle of his long-winded dinner-tune, drew a fresh inspiration, and dashed off into the opposite sharp, abrupt, cutting sound of the "Pipe away!"—the essence of which peculiar note is, that its sounds should be understood and acted on with the utmost degree of promptitude.

There was now a dead pause of perfect silence all over the ship, in expectation of what was to come next. All eyes were turned to the chief.

"No! never mind, we'll wait," said the good-natured captain, unwilling to interfere with the comforts of the men: "let them go to dinner; we will tack at one o'clock, it will do just as well."

The boatswain, on a nod from the lieutenant of the watch, at once recommenced his merry "Pipe to dinner" notes, upon which a loud, joyous laugh, rang from one end of the ship to the other. This hearty burst was not in the slightest degree disrespectful; on the contrary, it sounded like a grateful expression of glee at the prospect of the approaching good things which, by this time, were finding their speedy course down the hatchways.

Nothing was now heard but the cheerful chuckle of a well-fed company, the platter of plates and knives, and the chit-chat of light hearts, under the influence of temperate excitement.

When one o'clock came, the hands were called, "About ship!" But as the helm was in the very act of going down, the look-out man at the fore-topmast-head called out,

"I see something a little on the lee-bow, sir!"

"Something! What do you mean by something?" cried the first lieutenant, making a motion to the quarter-master at the con to right the helm again.

"I don't know what it is, sir," cried the man; "it is black, however."

"Black! is it like a whale?" asked the officer, playing a little with his duty.

"Yes, sir," cried the look-out man, unconscious that Shakespeare had been before him, "very like a whale!"

The captain and the officer exchanged glances, at the poor fellow aloft having fallen into the trap laid for him; and the temptation must have been great to have inquired whether it were not "like a weasel;" but this might have been stretching the jest too far; so the lieutenant merely called to the signal midshipman, and desired him to skulk up to the mast-head with his glass, to see what he made of the look-out man's whale.

"It looks like a small rock," cried young Skylark, as soon as he reached the topgallant-yard and had taken the glass from his shoulders, across which he had slung it with a three-yarn fox.

"Stuff and nonsense," replied the officer, "there are no rocks hereabouts; we can but just see the top of Muckish, behind Tory Island. Take another spy at your object, youngster. The masthead-man and you will make it out to be something, by and bye, between you, I dare say."

"It's a boat, sir!" roared out the boy. "It's a boat adrift, two or three points on the lee-bow."

"Oh, ho!" said the officer, "that may be, sir," turning, with an interrogative air to the captain, who gave orders to keep the frigate away a little, that this strange-looking affair might be investigated. Meanwhile, as the ship was not to be tacked, the watch was called, and one-half only of the people remained on deck. The rest strolled, sleepily, below; or disposed themselves in the sun on the lee gangway, mending their clothes, or telling long yarns.

A couple of fathoms of the fore and main sheets, and a slight touch of the weather topsail and topgallant braces, with a check of the bow-lines, made the swift-footed *Endymion* spring forward, like a greyhound slipped from the leash. In a short time we made out, that the object we were in chase of was, in fact, a boat. On approaching a little nearer, some heads of people became visible, and then several figures stood up waving their hats to us. We brought-to, just to windward of them, and sent a boat to see what was the matter.

It turned out as we supposed; they had belonged to a ship which had foundered in the recent gale. Although their vessel had become water-logged, they had contrived to hoist their long-boat out, and to stow in her twenty-one persons, some of them seamen and some passengers. Of these, two were women, and three children. Their vessel, it appeared, had sprung a leak in the middle of the gale, and in spite of all their pumping, the water gained so fast upon them, that they took to baling, as a more effectual method. After a time, when this resource failed, the men, totally worn out, and quite dispirited, gave it up as a bad job, abandoned their pumps, and actually lay down to sleep. In the morning the gale broke; but the ship had filled in the meantime, and was falling fast over on her broadside. With some difficulty they disentangled the long-boat from the wreck, and thought themselves fortunate in being able to catch hold of a couple of small oars, with a studdingsail-boom for a mast, on which they hoisted a fragment of their main-hatchway tarpaulin for a sail. One ham and three gallons of water were all the provisions they were able to secure; and in this fashion they were set adrift on the wide sea. The master of the ship, with two gentlemen who were passengers, two sailors, and one woman, remained on board, preferring to stick by the vessel while there was any part of her above water. This, at least, was the story told us by the people we picked up.

The wind had been fair for the shore when the longboat left the wreck, and though their ragged sail scarcely drove them along, their oars were only just sufficient to keep the boat's head the right way. Of course, they made but small progress; so that when they rose on the top of the swell, which was still very long and high in consequence of the gale, they could only just discover the distant land, Muckish, a remarkable flat topped mountain, on the north-west coast of Ireland, not very far from the promontory called the Bloody Foreland.

There appeared to have been little discipline among this forlorn crew, even when the breeze was in their favour; but when the wind chopped round, and blew off shore, they gave themselves up to despair, laid in their oars, let the sail flap to pieces, gobbled up all their provisions, and drank out their whole stock of water. Meanwhile the boat, which had been partially stove, in the confusion of clearing the ship, began to fill with water; and, as they all admitted afterwards, if it had not been for the courage and patience of the women, under this sharp trial, they must have gone to the bottom. As it was both cold and rainy, the poor children, who were too young to understand the nature of their situation, or the inutility of complaining, incessantly cried out for water, and begged that more clothes might be wrapped round them. Even after they came to us the little things were still crying.

"Oh! do give me some water!" words which long sounded in our ears. None of these women were by any means strong—on the contrary, one of them seemed to be very delicate; yet they managed to rouse the men to a sense of their duty, by a mixture of reproaches and entreaties, combined with the example of that singular fortitude which often gives more than masculine vigour to female minds in seasons of danger. How long this might have lasted, I cannot say; but probably the strength of the men, however stimulated, must have given way before night, especially as the wind freshened, and the boat was drifting further to sea. Had it not been for the accident of the officer of the forenoon watch on board the *Endymion* being unaware of the captain's intention to tack before dinner, these poor people, most probably, would all have perished.

The women, dripping wet, and scarcely capable of moving hand or foot, were lifted up the side, in a state almost of stupor; for they were confused by the hurry of the scene, and their fortitude had given way the moment all high motive to exertion was over. One of them, on reaching the quarter-deck, slipped through our hands, and, falling on her knees, wept violently, as she returned thanks for such a wonderful deliverance; but her thoughts were bewildered; and, fancying that her child was lost, she struck her hands together, and, leaping again on her feet, screamed out, "Oh; where's my bairn—my wee bairn!"

At this instant, a huge quarter-master, whose real name or nickname (I forget which) was Billy Magnus, and who was reputed to have no fewer than five wives, and God knows how many children, appeared over the gangway hammocks, holding the missing urchin in his immense paw, where it squealed and twisted itself about, like Gulliver between the finger and thumb of the Brobdingnag farmer. The mother had just strength enough left to snatch her offspring from Billy, when she sunk down flat on the deck, completely exhausted.

By means of a fine blazing fire, and plenty of hot tea, toast, and eggs, it was easy to remedy one class of these poor people's wants; but how to rig them out in dry clothes was the puzzle, till the captain bethought him of a resource which answered very well. He sent to several of the officers for their dressing-gowns: and these, together with supplies from his own wardrobe, made capital gowns and petticoats, at least till the more fitting drapery of the ladies was dried. The children were tumbled into bed in the same apartment close to the fire; and it would have done any one's heart good to have witnessed the style in which the provisions vanished from the board, while the women wept, prayed, and laughed, by turns.

The rugged seamen, when taken out of the boat, showed none of those symptoms of emotion, but running instinctively to the scuttle-butt, asked eagerly for a drop of water. As the most expeditious method of feeding and dressing them, they were distributed among the different messes, one to each, as far as they went. Thus they were all soon provided with dry clothing, and with as much to eat as they could stow away; for the doctor, when consulted; said they had not fasted so long as to make it dangerous to give them as much food as they were disposed to swallow. With the exception of the ham devoured in the boat, and which, after all, was but a mouthful a-piece, they had tasted nothing for more than thirty hours; so that, I suppose, better justice was never done to his majesty's beef, pork, bread, and other good things, with which our fellows insisted upon stuffing the new comers, till they fairly cried out for mercy, and begged to be allowed a little sleep.

Possibly some of us were more disposed to sympathise with the distress of these people when adrift in their open boat on the wide sea, from having ourselves, about a month before been pretty much in the same predicament. It always adds, as every one knows, greatly to our consideration for the difficulties and dangers of others, to have recently felt some touch of similar distress in our own persons. This maxim, though it is familiar enough, makes so little impression on our ordinary thoughts, that when circumstances occur to fix our attention closely upon it, we are apt to arrive as suddenly at the perception of its truth as if it were a new discovery.

THE LOSS OF THE ARNISTON.

THE *Arniston*, sixteen hundred tons, was engaged by the Transport Board, to carry out stores, ammunition, &c., to the Island of Ceylon. She sailed from Spithead on the 26th of April, 1814, and arrived at Ceylon on the 22nd of November following. After fulfilling her mission, she sailed again from thence to England on the 4th of April, 1815, having on board 525 souls; out of which number five only escaped death. On the 21st of May, meeting with adverse winds, they parted convoy, and on the 26th got into La Guillas Reef, two hundred miles eastward of the Cape of Good Hope. Now all hope of escape from their impending fate deserted them. Men now, who had faced many a danger unshrinkingly, trembled with fear at the near approach of that death which in its mildest form is terrible, but how much more with a violent one perpetually before their eyes, language cannot tell. There might be seen stern mariners, rough bred and rough taught, listening to the gentle voice of women, who, now all hope on earth was passed, bid them with an angel's voice and spirit, seek the God above. Hearts lately beating high and tumultuously at the prospect of seeing that land, and embracing those dear friends, now were endeavouring to learn the stern lesson of meeting death placidly and without regret.

On the 30th instant at ten o'clock, the horror-inspiring cry of "breakers ahead!" came from the lips of the looker-out. They had hardly been uttered when the vessel dashed violently against the rocks, and immediately began to go to pieces. Now came the heart-rending scene of mothers parting from children, and husbands pressing to their hearts in one last embrace, their wives, followed by the last dread scene, when the vessel sunk. Some perished quietly. Others, with loud cries of agony, strove hard to gain that life they were fated never to enjoy. A gurgling noise, as head after head disappeared, told how fruitless those struggles were. Of the number which tenanted that once noble bark, five only escaped. They, poor fellows, after encountering unparalleled difficulties, gained a barren island, and there on their knees poured forth their thanks to the throne of their Creator for their preservation. For near a month did those poor fellows stay there, keeping life in them (a living it could not be called) by what they could pick up from the wreck. This pitiful sustenance was almost expended, and it did seem that they had only escaped the late catastrophe to undergo further privation, and perish miserably of starvation at last, when they were discovered by Mr. John Swanson, who very humanely carried them to his father's house, where they received such treatment as their attenuated forms required. The names of the survivors were, Charles Stuart Scott, carpenter's mate, Thomas Mausfield, William Drummond, William Sheen, and James Mackay, seamen. These poor fellows, with assistance, buried three hundred and thirty-one bodies that were cast upon the beach. Amongst them were Captain Simpson, the late commander, Lord and Lady Molesworth, Mr. G. A. Stevens, the wife and niece of a missionary, and many other persons of distinction. They rested in one grave, and as they consigned their bodies to their last resting place, they dropped a tear to their memory, and breathed a prayer to heaven that they all might meet in that blest place, sorrowless, and endued with life immortal.

LOSS OF THE VRYHEID.

THE *Melville Castle*, a British East Indiaman, after having performed the usual number of voyages, was put up by the East India Company for sale, and purchased by an agent of the merchants of Amsterdam trading to the East Indies. She was navigated to Amsterdam, where she underwent a tolerable repair in her upper works, and was new sheathed and coppered, while her knees and timbers remained in a very decayed state. Thus patched up, with such an imperfect repair, the company tendered her to the government, who were then in want of a large ship to carry out troops and stores to Batavia, reserving to themselves the liberty of bringing home a return freight. A surveyor was immediately ordered on board, who reported that the ship was in perfect repair, and wanted

nothing but the necessary stores to equip her for the intended voyage. The ship was accordingly furnished with all the requisite stores, was painted throughout, and received the name of the Vryheid.

On Monday, Nov. 8, 1802, the troops who were destined to embark on board of the Vryheid, received orders to march from Rotterdam to Amsterdam, where three hundred and twenty-seven men, the flower of the regiment, were selected out of nearly one thousand, who formed the second battalion of marines in the service of the Batavian republic.

On Saturday the 20th, the troops were ordered to embark which was done without delay; and early the following morning the admiral, the colonel, and all the officers went on board

the Vryheid, accompanied by their ladies, attendants, and domestics.

The ship immediately got under weigh, and proceeded with a favourable breeze till early in the morning of the 22nd, when it blew a heavy gale from a contrary direction. The captain immediately ordered the top-gallant-masts and yards to be struck, when she appeared to ride much easier than before. As the day opened, however, the wind blew with increased violence, and every exertion of the crew to render the ship manageable, proved ineffectual.

The most serious apprehensions now began to be entertained for the safety of the vessel; and the state of the ladies on board was particularly distressing. Some embraced their helpless

LOSS OF THE VRYHEID, CAPTAIN SCHERMAN, NOVEMBER 28, 1802.

offspring and wept over them in speechless agony, while others in vain implored their husbands to procure the means of landing them in safety on their native shore, and to give up the voyage. The commander, Captain Scherman, was himself in a very trying situation. His lady was on board, with an infant only three months old at her breast; and her affliction was aggravated by being surrounded with so many females fondly weeping over their little ones, and earnestly entreating assistance of the captain, who had the utmost difficulty to prevail on them to leave him, so that he might attend to the duties of his station.

The ship continued to drive before the wind till about three o'clock on Monday afternoon, when the storm increased to a perfect hurricane. Soon after the mainmast went by the board

with a tremendous crash, and, in its fall, swept overboard several of the crew, who were drowned, besides wounding four or five others. This disaster greatly augmented the fears of all on board. The captain himself, the admiral, and the other officers, now seemed to consider their lives in the most imminent danger; for though they were near enough to the Kentish shore, that they could discern objects on land, yet the waves, which then rolled mountains high, totally precluded the possibility of their receiving any assistance.

They now hoisted a signal of distress, and after very great exertion, they managed to bring the ship to an anchor at the entrance of Hythe Bay; but as it was quite dark they could obtain no assistance from the shore, though the wind was not quite so tempestuous. By the captain's orders the crew were

plentifully regaled, and a beam of hope illumined every countenance; but, alas! it was but of momentary duration. The ship was found to have sprung a leak: all hands were ordered to the pumps; and while they were thus employed, the storm came on again with redoubled violence.

Universal consternation now prevailed, and the piercing shrieks of the women and children at each successive blast of wind, were sufficient to unman the stoutest heart. Every relief that circumstances would admit was afforded by the ship's company and the troops, to the unfortunate ladies, many of whom were, by this time, clinging round their husbands and fainting in their arms.

They remained in this dismal situation for several hours, during which the greatest order and sobriety reigned on board, till about six o'clock on Tuesday morning, when the vessel parted from her best bower-anchor, and drifted towards Dymchurch Wall, about three miles to the westward of Hythe. They continued to fire guns of distress, and kept the signal flying during the whole of the morning. At daybreak, a pilot-boat put off from Dover, and coming near, recommended the captain to put back to Deal or Hythe, and to remain till the weather became more moderate. "If you proceed," said the boatman, "all hands will be lost: you are not acquainted with the coast, and if the gale should continue, no power on earth can save you." The captain, however, conceiving the danger to be less imminent, neglected this advice, and flattered himself, that as the day opened the wind would abate, when he should be enabled to put into some bay or port, without being obliged to comply with the demands of the Dover pilots, or to pay the Downs fees for coming to an anchor there.

The pilot-boat had scarcely left the ship, when the commodore at Deal dispatched two boats to endeavour to board her, when the unaccountable and fatal obstinacy of the captain was again strikingly displayed; the crew were ordered to let the vessel drive before the wind, and to pay no attention to the recommendations of the commodore. The boats then fired several shots as a further signal to bring-to, but these were equally disregarded. A few minutes afterwards, one of the boats passed close under the stern, and as the ship had lost her mainmast, desired she would immediately put about and stand for the first port. But to this, like the former solicitations, they gave no reply, and the gale increasing they soon lost sight of both the boats. The ill-fated captain was now in a state of the greatest agitation, and bitterly repented his refusal to take a pilot on board, but it was now too late; the roar of the sea was terrific, and such a tremendous swell, that the chance of any relief being afforded from the shore, was effectually prevented.

The wind blew a perfect hurricane from the south and southwest, the signal-guns they continued to fire incessantly, and the captain twice attempted to put the ship about, but all his exertions proved fruitless. She was now near Dymchurch Wall, where the coast for the space of above two miles is protected from the encroachment of the sea by overlaths and immense piles, and is further secured by large wooden jetties stretching far into the sea. On the first of these jetties the unfortunate vessel struck.

In this desperate situation, with the wind becoming more and more boisterous, the captain ordered the mizenmast to be cut away, and all the water in the hold to be started, by staving the casks, while a part of the crew, under the directions of the officers, were incessantly employed at the pumps. They also hove almost all the ballast overboard; but in spite of every exertion, the danger seemed every moment to increase. So maddening was the reflection of what might have been their situation had the pilot not been refused, that the officers could not refrain from reproaching the captain with having slighted the advice of the English in the boats: he appeared to be deeply sensible of his error, but it was now too late to repent.

The admiral recommended the sheet-anchor to be cut away, which was accordingly done, and nearly two cables were veered out in the hope of bringing off the ship. All this time she continued to beat upon the piles, and the sea to break over her with such violence that the men were no longer able to remain in the hold. The pumps had now become so completely choked

with sand and mud that they were rendered totally useless, and a speedy destruction of the vessel and all on board appeared to be inevitable. The foremast soon afterwards went over the ship's side, hurrying along with it about twelve of the crew, who were soon out of sight. The ladies now began to strip themselves quite naked, which is a usual custom among the Dutch females under similar circumstances, and several of them were handed to the bowsprit attended by their husbands. The others chose to wait their fate on the quarter-deck, where stood the miserable Captain Scherman, in silent despair at the unavailing cries for assistance of those around him, while his unfortunate wife, in all the bitterness of maternal anguish from the loss of her infant, was clinging to his feet.

About eight o'clock the rudder was discovered to be unshipped, while the tiller was tearing up the gun-deck, and the water rushing in with fearful rapidity at the ports. At this moment most of the passengers and crew joined in solemn prayer to the Almighty, and while engaged in this act of devotion, the sea, foaming dreadfully, made a fair breach over them, so that they were obliged to exert every effort to remain in the ship. From the uncommon fury and roaring of the waves, the guns could scarcely be heard even on board; and no hope remained of their obtaining any assistance from the shore. As a last expedient, the captain gave orders to cut away the anchors from the bows, when a violent swell immediately parted them, and the ship drifted with irresistible force farther on the piles.

The unhappy sufferers had now no other prospect than that of instant destruction—every human exertion had been made to save the vessel—nothing more could be done; and all stood in silent suspense waiting the awful moment that should hurry them into eternity.

The morning was unusually dark, and to aggravate the horrors of the terrific scene, the ship was not more than four or five cables' lengths from the shore; so that the crew could discern that there were several people on the Wall, but who were unable to afford them any relief. It was now half-past eight, when a tremendous sea dashed with such force against the ill-fated vessel, that, after rocking like a cradle for two or three seconds, her timbers split, and immediately she broke her back. About one hundred and seventy persons were instantly overwhelmed by the furious element, and not one of them ever reached the land. The wreck, thus torn asunder, still presented nearly three hundred miserable objects clinging to the various parts that remained above water; while the tremendous noise of the foaming billows was drowned by the piercing shrieks and cries of the helpless women and children.

At the earnest request of the admiral, the jolly-boat, which was hanging over the stern, was now launched; and he, together with the colonel and eight females, were helped into her. Mrs. Scherman wept incessantly, but refused to quit her husband to accompany them. They had not, however, proceeded far when a dreadful sea broke over them, and the boat instantly disappeared. In a few moments the colonel was observed endeavouring to support his lady above water, when a returning wave overwhelmed them, and they sunk to rise no more.

The ship was now settling rapidly, and each determined to risk some experiment to reach the shore. The captain proposed to his lady, that they should make themselves fast to a large hen-coop, and commit their lives to the mercy of the waves. A few of the crew having cut away the coop, they, with great difficulty, made fast the captain and Mrs. Scherman, and after an affectionate parting, lowered them down over the stern. They had nearly reached the Wall, followed by the anxious looks of those who had remained on board the wreck, when a large piece that had been detached from it, drove them completely under, and they were never seen to rise again.

Painful as this spectacle must necessarily have been to the remaining survivors, their attention was completely absorbed in contriving means for their own preservation. A lieutenant, his wife, and two female domestics of the unfortunate admiral, still remained on the wreck, and the men agreed to make one more effort to save them. Seizing one of the hatches which had been torn asunder, they fastened it to a piece of the quarter-gallery, and lashed the females to the planks, while the

lieutenant, who was a good swimmer, stripped himself, and having taken a rope round his waist, the raft was lowered into the water. They had scarcely been a few seconds upon the water, when a violent gust of wind overset the raft, and every soul on it was hurried into eternity. Thus perished all the officers and females who had remained on the stern of the wreck.

About this time the bowsprit was torn asunder from the other parts of the wreck. It has been already observed, that many of the females and officers had taken refuge upon it, and the number of persons about the rigging and various parts of the bows was now above a hundred, who were driven towards the Wall by the violence of the surf. Those who were upon the stern, watched the progress of their companions with the utmost solicitude, and just as they supposed them to be beyond the reach of further danger, a tremendous sea broke over them, and whelmed them all in one general destruction.

The surface of the ocean was instantly covered with their bodies, and many of the unhappy creatures had almost reached the shore; but wave upon wave succeeded each other with fearful rapidity, and finally triumphed over all their exertions. Among the most distressing instances of individual suffering, was that of a captain of the marines, who was swimming with one hand, and, with the other, endeavouring to support his lady by the hair of her head; till, overcome by cold and fatigue, he turned round, clasped her in his arms, and both disappeared.

The wreck, meanwhile, was gradually disappearing, and many of the seamen and marines, successively seizing on various timbers, precipitated themselves into that danger they were so anxious to avoid; but it was natural to suppose, that after so many dreadful examples, those who still remained on the wreck should not be willing to attempt similar experiments. Of these there were now not more than forty-five on both parts of the wreck, which frequently became so entangled, that the men were near enough to hold a conversation with each other. Their situation, however, was now rapidly approaching to a crisis; from all parts, the planks were being torn away, and each succeeding sea was fatal to two or three of the wretched survivors. At length, two of the seamen determined to lash themselves to a large hog-trough, and endeavour to reach the land: they were handed over the larboard side, and after a miraculous escape from coming in contact with a fragment of the drifting wreck, they fortunately succeeded in reaching the shore in safety, being the first out of all the adventurers who had quitted the ship that had succeeded in their attempts.

Their success greatly contributed to animate the exertions of those whom they had left behind, and who instantly fell to work to construct a raft, which, in a few minutes, was sufficiently rigged for them to make the attempt. To this frail conveyance did the remaining survivors commit their lives, and had scarcely got clear off the wreck, when a heavy sea struck the ship with such violence, that she was dashed into a thousand pieces. The situation of those on the raft was now peculiarly awful, from the numerous fragments of the wreck, which were floating about in every direction, and by the violence of their motions threatening instant destruction. They continued, however, to drift nearer the Wall, when they were run foul of by a piece of the wreck, which swept off eighteen out of the thirty-three who were upon the raft, and wounded all the rest in a greater or less degree; at the same time, they were driven forward with such velocity, that it was impossible to afford any relief to those who were struck off. One of these poor fellows was snatched from the deep by the enterprising humanity of Mr. Kemp, of Hythe, who, at the imminent hazard of his own life, was observed endeavouring to save another, a soldier, when a piece of timber unfortunately struck the poor soldier on the head, and he was drowned. About ten minutes after this fatal accident the survivors succeeded in reaching the long-wished for shore, half dead with fatigue and the severe bruises which they had received.

Thus of four hundred and seventy-two persons, who, but a few days before, had left the city of Amsterdam, and who were but a few hours on board the Vryheid, in full health and confidence of security, not more than eighteen escaped. This wretched remnant of the crew of that ill-fated vessel received

from the inhabitants of the adjacent coast, such generous attention, as not only contributed to their recovery, but amply relieved all their necessities. The bodies of the unfortunate sufferers, which were scattered along the coast for many miles, were likewise collected, and interred in a decent manner at the expense of the inhabitants. The bodies of Captain Scherman and his wife, and many of the officers and their ladies, were committed to the grave with every mark of respect.

A very liberal contribution was afterwards made by the inhabitants of Folkestone and Hythe, to enable the survivors to return to their native land, which they reached in about ten days after the fatal accident.

It is a circumstance worthy of remark, that a small merchant vessel which left the Texel on the same day as the Vryheid, took a pilot on board off Margate, and was brought safe into port, without losing a single hand during the storm.

The following is an accurate statement of the number of the crew and passengers of the Vryheid:—forty-two officers, twenty-two women, twenty-eight passengers, seven children, fifty-one seamen, three hundred and twelve soldiers;—total, four hundred and fifty-four persons lost. Ten seamen, eight soldiers;—total, eighteen saved.

A SEA STORY.

WE were in S. lat. 20°, W. long. 10°, 18', on our passage from the Cape down to St. Helena, the ship was dashing the spray before her at the rate of ten knots an hour, the wind was just abaft the beam, and hardly enough of it to make a spar creak, every stitch of canvass was set, not a gore of it fluttered, she looked beautiful, as the breeze brought her topside down to the kiss of the larboard wave, and the leeward rigging slackened. I looked up at the bellies of the white sails, till I could almost imagine, like Byron, that I was carried away by a "thing of life." A sailor can never call his ship it. *She* is the only pronoun which he could apply to his "bonny barge." She is a sort of sweetheart to him. The captain stood on the quarter-deck, exulting in his well-rigged clipper, his eyes sparkled again as the spray broke over the roughtree-rail, and the long wake of eddies foamed abaft us. Really it was a scene which made one's soul glad. I, a passenger, felt the contagion, and, for the first time in my life, found myself in the company of one of the Parnassian nine. She dictated as follows:—

"The heart of the sailor's bounding high,
As his ship flies on 'twixt sea and sky;
She lives to him, and she's firm and brave,
And he'd serve the foe as she serves the wave.
And as she dances from zone to zone,
He feels her destiny is his own;
With her his life must sink or swim,
Her timbers and plank are fate to him:
As the sail swells proudly on her spar,
So swells the heart of the gallant tar;
Her shrouds, and stays, are rife with hope,
And his heart-strings tighten with every rope."

"Something on the starboard bow," bawled out Sam Stay-sail, with the voice of a Stentor. He was keeping a look out on the fore-castle. My muse took flight to the celebrated mountain to moisten her temples with a little Hippocrene water, that is, unless her museship had stronger nerves than many an exquisite to be found even at the United Service Club-house. For Sam's voice was of amazing volume, and force, and everything being as quiet as a mummy depot in one of the pyramids, —when he hailed us with his right hand at his lips for a speaking trumpet,—it startled us as much as if old Neptune had paid us a visit, and saluted us in the mild and subdued tone for which his godship is proverbial.

"Helm starboard!" exclaimed the captain to the man at the wheel.

She answered her helm immediately. The sheets were handled. The sheaves creaked—the sails shivered, and the good ship hove to, "in the twinkling of a marlin spike;" as one of the crew said, on observing the adroitness with which the evolution had been performed.

"Let go the boat, and a couple of hands," ordered the captain.

The Davits instantly seemed animated, two men were in the boat, and the Davit-falls running through the blocks, in less time than is generally occupied in taking a pinch of snuff. I took a telescope, and, standing against the fore part of the poop on the starboard side, endeavoured to descry the object which had been the cause of stopping us. I quickly discovered something rising and falling with the wave, and approaching the ship. It was not a boat. As it neared us I could perceive something alive on it. The living thing was a man, and he waved something in his hand. I soon discerned that it was a hen-coop on which the poor wretch floated. "Good God," I thought, "nothing but the wide Atlantic, and wider heaven for this poor creature to gaze upon, and a hen-coop, the only thing of this world to which he clings, to prevent him from perishing; nay, worse, that hen-coop his only oasis in this desert of waters, and even on that he seems but the prisoner of death, who, instead of dispatching him with a stroke of his dart, is gloating himself like a truculent tyrant, by gradually famishing his poor victim ere he devours him!" I thought, of many of the horrors of shipwreck, which I had heard of, and my blood seemed to curdle in my veins. All the passengers came upon deck. Among them there was a captain of a man-of-war, who had been picked up at sea by a vessel that we had fallen in with, his own ship having foundered under most mysterious circumstances: this gentleman was going to England in our vessel as a passenger. He had described the horrors which he endured previous to his being picked up, and the whole of his direful story rushed vividly on my mind, as I gazed upon the wretch, who, with the instinctive love of life, and under the influence of hope (the great boon of heaven to suffering wretches), clung to two or three deal boards, rather than close his miseries by sinking into eternity. The men in the boat soon removed him from his perilous situation. I could perceive, as they pulled him into our boat, that he was too weak to stand. They laid him down carefully in the stern-sheets of the boat, and pulled toward the ship. They soon came alongside, and ropes being handed down, the tars kindly put their jackets round the poor fellow's loins, and under his arm-pits; and we slowly *boused* him up to the gangway, and pulled him in-board upon deck. Famine had battered like a vulture upon his living flesh. He was a mere animated skeleton. His eyes glared from the recess of their sockets, his cheek-bones protruded almost through his yellow skin, his lips were blue, his beard was long, and added to the hideousness of his ghastly physiognomy.

"Water, water," he exclaimed, opening more widely his eyelashes, the pupil of his eyes dilating at the same time. "For God's sake, water;" his lips seemed rigid as he opened them to utter the supplication, and his lungs groaned, as it were with convulsion, as he inhaled the air which was expelled from them in articulating it.

We took him under the awning on the quarter deck. A little water in a biggin was brought to him. Oh heaven, I had no conception of what thirst is till that moment! His limbs quivered as the precious pure fluid touched his lips. And Oh, the expression, the horrible expression of gratification that distorted his hardly human features, as his parched mouth and throat were cooled by the delicious draught! Every restorative that could be thought of, and obtained on board the vessel, was administered to the sufferer, and at length sleep, nature's soft restorer, kindly shed her influence over him. He slept for two hours. When he awoke I was seated alone by his side. He looked wildly around.

"What—where—who—where am I?" he incoherently exclaimed. "Is this a ship—that the face of heaven, oh God!" he shut his eyes, and seemed absorbed in mental prayer for a few moments. I took his hand, and, with as much kindness as possible, asked him if he wanted anything, or if I could do anything for him. He grasped my hand tightly in his hard but attenuated fingers.

"You are not a fiend!" he exclaimed, gazing on me with a phrenzied look.

"No, no, my dear fellow." I replied, "a friend who wishes to serve you."

He grasped my hand still tighter, and pressed it to his bosom. I saw a tear roll down his lank cheek. The steward of the vessel passing at the moment, I sent him for a shirt of mine, and two or three articles of dress; enough to cover humanity in those tropical regions. The steward brought them. I had given my patient a little wine and water, and sopped a piece of bread in it, which with much difficulty he had swallowed. I lifted him up on my arm, the moisture had evaporated from his garments, and left the salt crystals in every fold. I, with much difficulty, stripped him, his back had evidently been lacerated by that accursed instrument of torture, the cat-o'-nine-tails; it was waled from the shoulders to the hip. He could hardly bear me to touch his back it was so tender.

"Is your back sore?" I inquired. He shook his head in an agony, and replied, "It is, sir, very, very sore."

I could not refer to it again, I concluded that he had been flogged for some act of criminality, and that any allusion to his flagellation would most likely cause a bitter augmentation of his sufferings. After I had clad him comfortably and put him into my own cot, he seized my hand, and kissing it said:—

"I fear sir, I am not long here." I cheered him, and told him that I could see he was an Englishman, and that I hoped in a few weeks he would see the white cliffs, and green fields of his native land.

"Never, never!" he responded with a sigh. "I have seen my poor father who died when I was a boy, and fiends were lashing me with scorpions, you drove them away—"

I was afraid that he was becoming delirious, and therefore stopped him. I assured him that he had slept and dreamed of those things.

"No, no, no," he ejaculated quickly, "I know they will seize me."

I endeavoured to tranquillise him. He seemed grateful for my kindness, repeatedly pressed my hand to his lips, and wept. At length he said—

"Oh, sir, my hour is come, I am a murderer."

"Providence," I exclaimed, "how mysterious are thy dispensations. A murderer thus rescued from the oblivious grave of the unfathomable deep, to confess his crime and perhaps expiate it on a gallows in the country of his birth!"

I involuntarily shrank from him and would have stood at a distance, but he would not let go my hand.

"Sit down," he said in an agony, "sit down, I will tell you all."

I sat down, my mind at the time experiencing a conflict between horror and curiosity, which it would require a more graphic pen than mine to describe.

"I am a dying murderer," he groaned, and seemed unable to proceed. "Oh, sir," he added, "do not look at me in pity, but promise me you will not divulge my story."

I promised him that I would not.

"But why not?" he said, "I shall be in the deep."

He paused.—A conflict of the most agonising description was evidently passing in his breast.—He turned to me, and seizing my arm with his left hand,—his right hand at the same time squeezing mine,—appeared as if he had concentrated all the energy which his sufferings had left him.

"I am a murderer, a dying murderer, but heaven—no, no, it was revenge—heaven can never pardon revenge—never, never—"

I besought him to be calm, and assured him that the gates of Heaven were shut only against the finally impenitent. He wept. He then proceeded.

"Oh, sir, I have been the means of sending hundreds of my fellow-creatures to their account before their time."

He shuddered as he uttered this, and fixing his eyes on vacancy, his lips quivered, his tongue moved but he uttered not a word. I thought he communed with the Almighty Parent of universal humanity, and I dropped on my knees, and besought my God of his infinite mercy to pardon him. His abstraction terminated. He resumed.

"I served on board His Majesty's Brig —, under Captain —, he was a cruel tyrant, but that's no excuse, he will appear in judgment against me—Lord forgive me."

He trembled as he uttered this. I thought his imagination wandered, and would have terminated his disjointed narrative, but he prayed me to hear the remainder.

"Oh, sir, he flogged me for looking at him, scarcely anything else did I do. I looked at him in a manner which displeased him, he ordered me to have three dozen. I writhed under the bloody thongs—I fainted—I was scoffed at—hooted—Oh God—I—I sought a revenge that a fiend would shrink from—I—I took an auger, bored holes in the pumps first, and then through the ship's bottom—Oh, Oh—"

He fainted. I moistened his lips and burned rags under his nostrils. He recuscitated. I intreated him not to resume his story, but he replied:—

"I pray you, sir, to hear me; my soul is already much relieved. The ship went down—I did intend to drown with the rest, but love of life was too strong for me. I clung to a hen-coop. I heard some shriek. I heard some struggle. The water gurgled in the throats of some. Oh, sir, I saw some of their looks as they sank—I saw my messmates that I had murdered—Oh God save, save, save—IT IS HIM—save, save—" he vociferated, and swooned.

The captain of whom I have before spoken had come to my side, when the poor wretch exclaimed "it is him!"

"Good heavens!" the captain exclaimed, "it is, it must be, Tom Rowler!"

"Do you know him, sir?" I inquired.

The captain looked at his arm, and seeing the mark with which it was tattooed, replied:—

"Oh yes, sir, I know him well enough, he was one of my own blackguards."

"Indeed, sir," I replied, "then there are other marks by which he may be identified," and I indignantly showed him the poor fellow's back. He coloured—hummed a tune—tried to assume an air of nonchalance.

"Oh, he deserved what he got," said he.

"Monster!" I muttered to myself.

"He will be glad enough to see me on *terra firma* again, I assure you, sir," said he, "poor devil, I thought he had made a shark's supper."

The poor fellow revived, but seemed afraid to open his eyes, he covered them with the palm of his bony hand. I stepped aside from him, and asked Captain— if he could account for the foundering of his vessel.

"No," he replied, with imperturbable coolness, "devil take me if I can account for it; we found the water "making" very fast, the pumps would not draw a tea-cup full, it seemed as if some infernal spell had seized the ship. However, down she went like a pig of Kentledge. *Sauve qui peut* was the motto of all hands. I got into the long-boat, and was picked up as I have already told you; this poor devil got quarters among the cocks and hens, it appears."

I was rejoiced to perceive that he did not know of the atrocious crime which the wretched being before him had committed. I again approached the poor creature, took his hands, and asked him if he felt better.

"Yes, yes, yes!" he replied convulsively, as if out of breath with the tumult within him.

"Hoy, Rowler!" unfeelingly bawled the captain.

The wretched man sprang up from the cot at the sound, opened his eyes as if frantic, uttered a horrible shriek, and exclaimed:—"It is him! save me! save, save—"

Convulsions seized his whole frame. It was with much difficulty that we held him down to prevent him from destroying himself. The fit left him in a state of extreme debility. Delirium and fever ensued, and two days after, death, from whom we hoped we had rescued one victim, seized his prey. We sewed up the body in a hammock. A shot was tied to it to insure its sinking, and we committed it to its deep grave of water, without a coffin or shroud, but not without a prayer. I never sat at the same table with the captain afterwards.

THE WRECKER'S REVENGE.*

At the period when this narrative commences, the unhappy Lord of Dunraven had suffered that dreadful domestic bereavement, the deaths of three children at once, by different accidents (all drowned), which the whole country regarded as God's revenge against wrecking, and which is recorded by Grose. One son remained, though long unheard of, who had embarked long since in merchandise to redeem the fortunes of the family, and it was for him (as the more charitable whispered) that the wretched father persisted in his crime, having for his agent and accomplice a desperate character, a ruined smuggler and pirate, for he had once an armed vessel of his own, who resided in a hovel up a creek of that rocky coast, though believed to hoard treasures still. Ralpho or Ralph, the Diaowl ("the Devil") was his nickname, also "Ralph Ironhand," he having lost a hand in a conflict with officers of justice sent against him by Mr. Vaughan, then a real philanthropist, generous but reckless, exerting his strong genius in planning a lighthouse for the sunken rocks thereabout, in framing an apparatus for saving men on wrecks &c. With this man (though become his deadly enemy) did his nature's dire revolution incline him to associate, not for the salvation, but destruction of man's life! So prone is human nature to depravation—so uncertain the duration of moral character! "*Corruptio optimi pessima*" well applies to man's nature. Passion (whose name is Legion) resembles a glorious river banked with galaxies of June flowers, with meadows green as spring's buds and beautified with the whitest flocks, which one day's storm changes into a foul flood, burying them all; and the next shows the ruin it has wrought—sheepfolds, prostrate shepherds drooping in misery, flowers, grasses, all viewless under the black slime and sordes which its sky-blue beauty held concealed. The passionate noble heart—the great gifted mind—unguarded by some humbler but vital quality, is but like a palace on fire, a mountain palace, glorified and exalted only to become a dismal beacon to all men, and as a child playing but with fire, or a peasant with his pipe's embers, may be the cause of turning a tower of centuries' standing into smoke and black ashes, so may unwatched moral influences, of the meanest nature at first, prove the dismal incendiaries in the citadel of men, and fire the very palace of the soul.

"Yes there are real mourners; I have seen

A fair sad girl, mild, suffering, and serene."—CRABBE.

And such an one,—so fair, so mild, so suffering,—was to be seen for years frequenting that shore of romantic grandeur, on one of whose maritime precipices towered the grey strength of the ancient castle of Dunraven. The fair mourner of Crabbe is depicted as haunting a churchyard, and our gentle Welsh maiden might almost be said to resemble her therein, for that great, grand sea, by which she walked continually, was too truly to her a mighty burial-place. It had buried her first young hopes, in love at least, and sad fond fancy for ever sounded in her sunken heart a knell for that love's object—for ever whispered that it had already buried him also—her first love, playmate, everything!—the fond, the faultless, the bold, the beautiful Septimus Vaughan, the self-banished heir of the manor of Dunraven. Margaret of Llangoed† was the daughter of a gentleman residing near the castle, but had lost both parents long since, and had been left under the guardianship of Mr. Vaughan, to whose younger children, after the death of his wife, she had supplied the care of a mother, till their lives were lost as related.

There was at that time a humble little sea-side hostelry, or "tavern," as the Welsh term it, not far from Dunraven, whose old hostess had been Margaret's nurse. In the back was a small room, whose lattice (of mere slips of wood crosswise) had been exchanged for a glazed casement, on purpose to allow the young lady, in all weathers, thence to let her eye wander over the boundless sea; and there she would sit, feeding her sick fancy

* From Ainsworth's Magazine.

† "The daughter of Trehearne, of Pencarreg," &c., naming her family domicile, (farm or mansion,) is the usual designation of the eldest daughter in Wales.

with the deadly melancholy that seemed to her ever brooding in the watery distance, let it dazzle gloriously with the sinking sun as it might, ever since the parting hour.

It was in the evening of a golden autumnal day, which was closing in heavy fog; with thunder-clouds in the distance, that she sat in one of those grand piazzas of rock, formed by the excavating waves of ages, which distinguish that beach, and melted to tears: there alone, recalling that hour—for the hour, the prospect, the very aspect of the evening were the very same, and the many years that had elapsed—that great void chasm in her life seemed as but a dismal dream of a terrible and lonesome night; but the sweet morning—his prayed-for return—when would that arrive? Far indeed from vanity was the feeling which prompted this lone faithful girl to so often turn to her mirror, pore over her poor white face, fancy “defeatures” which time had not written yet, and sometimes half wish to die, ere he should return, so to avoid blurring the fairer image of her which he carried out, and might still preserve. Suddenly she started out of deepest reverie, at the appearance of a tall figure of foreign aspect, standing in the gorge of a rocky creek, near, but too distant for her to recognise his features. Cut off by vast walls of cliff from the rustic homes above, fog and night-fall combining to give solemnity to the low roar of the waves, and deeper solitude to the scene, she grew terrified, and hid herself behind the huge columnar portals of the cavern. Presently he loitered towards what is called the Goat’s staircase (steps in the rock); but the dense fog prevented her viewing his features, though something urged her to pore upon his seemingly sallow face with an eagerness of the mad. Presently she heard a boat rowed away by men, both invisible in the fog. She caught the clank of a chain and voices, and concluded that it had landed this muffled stranger. She had had a wild dream the previous night (which may be hereafter alluded to); her spirits were violently agitated, she felt as if an apparition (a blest and glorious one!) had glided near her in its mist, so vision-like was the transient spectacle, all objects metamorphosed by the hazy medium into something strange, and his very stature increased by the same. She fancied his hand of strange whiteness—fancied she could discern even the blackness of a mourning ring on a finger—she had put one on the hand of Septimus at their last interview, so despondent was her mood in that very spot. Not dreaming of any one there lurking, the stranger stopped, and seemed to fix his eyes (hollow eyes, she fancied!) on the very cavern she occupied, the very spot of their very last endeavours! So strong was her perturbation, that her eyes grew dark, she nearly fainted—reviving, with a strong effort, she looked again, but he was gone.

That same evening, as the good dame of the cottage inn, or “public,” sat reading the “Welshman’s Candle,” or “Vicar’s Book”—*Livre y Ffycar*—of Rees Prichard, an old volume with brazen clasps, hardly less revered than the Bible itself by the South-Wallian peasantry—a stranger, stooping to enter under the eaves of thatch, disturbed her with the unwelcome sound of the Saxon tongue. He took refreshment in the little back room already alluded to, and began to inquire about the families in the neighbourhood. The old dame would hold no converse in “Saxon,” cutting all short by the eternal “dim Sassenach” (“No Saxon,” i.e. English). But her boy, her grandson, was more communicative.

“I saw, near the sea,” the stranger said, “an old man, of wretched appearance, with a beard (as I thought, at least, through the fog), as we rowed along the coast—who is that?” “He of the great house, sir,—the Squire Vaughan.” The stranger started.—“What! you do not tell me that old miserable man was Mr. Vaughan himself?” Assured it was he, the stranger’s countenance fell, and he was long silent. Desirous to interrogate the old woman, he addressed her, at last, in the Welsh tongue, and loosed her tongue, in so doing, as by a charm, but still preserved a studied concealment. He inquired about the lady of Llandoed, Margaret’s paternal seat, and sighed to hear of the death of both her parents. When told that she had been seated, not an hour since, at that very window—had slept one night, it being stormy, in that very bed

(which filled up one side of the old room), the colour mounted into the bronzed cheek, and strange light and exquisite softness, into the full eye of the guest. Grasping the withered hand of the hostess, he bade “God bless her,” in her own language, forced on her a piece of gold—on her grandson, one of silver—departed, none knew whither, leaving them all wonder and all joy.

Remorseful for the injury he had done to his son’s future interest, Mr. Vaughan, as has been already related, abandoned himself to despair. His only companion, besides the gentle orphan (whose attachment to his long absent son endeared her to him the more), was an aged domestic, named Jenan, who had enlivened his revelries in former days, by his skill on the harp, and whose love for the boy-exile, whom he had many a time carried on his back, when a child, was only second to the father’s own. He would sit speechless for hours, then hurry to his high turret window to look out over the sea, murmuring to himself, “A father or no father? Is my blood stopped utterly except in this old foul heart? Three at once!—all at once! and all by water, water!—all watery deaths!” It was indeed like a judgment!—What say you, Jenan? Am I a father yet?”

Margaret, on her return, tried to rouse his spirits, by telling how she dreamed his son was returned, well and happy,—that she held his hand in hers, but concealed (in her bashfulness) that it was before the altar, that their hands so met. She withheld also, the darker sequel—that suddenly she lost him in the darkness of a total eclipse; yet somehow the hand was not unlocked from hers, but gleamed to the ghastly light—a dreadful red—ring and all being covered with blood.

That same evening, or rather night, a vessel, which had been long lying to, came aground, and became a wreck, through the act of Ralph “the Diaowl,” who had kindled a fire on the beach, and, cut off by the walls of cliff, had the shore as a solitude for himself and his black purpose. Descrying the red gleams below, from his high lattice, Mr. Vaughan hurried down, followed by Jenan, bearing a life-preserving apparatus for reaching the wreck. They caught the sound of a clanking chain and faint clamour of voices, as of persons taking to the boat. A sudden, dreadful silence ensued. It was, no doubt, swamped. Mr. Vaughan urged the hardy wrecker to venture to swim out with the apparatus to the beating vessel, to ascertain if any one were still on board, and he consented.

The melancholy pair stood listening in the sort of cavern hollow, formed in the mixed fog and sea-mists, by the red light of the watch-fire, and heard only the sound of a bell, which, being fixed in the ship for calling the crew together on occasion, now kept time to the rolling of the wreck with almost the regularity of a passing-bell. “Think you he has reached the vessel yet?” Mr. Vaughan continually inquired. There are on that coast singular crannies and passages called windholes, which pierce far into the rocks and open above, occasioning sounds, sometimes of melancholy grandeur, like those of an enormous Æolian harp, or many such, and which the superstitious hear with awe and forebodings in wild weather. Deceived by these, perhaps, Mr. Vaughan exclaimed.—“I could fancy I heard two voices in the pauses of the gust! he’s on the hulk by this time—that dismal, dreadful bell! How strange, how solemn it sounds, above all the weltering and breaking of the waves and hissing of this pebbly beach!—Hark! hark! hark!” His last exclamation expressed intense alarm or awe, and in his eagerness to listen, he laid his finger on Jenan’s lips, to prevent his speech. “It’s only the noise of the windholes, sir,” he said at last.—“I’ve stood in wild evenings and heard such sounds; they seemed like screams of raving madness, and presently, as the wind sunk, like sweet voices, but melancholy—dirges or ‘waking’ of corpses—one might fancy anything.” “True!—anything; fighting or praying for life and mercy—cursing and blasphemy of murderers—anything!” “Why did you start, sir?—what made your hand tremble so violently as you laid

* His two sons had gone with the only boat, and landed on a rock, dry at low water, called “The Swinkers,” and the boat drifting away, they perished in sight of their father, on the shore. In the confusion, a younger child, left alone, fell into some water, and perished at the same time.—GROSS.

your finger on my lips just now?—what did you fancy you heard?”—“Tell me, first, what did you fancy you heard?”—But no, it was a wild fancy of my own brain, Jenan, that was all.—What does that devil on the wreck so long?—Ralph, you villain! Ralph! come back, I say!” “Alas! dear master, your voice can’t reach him—he is but looking about for what he can lay hands on.” “Lay hands on!—lay violent hands! No, no—there was no living thing there!—it was but my fancy. Yet you might have a wild fancy, a shocking fancy, as well as I—hark; oh God! again!” and he grasped his companion’s arm with a hand that shook so as to shake the old man’s whole person, he remaining dumb as death, in intensity of listening the while. “Now, did you hear nothing?” he burst forth. “I did hear a sound, as of a voice.” “Ay, and it must be a long, a strong, a dreadful sound, to be heard above all the sea, and all the sounds of these caves and winds! A voice—you mutter—a voice!—go on—whose voice did you fancy it was? But I am mad—no matter what I fancied—what did you? But we might both have a mad conceit. Did you fancy anything particular?” “I seemed to hear two voices.” “So did I!—Come back, you wretch—you wrecker—murderer!—or may that dark sea or hollow hell at once swallow you quick!—Come back, and put an end to this dream, if it be a dream!” “Pray, sir, do not exhaust yourself thus—the sea’s too loud.” “Then, end it you—you, yourself—now, now! Did you not think it his voice, my poor boy’s own? I know you did!—Answer me, and speak me dead at once! You know it—who could forget it? Speak—I’m ready!”

But ere the answer came, the sound of the wrecker himself regaining land rivetted his whole mind, while so deep a darkness, from invisible clouds of thunder (which already growled in the distance), joined to the fog, came over the night, that he was made conscious of the wrecker’s presence by his standing up, dim, before him, a black and figured shadow, for the embers shot light but a few feet into the mass of fog. “Was aught alive on board?—Speak, for the love of God!”—The sullen and malignant man baulked his frantic eagerness by a long pause, then muttered, carelessly—“There is nothing alive on board.” “Was anything alive on board?” was my question, dog!” he said in fury, between his teeth. “Well, then, there was one dog on the wreck,” replied the ruffian, laughing. “A mountain’s weight seemed heaved from off the breast of the fancy-fraught father. The suddenness of the relief was of itself a shock. “Only a dog—a poor dog,” he rejoined, calmly, his suddenly softened nature melting toward even this humbler object. “And you left it to die? It would have been merciful to bring him ashore. The tide is running out—will be likely to get to land?” “And so bar our claim to the ship? Blood! something has strangely wrought on you to-night! Why, there’s a rich cargo, that will lie dry by morning—I had it from the captain and owner, himself, that it’s a rich one.” “The rack again!—why, you said there was only a dog!” exclaimed Mr. Vaughan, in agony. “Ay, a dog of my breed!—did you not say I was a dog, just now? Did ye hear him howl when I—but never fear, he’ll never witness against us, never howl more, unless in the night of the judgment!” “Wretch! what name? what country? what?” The wrecker had retired into the darkness, but soon reappearing in the narrow circumference of the dying light of the embers, proffered his hand to the impatient questioner—“Be pleased, sir,” he said, “to accept the hand of poor Ralph, in token of his forgiveness for your causing the loss of his other!” “What means the mysterious wretch?” Mr. Vaughan exclaimed. “Answer my question, or return to the poor stranger on the wreck, if you be a man!—Horror of death! fellow,” he added, shuddering—“what a cold hand thou hast!” A laugh of ferocious and triumphing insult sounded through the dark, while, to his astonishment, Mr. Vaughan perceived his figure moving away, he still holding what he had believed to be his hand. “Wish me joy, sir!” the villain shouted, while he touched Mr. Vaughan with a hand of living warmth!—“I wish me joy of possessing two hands, once more! Now I’m satisfied—now we are friends! There is a ring on that hand; shew it to the fire there, and see if you know it. The poor gentleman, when I got the better of him, entreated me to give that to the young lady, your ward, and his

dying love and farewell to you. But when he was dead, it came into my mind to bring you hand and all!”—The unhappy father remained like a statue, speechless, holding a dead hand—the hand of his long-lost son!

The young adventurer was returning, in high hope and fortune, but the ship, bound to a Welsh port, happening to be delayed off the Glamorgan coast, he determined to land, prior to his final return, perhaps to satisfy himself respecting the feelings of his young mistress, after so long an absence—perhaps, also, wishing to surprise his father and her with the sudden announcement, when he should visit home, to depart no more.

On occasion of this tragedy, the wretched wrecker-lord resigned his manor and castle to the family of Butler, and nothing is recorded of his after fate. The ruffian suffered for another crime soon after. The lady is said to have preserved the hand and ring, for the remainder of her wasted life, in a sort of little grave, in an earthen vase, planted with sweet flowers, as the lady in Boccaccio’s novel preserved all she could retain of her lover in a pot of basil. Such was the fearful catastrophe which the Glamorganshire annals record as “God’s Revenge against Wreckers.”

LOSS OF THE BETSEY, CAPTAIN BROOKS,

Nov. 24, 1805.

THE schooner, Betsey, of seventy-five tons burthen, commanded by William Brooks, left Macao on Nov. 10, 1805, bound for New South Wales; besides the master, the crew consisted of Edward Luttrell, mate, a gunner, two sea-cunnies and one Portuguese, three Manila and four Chinese Lascars.

Nothing particular occurred during the first ten days; but on the 21st, at about half-past two in the morning, while going at the rate of seven and a-half knots, the vessel struck upon a reef: they instantly lowered down the boat, and sent a small anchor astern; but, on heaving it, the cable parted. They then began to construct a raft with the empty water-casks they had on board, but the swell was at that time so great, that for the present they found it impossible to effect it.

When the morning broke, they found that the vessel had forged over the reef, about four or five miles, not having more than two feet water; the reef extending for nine or ten miles to the S. E., and W. from four to five miles.

During the following three days and nights, every exertion was made to get the vessel off, but all to no effect; and the exhausted crew became so weakened and dispirited by their fruitless efforts, that they could hardly be persuaded to complete the raft which they had commenced; and the vessel, at this time, was bulged on the starboard side.

However, on the 24th, by dint of their united efforts, the raft was finished, and they took their departure from the vessel, in company with the jolly-boat, steering for Balambangan; in the jolly-boat were Captain Brooks, the mate, gunner, and two sea-cunnies; their only provisions being a small bag of biscuit and two bottles of water; while on the raft were one Portuguese, four Chinese, and three Malays, who were better provided. On the same day they parted company, and a brisk gale coming on to blow from the N.W., those in the jolly-boat saw no more of the raft. As the island of Borneo bore S.E. there is a probability that she might have drifted upon it. The Betsey was lost in lat. 9° 48' N. and long. 114° 14' E.

Her beauteous sides, whose rainbow hues

Gleam’d softly from below,

And flung a varied glowing flash.

O’er wreaths of murr’ring snow,

To the coral rocks are hurried down,
To sleep ’mid colours as bright as her own.

From the 24th to the 28th it continued blowing hard from the N.W., when it fell calm. By this time, the water was entirely expended, and the small remainder of their biscuits was completely saturated with salt-water.

On the 29th, at day-break, to their great joy, they discovered land, which they supposed to be Balabac; but they were nearly exhausted with the fatigue of rowing, as it was then a perfect

calm, and exposed to a burning sun; added to which, so great was their distress from want of water, that many of them, almost desperate from intense thirst, began to drink their own urine. At night it blew so hard from the N.E. that they were obliged to bear up for Banguay, the N.W. point of which they discovered the following morning at day-break; and having fortunately succeeded in reaching it, they instantly went in search of water, which they soon found and drank to excess.

As they were afterwards rambling in the woods, in search of fruit, they were met by two Malays, to whom they made signs that they were in want of food; which being understood by the Malays, they went away, and returned in the afternoon, bringing with them two cocoa-nuts and a few sweet potatoes, for which they gave them a silver spoon in exchange, and at night they returned on board the boat.

The next morning five Malays made their appearance, bringing with them some Indian corn and potatoes, for which they received some spoons in exchange. These people pointed towards Balambangan, and endeavoured to make them understand that the English had quitted it for some time; they then repaired on board with their little stock of provisions, and returned the following morning to receive the promised supply.

Eleven Malays now appeared on the beach, when after they had landed, and some conversation had taken place, one of them threw a spear at Captain Brooks, which hit him in the belly; another of them aimed a blow at Mr. Luttrell, but he being armed with a cutlass, parried it off, and made all haste to regain the boat. Captain Brooks succeeded in withdrawing the spear, and ran to a short distance; but weakened by the loss of blood, he was soon overtaken, when they cut off both his legs. The gunner was also severely wounded, and reached the boat covered with blood. At this time, those in the boat saw the Malays stripping the dead body of Captain Brooks, and in about a quarter of an hour afterwards, the gunner expired.

They immediately made sail from this inhuman shore, and after examining their stock of provisions, they found it consisted of ten cobs of Indian corn, three pumpkins, and two bottles of water, with which seasonable relief, and trusting to the mercy of Divine Providence, they came to the determination of shaping their course for the straits of Malacca.

Nothing of consequence occurred from the 4th of December until the 14th. Fortunately their small stock of water was replenished by frequent welcome showers, but the poor crew were nearly exhausted by their constant fatigue, hunger, and watching, which not only deprived them of strength, but the spirit to exert themselves.

On the 15th, they fell in with a group of islands in lat. 3° N. and long. about 100° E. As they approached the shore, they were observed by three Malay prows, which came up and attacked them, and in the pursuit one of the sea-cunnies was speared and died instantly; the other was very severely wounded. Mr. Luttrell had again reason to be thankful for a narrow escape, as a spear passed through his hat without injuring his head.

Thus overpowered, and rendered incapable of further resistance, the Malays took possession of the boat and immediately deprived them of their property, consisting of the sextant, the log-book, some plate and clothes; and kept them in a prow without any covering, exposed to the rays of a burning sun, and with only a small quantity of sago during the whole of three days: after which they were taken on shore on an island named Sube, to the house of a Rajah, where they remained in a state of slavery, entirely naked, and subsisting only on sago, until the 20th April, 1806, when the Rajah sailed from the island in a prow for Rhio, taking with him Mr. Luttrell and the two sea-cunnies.

After a tedious passage of twenty-five days, and being nearly famished by the scanty allowance of provisions, they arrived at Rhio, where their distresses were considerably alleviated by Mr. Kock, of Malacca, who treated them in the kindest and most hospitable manner; and the ship Kandree, Captain Williamson, arriving the following day, and being bound for Malacca, they obtained a passage to that port.

"MIND YOUR EYE."

BY "THE OLD SAILOR."

"WHY, how many wives have you had, Jack?" asked Mr. Wildgust.

"How many wives, sir?—let me see. I can't disactly say; but I think a matter of seven, or somewhere thereabouts," answered the boatswain's mate;—"the fact is, sir, I never liked to keep tally of them consarns, especially in regard of my never having learned to work a dead reckoning. But I remembers once, sir, being ashore on leave; I was a giddy monkey of a main-top-man then, full of frolic and mischief, and I belonged to the Royal Oak, seventy-four, as had Lord Amelia Beauclerk's flag flying; so, as I said afore, I was ashore on leave, and in course, as we'd been paid prize-money, and there warn't no purser to sarve out the grog, why I had just as much as I wanted. Here's towards all your healths, genelman," and Jack took a draught of his beverage. Not but what I was quite sober, sir," addressing the mate; "ownly I was what you may call happy, and as I was always wartuously inclined, I kept a good look-out a-head, to see if I could get sight of some decent young woman to overhaul my mind to, and ax her to be spiced. Well, whilst I was backing and filling, just dropping up with the tide, I spies as pretty a figure-head as I had seen for many a day, ownly she'd the least bit in the world of a squint in one of her eyes, and I'm blest' if I don't think it was that 'ere eye as did the job for me, all the same as Miss Ring Ching Fou has done it for Muster Pearson. She wore a suit of black gear, with plenty of crape about it, and a black wale, brailed up over her bonnet, and 'my precious rags and buttons,' thinks I, 'but she is a beauty, anyhow,' though I didn't much like the colour of her canvass. Howsomever, I claps her alongside, as bowld as brass, and 'What cheer, what cheer, lovey?' says I, but she jumped away, just like a shot when it strikes the comb of the sea, and her eye—that's her piercer, sir—gave me a look that went right slap through my heart, for all the world like that 'ere harpoon in the letter through Muster Pearson's, and I should have wished to have had that logged down instead of the Cupid in the boat, ownly it was a matter of onpossibility to draw a eye going through a heart."

"Come, bear a hand with your yarn, Jack," exclaimed the boatswain, somewhat peevishly, "you'll spin it out as long as you can remember."

"I'll cut it at once, if so be as the genelman wishes it," said Jack; but a general desire being expressed for him to go on, he continued. "Well, then, she bounces away, and in good consequence, seeing as I wanted her company, I springs my luff arter her: she made sail, and I went in chase; and so getting the heels of her, I creeps up upon her starboard beam, and we carried on for some time with our yard-arms touching, and I plied her with a royal salute of flattery, as made her reduce her canvass, and we were soon like owd acquaintances, for she hooked on to the crook of my elbow and away we went, happy-go-lucky, talking together as pleasant as turtle doves. I warn't long in fishing out of her who and what she was. She told me she was a young widow as had lost her husband."

"Why, how could she be a widow, without she had lost her husband?" inquired the boatswain.

"That's a matter, sir, as I never gave a thought about," answered Jack, "and therefore with my knowledge of things in general, it is not in my power to say; all as I'm certain on is, that she said, she was a widow without never a husband; and she heaved such a moloncholy sigh, and the tears trickled so fast down her face when she mentioned it, that thinks I to myself, 'a woman who can feel so strong a regard for him as is dead and gone would be likely to behave herself properly and lovingly, to any one as would fill up the wacancy and treat her kindly, as I would, and so says I, 'my precious,' says I, 'you're the neatest craft as I've seen for a month of Sundays, and though you've been married afore,' says I, 'yet I don't care for that, as mayhap you've larned all the better how to work ship and do your duty alow and aloft,' says I, 'and if you've ownly

* From the "Jolly Boat."

got a babby just to play with and cheer you when I'm at sea, why then, my darling, you can't do nothing more wiser than to take Jack Moberly for betterer or worserer,' and she blushed as red as the tomkin of a twenty-four-pounder, and then she sobbed and shook her head mournfully, but I knowed as she was pleased, because she clung tighter to me and didn't say 'No,' so I grappled her again, and poured in a broadside of all the fine love-making words as ever came into my head, now and then discharging a volley of small shot in the way of vows and promises, till at last she said 'she would consider of it.' 'And about the pickaninny,' says I, giving her hand a gentle persuader, 'is there one or not?' And then she blushed again, and cried; I never saw so much emulsion in any soul afore. 'Yes,' says she, as she covered her face with her white handkercher, 'yes; though my dear William is departed to heaven, he left behind a lovely pledge of our affection,' says she; 'and oh! if I thought you would be a kind father to it—I will, I will,' says I, 'the best and most dutiful of fathers I'll be,—ownly try me this once, lovey—and there's all my pay and my prize-money for you and the boy—but avast,' says I, 'is it a boy?' 'It is,' says she, 'a fine boy, the very moral of my poor William, whom I shall never see again.' 'So much the better,' says I, 'that's about the boy I means, my precious, and so, without any more palaver, let's get the parson to read us a page or two out of his book, and when you're Mrs. Moberly, I'll rig you out as fine as a fiddle.' 'You forget,' says she, 'that I'm in my weeds.' 'In your what?' axes I. 'In my weeds,' says she again, and holds up her duds. 'Ho! ho!' says I, 'that's what you mean, lovey, is it; well, never mind; as soon as we're spliced we'll change 'em for sea weeds. But I should like to see the babby.' 'You cannot see him just now,' says she, 'but wait till the evening, and then I'll bring him to you if you will give me your word not to get groggy.' 'Honour bright,' says I, laying my flipper on my heart, 'I'll keep soberer nor fifty men right out; but why won't you let me go home with you?' Howsomer, she wouldn't allow of my doing that last, and so I agreed to see her in the evening, at the place where we parted; for she would go, though I wanted her to cruise with me all day; but she said the child would cry for her, and that was enough, for I didn't much stomach the thought of the innocent babby suffering, especially as she promised to bring it with her. So you see, sir, I hauls my wind for owld Tom Spraggess—Tom had been a messmate when I was a boy, and now he kept the Salmon and Boathook, a house where all true-hearted tars were sure of being well sarved for money, and a bit of advice for nothing. So I goes to Tom, and I tells him of the consarn. 'Have a care, Jack,' says he, 'have a care, my son; pirates carry black colours, you know, and for the sake of the blue jackets you ought to make out what she is, before you put her into commission to cruise under your own naffie.' 'All very good, Tom,' says I, 'and all very proper in regard of my knowing as you means well; but if you was ownly to see her—why I'm blessed, Tom, but there she is,' says I, as I seed her go past the window, and Tom tops his boom, and slips his cable in chace, to reconnighter her build and rig, while I sits down to quiet the owld woman, who didn't much stomach Tom's running arter the gals. Well, after a while, back again he comes, and Mrs. Spraggs opens her lower deck ports at him, but Tom says nothing, but gives me a wink, and so we walks into the parlour together. 'Owld un breezy?' says he, axing a question which he hisself knowed well how to answer. 'A bit so,' says I; 'but you don't mind that; what have you made her out to be?' Tom shook his head. 'Mind your eye, Jack,' says he, 'I've seed her afore and knows a little of her history, but shan't never say nothing about it now; ownly, as I said afore, mind your eye; and be sure and have a good overhaul of the consarn of the babby,' says he.

"Well, genelman, this put me to a fathom or two of nonplush, but I couldn't believe, arter all, that one who looked so innocent, and piped her eye so nat'rally, could be a bad-un, and the more in regard of her grief for her poor William as had lost the number of his mess. Howsomer, I goes in the evening determined to follow Tom's instructions, but when I seed her, I'm blest if I didn't forget everything but her own beautiful

figure-head, though I thought the cocked-hat in her eye seemed to slew round precious fast, and when she answered my hail, she was rather thick and husky in the throat; and so as it was getting duskish, and there warn't many people on the look-out, I grapples howld of a kiss, and I'm blowed if her breath didn't tell me as she'd been taking a twist out of the neck of a bottle of rum; and then I thinks of Tom's advice, 'Mind your eye, Jack,' and about overhauling the consarn of the babby as she had nuzzled up onderneath her shawl; but she wouldn't never let me go for to touch it, as she swore it was fast asleep, and if she onkivered it the damp air would give it cowl; and thinks I to myself, 'that's kind and mother-like on her, too; mayhap Tom's mistaken, arter all. Well,' says I, 'lovey, you see as I've kept my word in regard of not getting groggy.' 'No, no,' says she, 'you've not kept your word—you are ontirely distosicated at this very moment.'

"Now, genelman, I positively purtest as I was as sober as I am at this instant, but coming from such lips as them, it jimmycumbered me, and as either she or me got to staggering I began to be certain it must be me; for as for she getting top-hampered, I couldn't have believed it no how. So I made up my mind, as I'd been drinking without knowing on it, and I axed her pardon, and got talking all sorts of treacly things to her; and she began to grow sweet upon me, when owld Tom's 'mind your eye, Jack,' crossed my thoughts, and as she rayther tript and lurches to looard, I'm a Dutchman if I didn't diskiver as it was she as was shaking a cloth in the wind instead of me, and 'Yo hoy, my precious,' says I, 'its a sad heart as never rejoices,' says I, 'but you've been bowing rather too taut a leech upon your jib, which arn't altogether ship-shape in a widow as is, and a wife as she's going to be.' 'I scorns your puterations,' says she, 'my jib, indeed, and me in mourning for my poor departed William; and she began to cry again, and I found the spray coming into my own scuppers till I recollected owld Tom's 'mind your eye, Jack.' 'There, don't go for to take on so, my dear,' says I, 'you know as I never meant any harm,' but I'm blessed afore I'd got the words hardly out of my mouth, away she takes a roll to starboard as nearly laid her on her beam ends, and says my thoughts to me, 'it's all plain enough now—she's a going it.' Well, seeing how matters stood, genelman, I was afear'd she'd capsize a top of the babby and scunch it, and so, says I, 'steady—steady, lovey, this will never do, and I must sheer off.' 'Oh, you must, must you,' says she, 'but you won't though—you promised to marry me, you did, and I've brought the child as you wished me—I've done all as you axed me to do.' 'And a precious sight more nor ever I axed you,' says I, 'but once for all, I'll never go for to have a wife who arn't able to keep a watch over herself—not but what I feels for the infant, poor thing—but I'm off, lovey, I'm off, and I gives her a wide birth, 'take care of the babby,' says I. 'Confound you and the babby too,' says she, 'and if you think I can't be a mother to it, take it yourself and be hanged to you!' and I'm blessed if she didn't whip the babby from under her shawl, and fling it right slap at me.

"Avast there, Jack, avast," exclaimed the boatswain, "she never couldn't be such a monster."

"It's as true, Mr. Pearson, as that Mr. Wildgust wants to be a lieutenant," responded Moberly, firmly, "she flung it right at me, and it hit me over the nose and nearly knocked me backwards. 'Halloo,' says I, 'this is pretty usage any how, and I'm blowed if you haven't killed the child!' For, d'y'e see, genelman, it dropped down like a dipsy lead at my feet, and there it laid quite still, and never moved a peg. 'You onnat'ral wretch,' says I, 'it's dead enough any how,' and so I stoops down to pick it up, 'poor babby,' says I, as I grappled howld of it to raise it up in my arms; 'poor innocent—this is a foul murder, this is—but halloo, why, what the blazes is all this?' says I, and what do you think it was genelman, I'm blowed if the babby warn't a wooden one."

A roar of laughter followed Jack's announcement, and it was rendered more hearty by the previous feelings of horror which had been excited, by the supposed murder of an infant by an infuriated and drunken woman.

"A what was it?" demanded the boatswain, who had preserved his gravity better than the rest.

"A wooden babby," responded Moberly, "yes, I'm blessed, Mr. Pearson, if it warn't a wooden babby. So I tucks it under my arm, and away I shins off to owld Tom Spraggses, and tells him all about it. 'I thought as much,' says Tom, 'she's no widow at all, but rigs herself out in that fashion to catch such gulls as you Jack, and she would have hooked you like a mackerel if so be as I hadn't towld you to mind your eye.' So you see genelman, there arn't much good in calculating the jography of women, by looking at a handsome figure head."

LOSS OF THE ALCESTE.

THE circumstances attendant on the loss of his majesty's ship *Alceste*, afford one of the most beautiful and instructive examples, not only of the good effects resulting from a well-regulated

system of discipline, but of the manly character of British seamen, which has been recorded in naval history.

Early in the year 1816, in consequence of the difficulties thrown in the way of our commerce with China, by the authorities at Canton, it was resolved by the British government to send out an extraordinary embassy to the court of Pekin. On the 9th of February, Lord Amherst, who was appointed to conduct what has well been termed this difficult and delicate mission, embarked at Portsmouth, with a numerous suite, on board the *Alceste*, a frigate of forty-six guns, commanded by Captain, afterwards Sir Murray Maxwell. This vessel was accompanied by the brig *Lyra*, commanded by Captain Basil Hall, and the General Hewitt, Indiaman, which carried out many very valuable presents for the Chinese emperor and his ministers.

Nothing of moment occurred during the outward voyage;

LOSS OF THE ALCESTE, CAPTAIN MURRAY MAXWELL, FEBRUARY 18, 1817.

and on the 9th of August, the ambassador and his suite landed in great state at the entrance of the White River, on the north-eastern coast of China; and the ships then proceeded to examine the coasts of Chinese Tartary, Corea, and the extensive group called the Loo Choo Islands, after which, they shaped their course for Canton, where they re-embarked Lord Amherst and the embassy, and sailed for Manilla, the capital of the Philippine Islands, on the 29th of January.

The embassy had not been received at the Chinese court, in consequence of the refusal of Lord Amherst to submit to a humiliating ceremonial, which was considered would have utterly frustrated the purpose of the mission. The object of the embassy was, however, fully, though indirectly, effected, by the conduct and sound judgment of Captain Maxwell, who, in despite of the threats and opposition of the lines of batteries on

the Canton River, and of a large fleet of war-junks which had been stationed to defend it, persisted in sailing with the *Alceste* up to Canton, after promptly silencing the fire of the whole of the Chinese warriors, afloat and ashore.

On the 9th of February, exactly twelve months after the expedition left the shores of Great Britain, the *Alceste* proceeded from Manilla on her voyage homeward: here parting company with the *Lyra*, which was ordered to India with despatches.

At daybreak on the 18th, after carefully avoiding the rocks and shoals which beset the Chinese sea to the westward of the Philippine Islands, our voyagers entered the straits of Gaspar, through which they intended to sail. They continued to follow the track laid down in the charts, and every precaution was used which skill and seamanship could dictate; but about half-past seven in the morning, the ship struck with great vio-

lence on a reef of sunken rocks, which rose almost perpendicularly in nearly seventeen fathoms water. It was a providential circumstance that the ship remained fast on the reef, as had she been dislodged from her first position by the force of the shock, she must have almost immediately gone down with most of her hands. The event, however, was extremely fearful; but we are told by one of the officers, that, notwithstanding the peril of their situation, not the slightest confusion or irregularity prevailed amongst the crew, every necessary order being as coolly given, and as steadily obeyed, as if nothing unusual had happened.

The ship lay about three miles and a half from the uninhabited and desolate island of Pulo Leat, on which, after considerable difficulty, Lord Amherst and his suite, with a part of the crew, safely landed by means of the boats. Captain Maxwell

and the rest of the officers remained by the ship, and, after great exertion, succeeded in saving a small quantity of provisions and stores, which occasionally floated up, all but the upper works being under water.

The island was found to be a perfect wilderness, so completely overgrown with wood and jungle, that it was necessary to clear away a small space, under the shade of the loftier trees at the foot of a hill, which rose in the midst of the narrow point where the landing was effected, in order to obtain shelter for the night. The party, when assembled, presented a wild and motley appearance; few, including Lord Amherst himself, were clothed with more than a shirt, or a pair of trousers; "whilst parliamentary robes, court-dresses, and mandarin shirts, intermixed with check shirts and tarry jackets, were hung around in strange confusion on every tree." On this wild spot, several days' sail

from the nearest friendly port, exposed, in all probability, to the endurance of the extremes of hunger and thirst, under the fierce rays of a tropical sun, were nearly two hundred and fifty of our countrymen thus thrown; yet no one seemed to be cast down or despairing; and the manly feelings which prevailed, were strengthened by the conduct of Lord Amherst, who, on the morning succeeding the wreck, desired every one to be called around him, when he took his share of the water which had been saved from the ship, consisting of a single gill for each individual, with the most perfect good humour, thus affording an example of calm fortitude, and cheerful readiness to share every privation without any distinction of rank, which in such cases is certain to be attended with the finest moral effect.

An increasing anxiety for water, however, naturally possessed every mind; but every exertion to obtain it proved fruit-

less, whilst the accidental discovery of a human skeleton led to the frightful belief, that an individual had perished by thirst. Under these circumstances, and considering likewise that the boats were insufficient for the conveyance of even one-half of the ship's crew, the ambassador and Captain Maxwell wisely determined, that his lordship and suite, accompanied by a guard to protect them, in the event of their falling in with any of the ferocious Malay pirates who swarm in those seas, should at once proceed with the barge and cutter, to the island of Java; which, in consequence of a favourable wind and strong current, it was anticipated they would reach in three or four days. This party, which consisted of forty-seven persons, having been furnished with all the provisions that could be spared, embarked at five o'clock in the evening, amidst the hearty prayers and good wishes of all. It was well, as will be seen, that Lord Am-

herst carried his resolution into effect with such promptitude, as the delay of a single day would, almost to a certainty, have placed him in the power of a horde of ruthless savages.

The prospect before the party left in the island, which consisted of two hundred men and boys, and one woman, was not the most cheering: for, in consequence of the adverse wind and current, no help was to be looked for, under the most favourable circumstances, for ten or twelve days at the least. Captain Maxwell, after again despatching a party in search of water, removed the bivouac, or encampment, to the summit of an adjacent hill, on which the underwood, abounding with snakes, scorpions, centipedes, and other reptiles, had been previously burnt and cleared away. To this spot, which was better calculated for the preservation of the health, as well as for the defence of the people, the whole of the small stock of provisions now remaining, was removed under a strict guard; whilst a few persons were left on the wreck, in order to save any further stores which might be floated up. During the rest of the day, much misery was experienced from continued thirst; but about midnight, to the great joy of all, a spring was struck upon, which, during the next twenty-four hours, afforded a pint of water to each individual. On the morning of the 20th, the captain ordered all hands to be mustered, and after explaining that, by the regulations of the navy, every man was equally liable to answer for his conduct as if he had been aloft, declared that whilst he lived, the most rigorous discipline, which was so important to the welfare of all, should continue to be enforced.

At day-break on the following morning, the party stationed on the wreck, discovered that they were surrounded by a small fleet of Malay proas or boats filled with armed men. These pirates, many of whom are cannibals, belong to a race generally considered to be the most merciless and inhuman savages existing in any part of the globe. Our countrymen, who were quite defenceless, instantly jumped into the boat and made for the beach, after a smart chase from the pirates; who then took possession of the ship; but not long after, an alarm was given, that they had effected a landing on a point of the island, about two miles distant. The most active exertions were immediately made to give them a warm reception: but only about a dozen cutlasses had been preserved, and, although the marines had nearly thirty muskets and bayonets, they had only seventy-five ball-cartridges amongst them. Orders were, however, given for every individual to arm himself in the best way he could; and small swords, dirks, knives, chisels, and even sharpened poles, soon supplied the place of regular weapons. Trees were also felled under the direction of the captain, and a circular breastwork was constructed around the station, by interweaving loose branches with stakes, driven into the ground amongst the fallen timber. The day having passed off quietly, in the evening the whole party was classed into separate divisions, to one of which the charge of the boats at the landing-place was assigned; the noblest spirit animated all, and but little apprehension prevailed of an attack from the savages during the night, as they appeared too busily engaged in plundering the wreck, to think of anything else.

Observing that the pirates had diminished in number, it was resolved, next day, to regain possession of the wreck; but the enemy, on perceiving the approach of the boats, instantly pushed off, and set fire to the ship, which became, in a few minutes, one burning mass from stem to stern. She continued in flames throughout the day and night, during which some alarm was occasioned by the sentries, mistaking for enemies, some of the large baboons met with on the island.

Early on Sunday, the boats again proceeded to the wreck, and found that several barrels of flour, with some casks of wine and beer, had floated up. This cheering intelligence reached the shore just at the close of divine service, which was performed in the principal tent. In the course of the two succeeding days, further supplies of flour, beer, and wine were recovered by the boats, together with what was almost equally important in the situation in which the party were placed, about fifty boarding pikes, eighteen muskets, and a small quantity of ammunition. In the meanwhile, those left on the shore were fully occupied in throwing up a glacis, or sloping bank, and in

otherwise strengthening the fortifications of the station; whilst the discovery of a second well at the foot of the hill, at last enabled every one to have water in abundance.

Early on the 26th, two armed proas, each towing a canoe, again made their appearance from behind a rock a few miles distant, whither the pirates had retreated, as was supposed, in expectation of receiving reinforcements. They prowled for some time unperceived about the entrance of the cove, but Lieutenant Hay, who commanded the guard during the night, no sooner discovered them, than he dashed out at once with the three boats under his command. The pirates instantly cut adrift their canoes and made all sail. Only one of our boats was enabled to near them. "On closing," says Mr. McLeod in his interesting narrative of the expedition, "the Malays evinced every sign of defiance, placing themselves in the most threatening attitudes, and firing their swivels at the boat. This was returned by Mr. Hay with the only musket he had with him, and as they closed nearer, the Malays commenced throwing their javelins and darts, several falling into the barge, but without wounding any of the men. Soon after they were grappled by our fellows, when three or four having been shot, and a fourth knocked down with the butt-end of the musket, five more jumped overboard and drowned themselves (evidently disdaining quarter), and two were taken prisoners, one of whom was severely wounded. The Malays had taken some measure to sink their proa, for she went down almost immediately. Nothing could exceed the desperate ferocity of these people. One of those had been shot through the body, but was not quite dead. On being removed into the boat with a view of saving him, (as his own vessel was sinking) he furiously grasped a cutlass which came within his reach, and it was not without a struggle wrenched from his hand: he died in a few minutes. The consort of this proa, firing a parting shot, bore up round the north end of the island, and escaped. The two prisoners were then brought ashore, and placed under a guard at the well, when their wounds were dressed, and ferocious as had been their conduct, the most humane attention was paid to them.

Soon afterwards, fourteen proas, and other small vessels, came in sight, and anchored under shelter of a distant point, on which many persons were seen to land. It was at first supposed, that they had been sent from Batavia by Lord Amherst for the relief of the party, and several officers therefore set out towards them; but an interview speedily dissipated the illusion, it being ascertained, chiefly by signs, that they were a wandering community employed in collecting a sort of sea-weed found in those islands, which is in request in China. Their amicable and submissive deportment disappeared, however, on the following morning, when the real situation of our countrymen was unmasked by the discovery of the wreck, which the strangers immediately proceeded to plunder. But it was not deemed advisable to interfere with them, as there was now little of any value to be procured there.

The boats were removed in the course of the day to an adjoining cove, where they were placed in a safer position, under cover of two little posts strongly situated on the rocks, which were manned by a party armed with musketry. The Malays, who had been fully engaged on the wreck during the preceding day, on Saturday morning received a powerful accession of force by the arrival of fourteen more proas. The prospects of our countrymen were in the meanwhile daily becoming more gloomy; their stock of provisions, although the utmost economy was used in the distribution, viz., by chopping up the allowance for the day into small pieces, whether fowls, salt beef, pork, or flour, and mixing the whole hotch-potch, boiling them together, and serving out a measure of this publicly and openly to every man without distinction, yet still it was diminishing with fearful rapidity; nothing but a few oysters could be obtained on the island; and the time had now passed away, when, according to calculation, relief ought to have arrived from Java. The boats were therefore put into a good state of repair, and a strong raft was constructed, in order to give every facility for escape, in the event of the worst taking place. But notwithstanding these depressing circumstances, a feeling of cheerfulness and content seemed to pervade every mind, and the utmost order continued to prevail.

The encampment on the hill, now termed "Fort Maxwell," had progressively been strengthened, so as to afford an excellent defence against an attack of the savages. When seen at night by fire-light, its appearance was singularly picturesque; "the wigwams," or dens as they were called, of some, neatly formed by branches, and thatched with the palm-leaf, scattered about at the feet of the majestic trees which shaded the circle; the rude tents of others, the *wrecked*, unshaven, ragged appearance of the men, with pikes and cutlasses in their hands, gave a wild and strange effect to the spot, beyond any robber-scene the imagination can portray.

Having been joined by a large reinforcement during the night of Saturday, the pirates at last began to assume a threatening aspect. At day-break on Sunday they advanced with the most hideous yells, with about twenty of their largest vessels, close to the entrance of the landing-place, where they proceeded to anchor, amidst the din of gongs, after firing one of their swivels at our party ashore. A smaller division was seen about the same time to proceed up a creek at the back of the British position, which rendered our countrymen apprehensive of a surprise in that quarter. This bold movement of the savages was, however, only a demonstration; and the two parties remained looking at each other for some time in a state of preparation, when, finding that the Malays held off from their attack, Captain Maxwell despatched an officer in a boat, a little beyond the mouth of the cove, who waved his hat in an amicable way, to endeavour to ascertain their disposition. An armed canoe, after a considerable pause, advanced to meet him, but nothing could be made out from the demeanour of the savages, who wished to possess themselves of the shirt and trousers belonging to one of the midshipmen in the boat. Another fruitless attempt was afterwards made in order to try their spirit, and when evening approached, the hostile force, which had greatly increased in strength during the day, and now amounted to more than fifty vessels of various sizes, drew closer into the cove, with a fierce and menacing aspect. Everything, indeed, indicated an approaching attack; the wreck was almost deserted, and the thoughts of the savages seemed fixed on gaining possession of property which they imagined had been rescued from it. Near sunset, several of the Malays, who had a few days before been mistaken for friends, advanced towards the landing-place, and gave our countrymen to understand, that the whole of the blockading force, except their party, were exceedingly hostile; and that a general attack was resolved upon when it became dark: they then intimated their wish that a portion of their number should proceed up the hill, for the purpose of protecting and aiding its defenders. On this treacherous offer being declined, they pulled back to their vessels, from which a wild war-whoop immediately proceeded.

When night set in, the whole of the force being assembled under arms, Captain Maxwell addressed the officers and men in an animating speech, which was received with three deafening cheers, from every Briton on the island: it was, indeed, the anxious wish of every heart that the threatened attack should be made; 1,600 ball-cartridges, which had been progressively accumulated, were distributed amongst the various watches; and an alarm, which was purposely given during the night, "showed the good effect of preparation, for all were like lightning at their posts, and every one returned growling and disappointed, because the alarm was false." The cheering had its due effect on the enemy.

When the day dawned, it was found that the pirate-force had received a further accession of ten vessels. Their numbers now exceeded 600 men; and they continued, during the morning, closely to invest the position as before. The general anxiety at the non-arrival of the looked-for relief, increased in strength each successive hour. "Awful as our situation was," says the historian of the voyage, "and every instant becoming more so; starvation staring us in the face, on one hand, and without hope of mercy from the savages on the other; yet were there no symptoms of depression, or gloomy despair; every mind seemed buoyant; and if any estimate of the general feeling could be collected from countenances, from the manner and expressions of all, there appeared to be formed in every

breast, a calm determination to dash at them, and be successful, or to fall as became men, in the attempt to become free."

About mid-day, whilst various plans for effecting a decisive night-attack on the pirates were in agitation, a powerful sensation was produced, by the report of the officer on the look-out, that a ship was in sight at a great distance to the southward; a dark cloud for some time hid the object of anxiety from the sight, but when it cleared away, every doubt was dispelled, by the announcement that the vessel was standing towards the island, under all sail. The British colours were therefore run up at the top of the loftiest tree on the hill; and it was not long before a sudden movement among the savages denoted that they also had discovered the distant ship. On perceiving this, Captain Maxwell resolved not to hesitate, and instantly gave orders for a simultaneous attack to be made on the blockading force; the pirates were, however, on the alert, for as soon as the marines emerged from beneath the shade of the mangrove-trees which fringed the harbour, the whole of their vessels made sail, the nearest firing her swivel (fortunately without effect) amongst a party of officers that had dashed after them into the sea; a smart fire was kept up without effect, till they were out of gun-shot, and they soon afterwards disappeared from sight altogether.

The vessel proved to be the Ternate, one of the East India Company's cruisers. It turned out a providential circumstance, that the attack had been made on the pirates; for in consequence of the opposition of the wind and current, the ship was unable to approach nearer than twelve miles of the British position, so that the pirates would have been enabled to have completely cut off all communication with her, had they remained. The island was finally abandoned by our countrymen early on the 7th of March, after a stay of nineteen days, during which, although they were alternately exposed to the influence of a burning sun, and torrents of rain, not a single individual was taken ill. The Ternate reached Batavia on the 9th, where an interesting meeting took place between Lord Amherst and the party that had accompanied him, with their countrymen, so mercifully and wonderfully preserved by the hand of Almighty Providence.

The events which we have now brought before the mind of the reader, form so striking a contrast to those which succeeded the loss of the *Méduse*, as perhaps, to afford in themselves the best commentary on the conduct of our countrymen, on this trying occasion. On the fearful fate which would have awaited them, had disorder and anarchy prevailed, had the rein of discipline been loosened, it is unnecessary to dwell. There can be little doubt, however, that the presence of mind, calm decision, and judicious exertions of the gallant and now lamented officer who commanded, contributed in an eminent degree to the accomplishment of a result so gratifying, in a national point of view, to all.

THE WRECKERS.

A CORNISH TALE.

It was a March morning—dark, yet without a drop of rain or breath of wind, that kind of marbly-black, compact sky, which is the sure forerunner of a storm. The night had been a raw and cold one—too cold to sleep with comfort in the open air; yet such was the chamber which a peasant-girl, a native of a little fishing hamlet upon the coast of Cornwall, had chosen for repose. Her couch was a hard and fearful one! the verge of a cliff that rose nearly a hundred feet perpendicular from the sea-shore; and yet not the softest couch that ever was spread in hamlet, town, or city, contained a tenant, in form, for symmetry—in feature for beauty—excelling the mistress of her who occupied that strange, appalling place of rest! Her slumbers were disturbed, yet deep. Neither the full dawn could break them; nor yet the pressure of a hand that had taken hold of hers; nor the tears that fell upon her face from the eyes of one who was hanging over her—a young man about her own age, or a little older, and who seemed to belong to the profession of the sea.

"And hast thou slept out again all night?" he murmured—his tears still flowing. "And does it grow worse and worse

with my poor wits? and shall I never see the day when I can make thee my wife? They will not let me marry thee, because, as they say, thou art mad, and knowest not what thou dost; but when thy mind was sound, I was loved by thee! Had I married thee then, thou still hadst been my wife! thou still hadst been cherished and loved! Why must I not marry thee now? I could watch thee, then, at night! My arms would enfold thee, then, and prevent thee from stealing from thy bed to sleep in such a place as this!"

The attachment which united this young man to the being whom he so pathetically apostrophized, was of that pure and steadfast nature, which can never take root, except in the unsophisticated heart. She had lost her reason in consequence of having been witness to a transaction of blood, which made her an orphan. She was to have been married to him; but, in the unfortunate state of her intellects, no clergyman would celebrate the rites. But she did not the less enjoy his protection. Beneath his mother's roof, she lived as sacred as a sister—the object of a passion in which frustration, and almost hopelessness, had only produced increase of strength.

"Kate, Kate," he called. "Rouse thee, Kate—rouse thee. Don't start. Don't be frightened. 'Tis only William. Get up, and come home."

He offered to raise her, but she checked him—looked round, and fixed her eyes, inquiringly, upon the sea.

"Where is it?" she exclaimed—her voice tremulous with intense emotion. "Where is the storm? I see the black sky; but I want the thunder and the wind—the white, white sea, and the big ship, driving upon the reef—or is it all over? No," she added; "'tis coming—'twill be here! I see it!"

She rose, and passively accompanied her watchful lover to his mother's cottage; where, leaving her under the custody of its mistress, the young man repaired on urgent business to a town at some distance from the hamlet.

That morning the storm came on; three days it continued—it was now the third day. A lee shore, a boiling sea, and on the coast of Cornwall! A wild and fearful offing! Foam, foam, foam, which way soever you looked—nothing but foam. Black reefs of rocks, that even in the highest spring tides were never completely covered, discernible now only by a spot here and there—so quick the breakers flew upon them. The spray flying over the cliffs—fifty, sixty, ay, a hundred feet and more, above the level of the sea, and spreading over the land for acres. And all above pitch black, though at noon-day. Everything seemed to cower before the spirit of the storm—everything except man. The shore—which consisted partly of huge masses of rock, partly of shingle—was lined with human beings—some in groups—some alone—promiscuously furnished with boat-hooks, gaffs, grapples, hatchets, and knives—ready to dispute with the waves the plunder of the fated ship, that might be driven within the jaws of that inhospitable bay. Expectation glistened in their eyes, that kept eagerly prowling backward and forward, far and near, over the waste of waters—they were wreckers! Not a few women, as well as children, were among them; nor were these unprovided against the approach of the wished-for prey—all seemed to have their appropriated places; from which, if they stirred, it was only a step or two, to be the next minute retraced. Little was spoken.

At one and the same moment almost every head was turned toward the cliff, at a wild and shrill halloo that rung from it.

"'Tis only Kate," cried one, here and there, as the maniac rapidly descended by a crevice, which few of the lookers-on would have attempted, and that with wary feet.

"The crazy slut will break her neck," carelessly remarked one to another. But she was safe in her recklessness or unconsciousness of danger, and in a second or two stood among them.

"A lovely day; a fair, lovely day," she exclaimed to the first she came up to. "Good luck to you! Anything yet? No, no," she continued, replying to herself! "white to the north—white to the west—white to the south—all white! not a speck upon the water! But 'tis coming—'tis coming—'tis coming!" she reiterated, dropping her voice to its lowest pitch; "I saw it here last night; a big, black hull—one mast standing out of three—cannons and stores overboard—rising and sinking—

rocking and reeling—driving full bump upon the reef where the William and Mary was wrecked seven years ago! I saw it," she repeated, eyeing the standers-by with a look that dared incredulity; then, all at once, her voice sinking into a whisper, "Hush, hush!" she added; "'twill be a handful or two for you; and a load for you; and more than you can carry for you;" addressing this person and that successively; "casks, cases, chests, gear, and gold! but what will it be for Black Norris? It will be a brighter day for him than for any of you! When do they say his time is out?"

"Whose time?" inquired one among the group she was addressing.

"One—two—three," she went on without noticing the question, until she had counted seven; "his seven years were out last May; he was transported three years before his hopeful son murdered my father."

"Hush, you crazy wench," exclaimed those around her; "if Norris hears you, you may chance to take a swim in the creek where he is standing."

"Crazy!" she echoed. "Yes; bless heaven that made me so! It knows best what it does! I saw my father murdered, though his murderer saw not me! they were struggling which should keep possession of the prey. Old Norris's knife decided it! I was powerless with fright! I could not speak! I could not stir! I became mad, and the judge would not believe me! I could tell my story better now, but it would be of no use; for they say I am crazy still. There she is!" vociferated she, pointing toward the offing at the southern extremity of the bay.

"Where—where—where?" inquired her auditors.

"No, no," she resumed, after a minute or two of silence, during which her eye-balls kept straining in the direction toward which she had pointed. "No," she resumed, dropping her hand; "but she is coming; and Black Norris will neither want roof nor board, gold nor gear, to welcome back the father that bred him up to his own trade. But where is he?" inquired she; "where, but upon the long reef, where I saw him." Saying this, she proceeded to the southern extremity of the bay.

A stalwart figure, in advance of the regular line, sat stationed upon the landward-end of a huge reef of rocks, that gradually dipped into the sea. His hair black and lank, thrown back from a swarthy, ill-favoured visage, hung half way down his shoulders; his eye dark, small, and glistening bright, directed toward the sea, in quick and restless motion, was everywhere at once. A long boat-hook, clenched with both his hands, rested across his knees; and, in a belt, which encircled his waist, were stuck a clasp-knife of more than ordinary size, and a hatchet. The wave repeatedly washed more than half way up his lower extremities, but he paid no more heed than if he were part of the rock that scattered it into mist.

"A lovely day—a fair, lovely day," cried the maniac, approaching him.

"How beest thou, Black Norris? Nay, I am good, now," continued she, in a deprecating tone: "don't look angry, I'll never say again that it was you."

The wrecker moved his hand towards his knife.

"Stop, stop, Black Norris," cried she, coaxingly and hurriedly, laying her hand upon his arm, "keep it for other work. You'll want it to-day: before night there will be a hull ashore. There will be need of knife, axe, hook and all—for the storm is lively yet—the sea shows no signs of going down—the breakers keep tumbling upon the shore. Mark how they sweep the shingles up, and back again. By-and-bye they will have something else to roll. 'Tis coming, Black Norris; 'tis coming. A huge, black hull—one mast standing out of three—cannons and stores overboard—rising and sinking—rocking and reeling—driving full bump upon the reef where the William and Mary was wrecked—the very reef on which you stand, Black Norris; ay, and the very spot."

"Silence, jade!" exclaimed the wrecker, looking from beneath his hand, which, with the rapidity of lightning, was raised to his brow, and placed there horizontally, and leaning eagerly forward.

"In the south?"

"Yes."

"Just clear of the point?"

"Yes; the looming of something: 'tis a sloop! I see but one mast."

"'Tis a ship, Black Norris. The other two have been cut away."

"Peace, jade! what know'st thou of the matter?"

"'Tis a ship," she continued. "I told you so! There is the huge black hull!"

"'Tis there, indeed!" exclaimed the wrecker. "Art thou a witch as well as crazed? 'Tis there, indeed! she is driving right into the bay, coming broadside on!"

A huge black hull it was, high out of the water, as if every article of weight that could be spared had been thrown overboard. Reeling and pitching she came on, staggering every now and then at the stroke of some wave that broke over her. Fast was she nearing the shore.

"Now, now, now!" ever and anon exclaimed the wreckers; but she was floating still, so much had those on board lightened her. At length she was fairly among the breakers. She touched and touched; yet went on—at last she struck, a long-continued crash came undulating upon the ears of the lookers-on, accompanied with halloos and shrieks. The shore was now all astir.

"That does for her!" exclaimed several voices all at once, as an enormous wave towering, as if charged with her doom, came foaming toward her. In another minute it broke upon her in a fury that sent the spray to the clouds, and totally hid her from the shore. When she became visible again, the whole of her larboard broadside was stove in. In a moment, men, women, and children were up to their middle in the surf. Another billow—she was gone! Planks, pulleys, spars, and cordage now came floating in, and every one went to work—every one but Black Norris.

He kept his station upon the reef—a post which common consent seemed to have yielded up to him. No one ventured to dispute his right to it. In advance of him stood the maniac, constantly looking in one direction—a kind of cove produced by a forking in the reef. Thence she never took her eye, except to throw a glance at Black Norris whenever he made a movement, as if about to quit the stand which he had chosen.

"'Twill be here," she kept repeating; "'twill be here: that which will be worth the hull to thee, were it high and dry, and all thine own; wait for it, 'tis sent to thee; 'twill be here. Did I not tell you of the huge black hull, and came it not? As surely that will come, which in that hull was sent to thee. Be ready with thy boat-hook. The minutes are counted. The wave that is to bring it, is rolling in. There it is! I know it! Here, take my place and be ready. Here it is—a body—hook it by the clothes; keep it clear of the rocks. Round—round—round here, into this nook. Look if it does not lie there as if it were made for it. What think you now, Black Norris? What think you now of crazy Kate? Softly, softly," she continued, as the wrecker, substituting his hands for the instrument, began to draw the body up to the beach. "Softly; the pockets are full. Softly, lest anything should drop from them. That will do! that will do!"

Scarcely was the body clear of the surf when the wrecker began to strip it. The pockets were full! one of them was speedily emptied, when a laugh from the maniac, who, squatting, sat gibbering at the head, arrested Black Norris in the act of examining the contents.

"What laugh'st thou at, jade?" he inquired.

"Go on," she replied: "'tis a fair, lovely day, as I told thee; is it not, Black Norris?"

"Peace, jade!" exclaimed the wrecker. "Jewels!" he ejaculated, closing a small case which he had opened. The maniac laughed again. "Wilt thou stop thy cursed mouth," vociferated the wrecker.

"Go on," murmured the maniac. "Go on, Black Norris. You should not be angry with me. Did I not tell you it was coming? Go on. 'Tis a fair, lovely day. Isn't it, Black Norris?"

"Silence!" again cried the wrecker.

"Gold!" exclaimed he to himself, as he emptied into his hand a portion of the contents of a purse, which he had taken from the other pocket; "broad, heavy, yellow pieces!"—another laugh from the maniac.

"I tell thee what, mad Kate," roared out the wrecker, "take to thy heels, or abide the consequence if thou utterest that sound again."

"Softly!—softly!" whispered Kate, "he hears you!"

"Who, jade!" cried the wrecker, starting from his knee.

"The owner of the diamonds and the gold. His lids have been moving for the last minute, and now they are wide open!"

The wrecker just glanced at the face of the shipwrecked man.

"Get thee away, good Kate!" said he, in a conciliatory tone. "Go, Kate; leave me by myself, and I'll never be angry with thee again. Go, good Kate; go."

The maniac looked at the wrecker for a moment—smiled—nodding her head significantly, and rose.

"I am gone, Black Norris!" she cried, "a good day to you! and a good fair day it is! and a lovely day! Isn't it, Black Norris? I'll leave you by yourself! I'll not stay! I am gone!" and starting toward a pathway which led up the cliff, and the commencement of which was sheltered by a screen of rock, she was quickly out of sight.

The wrecker now began to reconnoitre all around him. Every one was engrossed with his own occupation, securing such portions of the wreck, or such articles of property as were brought within his reach. His hand approached his knife—grasped it—half drew the weapon from his belt; but suddenly replaced it, and now fastened on the axe—the counterpoise to the blade of which was a wedge-like piece of iron, broad, and flattened at the end. In a second the instrument swung by his side. Once again he reconnoitred toward the beach; then turned toward the prostrate man. He thought the body moved—he trembled from head to foot. He advanced a single step, but stopped—the fingers were in motion! A low sound—half voice, half-breath—issued from the throat—which now evidently began to work! He advanced another step, though a tottering one!—another! He was now within a foot or two of the head—he sank, or rather dropped upon one knee. The eyes of the seaman moved—they turned to the right and to the left, and at last glared back upon the wrecker! Both hands now clenched the axe! Slowly 'twas lifted, the edge averted, and the blunt end suspended over the forehead of him that lay. 'Twas raised! It hovered a moment or two, then fell with a short, dull crash—a pause for a moment or two more—limb, eye, everything were still—the wrecker threw his weapon behind him, and wiped from his brow the drops that stood thick upon it.

"Ha! ha! you have done it!"

The wrecker turned and beheld the maniac standing behind him with the hatchet in her hand, her eyes flashing.

"Nay, move not, Black Norris!" she continued "unless you would have me give the corpse a fellow! Let me get farther from thee without forcing me to do thee a mischief, and I will tell thee something!" She retreated about twenty paces, without turning her back; the wrecker now perfectly unnerved, not daring to move. "Black Norris?" she resumed, "did I not tell you that this was a fair, lovely day! and a fair, lovely day it is! and a bonny one, too!—and know you not why, Black Norris! This day you have done—what you have done!—and this day seven years was the day—the fair, lovely day when you murdered my father! Black Norris! now follow me not, but good bye!"

She fled. The wrecker had not power to follow!

By the fire of a miserable hut, was seated upon a stool a female, of youthful but haggard appearance. She had an infant at her breast, and was endeavouring to lull it, rocking to and fro, with a low melancholy hum. Every now and then, she paused and listened, and after a second or two, resumed her maternal task.

"Be quiet, Shark; be quiet," she would occasionally cry, as a lean, black, rough-coated dog, between the Newfoundland and the mastiff, and which was stretched across the hearth, would raise his head, and, turning it in the direction of the door, keep howling amidst the gusts of the storm, which was slowly and fitfully subsiding.

At length the infant fell asleep, and was transferred from

its mother's lap to a wretched pallet in an adjoining room. Her charge being thus disposed of, she returned into the outer apartment. A cooking vessel was on the fire. She lifted the lid. The steam faintly rose from the contents.

"Will it never grow hot!" she impatiently exclaimed; and resorting to a bellows, through the creviced sides of which escaped the greater portion of the wind which was intended for the proper vent, proceeded assiduously, but almost in vain, to urge the sluggish fuel. "He'll brain me, if he comes home and nothing ready," she cried to herself, in a querulous under-tone. "Heaven send him luck, and I shall have peace for a day or two," continued she. "But for my baby, I wish I had never seen the face of Black Norris."

"Let me in!" cried the wrecker at the door.

"Thank heaven, he has met with luck!" ejaculated the wretched wife. She let him in. He had a trunk upon his shoulder, and under his arm he carried a bundle of clothes.

"Good luck, Norris?" tremulously, and half doubtfully inquired she.

"Yes!" was his sullen reply. "Why do you ask with such a face as that?"

"I was afraid you had not met with any."

"Why?" demanded he, sternly.

"From your looks," timidly responded she.

"Curse thee!" muttered the ruffian; "what business hast thou to mind my looks! Here! Lend a hand, and help this load from my back." The trunk was deposited upon the floor. "What! Nothing ready? Hast thou not victuals in the house? Hast thou not fire? Hast thou not hands? and why is not my dinner ready? Bestir thee! I have something to do in the next room. On thy life let me not be interrupted till I have done. Haste! Give me the key of the big chest."

"Don't wake the baby," entreatingly enjoined the wife. "He has not slept the whole morning, and is only just now dropped off."

"Curse the child," cried the wrecker, "thou thinkest of nothing but the child. Look to my dinner!" He went into the next apartment, shut the door after him, and bolted it.

He examined the jewels again. He emptied the purse of its contents and counted them. He opened the rest of the pockets. The trowsers he had taken from the bundle and thrown upon the floor of the other room—all contained riches. He placed them upon the ground, applied the key, and hastily began to deposit them in the chest. In the progress of his work, he started and stopped short, at a shuffling of feet he heard in the outer apartment, accompanied by the sound of voices, as of persons speaking in a low key. Muttering a curse, he proceeded.

"Norris, Norris!" whispered his wife at the door. He replied not, but went on.

"Norris!" she whispered again. "You are wanted!" He answered not, but listened anxiously. All was silent.

"Norris!" she repeated.

"Silence! and confound thee," was the ruffian's reply.

"I cannot help it, Norris," rejoined she, still whispering.

"You are wanted, husband. O come! Do come!" "Presently," he vociferated. The last article was put in. He locked the chest, and unbolting the door, threw it open.

"Well! Is my dinner ready?" he noisily demanded, entering the outer apartment, and looking toward the table—which had been constructed out of the fragments of a wreck—a corpse lay stretched upon it. At the head and at the foot was a group of his neighbours. He stood for a moment or two transfixed.

"What means this?" at length he boldly inquired, with a loud voice, striving to conceal a cowering heart.

"Merciful powers!" exclaimed one, lifting the rifled trowsers, which the wrecker had thrown upon the floor. "Merciful powers! if it is not your father's body, Norris, that you have been stripping."

"My father's body," echoed Black Norris; the blood utterly forsaking his cheeks.

"Yes! There it is, stretched upon the table."

Black Norris did not attempt to speak. He looked at the body—at the bystanders—at his wife—at the body again—with an expression of perfect vacancy in his countenance. He then approached the table, half seated himself on a corner of it, his back to the corpse, and with one leg upon the floor, kept swinging the other, looking wildly around him. His wife, who had dropped upon the stool on which she had been nursing her child, sat the image of horror. The rest kept silence.

"It can't be helped," at last exclaimed Black Norris. "The dead have no use for clothes. We'll bury him to-morrow, and wake him to night."

His auditors looked at one another, but made no remark. Pipes, tobacco, and spirits, were speedily procured and placed upon the same table with the corpse, which was now covered with a sheet. Black Norris seated himself at the head. His neighbours, whose numbers were now increased by occasional droppers in, accommodating themselves as they could, with stools, empty kegs placed on end, and pieces of plank converted into temporary forms, sat ranged around. The room waxed merry, save where the wrecker's wife sat crouching near the fire, her head supported by the wall. At length the first supply of spirits was out.

"I'll bring you better," cried the wrecker. "What we have been drinking was watered. I'll bring it you as pure as from the still."

He disappeared; and, after the lapse of about ten or fifteen minutes, returned with a fresh supply. He opened the door unobserved, but stopped short upon remarking that the place which he had just quitted, was occupied by three or four who were intently employed in examining the head of the dead body, from which the sheet had been partially removed. The rest of the company were leaning forward, apparently absorbed in what was passing.

"'Tis an ugly mark," said one.

"No rock could do that," observed another.

"No," interposed a third; "'tis more like the blunt end of an axe-head; see! here is the regular mark of the edge, all round. I would not be Black Norris for all he has got by this day's work."

"Why not?" vociferated the wrecker, springing forward and confronting the speaker.

Every eye was turned toward the wrecker, in whose countenance desperation and gathering fury were fearfully depicted. No answer was returned to his question.

"Why not," repeated he, with increased vehemence.

"Why not," echoed the young man, recovering from temporary surprise. "Why, who was it stove your father's forehead in, Black Norris?" added he, after a pause.

He had scarcely time to duck his head. The vessel which the wrecker carried, flew over it, and in the next moment the young man's throat was in the ruffian's gripe.

"Loose your hold of him," cried several all at once. Black Norris paid no heed to them. Three or four of the strongest and boldest rushed together upon him at once; overpowered him and rescued his almost suffocated victim. The wrecker drew his knife and brandished it. They rushed upon him again before he had time to make a stroke with it, and wrenched it from him. His wife, who, it appeared, had retired into the inner apartment during the interval of her husband's absence, now burst from it, sank on her knees before him, and, clasping him round the legs with one arm, while with the other she supported her infant, implored him to be calm. A blow levelled child and mother to the earth! With horror of the savage act, the spectators stood awhile, as if bereft of the power of speech or motion. For a second or two the wrecker glared around him like a fiend, then suddenly rushed into the inner room. He searched here and there, blaspheming all the time, cursing this thing and that thing, as any thing came to his hand except what he wanted. At length, however, he succeeded in finding his pistols. Then a pouch filled with slugs, and last of all, a powder-horn, presented themselves. Hastily he loaded and primed the weapons, and proceeding to the door with one in each hand, advanced a pace into the outer apartment.

"Now!" roared the wrecker, "now, who is the man to

come on?" No one stirred. "I give you just as much time," continued he, "as it will take you to clear the house. When that is expired, I fire at the man that remains."

A wild, shrill, piercing laugh was the answer to his menace. It came from the head of the corpse. The maniac was standing there. The wrecker's axe was in her hand; the blunt end resting on the mark in the dead man's forehead.

"Ha! ha!" she cried, exultingly; "there is your father, Black Norris! a corpse upon the plank of wood, to get possession of which, you murdered my father; and here is your axe upon the mark which you made in your father's forehead when I told you, as you were rifling him on the beach, that his eyes were moving, and you coaxed me to leave you alone with him. See how nicely it fits. But I knew you, and stole back. I did, Black Norris. And I saw the blow; and heard the crash; and snatched up your hatchet when you threw it behind you; and ran away with it. Give you joy of your diamonds and your gold, Black Norris. A fair day. Is it not? A fair, lovely day—a fair lovely bonny day."

The wrecker had been gradually raising his right arm. It was now nearly brought to a level. He fired; but the charge perforated the roof. His arm was struck up by some one, and at the same moment he felt himself powerfully pinioned. He looked round; he found himself in the hands of four of the preventive guard, accompanied by Kate's lover, with the staff of a boarding-pike in his grasp.

That day, having completed the business which called him from home, had the young man returned. His first inquiry was for Kate. She had been at her usual pranks, and had stolen away. He sought her in all her haunts—she was no where to be found—dispirited and fatigued, too; for he had walked upward of thirty miles since morning; he was repairing home when he received, from a group, returning from the wreck, and of whom he made inquiries after her, an account of her appearance among the wreckers, and her wild, mysterious prophecy, which had so strangely been fulfilled. Revolving what he had heard, he lifted the latch of his mother's door, and entered; but stopped short. A female, almost naked to the zone, was sitting with her back toward him; her skin of so pure a whiteness, that it fairly shone. The waist and shoulders of such a mould, as of itself apprises the beholder of the presence of surprising richness: although unrefined, uninformed, he is utterly at a loss to tell in what it lies. A moment he stood; then, abashed, confounded—he was on the point of retiring, when the female turned suddenly round.

"Kate!" burst in astonishment from the young man's lips.

The next moment the maniac, unconscious of her situation, was hanging upon his neck. Wildly she kissed him: straining him to her bosom and laughing.

"He has done it! he has done it!" she almost shrieked. "He has murdered his own father. Here is the hatchet with which he beat his forehead in," added she, springing from him to the other end of the room, and snatching up the instrument and flourishing it; her sun-burnished hands and neck forming an extraordinary contrast with the snow which had never been before revealed to the eyes of her lover, whose mother now entering from an adjoining room with some articles of apparel upon her arm, hastily retired again, drawing the poor, half-resisting girl along with her. The former presently returned.

"She has been down on the shore all day. There has been a wreck," said she. "About a quarter of an hour ago she came in inquiring for you, that you might take Black Norris, as she said, and hang him; for he had murdered his father. She was wet to the skin with the spray and the rain, and I was making her change herself when you came in. Hist! she is here!"

Kate entered. Her lover looked at her. Nothing appeared now but the hue, that was the child of the weather. The hatchet was in her hand. Exultation and impatience were painted in her looks.

"Come! come!" she cried; and opening the door, at once led the way to Black Norris's. Scarcely had they got

fifty yards from the house, when, at a turn in the road, they came upon four privates of the preventive service. The men were on duty. Kate instantly accosted them, related the transaction which had taken place upon the reef, and commanded them to accompany her. They looked—and obeyed.

Three weeks after there was a trial and an execution. Black Norris was the criminal. Among the spectators at the latter were a young man and a young woman. As soon as the body swung in the air, a shrill peal of laughter arose from one of the crowd. It was from the female who, the next moment, lay fainting in the arms of her companion. Kate was conveyed home. She was restored to consciousness; but her mind, so highly excited before, seemed now to have sunk into a state of infantine imbecility. Thus she remained for several days, nay weeks. A gloom seemed to have overspread her lover's mind, which threatened consequences similar to those under which the being whom he so tenderly loved had laboured. He avoided society—he would hardly exchange a word even with his mother. He was continually wandering about the cliff and the shore alone.

One day, when he had thrown himself upon the very spot where, as we related in the beginning, he had intruded upon the slumbers of the maniac—revolving the cause which now utterly absorbed his mind and soul, and lost to external consciousness—he was startled by something falling upon his face. He looked up, and saw the loved one hanging over him. The tear-drop stood trembling upon his lid—the light of reason beamed from her eye. She pronounced his name, talked to him of her father's death, informed him that she believed his murderer had suffered the penalty of his crime, but knew not when, or by what means. He drew her softly toward him—encouraged her to speak on—questioned her—found of all that had passed since her wits had gone astray, the only circumstance which had left an impression upon her memory, was the fate of Black Norris. He now endeavoured to ascertain the state of her heart with respect to him. An eye at once cast down—a burning cheek—lips that made soundless motion, confirmed the dearest hopes, and crowned the most ardent wishes of his soul. Reason was perfectly reinstated—love had never lost its seat. He urged the soft confession—and her face was buried in his bosom. In a week she was his wife, and along with his mother, accompanied him to a distant part of the country, lest old and painful recollections might be recalled by the presence of scenes, alas! but too familiar.

THE MARINER'S SONG.

BY JOHN INLAH.

GAILY we go o'er the salt blue seas,
And the wave breaks white before us;
The crowded canvass bends to the breeze,
And home points the pennant o'er us.
Speedily, speedily bound we on,
As if with the wind contending;
Now high the heaving surge upon,
Now its yawning gulf descending.
Our ship spreads wide her snowy wing,
Like another bird of ocean;
And she shapes her way like a living thing
Of graceful make and motion.
Then speed thee! speed my home-bound bark;
Still thy native harbour nearing;
Soon the white-cliff'd isle shall the mariner mark,
O'er the azure deep appearing.
Yet no charms for me hath the fairest vale,
Like the wilderness of waters;
When the vessel stoops to the fresh'ning gale,
And the spray around her scatters!
Then may the hammock my death-bed be,
And my grave beneath the billow;
There as well will I anchor under the lee
Of the wave, as of the willow!

LOSS OF HIS MAJESTY'S SHIP CENTAUR.

THE Centaur, a ship of 74 guns, and commanded by Captain Inglefield, sailed from Jamaica on September 10th, 1782, after the decisive engagement in the West Indies, on the glorious 12th of April, when the French fleet, under Count de Grasse, was defeated by Admiral Sir George Rodney; she was then in rather a leaky condition; but although it was necessary to keep two hand-pumps going, and a spell with the chain-pumps when it blew fresh, still no fears were entertained that she was not able to encounter a common gale of wind, till experience convinced them of their fatal mistake. It was on the evening of the 16th, that the fatal gale came on; the ship was prepared for the worst weather that is usually met with in those latitudes: the mainsail was reefed and set, the top-gallant-masts struck, and the mizen-yard lowered down, though at that time it did

not blow very strong; but towards midnight it increased to a gale, and caused the ship to make so much water, that all hands were obliged to be turned to the pumps.

About two in the morning of the 17th, the wind had so much decreased, that they began to flatter themselves the gale was breaking; but soon after there was a heavy shower of rain, accompanied with thunder and lightning, and the wind blew in such strong gusts, that obliged them to haul up the mainsail, the ship being then under bare poles. This was scarcely done, when a gust of wind, exceeding in violence anything they had ever seen, laid the ship on her beam-ends. The water forsook the hold and appeared between decks, so as to fill the men's hammocks to the leeward, and the ship lay motionless, to all appearance irrecoverably overset. The water increasing fast, forced through the cells of the ports, and scuttled the ports from the pressure of the ship. The captain immediately ordered the

LOSS OF HIS MAJESTY'S SHIP THE CENTAUR, CAPTAIN INGLEFIELD, SEPT. 23, 1782.

main and mizen-masts to be cut away, and the fore-mast and bowsprit soon followed, upon which the ship immediately righted, but with such violence, and so quick, that they found it difficult to work the pumps; three guns immediately broke loose upon the main-deck, and it was some time before they were able to secure them; several men being maimed in the attempt, and every moveable was destroyed, either from the shot thrown loose from the lockers, or the wreck of the deck. The officers who had left their beds in the morning, naked, when the ship overset, had not an article of clothing to put on, nor could they get supplied with any.

The masts had not been over the sides ten minutes, when the tiller broke short in the rudder-head; and before the chocks

could be placed, the rudder was gone. Thus were they as much deserted as possible, lying at the mercy of the wind and sea; yet they had one comfort, that the pumps, if anything, reduced the water in the hold, and, as the morning of the 17th came on, the weather grew more moderate. At daylight, two line-of-battle ships appeared to leeward; one had lost her fore-mast and bowsprit, the other her main-mast, and it was the general opinion on board the Centaur, that one was the Canada, and the other the Glorieux. About seven they saw another line-of-battle ship ahead, which they soon distinguished to be the Ville de Paris, with all her masts standing. They immediately made signals of distress, hoisting the ensign on the stump of the mizen-mast, union downwards, and firing the fore-castle guns.

The ensign blew away soon after it was hoisted, and it was the only one they had left; but they had the satisfaction to see the *Ville de Paris* veer and stand towards them. Several of the merchant ships also approached, and those that could, hailed and offered their assistance; but depending upon the king's ship, they only thanked them, desiring them if they joined Admiral Graves, to make him acquainted with the condition of the *Centaur*. They had not the smallest doubt, but that the *Ville de Paris* was approaching them, as she appeared not to have suffered in the least by the storm, and having seen her veer, they knew that she was under the government of her helm; at this time, also, it was so moderate, that the merchant ships set their topsails, but the *Ville de Paris*, after approaching within two miles, passed them to windward, which being observed by one of the merchant ships, she wore and came under their stern, offering to carry any message to her. Captain Inglefield desired the master to acquaint the *Ville de Paris* with their condition, and that he would remain with them till the weather grew moderate. They afterwards saw the merchantman approach near enough to the *Ville de Paris* to speak to her; but they had reason to fear her condition was much worse than it appeared to be, as she continued her course. As the evening came on it grew hazy and blew strong in squalls. They lost sight of the *Ville de Paris*, but confidently expected they should see her in the morning: the night was passed in constant labour at the pumps, and when the wind lulled, the water diminished; but when it blew strong again, the sea rising, the water again increased.

On the evening of the 18th, they found their condition much worse than they had expected; the pumps being choked, were of little use, and all the casks of rum and provisions were stove, having floated with violence from side to side, until there was not a whole cask remaining. Should the ship swim, they had no water, but what remained in the ground tier, and over this all the wet provisions, and casks filled with salt water, were floating, and with so much motion, that no man could go into the hold with safety. There was nothing left for them to try, but baling with buckets; and twenty large ones made of canvass were immediately employed. By noon the working of the buckets had considerably diminished the water, but there appeared no prospect of saving the ship if the gale continued. The labour was too great to hold out without water, yet the people worked without a murmur, and indeed with cheerfulness.

The weather at this time was more moderate, but as the evening came on, the gale increased. All day they had seen nothing of the ship that had lost her main-mast, but from her having fired guns of distress, they imagined her to be as much in want of assistance as themselves. Through the night the *Centaur* laboured so much, that they scarcely dared to entertain a hope that she could swim till the morning; yet, by dint of great exertions, which were increased by want of water, they managed to hold out: but their sufferings were so intense, that many of the people could not be restrained from drinking their own water.

At daylight, on the 19th, there was no vessel in sight, and having seen flashes from guns during the night, they feared that the ship which they had seen the preceding day had foundered. The weather grew more moderate by about eleven o'clock in the forenoon, and as the water in the hold began to diminish, the men were encouraged to redouble their efforts to get the water low enough, so as to enable them to break a cask of fresh water out of the ground tier. Some of the most resolute of the seamen were employed in the attempt, and at noon they were so far successful as to get one cask, which, though little, was a very seasonable relief.

On the morning of the 20th, the fore-hold was cleared of the water, and they had the cheering promise of a fine day, which was taken advantage of by making every disposition that could contribute to their safety; and the captain had great hopes that should the moderate weather continue, the ship would by the next day become manageable, and thereby enable them to save the people on some of the western isles: but, at the same time, had there been another ship in the company, the captain would have deemed it his duty to have quitted the ship directly.

Unfortunately, however, on the morning of the 21st, they

had the mortification to find the weather again threatened, and by noon had increased to a storm; the ship laboured excessively, the wind still increased, and the carpenter declared the pumps nearly useless; and as they had no other resource but baling, all the sail-makers were employed night and day in making canvass buckets. The orlop-deck had fallen in on the larboard side; a large leak had been discovered and stopped in the forehold, and another in the ladies' hold, and the ship appeared so weak from her labouring, that it was evident she could not last much longer; the fore and after cockpit had fallen in, and all the store-rooms were down, and the stern-post was so loose, that as the ship rolled, the water rushed in on either side in such great streams, that it was impossible for them to stop it. Night came on with the same dreary prospect as the preceding, and was passed in continued labour and exertion.

On the morning of the 22nd, it was plainly to be perceived, that the fate of the ship was not far off, but still the labour went on without any apparent despair. The people were obedient and even cheerful, and each officer took his share in the work that was to be performed; but despite of their exertions, the water continued to increase during the night, and their speedy destruction seemed inevitable.

On the morning of the 23rd, they found, that during the night, a fresh leak had been sprung, that the well was stove in, and the chain-pumps displaced and totally useless; and up to this time, the crew had laboured cheerfully, without a murmur and without a tear, as if determined to conquer their difficulties: but this fresh disaster rendering all their efforts useless, overwhelmed their faculties, and many of them burst into tears and wept like children. The carpenter declared that the ship could not live long, and proposed making rafts to float the ship's company, as it was no longer possible to encourage them with any prospect of their safety. Some appeared perfectly resigned, went to their hammocks and desired their messmates to lash them in, while others were lashing themselves to gratings and small rafts; but the most prominent idea was that of putting on their best and cleanest clothes. The weather became more moderate about noon, and as the rafts had been mentioned, the captain thought it right to make the attempt, although the spars they had on board could not float half the ship's company; but men in their situations were ready to catch at a straw. The captain therefore called them together, and telling them his intention, recommended them to behave with regularity and obedience to their officers. They immediately commenced making preparations; the booms were cleared, and the boats, of which they had three, the cutter, the pinnace, and five-oared yawl, were got over the sides, a bag of bread was ordered to be put into each, and any liquors that could be got at, for the purpose of supplying the rafts.

It was the intention of the captain to get into the five-oared yawl, and the coxswain was desired to get anything from the steward that might be useful; and two men, captains of the tops, of the fore-castle, or quarter-masters, were placed in each of the boats to prevent any of the men forcing them until the arrangements were complete; but while these preparations were making, the ship was gradually sinking, the orlop-decks having been blown up by the water in the hold. The men had for some time quitted their employment of baling, and the ship was left to her fate.

In the afternoon the weather again threatened and blew in strong squalls, the sea ran mountains high, and the yawl stove alongside and sunk. As the evening approached, the ship appeared little more than suspended in water, and there was no certainty that she could swim from one moment to another; indeed, such was the awful appearance of the surrounding elements, that it was impossible for any man to deceive himself with a hope of being saved upon a raft in such a sea; and the love of life, which never appears stronger than in the approach of death, began now to level all distinctions. It was near five o'clock when Captain Inglefield, on coming from his cabin, observed a number of people anxiously looking over the side, and found that several men had forced the pinnace, and that more were endeavouring to get in. The captain's first thought was to secure the boat before she might be sunk by numbers, and

there appeared not a moment for consideration. It was a painful conflict of feelings, and which can hardly be imagined by any person who has not been in a situation like Captain Inglefield, either to remain and perish with the ship's company, to whom he could be of no further use, or seize the only opportunity of escaping which seemed left, and leave the people with whom he had had so often occasion to be well satisfied. However, the love of life prevailed. The captain called to Mr. Rainy, the master, who was the only officer on deck, and desired him to follow him. They immediately descended into the boat, and with great difficulty got her clear of the ship, as twice the number that the boat would carry were endeavouring to get in, and many jumping into the water. Mr. Baylis, a young gentleman fifteen years of age, leaped from the chains after the boat had got off, and was taken in, making twelve persons altogether in the boat, viz., Captain Inglefield; Mr. Rainy, master; Mr. Baylis, midshipman; Mr. Clarke, surgeon's-mate; Timothy Sullivan, captain's coxswain; John Gregory and Thomas Matthews, quarter-masters; and five seamen.

The boat falling astern became exposed to the sea, and they endeavoured to pull her bow round, and keep her to the break of the sea, to pass to windward of the ship; but she was nearly filled in the attempt. The sea ran too high, and the only probability of living, was by keeping her before the wind. It was then the dreadful truth flashed upon their minds, how little better, if anything, was their condition, to that of those they had left behind them in the ship; at the best it appeared but a prolongation of a miserable existence. In a leaky boat, with one of the gunwales stove, nearly in the middle of the Western Ocean, without compass, without quadrant, without sail, without great coat or cloak, all very thinly clothed, in a gale of wind, with a heavy sea running, was a miserable alternative between that and death.

It was about five o'clock in the evening; and about half an hour after losing sight of the ship, and before it was dark, that a blanket was discovered in the boat; this was immediately bent to one of the stretchers, and under it as a sail they scudded all night, expecting that every wave would swallow them, and with great difficulty being able to clear the boat of one sea, before the next would overwhelm them, and all of them half drowned—without having really perished, perhaps no people ever endured more.

—On the morning of the 24th, the weather grew moderate, having shifted to the southward; when they quitted the ship, it was at N.W. or N.N.W. Fayall bearing E.S.E. about two hundred and fifty leagues, and should the wind continue for five or six days, there was a probability that by running before the sea, they might fall in with one of the Western Isles; but the wind having shifted, should it come on to blow, their hopes were at an end; for there was no possibility of preserving life, but by running before the sea, which would carry them again to the northward, where they must inevitably perish. Upon examining what they had to subsist on, they found a bag of bread, a small ham, a single piece of pork, two quart bottles of water, and a few French cordials.

The wind continued to the southward for eight or nine days, but providentially it did not blow so strong but what they could keep the boat to the side of the sea; but they were all most miserably wet and cold. As near as they could judge, they had made nearly a E.N.E. course since the first night's run, which had carried them to the S.E., and expected to see the island of Corvo. In this, however, they were disappointed, and feared that the southerly wind had driven them too far to the northward. Their condition now began to be truly miserable, for on the fifth day, they discovered that nearly all the bread was spoiled by salt water; and as it was necessary to go to an allowance, one biscuit was divided into twelve morsels for breakfast, the same for dinner; the neck of a bottle broken off with the cork in, and filled with water, was all the allowance of each man for twenty-four hours; and this was done without any degree of partiality or distinction: but they must have perished before this, had they not fortunately caught six quarts of rain water, and even this they could not have been blessed with, had they not found a pair of sheets, which had been put there by accident, these were spread when it rained, and when tho-

roughly saturated, were wrung into the kit with which they baled the boat. With this short allowance, which in their sad condition was rather tantalizing, they began to grow very feeble, and their bodies were chafed into sores in many places, from their clothes being continually wet.

On the thirteenth day there was a perfect calm, but a breeze of wind soon sprung up from the N.N.W., and increased to a gale, so that they ran before the sea, under the blanket, at the rate of five or six miles an hour, till they judged they were to the southward of Fayall, and sixty leagues to the westward; but they could not attempt to steer for it, as it was blowing strong.

On the fifteenth day of their being in the boat, they had only remaining one day's bread, and one bottle of water out of a second supply of rain. Their sufferings were now as great as human nature could possibly sustain, but they were convinced that good spirits were a better support than great bodily strength. This day died Thomas Matthews, one of the quarter-masters, and the stoutest man in the boat, from extreme hunger and cold. The day before, he had complained of his throat, as he expressed it, being too weak to swallow his morsel, and in the night he drank salt water, grew delirious, and died without a groan. As this seemed inevitably the fate of all of them, it was some consolation to think that death by starvation was not quite so dreadful as their imaginations had pictured to them. Some complained of the symptoms in their throats, others had drunk their own urine, and all but the captain had drank salt water: yet with all these causes for depression of spirits, despair and gloom had as yet been successfully banished, and repeatedly had a song or a tale been substituted for a supper; but this evening the captain found it impossible to raise either.

The weather became calm as the night came on, but about midnight a breeze sprung up from the westward; but not being certain of the direction, and afraid of running out of their way, they impatiently waited for the morning sun to be their compass, whose rising showed them that the wind was precisely as they had wished, and immediately spreading their blanket, ran before the sea at the rate of four miles an hour. Their last remaining breakfast had been served, when John Gregory, the surviving quarter-master, declared that he saw land, in the S.E.; but they had so often seen fog-banks, which bore the appearance of land, that the captain dared not trust himself to believe it, and, as they appeared exceedingly elated, gave them a caution, that they might not feel the effects of disappointment; but one of the seamen broke out into an immoderate fit of joy, swearing that if that which he now saw was not land, he had never seen land in all his life. They immediately shaped their course for it, although the captain had very little faith in it.

The wind freshened, the boat went through the water at the rate of five or six miles an hour, and in two hours the land was plainly seen by every man in the boat, but at a very great distance, so that they did not reach it before ten at night. It must have been at least twenty leagues from them, when they first discovered it. There was so thick a haze in every part of the horizon, except where they discovered the land, that they could not see for more than three or four leagues. By their reckoning, Fayall bore E. by N., which was the course they were steering; and had not the sky opened for their preservation, they would in a few hours have increased their distance from the land, got to the eastward, and of course missed all the islands. As they neared the land, they were more and more convinced that it was Fayall. The island of Pico, had the weather been clear, would have satisfied them, but it was at that time capped with clouds, and it was some time before they were quite certain, having traversed for two hours a great part of the island, where the steep and rocky shore refused them a landing. This was borne with much impatience, for they had flattered themselves that they should meet with fresh water the instant they approached the island; but being disappointed in this, their thirst increased into almost a degree of madness, so that they were near attempting to land where the surf must have dashed the boat to pieces. Fortunately they discovered a fishing canoe, which conducted them safely into the road of Fayall, about midnight; but the regulations of the port would

not suffer them to land, till they had been examined by the health officers. However, as their pilot brought refreshments of bread, wine, and water, they did not think so much of sleeping in the boat all night.

In the morning they were visited by the English consul, Mr. Graham, whose humane attention made ample amends for the formality of the Portuguese. Indeed it is impossible to express their feelings of gratitude, for the kindness and humanity which was evinced by him, not only to Captain Inglefield, but to all the companions of his misfortunes; for several days his whole employment seemed to be contriving the best means of restoring them to health and strength. Perhaps there never were objects more deserving of pity. Some of the stoutest men belonging to the Centaur were obliged to be supported through the streets of Fayall. Captain Inglefield, and Mr. Rainy, the master, appeared in better health than any of the others; but even the captain could not walk without being supported; and notwithstanding the utmost attention that was paid to them, the most salutary provisions, and the most comfortable lodgings, for several days they grew rather worse than better: but that Providence which had sustained them through such an almost unparalleled accumulation of hardships, fatigues, and severities, at last restored them to health, vigour, and spirits.

AN ADVENTURE AT SEA.

It was somewhere near the middle of the ocean, on our homeward passage from Jamaica, that we fell in with the wreck of a vessel, and several poor souls clinging to the rigging. The

weather, for some days before, had been rough, with hard gales from the N.N.E.; and our ship being heavy laden, we were much afraid that she would founder. For a time, we gave ourselves up to despair, seeing nothing around us but certain death. We drove at the mercy of the tempest, without being able to set a stitch of sail, and we expected every moment our mast would go by the board. Several large seas broke over us; one of which carried away a boy and two seamen, as well as our best boat, upon which we mainly relied for assistance, in case we had been forced to leave our vessel. When we were in the greatest extremity, however, and every one on board, like the seamen in the ship of Tarshish, was calling upon his God, the storm suddenly abated, and the wind, veering round to the S.W., blew a brisk and steady breeze.

After some days' sail, the man at the mast-head one evening called out, "On deck there; breakers a-head!" and the vessel, which was then going at the rate of ten knots an hour, was immediately brought to. The old seamen said that no breakers were known in that part of the ocean, that they had sailed in that course twenty times and had never seen any. The captain took his spy-glass, and going up into the fore-shrouds, soon found that it was the hull of a vessel, half sunk, and part of a mast standing, which the man had mistaken for rocks. He looked sulky when he came down, and ordered us to proceed. As we approached the wreck, we observed the people upon it making signals to us with their hats and handkerchiefs; and the captain having gone below for a few minutes, the mate hoisted the English jack as a token that we had observed them; but the captain, when he came again upon deck, was angry with

SAILORS ON THE WRECK.

him for so doing' and ordered the jack to be instantly hauled down, at the same time telling the mate, that if he acted so again, without orders, he would punish him for his presumption. Our captain was a hard man, and, when he was out of humour, carried it with a high hand, both to his officers and crew.

When we came alongside the wreck, we discovered that the men, five in number, who were clinging to it, were pale and sickly, and seemed as if they had been some days in that situation. It is probable their vessel had suffered in the same tempest from which we ourselves had escaped. They stretched out their hands towards us, and seemed delighted with the prospect of deliverance; and one of them hailed us, and told us they were from Quebec—that their vessel was timber-laden—and that they were the only survivors of the crew. Our cap-

tain replied, that he could not take them up, for we had already had a long voyage ourselves, and would soon be on a short allowance of provisions. "But some other vessels are behind," said he, "and will relieve you." The poor man then cried out earnestly, "Oh, for the love of God, do not leave us here. We have been waiting for nights and for days, but no ship has come near us, and we are dying of hunger and cold. Our shipmates are all dead, and buried in the waves, and we are alone and helpless on the wild ocean, and we have no one to comfort or save us. Oh, if ye be men and christians, have mercy upon us, and do not leave us here." His companions then raised their voices, and joined their entreaties to his so piteously, that every man in our ship shed tears of sympathy and commiseration, except our unfeeling captain. He stood upon the quarter-deck, and looked upon the poor supplicating wretches with coldness

and indifference, sometimes humming a tune, and sometimes giving directions to his men, as if he saw not the scene of misery which lay before him.

The mate then went up to him, and asked whether he should hoist out the boat; but the captain swore that he would not shorten sail, or hoist out his boat, to save all the lubbers that ever stepped between stem and stern. "By heavens, Morris," said he, "we have mouths enow already, and we shall not have a biscuit a day to each, by the time we make the Land's End." The mate, who was a humane man, and a Methodist, said, "We have received mercy ourselves from the Highest, and how can we deny it to others, who are our fellow-creatures, and the beings of his hand. Let us save those unhappy men, that we ourselves may be saved in the time of need—for by what measure we mete, it shall be measured unto us again." But this only enraged the captain more. He cursed the mate for a canting scoundrel, and swore if he did not keep quiet, and mind his own business, he would have him started up with a rope's end. The mate saw it was useless to remonstrate any longer, so he left him, and walked away.

It was mournful to hear the cries of the poor men, when they saw we were deserting them. They cried out, and entreated mercy in such heart-rending accents of distress, as would have moved the compassion of a savage. Greatly did I regret that our crew did not then take the command of the ship into their own hands, and rescue the sufferers; but such was our habitual reverence for our captain, and so much were we lost in astonishment at his strange and inhuman conduct, that we were utterly incapable, at that moment, of acting otherwise than in obedience to his will.

They continued to call after us till we were far past them, and their voices were lost in the whistling of the wind. I kept my eyes fixed upon the wreck, where my fellow-creatures were struggling for existence, till the intervening waves hid it from my sight.

The breeze now freshened, as the darkness of night approached, whereby we were obliged to close-reef our mainsail and top-sails, in order that we might be prepared for the worst. It was my turn at the helm that night, and my thoughts often wandered back to the poor wretches we had left behind, and I thought they must soon perish in the waves, for the sea was now running high and dangerous. The crew had all gone below, except the watch, who were on the fore-castle, looking out a-head, and managing the rigging. It was some time past midnight, I think, when I heard the captain bawling as loud as he could, "About ship;" and at the same time he came running towards me, followed by the mate, and taking the wheel out of my hand, turned the ship's head round to the wind in a twinkling. "We must go back," said he to the mate, "and save these poor men on the wreck—I cannot sleep for thinking of them." The mate looked mournfully out to the sea, then shook his head, but remained silent.

As we had now a strong breeze in our teeth, and as our ship was deep, and did not lie near the wind, we beat about for a good while, and made but little of it. A clouded moon shone out upon the sea, and showed it heaving in a strange and tempestuous manner, so that we could not hope that the wreck would hold together for many hours. All this while the captain walked restlessly about the deck, with his night-glass in his hand, frequently looking out a-head, and appearing to be in great agitation of mind.

"It is going of a fool's errand," said the boatswain, "to seek for these poor fellows. Their last day's cruise is over, I'll warrant them, and all we can do for them now is to hope that they have got into snug and quiet berths aloft, in a better harbour than the one they have left here." "Amen," said the mate. The captain turned away from them, and his feet struck hard against the deck, as he paced it irregularly fore and aft.

It was noon next day, ere we reached the place where we conjectured the wreck had been, but not a vestige of it remained. The air was now clear, and the sea stretched far and wide, but nothing was to be seen to indicate either that the unhappy sufferers still existed, or that they had been entombed in the waves. The mate, and some of the more experienced seamen, advised that we should forthwith proceed on our voyage,

as it was impossible that the wreck could have outlived the tempest of the night; but the captain was now as anxious to save the lives of these poor men, as he had before been averse to it. His conscience seemed to reproach him for his inhumanity, and he seemed to feel that he should one day be made to account for the sufferings of his fellow-creatures, which he had refused to compassionate. Even when he acknowledged that there was no hope of meeting with the wreck, still he persisted in the search, and a considerable time was spent before he consented to quit the spot. We beat about for several days, but at length we were obliged, with heavy hearts, to stretch away on our course.

The captain, during the rest of our voyage, seemed much disturbed in his mind. Sometimes he was observed to steal out of his cabin at night, and stand at the bows of the vessel, as if watching for a sail, till morning.

After we had arrived in port, and discharged our cargo, I quitted the ship, as did the whole of my messmates, for we liked not to sail any longer with our captain. He, however, in a short time, set out again for Jamaica, but he was never afterwards heard of.

Whatever may have been his fate, it is certain that he never reached the end of his voyage.

A STRIKE ON A CORAL BANK.

NEXT morning we were all carrying as much sail as we could crowd. By this time we had got our jury-foretopmast up, and the Rayo having kept astern in the night, was now under top-sails, and top-gallantsails, with the wet canvass at the head of the sails, showing that the reefs had been freshly shaken out, rolling wedge-like on the swell, and rapidly shooting a-head, to regain her station.

As she passed us and let fall her foresail, she made the signal to make more sail, her object being to get through the Caicos Passage, into which we were now entering, before nightfall. It was eleven o'clock in the forenoon. A fine clear breezy day, fresh and pleasant, sometimes cloudy over head, but always breaking away again, with a bit of a sneezer, and a small shower. As the sun rose, there were indications of squalls in the north-eastern quarter, and about noon one of them was whitening to windward. So "Hands by the top-gallant clew-lines," was the word, and we were all standing to shorten sail, when the Commodore came to the wind as sharp and suddenly as if she had anchored; but on a second look, I saw her sheets were let fly, halyards let go, and apparently all was confusion on board of her. I ran to the side and looked over. The long heaving dark blue swell had changed into a light green hissing ripple.

"Zounds, Captain Crawfoot, shoal water—why it breaks—we shall be ashore!"

"Down with the helm—brace round the yards," shouted Crawfoot; "that's it, steady—luff, my man," and the danger was so imminent, that even the studding-sail-halyards were not let go, and the consequence was, that the booms snapped off like carrots, as we came to the wind.

"Lord help us, we shall never weather that foaming reef there. Set the spanker—haul down the fore-topmast-staysail—so, mind your luff, my man."

The frigate now began to fire right and left, and the hissing of the shot over head was a fearful augury of what was to take place; so sudden was the accident, that they had not time to draw the round shot. The other transports were equally fortunate with ourselves in weathering the shoal, and presently we were all close hauled to windward of the reef, until we weathered the easternmost prong, when we bore up. But, poor Rayo! she had struck on a coral reef, where the admiralty charts laid down fifteen fathoms water; and although there was a talk at the time of an error in judgment, in not having the lead going in the chains, still do I believe there was no fault lying at the door of her gallant captain. By the time we had weathered the reef, the frigate had swung off from the pinnacle of rock on which she had been in a manner impaled, and was making all the sail she could, with a feathered sail under her bows, and chain-pumps clanging, and whole cataracts of water

gushing from them, clear white jets spouting from all the scuppers, fore and aft. She made the signal to close. The next, alas! was the British ensign turned union down in the main rigging—the sign of the uttermost distress. Still we all bowled along together, but her yards were not squared, nor her sails set with her customary precision, and her lurches became more and more sickening, until at length she rolled so heavily, that she dipped both yard-arms alternately in the water, and reeled to and fro like a drunken man.

"What is that splash?"

It was the larboard-bow long eighteen-gun hove overboard, and watching the roll, the whole broadside, one after another, was cast into the sea. The clang of the chain-pumps increased, the water rushed in at one side of the main-deck and out at the other, in absolute cascades from the ports.

At this moment the whole fleet of boats were alongside, keeping way with the ship, in the light breeze. Her main-topsail was hove back, while the captain's voice resounded through the ship. "Now, men—all hands—bags and hammocks—starboard watch, the starboard side—larboard watch, the larboard side—no rushing now—she will swim this hour to come."

The bags and hammocks, and officers' kits, were handed into the boats: the men were told off over the side, as quietly by watches as if at muster, the officers last. At length the first lieutenant came down. By this time she was settling perceptibly in the water; but the old captain still stood on the gangway, holding by the iron stanchion, where, taking off his hat, he remained uncovered for a moment, with the tears standing in his eyes. He then replaced it, descended, and took his place in the ship's launch—the last man to leave the ship; and there was little time to spare, for we had scarcely shoved off a few yards, to clear the spars of the wreck, when she scudded forward, heavily and sickly, on the long swell. She never rose to the opposite heave of the sea again, but gradually sank by the head. The hull disappeared slowly and dignifiedly, the ensign fluttered and vanished beneath the dark ocean. I could have fancied reluctantly, as if it had been drawn down through a trap-door. The topsails next disappeared, the fore-topsail sinking fastest; and last of all, the white pennant at the maintop-gallant-mast-head, after flickering and struggling in the wind, flew up in the setting sun as if imbued with life, like a stream of white fire, or as if it had been the spirit leaving the body, and was then drawn into the abyss, and the last vestige of the *Rayo* vanished for ever. The crew, as if moved by one common impulse, gave three cheers. The captain now stood up in his boat—"Men, the *Rayo* is no more; but it is my duty to tell you, that although you are now to be distributed amongst the transports, you are still amenable to martial law; I am aware, men, this hint may not be necessary, still it is right you should know it."

When the old hooker clipped out of sight, there was not a dry eye in the whole fleet. "There she goes, the dear old beauty," said one of her crew. "There goes the blessed old black dear, quoth another." "Ah, many a merry night have we had in the clever little craft," quoth a third; and there was really a tolerable shedding of tears, and squirting of tobacco-juice. But the blue ripple had scarcely blown over the glass-like surface of the sea where she had sunk, when the buoyancy of young hearts, with the prospect of a good furlough amongst the lobster-boxes for a time, seemed to be uppermost amongst the men. The officers, I saw and knew, felt very differently. "My eye!" sung out an old quarter-master in our boat, perched well forward with his back against the ring in the stern, and his arms crossed, after having been busily employed rummaging in his bag, "my eye, what a pity—oh, what a pity!" Come, there is some feeling, genuine, at all events, thought I.

"Why," said Bill Chestree, the captain of the fore-top, "what as, can't be helped, old fizgig; old *Rayo* has gone down, and—"

"Old *Rayo* be hanged, Master Bill," said the man; "but may I be flogged, if I ha'n't forgotten half-a-pound of negrohead baccy in Dick Catgut's bag?"

"Samuel, a-hoy," hailed a half-drunken voice from one of the boats astern of us. "Hillo," responded the cockswain. The poor skipper even pricked up his ears. "Have you got Dick Catgut's fiddle among ye?" This said Dick Catgut was

corporal of marines, and the prime instigator of all the fun amongst the men. "No, no," said several voices, "no fiddle here." The hail passed round among the other boats, "no fiddle." "I would rather lose three day's grog than have his fiddle mislaid," quoth the man who pulled the oar.

"Why don't you ask Dick himself?" said our cockswain.

"Ay, true enough. Dick, Dick Catgut!" but no one answered.

Alas! poor Dick was no where to be found; he had been mislaid as well as his fiddle. He had broken into the spirit-room, as it turned out, and having got drunk, did not come to time when the frigate sunk.

Our ship, immediately after the frigate's crew had been bestowed, and the boats got in, hoisted the Commodore's light, and the following morning we fell in with the *Torch*, off the east-end of Jamaica, which, after seeing the transports safe into Kingston, and taking out me and my people, hove up through the gulf, and resumed her cruising ground on the edge of the Gulf Stream, between 25° and 30° north latitude.

A TRUE TALE OF SHIPWRECK.

It was in the autumn of 17— that I left Italy, in company with my daughter, the last child of that family of brave and fair ones who had made my fireside so joyous, when I returned home from the voyages which my calling of merchant obliged me frequently to take. My two boys had fallen gloriously on the field of battle; and of my girls, two had already perished by an insidious disease; to avoid which, beneath the bright skies and gentler airs of the south, I was now again, for the sake of the remaining one, about to become a wanderer.

We left our desolate home with feelings we dared not acknowledge to each other, and only spoke of the future. My child seemed to be possessed with an insatiable yearning to rest in some quiet retreat near Rome or Naples; and therefore, to avoid the fatigue of a long over-land journey, we embarked at Falmouth, on board a small vessel bound to Leghorn; resolving to reserve Switzerland, France, and the Rhine Country, till our return; and in dwelling upon our plans, we endeavoured, as much as possible, to forget the charm which death had made in our affections in the short space of two years.

Our voyage was prosperous for many days; and, indeed, there seemed every reason to think that the step I had taken was a fortunate one; for my invalid certainly looked less pale, and her colour was less changeable than it had been since we left Hampshire. Her spirits, too, were relieved of a part of the oppression they had borne so long; and she loved to sit on the deck for hours every day, and, for the first time since our calamity, would sing me my favourite romances, and the wild airs I had brought her across the seas. There is one Hindoo tune, which, as it was my greatest favourite, she always sung the last. I verily think that to hear it now would drive me to distraction.

Towards the evening of the day when we passed Marseilles, the sky darkened, the sun set behind a huge bank of heavy clouds, and the wind began to arise, and to sweep the waters with a loud and moaning swell, which died fitfully into silence, again to awaken with a wilder and sadder tone. I had so often crossed the sea, and been an attentive observer of the signs of the heavens that I forsook a storm was approaching; and I persuaded Helen to retire to our miserable little cabin earlier than usual, while I watched, with an anxious heart, the gathering of the clouds and the fading of the day-light. The captain was a silent, and somewhat rude man, (we had only chosen his vessel to avoid a delay which, my daughter's physicians had assured me, might be fraught with peril); and the crew were mostly Maltese and Spaniards,—a people who, on the seas, are proverbially timid and insubordinate. It was, however, too late to think of these things; the gale presently increased till I could hardly keep my feet; the sails were all close reefed, and we scudded along with a fearful speed. There was neither moon nor star that night: and the only light I could discern

was the foam of the waters, which boiled, like a mighty caldron, on every side.

The crew were now all thoroughly terrified, and incapable of comprehending or executing the captain's orders. They rummaged their sea chests for the images of saints long forgotten, and knelt to them, weeping like children, and praying, and vowing costly offerings to their shrines, if they might be delivered from their peril, while the storm increased every instant.

It was about midnight that the man at the helm gave a loud cry, which I shall remember to my dying day, the cry of "Land!" It was even too true: we had mistaken our course, and were fast approaching an iron-bound and rocky shore. Dreadful was now the uproar on deck; shrieks and oaths, and confessions of crimes long concealed, were heard even above the fiercest wrath of the storm. At length the captain ordered the boats out; and while the men prepared to obey his commands, I hurried below to prepare my daughter for the worst. I had been several times that evening in her cabin, and marvelled at, while I admired, the calm, self-possessed courage she maintained amid so much calculated to terrify a woman's spirit. I now found her dressed, and on her knees, though that attitude was scarce possible from the deep pitching of our crazy vessel. She arose, and without a word or expression of fear, suffered me to wrap her in my cloak, and to support her up to the deck.

By this time the boats were lowered—and only just in time. With a shock, like the rending of the eternal hills, the vessel struck upon a rock; and the terrified mariners crowded into the boats, frail and leaky though they were, with the selfish eagerness of fear. I waited but an instant ere I committed my child to these, our only insecure chance of life; for the vessel had sprung a leak, and was fast filling: and while I yet paused, there came an immense wave, which broke over the vessel and boats with the roar of a cataract. It subsided;—but I never saw our companions more.

There was now little time to deliberate: the shore seemed not very far, (indeed, I had certainly seen a light in that direction,) and the vessel rapidly filling. I emptied, therefore, in haste, two of the largest sea-chests I could find, and, binding them together by the handles with a rope, lowered them from the vessel's side. It was our only hope of life; and, almost without a word spoken, my child placed herself by my side, though, owing to the pitching of the vessel, this was a work of difficulty; and we committed ourselves to the waves. From this moment I remember nothing.

When I returned to consciousness, I found myself lying, in an old ruinous shed, upon some straw. Helen was beside me; saved indeed, but so bruised and exhausted that, as she lay there, with the water streaming from her garments and her long loose hair, it was an instant ere my dizzy senses could believe that she yet lived. A lamp was placed beside her on the clay floor, and a dark loose mantle, which wore signs that some human being had been there. I spoke to her,—I bent over her,—and supported her unresisting head upon my knee. "Father," said she, softly, "I think I am dying."

"Oh God! and there is no help!"

"I know not," she said feebly, "and yet, since I have been here, I have seen twice an old man, who has looked upon me through the door, and who left this lamp here." That instant a thought struck me that there must be habitations near, and I resolved to seek shelter and assistance: but first I made my poor girl more comfortable, if gathering up the straw into a close heap under her head, and covering her with the coarse rug or mantle, could be called comfort; and then, in an agony, rushed out into the open air.

The earliest dawn, which had partially broken upon the stormy sky, enabled me to discern, at a little distance, a small hut or cabin, whence the light proceeded which I had not been mistaken in imagining I had perceived. As far as I could see, this, and the shed I had just left, were the only dwellings of man near: they stood upon a broken rock which overhung the sea. The hope of obtaining succour gave wings to my feet, though, when I attempted to walk, the pain was excessive, for I too was bruised and wounded: but it mattered not; I thought only of

Helen, and, guided by the light, made haste towards the cottage, which was distant about one hundred yards.

Misfortune abolishes ceremony; and, perceiving, from the sound of voices, that the inhabitants were yet astrir in the house, I raised the latch, unbidden, and entered what seemed to be the cottage of a fisherman. The room, though small, was scrupulously clean, and neatly furnished: a bright fire was blazing on the hearth. The appearance of the place seemed to promise a friendly shelter: not so the countenances of its inhabitants. By the side of the fire sat an old man and woman, decently clad in the provincial dress; the features of both were singularly stern and hard, and they rose not, neither testified surprise at my intrusion. I had therefore to speak in French, as well as I could, and tell them of our calamity. "We are English," I said—

"English!" interrupted the austere old man, for the first time breaking silence, and speaking in pure good French. "Wife, do you hear this? Thank God, our prayer is granted, and our vow shall be fulfilled. Go, stranger, and clamour elsewhere: I have no aid for you."

"But," cried I, passionately, "I am shipwrecked and wounded, and have lost everything, and my daughter is dying hard by; dying of cold and weariness. Give us shelter and dry clothing; and I promise you an ample reward, so soon as I can send to Marseilles."

"What I will not give I will not sell," replied the old man, in the same cold and unmoved tone. "Go back to your daughter; I have brought you both from the shore, and given you a light and a garment. What would you have more? Go!"

"But, good heavens! have you no mercy? no human feeling? You, my good woman, may have been a mother yourself. You may—"

"Ay," cried she, bitterly, rising and confronting me face to face; "I have been a mother. Listen to me—I had a daughter. My husband, there, was captain and owner of the fairest ship that sailed out of the port of Marseilles. I sailed with him, and my child, who was then eighteen, and fifty times as fair as your pale girl—she was to be married when we returned. Well, our vessel was wrecked on the western coast of your island; the rocks were crowded with people; but they put no boats out, nor came to save the poor perishing wretches who shrieked for aid even in the struggles of death. Of the crew, we three were alone saved, with what treasure we could bear about us; and your people helped us vastly. They rifled us of our money, and tore the rings from the ears and fingers of my Rosalie, and broke open our chests, while my husband and I were too weak and wounded to resist their plunder, and knew not a word of their language to complain. And my Rosalie, they left on the cold wet sand in her swoon—left her for an hour, with the spray dashing over her; and then two rude men brought her rudely into the hut where they had laid us (believing we were dead), wounded, and crushed, and pale, and bleeding: yet they searched her for money, and she, old man! she died that night! and they buried her in their churchyard."

"It pleased God, however, that we both recovered, though none cared for us, nor restored us the money or the clothes they had robbed us of. We begged our way through the country, through a land of strangers who hated our nation. Even the very children jeered at us as we passed them, and the magistrates put us in prisons and stocks. But at last, thank God, we got home; and we bound ourselves with a solemn vow, as your people had dealt with us, so to deal with you, should ever a like chance happen. That vow we have broken already, this night. Here (giving me a bundle from a clothes-press) is clothing: and here (handing me, as she spoke, a crust of black bread and a cup of water) is food. Go, old man, and, as you sit by your dying daughter, remember the tale I have told you."

It was in vain to make further entreaty: the inexorable old woman, when she had ceased, returned to her seat; nor could prayer, or the anguish of a distracted father, extort another word from her. It was in the chill sickness of despair that I turned away from the door, which I heard immediately and closely barred behind me; and with the wretched food and raiment I had received, hastened eagerly to the shed where my beloved child lay.

The churlish aid had been given too late: for the feeble spirit had left its clay in my absence; and I sat alone, in my agony, beside her dust, till the morning dawned.

A LEAF FROM A LOG.

We had a negro on board, of a very sullen and repulsive aspect, who bore the name of Quaco. He belonged to the captain of the schooner, who had treated him with great kindness, and cured him of that scourge of the African, called "mal d'estomac," caused by eating earth. That his cure might be completed, his humane master brought him up the river Orinoco with us, and as he had been accustomed to the kitchen, or, what is better understood in the West Indies, the cook-room, employing him as cook on board the schooner. The crew having been much fatigued with their exertions that day, the captain ordered his cook to make some good coffee, and enough for all on board. This was presently brought us: but the lad who served us as steward, an intelligent Creole youth, the moment he placed it upon the table, besought us with entreaties not to touch it, saying that he felt certain there was something in it, and that he had already cautioned the crew. The captain was inclined to treat the boy's warning as some idle suspicion, observing that the man had not been on shore, and that the medicine chest was safely locked. But nothing could pacify the boy.

"Look at it, sir," said he earnestly, "smell it, and say if it is as it ought to be."

"Why, it is rather thick," said the captain; and taking the cup in his hand, "egad! it does smell rather queer."

I inquired whether he had any test on board that might detect anything deleterious.

"True," said he, "I have a test, and a sure one;" and he reached a case from the lockers, from which he drew a brace of pistols, and very deliberately began to load them.

"What would you do?" I exclaimed. "Surely, upon such slight grounds, you would not—"

"Don't be alarmed," said he, interrupting me. "I shall do nothing rash;" and he coolly examined the flint. Having loaded and primed the weapons—"Call down Quaco and the crew."

They came into the cabin. The cook was called forward, and the crew thronged around the door.

"Quaco," said the captain, sternly, "drink that cup of coffee to the very dregs."

"I don't like coffee," said the African, drawing back in evident surprise and alarm.

"Swallow it this instant!"

The negro took a spoonful of this mixture, though trembling with fear. He held it in his mouth for a moment, and then, shuddering, spirted it out.

"Force him to take it, sir," said one of the sailors.

"He would have poisoned the whole of us," said a stout Angosturian; "St. Antonio and the saints keep us!" and he crossed himself most devoutly. The sailors made an advance as though they would have enforced the request of the former, when the captain called out—

"Stand off; let no one lay hands on him." He then emptied the cup which held the liquid into a vessel containing about a pint or more, and addressed the negro:

"Do you see these pistols? Each contains two balls. You are a guilty man if you refuse to drink that coffee which you have made, and you only choose your death; for, as God is just, your minutes are numbered. But if you drink and are unharmed by it, I will give you your freedom for accusing you unjustly. I promise it in the presence of these witnesses. Now drink it."

The negro looked as though he understood the action of his master, if he did not fully comprehend his words, for he appeared to meditate a flight on deck; but the crew seemed to anticipate his intentions, and their angry gestures plainly told him what mercy he might expect at their hands. Meantime all was as silent as death, save the clicking noise which accompanies the cocking of pistols. The negro paused; big drops of sweat poured down his dark brow like rain; his eyes

glared fearfully around, and the paleness of death was on his lips.

"Drink it this instant, you black, murderous fiend!" cried the captain, who had now no doubt of his guilt, and he levelled the pistols at his head.

The African, with a convulsive grasp, seized the jug, and, while his teeth chattered against its edge, drank every drop: then rolling his eyes frightfully, from fear or agony, sunk with a deep groan upon the floor of the cabin. A murmur of execration arose from the crew as he fell, and not one moved forward to assist the wretched man. Whether the captain thought he was hardly warranted in enforcing such summary justice, or that a slight shade of compassion came over him, he immediately endeavoured to ascertain the nature of the poison with which it was evident the coffee was drugged; but the negro either could or would not answer. We examined his chest, and sought for a clue, but without success, until one of the crew discovered a quantity of savannah flowers (*echites suberecta*), a most deadly poison, which the assassin had picked out from the refuse of the mules, the instinct of these animals always inducing them to reject it from their food. Satisfied with this discovery, we returned to the cabin, where we found the youth who had warned us in the first instance, on his knees, returning thanks to Providence for having been the means of saving us all from a dreadful death. His thanksgivings were only interrupted by the groans of the negro, who was writhing on the floor, apparently in his last agony. We prepared an emetic of white vitriol, which we forced the murderer to swallow, but it was useless. It brought on a slight vomiting; but in a few minutes he expired in dreadful tortures. Many a time since have I been haunted by that dark, agonised, despairing face, and the recollection of those dying groans!

CHARYBDIS.

OUTSIDE the tongue of land, or Braccio di St. Rainiere, that forms the harbour of Messina, lies the Galofaro, or celebrated vortex of Charybdis, which has, with more reason than Scylla, been clothed with terrors by the writers of antiquity. To the undecked boats of the Rhegians, Locrians, Zancleans, and Greeks, it must have been formidable; for, even in the present day, small craft are sometimes endangered by it, and I have seen several men-of-war, and even a seventy-four-gun ship whirled round on its surface; but, by using due caution, there is generally very little danger or inconvenience to be apprehended. It appears to be an agitated water, of from seventy to ninety fathoms in depth, circling in quick eddies. It is owing probably to the meeting of the harbour and lateral currents with the main one, the latter being forced over in this direction by the opposite point of Pezzo. This agrees in some measure with the relation of Thucydides, who calls it a violent reciprocation of Tyrrhene and Sicilian seas; and he is the only writer of remote antiquity I remember to have read, who has assigned this danger its true situation, and not exaggerated its effects. Many wonderful stories are told respecting this vortex, particularly some said to have been related by the celebrated diver, Nicholas, who lost his life here; I have never found reason, however, during my examination of this spot, to believe one of them.

LOSS OF THE ISABELLA FORBES,

CAPTAIN BRUCE, NOVEMBER 23rd, 1837.

THE *Isabella Forbes*, a fine new schooner, belonging to Perth, where she had been built only a few months previous, and commanded by Captain Bruce, sailed from Rotterdam, with a general cargo, bound for Perth. On the morning of the 23rd of November, on coming into the river, she struck on the Abertay Sands, but was driven off on the flood-tide making. It was then blowing a heavy gale of wind from the W.S.W., and as she had lost her rudder she was found to be unmanageable. A boat's crew from the North Ferry got alongside of her, but she leaked very much, and ultimately sunk in three fathoms water, upon Gaa Sands. A young man belonging to her was drowned by the swamping of a boat, but the remainder of the crew escaped.

DREADFUL SUFFERINGS OF MADAME DENOYRE.

The following narrative of the dreadful sufferings and distressing situation of Madame Denoyre, a courageous and unfortunate Creole of Cape François, in St. Domingo, cannot fail to excite the sympathy and interest the feelings of every tender and virtuous mind, and to show in fearful reality the enormous excesses which men are sometimes tempted to commit, through the base desire of gain.

M. Denoyre having resided for some time at Cape François, where he had gained the universal esteem of his neighbours, formed a design of settling at Samana, a bay in that portion of St. Domingo which then belonged to Spain, with a view of improving his condition; and this intention he communicated to

his wife, by whom it was heartily approved, and he accordingly carried it into effect.

After residing at Samana for rather more than a twelvemonth, Madame Denoyre was particularly anxious to return to Cape François, as her native air was more favourable to her health, and M. Denoyre was too fond of his wife not to accede to her wishes. With this view they embarked on board a small vessel belonging to him, with one child, about seven years of age, and another at the breast, and accompanied by a female negro servant, named Catherine. While they were preparing for the voyage, an English vessel was wrecked upon the coast; the crew, however, fortunately succeeded in reaching the shore. At Samana, there was a small French ship just ready to sail; upon which the shipwrecked men, to the number of eight, re-

DREADFUL SUFFERINGS OF MADAME DENOYRE, MARCH, 1766.

quested the Sieur Verrier, who commanded her, to receive them on board and take them either to Cape François, or Monte Christo, which he consented to; but being unable to accommodate them all, he proposed to M. Denoyre to take two of them in his vessel. One of these was the captain, whom they called John, the name of the other was Young.

M. Denoyre, who was a man of humane and benevolent disposition, received them with pleasure, supplied them with linen and articles of clothing, of which they stood in great need, and treated them with the utmost kindness; for which, in return, they expressed the most lively gratitude, promising to render all the assistance in their power to their generous benefactor.

At the beginning of March, in the year 1766, M. Denoyre commenced this ill-fated voyage, having on board two French

seamen, whom he had hired to navigate the vessel. They steered their course close in shore, and when they had arrived opposite the habitation of Manuel Borgue, which was several leagues distant from the place of their departure, the two French seamen requested M. Denoyre to put them on shore, as the assistance of the two Englishmen whom he had so hospitably received, would be sufficient; and with this request, M. Denoyre complied.

About ten o'clock on the following morning, M. Denoyre, with the assistance of the two Englishmen, set sail; and in the evening they came to an anchor, at a place called Grigri, about a league from Porto Plato, on the north coast of St. Domingo. They supped together near the shore, after which they covered the poop with palmetto leaves, and erecting a kind of awn-

ing, they placed underneath it a mattress for Madame Denoyre, her two children, and the negro to sleep upon. M. Denoyre then threw himself upon another mattress at the feet of his wife, while the two Englishmen lay down at the head of the vessel.

They slept soundly till midnight, when they were awakened by the cries of their infant daughter, and M. Denoyre arose; but after milking the goat which they had brought with them for the purpose of suckling the child, he laid down again. About three or four o'clock in the morning, his wife was disturbed by the dull sound of a violent blow, which seemed to be the stroke of a hatchet on the bed of her husband, whom she heard sigh. Trembling with affright, she awoke her black servant, crying, "Good God! Catherine, they are killing M. De-

noyre;" and at the same time lifted up the cloth which composed the awning, when John darted towards her bed, with a hatchet in his hand, and with a ferocious look threatened to kill her if she made the least attempt to rise, and unless she immediately let down the cloth, with which, from fear of his threats, she was obliged to comply, when the perfidious assassin returned to his victim, and with two more strokes dispatched him. He then spread the sails; his companion, Young, repaired to the helm, and they left the shore with the intention of steering towards New York.

At break of day the vessel was about two leagues from the shore; but Madame Denoyre was so overwhelmed with fear, that she had scarcely strength to rise from her bed. But what were her feelings at the horrid spectacle which presented itself

to her eyes, must be left to the imagination to conceive. Upon the mattress, which was floating on the water, lay extended the mangled body of her husband, while his barbarous assassin, as if to aggravate his black ingratitude, and add insult to deep and irreparable injury, addressed her with the bitterest railery. "Madam, make yourself easy, your husband is taking a sound nap." But directly afterwards he returned to her, brandishing a dagger, and furiously demanded her husband's arms, and the keys of his boxes.

Weakened by the struggle of her feelings, and alarmed for her own safety, Madame Denoyre delivered to him the keys; but after rummaging in every place with the hope of finding money, in which he was unsuccessful, he returned them to her. The disconsolate and almost heart-broken widow had as yet

shed no tears, as if the excess of her grief had dried up their source; but they now came to her relief, when bitterly reproaching the treacherous ruffian for his villainous perfidy, she asked him why he had murdered her husband, since he had no money? The assassin replied, that it was for the sake of the vessel, with which they had resolved to proceed to New York. After this, the inhuman monster appeared to relent, and offered the afflicted lady tea and chocolate; but she answered, that she wanted nothing: upon which he told her not to grieve, that he intended her no injury, but on the contrary, would land her on French ground with all her luggage. During the remainder of the day, he did not attempt to interfere with her, but left her at liberty to resign herself entirely to her sorrow. It may readily be supposed, that the approaching night af-

forded no comfort or repose to this unfortunate woman. The image of her late beloved husband, treacherously murdered by brutal villains whom he had treated with the utmost kindness, incessantly haunted her; their cruelty, their baseness, their brutality, augmented her fearful apprehensions, and rendered them still more terrible when she cast her eyes on her beloved infants. While her mind was thus occupied with the most gloomy and most afflicting ideas, she overheard the two executioners of her husband, planning an outrage which every virtuous woman dreads more than death itself. John, the infamous John, proposed to his companion that he should take the servant, while he reserved the mistress for himself; but Young refusing to comply, the villains fastened the helm and then lay down. While they were asleep, the black servant conceived the design of putting out their eyes with a nail; but fearful that they might be only feigning sleep, she relinquished the undertaking.

At the dawning of the following day, they set sail and stood out to sea, upon which Madame Denoyre inquired of them whether they meant to take her to New York. They replied, that if she wished to go to Cape François, one of them would take her thither, with the children and black servant, in the canoe which they had on board. Her anxiety concerning her future fate, the constant sight of the villain whose hands were stained with her husband's blood, coupled with her forlorn situation, and her apprehensions and grief, induced her to accept this offer; though the canoe was very small to withstand the fury of the waves, it being made out of a single trunk of a tree, after the manner of the savages of America. Having acquainted them with her resolution, John told her to pack up her linen in a bundle, as her boxes were too bulky to be removed in such a slight bark as the canoe. He himself put into it a wretched straw mattress, four biscuits, a pitcher containing about four quarts of fresh water, six eggs, and a small quantity of salt pork. John having put the two children and the black servant into the canoe, searched Madame Denoyre's pockets, where he found her husband's silver stock and shoe-buckles, which he took from her, together with the linen which she had packed up. Having at length got into the boat, she waited with impatience for the conductor that had been promised her; but to her surprise and dismay, she saw Young cut the rope by which the boat was fastened; he then repaired to the helm, while John set the sails.

Abandoned thus in the midst of the wide ocean, surrounded only by the remorseless waves, and far from any friendly shore or prospect of relief, the forlorn widow demanded assistance of her husband's butchers; she conjured them, with all the eloquence of an affectionate mother, to take compassion on her infant offspring; and when her voice failed, she continued to supplicate them with the most expressive and affecting gestures; but all in vain, she might as well have preached to the storm, or reasoned with despair; for the inhuman assassins, deaf to all her entreaties, abandoned the wretched family to its miserable fate, and were soon out of sight.

Consternation, the excess of her grief, and the danger which threatened the objects dearest to her heart, combined to reduce her to a state of almost total insensibility. Her faithful slave endeavoured by every means in her power, to recover her unfortunate mistress to a state of consciousness. She revived, but only to behold the abyss ready to receive her; to deplore the wretched situation of her beloved children, in momentary expectation of their becoming the prey of the monsters of the deep. She pressed them to her bosom, bedewed them with her tears, and every time she cast her eyes upon them, she imagined that she beheld them for the last time; and resigning herself entirely to the will of Providence, she suffered the canoe to float at the mercy of the waves.

The approach of a horribly dark night soon augmented her danger and her apprehensions; and to crown the misfortunes of this distressed family, the wind began to blow with great violence, the waves rose, and amidst their impetuous shocks, a sea broke over the canoe, washed away the biscuit and fresh water, while the attention of the wretched women was only diverted from such a misfortune by the fear of being engulfed by a wave still more tremendous. But it is impossible for lan-

guage to describe the dreadful and protracted horrors of this terrible night.

The long wished-for dawn at length arrived, and brought calmer weather, but no other consolation. As far as the eye could reach they beheld nothing but the broad expanse of sky and water, and were totally ignorant of which way to direct their course. In this desperate situation, Madame Denoyre did not cease to implore the assistance of Divine Providence—the only refuge and support of the unfortunate.

In this miserable manner they passed seven days and seven nights, exposed to all the inclemencies of the weather, and without drink or food of any kind, with the exception of a little salt pork. Exhausted with fatigue, the enfeebled mother was every moment losing the little strength she had left; but even in this condition, the idea of a speedy death was less terrible than the deplorable state of her children. In quitting them she was desirous of giving the most precious mark of maternal affection, and was on the point of opening a vein, that she might, with her own blood, prolong the life of the little innocent, who was closely pressed to her bosom, when Catherine discovered a distant sail.

This joyful intelligence infused new life into Madame Denoyre, who was almost exhausted; and both the women shouted and made signs. They soon perceived that their signals were seen, and that the vessel was standing towards them; but a new difficulty now presented itself, and intervened between them and their hopes of safety. The waves broke with such force against the ship, as to render them apprehensive that the canoe would be swamped if they attempted to get on board. However, by the prudence and skill of the captain of the vessel, the widow, the children, and the black servant, were all safely taken on board. The vessel safely arrived in the road of New Orleans, the place of her destination, where Madame Denoyre had the good fortune to find a near relation, M. Rougeot, a notary, who received her and her family, rescued as they were from the tomb, with the greatest joy and affection.

The inhabitants of Louisiana, affected by the sad tale of her misfortunes, generously raised a subscription for the relief of this unfortunate lady. She gave her liberty to Catherine, the faithful companion of her distress; but that female, touched with the gratitude of her mistress, refused to leave her, declaring that nothing but death should part them.

The above facts were attested by Madame Denoyre, before the proper officer at New Orleans, to whom she likewise gave a description of her husband's assassins. Inquiry was made at New York, concerning them; but whether they perished by the just judgment of Providence, or found means to escape detection, was never ascertained.

WRECK OF THE FRANCES MARY,

4TH FEBRUARY, 1826.

"Down on the vale of death, with dismal cries,
The fated victims, shudd'ring, roll their eyes."

The following affecting account is given of the wreck of the Frances Mary, in a narrative of a voyage of H.M.S. Blonde:—

On the 28th of January we left St. Helena, and on the 27th of February we crossed the line, where we experienced nearly three days of calm; after which we continued our course, favoured by the north-east trade wind, until the 7th of March, when one of those affecting incidents occurred which surpass, in horrible interest, all that invention has ever produced to move the sympathies of man. The morning was squally, but about noon it cleared up, and the ship's place was ascertained to be in latitude 44° 18' N. and longitude 23° W. About four o'clock, p.m., a strange sail was reported, and though, from the haziness of the weather, she was but indistinctly seen, it was perceived that she was in distress. Our course was immediately altered, and we steered directly for her, being distant about nine miles. As we neared her, she proved to be in distress indeed: she was a complete wreck, and water-logged, but, being laden with timber, had not sunk. Her dismantled rigging indicated how severe had been her struggle with the elements. Her foremast was carried away, but part of her bowsprit and the stump of her main-topmast were still standing,

and a topsail-yard was crossed, to which a few shreds of canvass were still hanging. An English jack reversed was attached to the main rigging, and the mizenmast was partly gone. The sea had cleared the decks of everything. We all now felt the greatest anxiety to reach her. The evening was closing in, with every sign of an approaching gale. Thick squalls had already once or twice concealed from us the object of our pursuit; but at length we came near enough to discern two human figures on the wreck, and, presently, four others came out from behind the remnants of a tattered sail, which hung from the main rigging, and which had, as it appeared, been their only shelter from the weather.

It was late ere our boat reached the wreck, where she remained long; and, as the weather was growing worse, and the night dark, we fired a gun to hasten her return. No words can describe the wretched state of the poor creatures she brought when she did come. Two women and four men were sent up in the arms of the sailors, evidently suffering in the last stage of famine. They were immediately carried below, and supplied with small quantities of tea and bread, then stripped of their wretched clothing, washed, and put to bed.

Meantime the officer reported the condition in which he had found the wreck. It appeared to have been thirty-two days in the state in which he saw it, during which time most of the crew had died, and the rest had only preserved life by feeding on their late companions. When the officer went on board, the two women rushed towards him, kissed his hands, and hailed him as a deliverer. The men, stupefied, as it appeared, with suffering, scarcely spoke, but hastily gathering their tattered clothes round them, hurried towards the boat. The master of the vessel, his wife, a female passenger, two middle-aged men, and one young man, were all that survived of seventeen. One of the women, when brought on the Blonde's deck, fell on her knees and exclaimed, "Great God, where am I? is it a dream?" but it was not until the next day that we heard the particulars of their sad story.

As the night came on, it began to blow fresher and fresher, and ere morning the weather was violent enough to have destroyed these poor creatures, had they remained upon the vessel; but as day advanced the wind again moderated, and the master of the vessel, being somewhat recovered, gave the following account of the wreck:—

About the end of January, 1826, the ship *Frances Mary*, laden with timber, sailed from New Brunswick for Liverpool. From the very beginning of her voyage she had experienced tempestuous weather. On the 4th of February, the main-topmast having been carried away, she had become almost unmanageable, and they therefore cut away her foremast in order to bring her to the wind. Before that she had been scudding. While in the act of cutting away the mast, a heavy sea broke over her stern with a dreadful crash, forced in the cabin windows, unshipped her rudder, and in a moment left her a helpless wreck. Wave after wave now swept over her, and the crew and passengers took refuge in the maintop. One of the number, an elderly man, died that night; next day, the weather having moderated, the rest came down from the top, and endeavoured to get at some provisions, but nothing but a few pounds of biscuit could be obtained, notwithstanding every effort they could make to hook up some of the stores from between the timbers. On the fourth day, to their great joy, they perceived a sail bearing down towards them, under American colours. She soon came within hail, and offered to take them on board, provided they could make a raft to go to her; but the sea was still running so high, that she was fearful of lowering a boat. The wretched sufferers had neither tools nor materials to construct a raft, even if they had retained strength to do it. However, this American staid by them two days, evidently anxious to assist them if possible. She was once separated from them by the violence of the gale; but, on rejoining them, came so near that two of the people on the wreck proposed to swim to her, if she would then lend her boat to save the rest. The proposal was perhaps unheard—it was certainly unanswered; and shortly afterwards the American bore up, and the wretched crew of the *Frances Mary* were once more left to their fate, amidst feelings to which no words can give a name.

A few days afterwards their hopes were again raised, only to be again disappointed, by the approach of another American vessel, under the same circumstances; for she also, with a bare expression of pity, sailed away. Now the sufferers abandoned all hope of being saved. Ten days had elapsed since their ship became a wreck, and their scanty store of biscuit was exhausted. During this time, besides the evils of cold and hunger, they had had the discomfort of being frequently obliged to lash themselves to the remaining rigging to save themselves from being washed overboard.

As their numbers thinned, each thought, but dared not yet speak, of one means of sustaining life. On this day, the tenth of their misery, they looked at each other as they were committing a body to the deep—and it appeared as if each had understood the look; but still another, an old man, died—and again they forbore. That same night, however, a boy expired, and famine forced them to the unnatural food.

The women bore these complicated evils better than the men. The young passenger, in particular, did, as they all confessed, contribute most of all to save such as did survive. Engaged to marry the ship's steward on reaching England, she had the misery of seeing him expire before her—the still greater misery of reflecting, in after-life, that the frenzied love of existence that extreme famine is known to excite, forced her, with her companions, to the horror of deriving life from his death; yet she kept up the spirits of her companions; she daily called upon them to pray with her: she portioned out their unnatural food; and robbed their misery of half its horror, by her confidence in Providence, and her decency of conduct even in that wretched time.

It is repugnant to lay open such shocking tales of human misery as seem to degrade man, and display a state in which his animal cravings get the better of his moral sense; we will, therefore, forbear to dwell on the further particulars of this sad story; suffice it to say, that the patients all recovered, and with their bodily strength their gratitude increased. At first they seemed insensible to the horror of their tale, and had related it without reserve, but, as their powers returned, they seemed horror-struck at the remembrance of what their dreadful sufferings had compelled them to have recourse to for the preservation of life.

The wreck of the *Frances Mary* continued to float until the summer of 1826, when it was fallen in with by H.M.S. *Diamond*, on her passage from Brazil to Lisbon; and Captain the Right Honourable Lord Napier having placed some volunteers on board the wreck, she was, with great difficulty, taken to St. Mary's in the Azores. On his lordship's arrival there, she was so far refitted, under his direction, as to be enabled to perform her voyage home with safety, and most of her cargo was preserved.

MISFORTUNES OF CAPTAIN LYON.

THERE are some persons who, in the course of life, seem particularly subject to misfortune, and borne to endure a more than ordinary share of those casualties and sufferings to which all are liable. This is wonderfully exemplified in the life of one of the bravest and most able officers of modern times, Captain Lyon. This gentleman, after having spent some time in our service on the coast of Africa, was appointed to command part of the expedition to the North Pole: in both, however, he confined not himself to the mere duties of his appointment. Two able works have been given to the public, briefly and manfully relating the occurrences of both those services. Possessing the finer accomplishments of a traveller, still his claims as an able and experienced officer were great, and he had a right to employment: he did get employed—he was sent to explore that part of the northern continent of America, the very name of which almost traditionally told of the danger. No words can better paint the heroic virtues of those composing this expedition, than his own, in describing the night of the 1st of September, 1824. He says, "Although few or none of us had any idea that we should survive the gale, we did not think that our comforts should be entirely neglected, and an order was therefore given to the men to put on their best and warmest cloth-

ing, to enable them to support life as long as possible. Every man, therefore, brought his pack on deck and dressed himself; and in the fine athletic forms which stood exposed before me, I did not see one muscle quiver, nor the slightest sign of alarm. The officers each secured some useful instrument about them, for the purpose of observation, although it was acknowledged by all that not the slightest hope remained. And now that everything in our power had been done, I called all hands aft, and to a merciful God offered prayers for our preservation. I thanked every one for his excellent conduct, and cautioned them, as we should, in all probability, soon appear before our Maker, to enter his presence as men resigned to their fate. Noble as the character of the British sailor is always allowed to be in cases of danger, yet I did not believe it possible, that among forty-one persons, not one repining word should have been uttered. Each was at peace with his neighbour and all the world; and I am firmly persuaded, that the resignation which was shown to the will of the Almighty was the means of obtaining his mercy." Could such a scene as this pass and be forgotten?

It is said that he offended the Admiralty for daring to say his ship was not adapted for such an expedition; and holding such an opinion as this, he must have felt that the lives of his men had wantonly been exposed and Providence challenged; but the great will not bear to be told truths, and nautical talents and commanding abilities, have but little influence with those who love dishonest flattery, and who select, as their supporters, men who can extol their errors into virtues.

Captain Lyon's chance of appointment in the service being now but small, he accepted a situation in one of the Mexican Mining Companies, and proceeded to the place of his appointment with his newly-married bride, a lady of great beauty and equal accomplishments. After a tedious passage down the channel, he was wrecked off the coast of Cornwall, and lost all his property. Reluctantly obliged to leave his wife in England, whose constitution appeared to suffer from the fatigues and dangers of a sea voyage, he proceeded to America; returning home in the packet-ship Panther, he was wrecked at Holyhead, again losing everything, including his journal, charts, and plans of the mines, &c. But his misfortunes did not rest here: a few hours after being on shore, he received the distressing intelligence of his wife's death.

EXTRAORDINARY ESCAPE

OF CAPTAIN FREEMAN, AND FIVE OTHER MASTERS OF SHIPS,
FROM A DANISH PRISON, IN 1808.

CAPTAIN FREEMAN, of the ship Moxton, of Hull, having been captured by Danish gun-boats, in 1807, had been confined in the prison of Helsterburg, in North Jutland, with about twenty other masters of vessels, five of whom, namely—John Davidson of Sunderland, John Kidd of Arbroath, David Raft, and Daniel Stewart of Dundee, John Millar of Kirkaldy, and himself, effected their escape, on June 20th, 1808, in the evening, by rolling themselves down the bank of the field in which they were permitted to walk, and thus eluding the vigilance of their guards. After two nights' travelling towards the westward, and hiding themselves in the corn by the day, they reached the sea-shore near Bovenbergen, where they found a boat about thirty feet long by seven feet broad; they immediately put to sea in this boat, the whole of their stores consisting of about a gallon of water and the small quantity of bread they had brought away in their pockets; they had neither compass nor sails, but they managed to supply the latter deficiency by six spare shirts, which they took to pieces, and sewed them together with the yarn of their stockings. Being so poorly supplied, it was necessary to be very economical of their provisions, which they were, by restricting every man to an allowance of half a penny loaf of bread a day, and a tea-cupful of water night and morning. On the second day they were fortunate enough to find a haddock floating on the sea, which they divided among them. They were compelled to steer along at no great distance from the shore, as the weather was at times

very foggy, and they intended, if possible, to make for Heligoland.

On the evening of the 26th, they ran within a small island, and two of them landed on the continent, to endeavour to replenish their exhausted stores of food and water, and for that purpose started to a house about a mile distant from the shore; but had not gone far, when they were chased back by two French dragoons, and were glad to regain their boat and put off from the inhospitable shore. They made for the island, and lay-to near it during the night, but in a most pitiable state, as they had not tasted water for sixteen hours, and their throats were so affected by intolerable thirst, that they could not swallow a morsel of bread; but fortunately it began to rain, when they contrived, by the help of their shirts and sail, to collect about a gallon of dirty water, which proved a seasonable relief, and prevented them from delivering themselves up to the enemy, which otherwise they must have been compelled to do, to save themselves from perishing by starvation.

On the afternoon of the 27th, after suffering severely from the cold and rain, the weather having proved so unfavourable, and their stock of provisions being nearly exhausted, they made Newark Island, and ran past it to within about half-a-mile of the shore, where they laid-to with the intention of landing in the evening, to endeavour, if possible, to procure a fresh supply of water, of which they stood so much in need; but the fatigues and privations they had undergone had so exhausted them, that they fell asleep, and were awakened by a Cuxhaven fisherman, who had waded to them from the shore; and having heard their case, advised them by all means to put off again immediately, as otherwise they would be in imminent danger of being made prisoners by the French, and recommended their landing at Newark Island, as there were no troops there. They accordingly landed near a single house, where they replenished their bottles with water, but they could not prevail upon the inhabitants to supply them with a morsel of bread.

On the morning of the 28th, about one o'clock, they put off again from the island, and proceeded on their voyage, and about seven o'clock the same evening they got on board a vessel which was lying on the banks to the eastward of the Elbe, and loading shells for Hamburg. On board this vessel there were only two men, who supplied them with water, about two pounds of bread, and a small compass. They left this vessel at about two o'clock the next morning, and about seven o'clock on the morning of the 30th, to their inexpressible joy, they came in sight of Heligoland; and after rowing the whole day against a heavy N.W. sea, and a smart breeze of wind, they succeeded in gaining the shore about eight o'clock in the evening, and were cordially received on the beach by several hundreds of the inhabitants, who heartily congratulated them on their providential deliverance.

Governor Hamilton, and the rest of the officers and council, treated them with uncommon kindness, and showed them every possible attention, supplying them with everything which their exhausted state rendered necessary, and which contributed to their speedy restoration to health and strength.

On July 4, Captain Freeman and Captain Davidson left Heligoland in a Papenburg vessel, and in a short time arrived safely off Yarmouth; the others remained till about the 10th, when they departed in some vessels belonging to Leith, where they subsequently arrived, with heartfelt gratitude to that Providence which had so singularly delivered them from captivity, and safely conducted them to their homes.

REFLECTION AT SEA.

SEE how, beneath the moon-beam smile,
Yon little billow heaves its breast,
And foams, and sparkles for a while,
And murmur'ing then subsides to rest.
Thus man, the sport of bliss and care,
Rises on time's eventful sea;
And having swelled a moment there
Thus melts into eternity.

LOSS OF HIS MAJESTY'S FRIGATE THE ETHALION, OF 38 GUNS,

Commanded by Captain John Clarke Searle, which was wrecked on the coast of France, December 24, 1799.

The following narrative of the loss of the Ethalion, is taken from Captain Searle's own account of the melancholy disaster, which, in the midst of his most indefatigable exertions to serve his country, not only obliged him to abandon his laudable intention, but consigned to destruction the vessel from which he had fondly flattered himself to derive both honour and reward.

On December the 24th, at four p.m., Point le Cleure bore S.E. by E. about three or four leagues; they were then standing off and on off St. Matthew's, with an intention of beating to windward in the morning, to reconnoitre the position of the enemy's fleet; a service which they were particularly anxious to perform, as no opportunity for that purpose had occurred since December 18, when the Fishguard, Ethalion, and Sylph, were all driven off the coast by a hard gale of wind, and they were aware that by that time the Fishguard could not have regained her station. At eight o'clock the captain gave the usual necessary directions and precautions to the officer of the watch, and to the pilot, for keeping the ship in a proper situation during the night; with instructions to inform him if any change of wind or weather took place, and whenever the pilot wished the ship to be put on the opposite tack; and also at the end of each watch, as was the custom every night, to acquaint him with the situation of the ship, with respect to her distance from the land. St. Matthew's light then bore E. by N. about three leagues, the ship standing to the southward under her treble-reefed topsails, fore-topmast staysail, and mizen staysail, with the wind S. E., and lying up S.S.W., going a knot-and-a-half. At half-past ten, by desire of the pilot, she again wore. At twelve, the light bore N.E. by E. about three or four leagues, at which time there was not much wind; the captain directed a reef to be let out of the topsails and the jib to be loosed, to be in readiness to make sail at a moment's warning. At half-past one a.m., the light bearing E.N.E. between six and seven miles, by the desire of the pilot she wore again, with the intention to stand to the southward till four o'clock, as there was but little wind; but at ten minutes past three, although the ship had not gone more than two miles since she wore, and the light was then in sight, bearing N.E. by E., although the night was very dark, the rocks were discovered close ahead; and in attempting to wear clear of them, the ship struck. All hands were immediately turned up, and the pumps got to work, and the boats got out; the master was sent to sound, the water was started, the guns were thrown overboard, and every possible exertion used to get the ship off. At four she struck very hard, and knocked away the stern-post, when signals of distress were made to the Sylph. At six she fell over on the starboard side, and bilged. At daylight they saw the Danae, Sylph, and Nimrod, cutter, and made the signal for boats to assist; it was then resolved to send away the idlers and first division of seamen in their own boats, to the Danae, Sylph, and Nimrod, as they found she had bilged in several places, and parted on the starboard side, amidships, and that it was impossible to save any of the stores. At nine Lord Proby came on board, also another boat from the Danae, followed by one from the Sylph. The water was now over the lee gunwale, and the greater part of the stern totally under water, and very difficult and dangerous for boats to approach the wreck, owing to the great surf amongst the rocks. At eleven, having got all the people out of the ship, the captain ordered the first-lieutenant to set fire to her remains, and Mr. Ballinghall, the master's-mate, cut away her lower masts, which disagreeable duty being performed, and he had seen all the commissioned officers and master into the remaining boat, he was under the painful necessity of abandoning her. To those only who have experienced a similar misfortune, can the anguish of his feelings, during this unfortunate affair, be sufficiently apparent. It appeared, on after examination, that they were at the time of the accident full eighteen miles from the light of St. Matthew's, although both captain, master, and pilot, did not believe it possible that a light could be seen so distinctly at that distance.

LOSS OF THE BRIG SALLY, CAPT. TABREY, IN 1767,

Bound from Philadelphia to Hispaniola, and the extraordinary distresses which the surviving part of the Crew endured.

On August 8th, 1767, while in latitude 23°, longitude 69° 40', having a strong gale of wind, the brig Sally was laid to under her main-staysail, till ten o'clock the next morning, when she was hove on her beam-ends, and, in less than five minutes, turned keel upwards, so that they had only time to cut away the lanyards of her mainmast. There were on board Anthony Tabry, master; Humphry Mars, mate; Joseph Sherver, Samuel Bess, John Burne, mariners, who were drowned; and six other mariners, viz., Peter Foy, Daniel Cuitain, John Davis, Alexander Landery, Peter Mayes, and William Hammon; who, having got hold of the topmast, which floated alongside, lashed it to the stern, and supported themselves by it till about five o'clock in the evening, when the cabin-boy swam to the hull, and threw them a rope, by which they got on the bottom of the vessel, where they were still in a dismal plight, as the first want which invaded them was drink, and this drove away all thought of meat.

As the lanyards had been cut away, the mainmast, with all the rigging, came up alongside, from which they got the wreath, a square hoop which binds the head of the mast; with which and a bolt, of a foot in length, they went to work on her bottom, and in the mean time endeavoured to keep their mouths moist, as well as they could, by chewing the stuff off her bottom, (not having any barnacles, as she had lately been cleaned), and some lead which was on her bow; occasionally drinking their own water. On the fourth day Peter Foy died, raving for drink, and the next day they threw his body off the vessel. In this manner did they work for six days, without food, drink, or sleep, not daring to lie down, for fear of falling off the vessel; but on the sixth day they made a hole through her bottom, and found a barrel of bottled beer, which they drank very greedily, and soon after got another parcel, when one of them put the others upon allowance.

On the eleventh day, they got a barrel of pork, which they were obliged to eat raw. As to sleep, as soon as they got a hole through the vessel's bottom, they pulled out a great number of staves and shingles, with which they made a platform in the same place, but it was so small that, when they wanted to turn, they were obliged to wait till the sea hoisted the vessel, and when she fell again with the sea, they were almost frozen to death. Thus did these poor miserable fellows live for thirteen or fourteen days. After they had got the pork they made a kind of net with a hoop, some shingles, and ropes, which they got from the mast; this they let into the sea with some pork, and caught a few small fish, which, with two or three mice, they caught on board the brig, afforded them several most delicious repasts, raw as they were; this lasted but a few days, as they could not catch any more, and then they were obliged to return to their pork, which was become quite putrid; by the salt water getting to it.

On the 1st of September, at four o'clock in the afternoon, being in lat. 26° 15', long. 70° 10', to their great joy, they discovered a vessel to windward of them, which seemed to stand some time for them, but soon put about and stood from them; it was then they despaired, as that morning they had drunk their last bottle of beer; and that one was all that they had; for that day they worked hard to get at the casks of water in the hold, but they were so far from them that they could not get at them for a long time; however, about half-an-hour before sunset, the vessel they had seen again stood for them, and came so near that they perceived a piece of canvass which they on the wreck supported on a board, bore down for it, and, about half-past seven o'clock, took them on board: this was the brig Norwich, Captain Robert Noyes. Thus, when death stared them in the face, were they providentially relieved by a captain who used them very kindly, gave them food and clothes, as their own were rotted off their backs, washed their sores, and gave them plasters, as they were almost raw from head to feet with the heat of the sun and salt-water, and which, in many places, had eaten holes into their flesh.

LOSS OF HIS MAJESTY'S SHIP ROMNEY,

Hon. Capt. Colville, on the South Haak, off the Texel, Nov. 19, 1804.

THE following is an extract from a letter from the Hon. Capt. Colville, dated Helder, North Holland, Nov. 21, 1804, giving a concise, but satisfactory, account of the calamitous disaster attending the Romney:—

"It is with feelings of sincerest regret, of which I feel but little capable of expressing, that I sit down to discharge the painful duty of acquainting you with the total loss of his Majesty's ship, the Romney, on Monday, the 19th inst., off the Haaks, on the S.W. part of the sand, owing to the mistake of the pilots, although regular soundings had been taken on our run from Yarmouth, whence we sailed at nine a.m. on the preceding day.

"A few minutes before the ship struck, I felt confident that we were on the edge of the Broad Fourteens; and having then sounded, they proposed standing in as we were, viz., with double-reefed topsails, and fore-topmast staysail set, with the wind at S.S.W., until they should be in ten or eleven fathoms: to this I objected, as, from the unsettled appearance of the weather, and the thickness of the fog, I deemed it imprudent to approach the shore in quest of Rear-Admiral Russell, to whom I was proceeding, in conformity with my orders. We were, accordingly, in the act of wearing, when a large ship, apparently at anchor, was discovered through the fog, bearing E. by N. We then stood towards her, to make her plainly, but had not proceeded more than four or five minutes on that course, when we perceived her to be a large merchantman on shore. The pilots then wished to haul her off, on the larboard tack, but before the ship could be brought to the wind, she struck. The wind continued to increase, the fog being again very great, and a heavy sea got up; the ship struck so hard as to cause her to make so much water, that in a short time all hopes of saving her were at an end. There then remained but the hope of saving to his Majesty's service the officers and crew. In that hope I have been disappointed, from a combination of unfortunate circumstances, and more especially from none of our cruisers being attracted to us by the guns we fired, and which I flattered myself would have been the case yesterday, as the weather was clear.

"That every possible exertion was made to lessen the calamity after having struck, I trust will appear from the minutes. It will be a great consolation to myself and officers to know that they have that effect. Under the uneasiness of mind which the loss of the ship I had the honour to command must naturally occasion, I feel some alleviation in reflecting upon the zealous, active, and orderly conduct of my officers and crew, in circumstances the most trying, and in which they endured the severest hardships with cheerfulness, and in perfect reliance on Divine Providence, whose interposition in our behalf was strongly evident.

"When the ship floated a little, she was, by letting go the bower-anchor, brought to swim her head to the wind, which enabled her to hold together, and so bore her through the horrors of the night, which we certainly should not otherwise have survived.

"We have experienced from the Dutch Admiral, Kirkhart, every attention that our distressed situation made so necessary, and which his disposition seems incapable of withholding, even from an enemy; but the wants of my fellow-sufferers are great, for not an article of clothing, or any thing else, was saved by any one from the general wreck. I hope the Dutch government will be disposed to alleviate, in some degree, their wants, particularly in clothing, and I have solicited the assistance of Rear-Admiral Russell in obtaining these necessities.

"I have reason to believe that we shall be sent to Amsterdam until exchanged.

"The crews of the launch and jolly-boat, who had been found to bear up for the Texel, joined me here this day. The barge was swamped alongside. One cutter, in returning from her attempt to bring to our assistance a galliot, who passed us heedless of our distress, was driven among the breakers on the Haaks, and overset. The other cutter, equally unsuccessful in an attempt to bring to us a schuyt that was to leeward, was

under the charge of Lieutenant Baker, who, unable to regain the ship, judged it most prudent to bear up for the Texel, in hopes of obtaining assistance for us; which, however, the state of the weather did not allow of being afforded that night."

Nine seamen were drowned, and thirteen others, who left the wreck upon a raft of timber, were picked up by one of our cruisers, and safely lodged on board the Eagle: the remainder who were saved became prisoners on shore at the Texel.

REMARKS ON THE SEA.

"The sea—the sea—the open sea!

The blue, the fresh, the ever free!

Without a mark—without a bound—

It runneth the earth's wide regions round,

It plays with the clouds—it mocks the skies;

Or like a cradled creature lies!"

THE mean depth of the sea is, according to La Place, from four to five miles. If the existing waters were increased only by one-fourth, it would drown the earth, with the exception of some high mountains. If the volume of the ocean were augmented only by one-eighth, considerable portions of the present continents would be submerged, and the seasons would be changed all over the globe. Evaporation would be so much extended, that rains would fall continually, destroy the harvest, and fruits, and flowers, and subvert the whole economy of nature.

There is, perhaps, nothing more beautiful in our whole system than the process by which the fields are irrigated from the skies—the rivers are fed from the mountains—and the ocean restrained within bounds, which it never can exceed so long as that process continues on the present scale. The vapour raised by the sun from the sea, floats whenever it is lighter than the atmosphere; condensed, it falls upon the earth in water; or, attracted to the mountains, it gathers on their summits, dissolves, and perpetually replenishes the conduits with which, externally, or internally, they are all furnished. By these conduits the fluid is conveyed to the rivers which flow on the surface of the earth, and to the springs which lie deep in its bosom, destined to supply man with a purer element.

If we suppose the sea, then, to be considerably diminished, the Amazon, and the Mississippi, those inland seas of the western world, would become inconsiderable brooks; the streams would wholly disappear; the atmosphere would be deprived of its due proportion of humidity; all nature would assume the garb of desolation; the bird would droop on the wing, the lower animals would perish on the barren soil, and man himself would wither away like the sickly grass at his feet.

He must indeed be incorrigibly blind, or scarcely elevated in the scale of reason above the monkey, who would presume to say, or could, even for a moment, honestly think when duly informed on the subject, that the machinery by which the process of evaporation and condensation has been constantly carried on upon earth for so many centuries, exhibits no traces of Divine science and power, and especially of benevolence towards the countless beings whose subsistence and happiness absolutely depend upon the circumstance of the waters of the ocean, earth, and air, uniformly preserving the average of their present mutual proportions.

LOSS OF THE INDIAN CHIEF.

Captain M'Donald, on the Blackwater Bank, November 19th, 1837.

THE ship Indian Chief, commanded by Captain M'Donald, sailed from Liverpool, on Wednesday, November 15th, 1837, bound for the Mauritius. On the 19th, being off the coast of Wexford, in Ireland, she struck on the Blackwater Bank, about four o'clock in the morning; and as she had about fourteen feet water in the hold, the crew left the vessel, which drifted off about ten o'clock, and continued to float until four in the afternoon, when she sunk about two leagues S.E. of Arklow lightship. Several boats put off to the vessel with the endeavour to rescue some part of the valuable cargo, which was of bale goods, and valued at £80,000; but one of the boats was engulfed with her, and the crew, six in number, perished.

LOSS OF H.M.S. ANSON, DECEMBER 28th, 1807.

His MAJESTY's frigate Anson, of 40 guns, Captain Lydiard, sailed from Falmouth on the 24th of December, 1807, to resume her station off Brest. As it blew very hard from the W.S.W. she was not able to get so far to the westward; however, Captain Lydiard persevered in his endeavours until the 28th.

On the morning of that day they made the Isle of Bas, on the French coast, which they had seen the preceding evening. There being now every appearance of bad weather, Captain Lydiard determined to return to port, and accordingly shaped a course for the Lizard, the gale still increasing, and it coming on very heavy. About three, p.m., the land was seen about five miles west of the Lizard, but at the time not exactly known, as many opinions were expressed as to what land it was then in sight; the ship was wore to stand off at sea, but had not long been on that tack, before the land was again descried right ahead.

It was now quite certain that the ship was embayed, and every exertion was made to work her off the shore; but finding she lost ground every tack, she was brought to an anchor in twenty-five fathoms, at five, p.m., with the best bower-anchor veered away to two cables' length. By this anchor the ship rode in a most tremendous sea, and as heavy a gale as was ever experienced, until four, a.m., of the 29th, when the cable parted. The small bower-anchor was then let go, and veered away to two cables' length, which held her until eight, a.m., when that also parted; and, as the last resource, in order to preserve the lives of as many as possible, the fore-topsail was set, and the ship run on shore, on the sand which forms the bar, between the Loe Pool, about three miles from Helstone and the sea. The tide had ebbed about an hour when she struck; on taking the ground, she broached-to with her broadside to the beach, and most happily heeled in to the shore: had she, on the contrary, heeled off, not a soul could have escaped alive.

Now commenced a most heart-rending scene to some hundreds of spectators, who had been in anxious suspense, and who exerted themselves to the utmost, at the imminent risk of their lives, to save those of their drowning fellow-men. Many of those who were most forward in quitting the ship lost their lives, being swept away by the tremendous sea, which entirely went over the wreck. The mainmast formed a floating raft from the ship to the shore, and the greater part of those who escaped, passed by this medium.

One of the men saved stated, that Captian Lydiad was near him on the mainmast; but that he seemed to have lost the use of his faculties with the horror of the scene, and soon disappeared.

At a time when no one appeared on the ship's side, and it was supposed the work of death had ceased, a dissenting minister, hazarding his life through the surf, got on board, over the wreck of the mainmast, to see if any one remained. Some honest hearts followed him. They found several persons still below, who could not get up; among whom were two women and two children. The worthy preacher and his party saved the two women and some of the men, but the children were lost.

About two, p.m., the ship went to pieces, when a few more

men emerged from the wreck. One of these was saved. By three o'clock no appearance of the vessel remained.

To the above account, we subjoin that of Captain Lydiard's steward, who was more immediately about his person, and very correct in his observations.

"On the 27th of December, cruising off the Black Rocks, and perceiving the approach of a gale, kept a look out for the commodore in the Dragon. The next morning (Monday), the gale increasing from the S.W., and not perceiving the Dragon in any direction, at nine o'clock shaped our course for the Lizard, with a view of getting into Falmouth. At twelve o'clock, all hands upon deck, the sea running very high; two bow-ports on the starboard-side washed away by the violence of the sea, also a port abreast the mainmast, by which means she shipped a great deal of water.

"The captain sent for the master at this time to determine the situation of the ship; and, at half-past twelve o'clock, or thereabout, land was seen about two miles distant; but, from the extreme thickness of the weather, they could not ascertain what part. Captain Lydiard ordered the ship to be wore to the S.E., not thinking it safe to stand in any nearer, under such circumstances of weather. Soon after one o'clock, the master wished him to run in again and make the land, which was supposed to be the Lizard, and that if we could make it out, we should get into Plymouth. Captain Lydiard asked if it could be done without risk; he, (the master) said, he thought it could.

"The ship was then wore, but the weather still continuing thick, we had a cast of the lead, and, having twenty-seven fathom, we were convinced we must be to the westward of the Lizard, and immediately wore ship again, and made all sail. Soon after three o'clock, as the captain was going to dinner, he looked out of the quarter gallery, from whence he saw the breakers close to us, and the land a long distance ahead. The ship was wore instantly, and Captain Lydiard's mind made up to come to an anchor; for had we kept under weigh, the ship must have struck upon the rocks in a few hours. The top-gallant masts were got upon deck, and she rode very well until four o'clock on Tuesday morning, when the cable parted. The other anchor was immediately let go, and the lower yards and topmasts struck. At day-light the other cable parted, and we were then so close to the land, that we had no alternative but to go on shore, when Captain Lydiard desired the master to run the ship into the best situation for saving the lives of the people; and, fortunately, a fine beach presented itself, upon which the ship was run. Shortly after she struck, the mainmast went, but injured no one.

"Captains Lydiard and Sullivan, with the first lieutenant, were resolved to remain with the ship as long as possible: many people were killed on board. The first lieutenant and a number of others were washed overboard. It was the captain's great wish to save the lives of the ship's company, and he was employed in directing them the whole of the time. He had placed himself by the wheel, holding by the spokes, where he was exposed to the violence of the sea, which broke tremendously over him; and, from continuing in this situation too long, waiting to see the people out of the ship, he became so weak, that upon attempting to leave the ship himself, and being impeded by a boy who was in the way, and whom he endeavoured to assist, he was washed away and drowned."

This unfortunate officer might be truly said to have sacrificed his life to the high sense of duty, which, at all times and on all occasions, determined his conduct. His body being found, was interred with military honours at Falmouth, attended by Admiral Sir Charles Cotton and General Spencer, with all the navy and military officers of the expedition at that port, the captains of the packets, and the mayor and corporation of the town; and was afterwards removed to his family vault in the parish church of Haslemere, Surrey.

The men who survived were conveyed to Helstone, about two miles distant, where they were taken care of by the magistrates, and afterwards sent to Falmouth in charge of the regulating captain of that port.

Among the officers saved, were Captain Sullivan, a passenger; Messrs. Hill and Brailey, midshipmen; and Mr. Ross, assistant-surgeon.

LOSS OF THE ROTHSAY CASTLE.

THE Rothsay Castle, steam-packet, left the pier-head at Liverpool, on the morning of Wednesday, the 17th of August, 1831, bound for Beaumaris. Her passengers on this occasion, consisting, as usual, of those who sought relaxation from the toils of business in the pursuit of laudable pleasure. Most of them were strangers at Liverpool, having come from the adjoining districts on an excursion to Wales, and by far the greater number of them were women and children. Their hearts, no doubt, were light with gaiety, and their eyes sparkling with the fond hope of anticipated pleasures, which they naturally thought awaited them. Poor things! how little

did they dream of the sad fate which so soon was to overwhelm them.

The steamer, being in the river for more than an hour, occupied in taking in passengers, it was twelve o'clock before she got clear of the light-house. The storm of the morning had passed, but the wind was still blowing very fresh, and a considerable sea running, which caused very great alarm among the passengers; and their fears were increased by the tremulous motion of the steamer, which was anything but seaworthy, even in calm weather and smooth water, and was now rendered doubly dangerous by the strong tide which she had to stem after passing the rock.

Indeed she appeared so crazy and weak, that Mr. Varney of

THE LOSS OF THE ROTHSAY CASTLE, STEAM VESSEL, AUGUST 17TH, 1831.

Bury, in common with others who were greatly alarmed, went down to the cabin where the captain was at dinner, and earnestly requested him to put back, as they had great fears for the safety of the vessel; but so far from paying any attention to their entreaty, or even treating them with common courtesy, he replied, "I think there is a d—d deal of fear on board, and very little danger. If we were to put back with passengers, it would never do—we should make no profit." It may be observed, that the captain was at this time intoxicated. The sea still continued very rough, and the vessel made so little progress, that for more than three hours she remained in sight of the floating light. The excessive motion of the vessel, combined with increasing fears for their safety, had such an effect on most of the passengers, that they became extremely ill, and again earnestly entreated the captain to put back; but

he still obstinately refused to accede to their request: he also declined to make signals, although he was repeatedly asked to do so.

Soon after night-fall, and just previous to her being off the Great Orm Head, the wind was right a-head, and the sea being very rough, caused the steamer to strain so much, that the water came in through the beams and at the axles of the paddles in such quantities, that it was very soon ankle-deep in the engine-room. The pumps were now ordered to be set a-going, but they were very soon rendered unserviceable by the ashes from the furnace which had mingled with the water, and choked the pumps, and considerable time was lost before they succeeded in getting them to work again. In this emergency the captain was again requested to make signals of distress, and practical men have since expressed it as their opinion, that

had he done so, there is very little doubt that all could have been saved.

But insensible to all regard for the safety of those whose lives had been intrusted to his care, and madly obstinate in refusing to listen to any persuasion or entreaty, he would neither make signals for assistance, nor even hang out a light; and the result of this perverseness was, that the steamer quitted her course, and struck at twelve o'clock. The scene which followed was piteous in the extreme, for long before the heavy lurching of the vessel had thrown about fifty persons into the sea, amidst the screams of the horror-stricken survivors. The passengers, in despair, gave themselves up for lost, and parents, relations, and friends were affectionately taking leave of each other for ever.

When the vessel struck, the passengers simultaneously rushed forward, but the captain immediately ordered them aft, and began to consult with the mate, probably as to the best means of rescuing them, when a gentleman observing them in close consultation, cried out, "It is all over with us; the captain and mate are preparing to leave the vessel." At this moment, no doubt from accident, as the captain had been intoxicated all the way, he fell or tumbled overboard, and was drowned. The vessel continued whole until one o'clock, when she broke, as it were, across the middle, and the remainder of the passengers, with the exception of those who were saved, were hurried into the sea. Before this direful event, the scene on deck was heart-rending in the extreme. The women and children were collected in a knot, and kept embracing each other, in the full expectation of each moment being their last, while their dismal lamentations were distinctly heard amidst the roar of the conflicting elements. When exhausted by their crying, they lay against each other, with their heads reclining like inanimate bodies; but when the vessel went to pieces, at about half-past one, the shrieks of anguish and despair were terrific and deafening. At this awful moment, a Mr. Nuttall was precipitated into the sea; and, in addition to the clothes and a great coat by which he was encumbered, a fine little boy took refuge on his back. He was unable to swim, and, in a few minutes, must have perished, had not a rope been providentially thrown into his way; which he eagerly seized, and was guided to a part of the wreck which adhered to the wheel of the engine, where he found Mrs. Whittaker (one of the passengers), a boy, and six others. In this precarious situation, with death every instant staring them in the face, these comparatively fortunate few remained until seven o'clock in the morning. With the almost forlorn hope of attracting notice, and so obtaining assistance from the shore, they hung out Mrs. Whittaker's shawl; and this signal having fortunately been seen from the land, the life-boat came off and rescued them from the wreck, at a time when hope had almost given way to despair. Previous to her arrival, as it was low water when the vessel struck, the tide had carried them out to sea, where they must very soon have perished, had not this timely assistance arrived.

At midnight, by the testimony of the man at the wheel, the vessel had got far enough to windward of the land called Dutchman's Bank, and abreast of the tower on Priestholme Island, when, owing to a temporary stoppage of the engine, the steamer lost way, at which time she was labouring heavily, and making a great deal of water. The steersman had the helm hard a-port, when the vessel struck, with her stern upon the bank. The captain, who, it appears, was below when the vessel lost way, now came upon the poop, and ordered the steersman to starboard his helm, alleging that he would otherwise run her upon the causeway on the other side. This was done, and the vessel was consequently brought with her head to the bank. Immediately afterwards the engines were reversed, with the view of getting her into deeper water, but owing to the want of sufficient power, the attempt proved ineffectual. The jib was then hoisted, but in vain; and, after repeatedly striking and dragging along the edge of the bank for about half-a-mile, she came broadside on the bank about half-past twelve, and there remained beyond the reach of human exertion to remove her. A mountainous sea was continually breaking against and over her, which frequently raised her in part from the bank, but which instantly struck again with tremendous violence upon the sand.

The moon had, by this time, gone down; the sky was overcast with heavy clouds overhead, while, beneath, the pitchy waves appeared as if yawning for their prey, which they were so soon to engulf.

Very shortly after the vessel had got with her broadside to the bank, the after-tackle of the chimney broke loose, but, after some time, was, with great difficulty, again secured. In a few minutes it again gave way, and, with the next heavy shock of the sea, the chimney came down, bringing with it the mainmast, and both falling in a slanting direction, athwart the deck to the weather side. What number of individuals were killed or thrown overboard by the shock, it is impossible to tell; but soon after, about ten or twelve persons were washed off the deck into the deep. The rudder was next unshipped; and the boat having filled with water, broke from the painter, and went adrift. Many persons stripped off their clothes in order to swim, and several threw themselves into the sea with a form from the quarter-deck; but all of them speedily found a watery grave. The bulwarks on the weather side, behind which were from ten to twelve persons, who had taken refuge, were next washed away, and all who clung to them buried in the remorseless deep. Just before half-past one the weather paddle-box, on which between thirty and forty persons had placed themselves, was carried off by a tremendous sea, and every one of those individuals, it is believed, must have perished.

Just before two o'clock, when the vessel broke in the midships, the main-deck burst up in every direction, and the quarter-deck, upon which there were at the moment six men, a woman, and a boy, as before-mentioned, was still held by some of the ship's tackle, although it had parted from the vessel, until Mr. Jones, a Liverpool pilot, who was a passenger on board, with great promptitude cut the tackle with his knife, and the quarter-deck floated clear of the wreck, whereby his own life, and the lives of the other individuals upon it, were preserved. At the time the quarter-deck floated from the hull, there remained from thirty to forty persons upon the wreck; of whom some threw themselves into the water, lashed to planks, or whatever else they could lay their hands on; about twelve clung to the falling mainmast, and shared its fall; three ascended the foremast, which still retained its upright position; two or three more clung to the lower part of it; and some others were washed overboard. Of all these, not above ten appear to have been rescued from the general destruction.

The escape of Mr. Edward Jones, of Bangor, was truly miraculous. He could not swim, but having found a small keg on board, he fastened it with a piece of rope to his body, along with two of his fellow passengers. Shortly afterwards, a carriage that was on the deck, was washed overboard, and he and his companions precipitated into the sea with great violence. To add to his distress, the keg shifted from his breast, and got under his left arm, so that it was with extreme difficulty he could keep his head above water. The carriage was now floating past him, when he laid hold of one of the wheels with his right hand; but the carriage soon sunk. Just at this critical moment, he observed a fellow sufferer, Mr. Duckworth of Bury, within a few yards of him, seated on a board, about the size of a room-door. Mr. Jones immediately relinquished his keg, and although he had never before attempted to swim, he made several resolute strokes, and succeeded in gaining the board, upon one end of which he rested, while Mr. Duckworth remained upon the other. Their united weight brought the board so much under water, that it was with great difficulty they could keep their heads up high enough to breathe, and both of them were becoming rapidly exhausted, when Mr. Duckworth contrived to undress himself, and quitted the board with the intention of swimming to the shore, in which attempt he happily succeeded. Having thus had the board left to himself, Mr. Jones got fairly upon it, and put his feet through the hole in the centre, while he held on to the sides with his hands. In this posture he kept afloat until nearly eight o'clock, when he was picked up by a boat belonging to the schooner *Campadora*, so close to the breakers, off the Great Orm Head, that had the boat been five minutes later, he must inevitably have perished, without being capable of rendering him the slightest assistance.

Mrs. Whittaker, who was one of those that were rescued from the quarter-deck, stated, that the first thing she noticed was the water coming over the side of the vessel. She and the boys then got hold of a rope, when the seat on which they had been sitting was washed overboard. The mast then came down, and lay in such a position, as to press her against the side of the vessel. At length the waves, which she had observed gradually thinning the number of passengers, as one by one were in vain struggling with the remorseless element, broke in the side of the vessel, and swept them all overboard. Fortunately she got hold of a rope, and tried to get on deck again, but she could not succeed, when Mr. Nuttall, who, with some others, was upon a part of the wreck with the wheel attached to it, got hold of the hair of her head and pulled her to them, she being at the time almost naked, as her garments had been torn off her one by one, leaving only her stays, under petticoat, and shift. Mrs. Whittaker adds, that the sailors behaved most kindly to her, and that when they were landed at Beaumaris, they stripped off their jackets and handkerchiefs, and wrapped her in them. They were taken up nearly at the foot of Penmaen Mawr, and conveyed to Beaumaris, where the utmost attention was bestowed on them by the inhabitants. Thus these miserable few were all that remained of the number that had departed from Liverpool only the day before, when the wide range of life was gay about them. It was impossible to ascertain the loss correctly, but it was computed that one hundred and eighty persons had fallen a sacrifice to the fury of the storm, accelerated by the wilful obstinacy of the commander of the vessel.

YOUNG JIM.

BY HARRY BLUFF.

Mrs. Lacy had for many years been a widow. Her husband, a Deal boatman, perished in endeavouring to save the lives of some unfortunate mariners, wrecked off that dangerous coast. She had an only son, wild, thoughtless, and often disobedient, though the joy and pride of her old heart. When she gazed upon the boy's handsome and expressive face, lit up with enthusiasm at a tale of daring and peril, the lineaments of him she loved so well in life and regretted so deeply in death, stood in life-like characters again before her. She had tasted so deeply of the disasters of the ocean that she endeavoured to apprentice this young Jim to a trade, that he might be enabled to gain a livelihood without exposure to that danger to which his father's life paid penalty. It wouldn't do for Jim. If he had his father's face, most assuredly he had his father's heart and spirit, and loved, even for its dangers, his father's adventurous and dangerous profession. "It's no good, mother, I shall never be anything but a skulking vagrant if I stay on land. I do so thoroughly detest it and its ways." For a long time Jim's eloquence failed to accomplish its end, namely, of obtaining his mother's consent to his departure. But an unlooked-for event completed what he so long had desired, and his mother had so long dreaded. She had got him a situation with a shoemaker of that place. Jim, before his entrance, was heartily disgusted with the trade, and after it, with his employer. The consequence was, that saving talking, Jim did but little. His master, who, if he failed to reward industry, certainly didn't appreciate laziness, favoured Jim with a shower of words; a species of blowing up that Jim so thoroughly detested, that he would rather face the most violent hurricane than that. Well, Jim was sent with a pair of boots, and was ordered to exercise the utmost celerity in delivering them. So he did to the whole length of the street, at a corner of which a crowd of boys were arranged around two that were fighting. As a great patron of the "noble science," Jim dropped his boots and speedily became interested in the combat. Too much so it would seem in the eyes of the combatants' seconds, who favoured our hero with such a "topper" that his eye speedily began to assume the colour called black, and in a few minutes they were as warmly engaged as the original boxers. The finale of this adventure was, that Jim succeeded in thrashing his opponent to his heart's content, and that he went home sightless of one eye and minus the boots. Some gentleman having, with more feeling than

politeness, decamped with those articles. His master's rage was now turned from oaths to blows, of which our hero received a plentiful supply. So much so, in fact, that instead of damping Jim's courage it raised his indignation, and the consequence was that in a few minutes the little man lay bleeding and senseless on the floor of his own shop. One glance assured Jim that the only remedy left was to follow the example of the boots, and vanish. He was further assured of the efficacy of this by the appearance of two constables, so without waiting to exchange good wishes or shake hands at parting, Jim was off. He was tearing down street after street, when he was startled by footsteps hastily following his own, and in an instant he felt his arm hurriedly grasped while a hand seized him by the collar and forced him along with the utmost rapidity till they reached the beach. A loud whistle, and a boat full manned ran alongside, and before Jim could comprehend his situation, he was on board a fine ship lying off that port.

"You're a pretty fellow, you are! A pretty kettle of fish you've made of it, by jingo. A nice help you are to a widowed mother, as good as a sexton: you're helping her into the grave."

Such were the first words that greeted Jim from his conductor—a bluff, hearty, good tempered fellow, that looked every inch a sailor.

"I tell you what, my fine fellow. I've brought you here, out of no respect to you, you young scoundrel, mind, but to save your mother the pain of seeing you handcuffed like a felon. That's your doom, if you'd a stopped another hour, I know. I've brought you here that you may learn to keep yourself—you're big enough and strong enough, and, by God! if I don't cure you of your laziness there's no virtue in a stout rope's end."

The boy listened in silent astonishment, wondering to what this tended. The other proceeded:—

"To-morrow I sail for Barbadoes, stop and you'll find plenty of grub, grog, and work, and if you're lazy, you beggar, plenty of rope. Go ashore if you like, you'll find a constable and a gaol. Which do you choose?"

Jim thought the first condition best, and said so: and thanked him for his offer.

"No thanks," said the captain of the Warrior, stopping him abruptly; "that savours too much of the land for seamen. Let your actions prove your gratitude, and you'll have no cause to regret the change. Thompson," said he, calling a seaman, "show this fellow his berth."

The next morning broke gloriously. The sun shone with all its splendour, and the waves, as they danced beneath its golden rays, fell in drops like a shower of diamonds. The command was given, the sails were set, and they moved majestically from the place. Poor Jim! He leant over the bulwark, his eyes fixed upon the fast receding shore, and his heart throbbing with unutterable grief. He was leaving home (and we never know its value till we do) for many months. He wouldn't have cared if he had only had one parting word. But leave, as he did, compelled to fly to escape prison, he knew now the agony this would cause a mother's heart. But it was too late! too late! and the conviction almost swelled his heart to bursting. He would have given the world now—would even have been content to go to prison to pay for his violence, if he could only see her. Too late! "My mother—poor dear mother—would that I had seen you—God bless her!" he sobbed.

A short, but sincere prayer, that might have been heard in heaven. Who knows?

"Leave her, my boy," responded the hearty voice of the captain. "Courage! you'll meet her yet a happy, good, and rich man!"

On, on! struggled the noble bark, conquering winds and waves, on, on! Full many a mile they'd passed that bore them farther from their native land. The boatswain's pipe, loud and shrill, had hardly died away upon the breeze summoning the evening watch, when they discovered on the starboard bow, with all sails set, in swift pursuit, a ship. The alarm was given—decks cleared—men armed—guns loaded—and they waited impatiently for the fast approaching foe.

"Englishmen," said the captain, to his small but brave crew, "we are pursued; by whom I know not, but evidently

no friends, or he would not so long have kept his colours hid. Look you—the ship is larger than ours; granted—but not better. The crew more numerous. But if ours is few our hearts are brave. We fight for rights and justice—things they know nothing of. Cry mercy, and they give us death; resist, they cannot give us more. Fight as ye would fight for life and all that's dear, and then the victory's ours. I cannot talk, but I'll show you presently how I fight! Three cheers, my boys, and then to work." The loud voices of the men echoed and re-echoed in the still air, and then the tall ship drew within gun-shot, and hailed them in English with "ship ahoy—ahoy there. What ship's that?"

"The British ship, Warrior," replied Captain Norton, in a voice that echoed again through the trumpet, "what ship's that?"

"The Pestilence. Where are you from? Eh?"

An appropriate name, the captain of the Warrior thought, but only answered "England."

"Send your boat aboard—we're short of water."

"So are we," was the reply, and a true one too.

"Send your boat aboard, and be d— to you," repeated the same voice in English.

"Stand to your guns, my hearties," continued Captain Norton. "Show your colours," he exclaimed in reply.

"There you have them," was the reply, as the black flag ran up, and the helm rapidly turned, drove the vessel towards them, the shot from a gun at the same time rattling amongst and cutting away their rigging.

"Pay them back in their own coin, my boys," exclaimed the captain, and in an instant the Warrior poured in her fatal broadside. "There's where the shot struck," as the groans

and shrieks of the dying on board their assailant's broke upon their ear. A fierce curse from the commander of the enemy was all that broke the silence for four or five minutes, while the Warrior turned her head and wore away, wishing to avoid a contest if possible. The captain of the Pestilence, however, did not seem stimulated by such amicable principles; for, following closely, and running alongside he opened his broadside upon the Warrior, which was instantly replied to by the crew of that vessel with right good will and deadly effect. It soon became apparent that the captain of the Pestilence wished to board the Warrior, trusting in

his superior numbers to crush them with one effort. The eagle eye of Captain Norton read their design, too late, however, to prevent the grappling-irons from fixing their hold, but time enough to raise his own crew to repel the attack. Now did his parent's spirit exhibit itself in Jim. Seizing a cutlass that lay near, and making his way to the most exposed and dangerous part, he stood, full of impatience and courage, waiting the attack. At first the head, shoulders, and, eventually, the whole person of a huge black, appeared on the deck of the Warrior. He had hardly set his foot upon the deck when Jim's cutlass descended with a fierce unerring blow that cleft

the man's head in two. Another followed his example, and perished in the same manner.

A crowd this time leaped with a fierce yell upon the deck, and the harsh clash of steel told how soon they felt opposing weapons. Norton was in the midst dealing death around, and urging by his inspiring words and actions his followers to do the same. Jim was at his side: this time opposed to two of the enemy, superior both in size and strength to himself; but he kept his ground as firmly as a bull dog. Parrying with rapidity the blows that were showered upon him, a return of like favours being impossible under existing circumstances, when all his strength and agility was required to save his head. At this time, when sinking rapidly, and retreating—though inch by inch—from his assailants, Norton, who perceived the inequality of the engagement, gave the tallest and most formidable one a cut that eased him of his labour and his life. The other, missing his companion, turned his head for a moment, a moment that was instantly taken advantage of by Jim, and in another instant the fellow lay stretched over the body of his companion, dead. How well and earnestly Norton and his gallant crew fought; their deck strewn with dead and dying bore fearful witness. They drove their enemies back, but others instantly poured in and supplied their places. At this moment the captain of the Pestilence, followed by some fifty men, sprung upon the deck, determined to carry all. Norton, singling his cocked hat from the group around, cleared his way to the spot, and cut at him fiercely. The other, with the rapidity and ease of an experienced swordsman, met his upraised sword with the back of his own weapon, and the treacherous steel broke in two. Ere he had time to reap the benefit of this accident Norton

sprung upon and seized him by the throat, in an embrace so close as to render swords rather an impediment than use.

Grappling each other with a vigour which a struggle between life and death would be likely to produce, they rolled together upon the deck. For a long time it appeared as though they were fairly matched and no advantage gained by either; but, by an immense exertion, the pirate captain succeeded in getting uppermost, and while, with one knee upon the breast of his antagonist, and his knuckles pressed fiercely in poor Norton's throat, he searched with eagerness for his knife, which had done him good service in many a like

engagement. It was in his hand, and as he opened the weapon with his teeth, the bright steel flashed in the dismal light. Lifting it above his head with a fearful yell, whilst the unnatural light of his eyes bespoke his savage joy; he pressed his knuckles fiercely in the throat of his insensible enemy, and drew him round, that his knife, when the blow was struck, would pierce his heart. At this juncture Jim, who had seen the movement, threw himself forward, and received the blow intended for his patron. No cry of pain; but with the quickness of thought he drew the knife from the wound, and buried it in the pirate's heart, who, with a bitter curse, fell backwards, dead. Poor

Jim!—fainting from the agony of his wound, and the loss of blood—fell forward with a stifled groan on the body of his commander, who was now recovering from the stupor which the pressure on his throat had occasioned. Disengaging himself from the embrace of the noble boy, who so heroically saved his life, he staggered to his feet, and placed himself again at the head of his now thinned but brave crew. Re-inspired by his presence and urged to desperation by the host of their poor messmates that fell so thick around them, they raised a cheer, and rushed upon the foe, who, panic-stricken by the loss of their commander, and the fierce attack of those whom they had made their enemies, threw down their arms, and clamoured loudly for mercy. They were instantly pinioned and confined, while the crew were now occupied in clearing the deck of the wounded and dead. Many a noble-hearted man who commenced the action full of life and health, little anticipating such a fearful fate, were among the latter. As body after body splashed in the deep, accompanied by a word of sorrow or deep sigh of grief from their messmates, the voice of the chaplain, with the words, "We commit this body to the deep, O Lord," sounded solemn and awful at that midnight funeral. The wounded having been conveyed below and left to the care of the surgeon and his assistant; and the dead having been deposited in the deep, deep sea, Captain Norton went on board the prize. It was a noble vessel of English build, the late commander also using that language, but the crew was composed of the most villainous scum from almost every nation under heaven. Descending, they were startled by a groan. Looking around, to discover whence the sorrowful sounds proceeded, they discovered a kind of closet, in which was, pent up in that confined place and stifling atmosphere—a lady! Yes! a beautiful, well-educated, high-born lady! They wrenched the fastenings of the wretched place by main force, and gave her liberty—that liberty which she had long resigned as lost for ever. What pen can portray her transports at—instead of emerging from that dread place to meet a fearful death, to be greeted with kind and cheering words, and promises of long, long years of happiness yet to come. At first a flood of tears, and then, overpowered with such excessive happiness, she fainted. Lifting her as gently, and with as much ease as though she were a child, Norton conveyed her on board the *Warrior*, that she might meet with such attendance as, emancipated from long suffering and confinement, she required. In a short time she recovered, and, having been attended by a female they had on board, was placed in a bed; and soon sunk in a sound and refreshing sleep. Having seen his beautiful charge comfortably installed, Norton's next care was to visit his young saviour, Jim. The doctor, who was bending over his patient, raised his finger to enforce silence. Norton needed no such caution. Moving noiselessly towards the couch, he bent his head and touched with his lips the pale marble-like brow of his young friend.

"How is he?" was his first inquiry.

The doctor shook his head gravely. "No worse, I hope?" he again inquired. Another professional shake, this time full of meaning.

"D— it, man!" exclaimed the blunt tar, "how the deuce am I to know what you mean, wagging your head that way. Give your skull a little rest and your tongue a little employment. How is the boy?—Is he dangerously hurt?"

"Seriously," was the reply; "but not immediately dangerous. The eighth of an inch more, my friend, and—" The man of pills made a motion of falling on his back—"and he would have made food for the fishes."

"But there is hope, my dear fellow?—there is some hope?—is there not?" speaking earnestly, as though the life of the boy lay in the doctor's hands.

"Some, certainly," was the reply; though the words bore so much emphasis as to make the sound very equivocal.

"I would not have that boy die," continued the captain, "for the world. The gallant noble fellow! If you have any good in you, expend it on him;" and he approached a step nearer the sleeping sufferer. "Use all your skill and all your knowledge to keep life in him till we reach Barbadoes, to try her physicians, and get him cured, if cured he can be."

"I passed my examination," said the surgeon, feeling that his skill was called into question.

"Triumphantly, no doubt, my boy," interrupted the captain; "I never questioned or doubted it: or by Neptune you'd never have set foot aboard the *Warrior*. That boy has saved my life, and to save it received yon selfsame ugly wound. Hence my solicitude and gratitude. I tore him from a widowed mother—true, it was done with a good intent; but what of that. I would not return him to her arms a corpse. That boy's father and mine perished in each others arms. My father—poor man!—was wrecked. The sea dashed as though stirred to violence by the evil one, and determined to spread death and ruin on all that floated on its bosom. The bravest hearts quailed at its mighty awful fury. Save that boy's father none stirred to save the crew clinging to that shattered doomed bark. He urged his companions on—they were all brave men; but they said (many had wives and children—more than one life clinging to them) that 'twas death—no boat could live in such a fearful tempest. But this one man, guided by humanity, and sustained by his invincible spirit, threw himself into the ocean that boiled, hissed, and roared around him. Two of the crew did he save, a woman and a child. Again he ventured out, bound on his noble mission. My father was his companion. They had nearly reached the shore, when a huge mighty wave came rolling on and buried them beneath. When they again rose they floated on its breast, clasped in each others arms, dead."

"Gently," interrupted the surgeon, "he awakes."

The captain hastily approached and grasped the boy's hot feverish hand in his own: Jim's face expressed his gratitude at this kindness. He strove to speak. How was it his throat was so dry, harsh, and soundless! but the tears that filled his eyes spoke his thanks much better than all the words in the English dictionary could have done.

"Now my dear friend, calm this agitation; why your hand trembles more, and your pulse goes faster than it did yesterday, when thrashing those precious pirates."

"I'm so happy!"

"A precious deal to be happy about, certainly; I suppose the few inches of that vagabond's knife rather cheered you than otherwise, eh? Don't be happy here; make haste and get well. I want to see how you'll look in a midshipman's jacket, and whether you can handle a middy's sword as well as you did that cutlass; I'll be bound you can. Then if you're not happy, my boy, I'll send you home again as useless and hard to please. But wait, now comes the question that ought to have come first,—how are you?"

"All right, sir," replied Jim; "if it wasn't for this bandage—"

"Or the cut, rather. I tell you what, we dispense with the 'Sir,' on the quarter-deck of the *Warrior*, you'll recollect that, my friend."

The boy's looks showed he hardly comprehended his meaning; and he said,

"My perception was never too keen, and this—"

"Cut hasn't improved it, you would say, eh? Well, then, in plain English, to prove my gratitude for your noble courage, I'm determined to give you a middy's berth. I'll put you on the first step of the ladder, my boy, the devil doubt but you'll soon outstrip your patron. I heartily hope you may. Now, if you want something to dream about, think of your dear old mother, and her pride at seeing you a gentleman; and picture her half bent down with a lapful of English gold, the fruit of your industry. Now, Jim, go to sleep and get better as soon as possible."

* * * * *

Now, with the reader's permission, (or without it if it isn't granted freely) we'll return to England—England, the first and best of all the nations of the earth. We'll land at Deal, and just look in on Jim's Mother. Four years have elapsed since her son's departure, and no word or tidings, good or bad, has she heard of him yet. A long, long, wretched four years to her, as that pale face, looking prematurely old, from sorrow, too surely tells. Dismal days and sleepless nights, have planted many a wrinkle on that once fair open brow. From her silent but bitter sorrow, her health

had rapidly sank, and the day which we mention, found her on a bed of sickness. 'Twas a hard task to live, when full of health and vigour; latterly as her strength declined from her failing health, she had wanted that spirit to strive and struggle for her daily bread which she formerly possessed. She was proud in her way nevertheless. It was a poor, but it must be confessed an honest pride of hers, at least, that prompted her to work so hard to avoid one thing, and that was—credit!

Now that sickness, stern sickness, that overturns all our projects, and turns strong man into the infant, had compelled her to woo this enemy. She owed a something for rent: a very little something in the eyes of the wealthy; but in her eyes and the landlord's too, 'twas at least too much. The landlord (Jim's old master) possessing more of English justice (?) than of English humanity, determined to have his right. Rights that placed the power in his hands, if the woman had not the power to pay, of converting her "sticks" into the required sum. With this intent in view, he had the assistance of the broker, and proceeded to seize her humble and scanty furniture. And had it come to this, that she, the wife of that noble fellow who sacrificed his life at the altar of humanity, must be turned into the street houseless, to perish miserably of starvation? Oh! ye patrons of arts and science; ye men with the keen discerning eye and liberal hand; who drop your pounds without regret for a painting, a piece of mimic life, yet grudge your shilling for a piece of real, to save a suffering mortal. Learn ye, that it shows the noblest principles to encourage the heart first; the sorrow-stricken suffering heart, in preference to a piece of mechanism, or a piece of gaudy paint called art. No word of sorrow, no bitter execrations, no groan or tear denoted her suffering; it was too deep for that. But gasping for breath, she staggered towards and sunk into a seat. The men went on unnoticed her, and making no noise except the dull sing-song tone of the man whose part it was to specify the doomed piece of of furniture, save this, and an occasional brutal jest at some antiquated rude piece of furniture, they were quiet enough. They were so busily occupied that they did not notice the opening of the door and appearance of a tall handsome sailor in the garb of a naval officer that entered at the moment. Mrs. Lacy raised her eyes to the intruder's face, and uttering a wild cry of joy, sprang to her feet and staggered towards him: "Jim!" broke from her fevered lips, and the next instant she was pressed to his heart. "Yes, mother, dear mother," and a kiss, accompanied every word. "Your own boy, your own son, Jim. After many a weary month of travel, come home, mother, a rich man, to strew your latter path of life with happiness and peace. Oh! this is a joyous recompense for all the cares and trials I've undergone. Come, home, mother, (how bright and happy the words sound) to leave you no more for ever—for ever. Come look up. Greet me with a joyous face."

Her heart was so full of happiness, that she could not speak. She raised her face to that of her handsome son's, and wept for joy.

"These gentlemen are no friends or acquaintances of mine, mother, nor from their faces, is such an intimacy desirable. I am most happy to see you, gentlemen, but the pleasure of our meeting would, at least, to me, be enhanced by your stepping out of doors."

"I've a bill here for rent—"

"You have pen and ink here: receipt it and be gone," said he, throwing a handful of gold upon the table.

"Stay," said he, to his old master! who, having taken the money, turned to depart.

"I should know your face."

"Mine is sun-burnt and travel-stained, and you doubtless at first failed to recognise it. Four years since you had a boy in your employ, Jim by name. He was wild, thoughtless, lazy, anything but a good servant. You was tyrannical, overbearing, in fact, anything but a good master. This boy in a street scuffle, lost a pair of boots—"

"Lost a pair, the young scoundrel!—oh, if I had only caught him!—stole 'em you mean; sold 'em, that woman no doubt came in for her share of the spoil."

"You lie! you base hound!" exclaimed the young stranger, in so loud a tone, and with so menacing a gesture, that the little man drew back in affright.

"Look at me well; ha! old friend, your recollection brightens. I was that boy!"

"You!" exclaimed the other, starting back.

"I. Now then, the time of payment's come. Here are five pounds; ten times the value of the trash I lost—take it, and go."

"I came home," he continued, "to make, and not to break the peace, or by Jove, I'd pay you well you scoundrel,—for your villainous conduct to my poor mother. Begone, I say, or I may, in spite of myself, give you a taste of a sailor's indignation."

The poor little man, scraping the money in his hand, all the time shivering from head to foot, made a bow, and left the house.

"Now, mother, first and foremost to satisfy your curiosity, I left here very suddenly, and very sorrowful; sad, that I had not the consolation of parting from you. My friend, the captain of a noble ship, the Warrior, hurried me aboard that vessel, to save me as he said: and that villain's words have corroborated his, from a prison. Had I stopped, mother, such would have doubtless been my fate, pursued by such a vindictive fellow as that. And by this time, instead of wearing the uniform of a servant of the king, I might have been found at Botany Bay, the government having most considerably and kindly, favoured me with a free passage to that delightful spot! Well, mother, we were chased by pirates, on our passage out; we fought them and beat them. I had the happiness of saving my commander's life. For this, mother, I, the poor runaway boy, was taken from the meanest station in the ship, to the quarter-deck. We rescued from the prize, mother, a young lady, beautiful, and of noble birth. She took an interest in the orphan boy, and taught him things befitting his newly-acquired rank. Yes! and in all her teaching, taught me love! We reached the Indies. Lauded to the skies for the capture of this infamous pirate, who had crimsoned those seas with blood, I was introduced by my friend, the captain, as one of the heroes of the fight, to this lady's rich and noble friends. I found favour in their eyes, and oh! mother, in her heart I found love! The noble girl overlooked the difference in our rank and fortune, 'the heart was the standard of true nobility,' she said, 'and her fortune was enough for two.' She accompanied me to England, mother, as—my wife! Come! leave this wretched place; and with it all your happiness and sorrow; leave such unthankful things behind, and come to my home,—our home of happiness and plenty,—presided over by that angel of all angels—my wife!"

THE LAST VOYAGE.

WE cannot fail to observe, as we advance in life, how vividly our earliest recollections recur to us, and this consciousness is accompanied by a melancholy pleasure, when we are deprived of those who are most tenderly associated with such remembrances, because they bring the beloved dead "before our mind's eye," and beguile the loneliness of the present hour, by visions of the past. In such visions I now often love to indulge, and in one of them, a journey to Yarmouth was recently brought before me, in which I accompanied my father, when I was but a child.

As we drove through Caistor, a village within three miles of Yarmouth, he directed my attention to a remarkable rising, or conical mound of earth, on the top of the tower of Caistor church. He then explained the cause of this singular and distinguishing appearance, and told me the traditional anecdote connected with it; which I now communicate to my readers.

It is generally supposed, that great grief makes the heart so selfishly absorbed in its own sufferings, as to render it regardless of the sufferings of others; but the conduct of her, who is the heroine of the following tale, will prove to this general rule an honourable exception.

I know nothing of her birth and parentage; but BIRTHA, as the story goes, lived at Caistor, and she was betrothed to the

mate of a trading vessel, with the expectation of marrying him, when he had gained money sufficient, by repeated voyages, to make them in union consistent with prudence.

In the meanwhile, there is reason to believe that BIRTHA was not idle, but contrived to earn money herself, in order to expedite the hour of her marriage; and, at length, WILLIAM, her lover, thought that there was no reason for him to continue his seafaring life, but at the end of one voyage more, he should be able to marry the woman of his choice, and engage in some less dangerous employment in his native village.

Accordingly, the next time he bade farewell to BIRTHA, the sorrow of their parting hour was soothed by WILLIAM's declaring, that, as the next voyage would be his last, he should expect, when he returned, to find every thing ready for their marriage.

This was a pleasant expectation, and BIRTHA eagerly prepared to fulfil it.

By the time that BIRTHA was beginning to believe that WILLIAM was on his voyage home, her neighbours would often help her to count the days which would probably elapse before the ship would arrive; but when they were not in her presence, some of the experienced amongst the men used to express a *hope*, the result of *fear*, that WILLIAM would return time enough to avoid *certain winds*, which made one part of the navigation on that coast particularly dangerous.

BIRTHA herself had, no doubt, her *fears*, as well as her *hopes*; but there are *some fears* which the lip of affection dare not utter, and this was one of them.

BIRTHA dreaded to have her inquiries respecting that dangerous passage answered by "Yes, we know that it is a dangerous navigation;" she also dreaded to be told by some kind, but ill-judging friends, to "trust to Providence;" as, by such advice, the reality of the danger would be still more powerfully confirmed to her. This recommendation would to her have been needless as well as alarming; for she had, doubtless, always relied on Him who is alone able to save, and she knew that the same "Almighty arm was underneath" her lover still, which had hitherto preserved him in the time of need.

Well, time went on, and we will imagine the little garden before the door of the house which BIRTHA had hired, new gravelled, fresh flowers sown and planted there—the curtains ready to be put up—the shelves bright with polished utensils—table-linen, white as the driven snow, enclosed in the newly-purchased chest of drawers; and the neat well-chosen wedding-clothes, ready for the approaching occasion. We will also picture to ourselves, the trembling joy of BIRTHA, when her eager and sympathising neighbours rushed into her cottage, disturbing her early breakfast, with the glad tidings that WILLIAM's ship had been seen approaching the dangerous passage with a fair wind, and that there was no doubt but that he would get over it safe, and in daylight! How sweet it is to be the messenger and the bearer of good news; but it is still sweeter to know that one has friends who have pleasure in communicating pleasure to us.

But BIRTHA's joy was still mingled with anxiety, and she probably passed that day in alternate restlessness and prayer.

Towards night the wind rose high, blowing from a quarter unfavourable to the safety of the ship, and it still continued to blow in this direction when night and darkness had closed on all around.

Darkness at that moment seemed to close also upon the prospects of BIRTHA; for she knew that there was no beacon, no landmark to warn the vessel of its danger, and inform the pilot what coast they were approaching, and what perils they were to avoid; and, it is probable, that the almost despairing girl was, with anxious friends, that live-long night, a restless wanderer on the nearest shore.

With the return of morning came the awful confirmation of their worst fears!

There was no remaining vestige of WILLIAM's vessel, save the top of the mast, which showed where it had sunk beneath the waves, and proved that the hearts which in the morning had throbbed high with tender hopes and joyful expectations, were then cold and still "beneath the mighty waters!" How different now was the scene in BIRTHA's cottage, to that which it exhibited during the preceding morning.

That changed dwelling was not indeed deserted, for sympa-

thising neighbours came to it as before; but though many friends may be admitted with readiness when it is time for congratulation, it is only the few who can be welcome in a season of sorrow; and BIRTHA's sorrow, though *quiet*, was *deep*—while neither her nearest relative, nor dearest friend, could do anything to assist her, save by removing from her sight the new furniture, or the new dresses, which had been prepared for those happy hours that now could never be her's.

At length, however, BIRTHA, who had always appeared calm and resigned, seemed cheerful also; still she remained pale, as in the first moments of her trial, save when a feverish flush occasionally increased the brightness of her eyes; but she grew thinner and thinner, and her impeded breath made her affectionate friends suspect that she was going into a rapid decline.

Medical aid was immediately called in, and BIRTHA's pleased conviction that her end was near, was soon, though reluctantly, confirmed to her, at her own request.

It is afflicting to see an invalid rejoice in knowing that the hour of death is certainly approaching; because it proves the depth and poignancy of the previous sufferings; but then the sight is comforting and edifying also. It is *comforting*, because it proves that the dying person is supported by the only "help that faileth not;" and it is *edifying*, because it invites those who behold it to endeavour to *believe*, that they may also live and *die* like the departed Christian.

But it was not alone the wish "to die and be with Christ," nor the sweet expectation of being united in another world, to him whom she had lost, that was the cause of BIRTHA's increasing cheerfulness, as the hour of her dissolution drew nigh. No—her generous heart was rejoicing in a project which she had conceived, and which would, if realised, be the source of benefit to numbers yet unborn. She knew from authority which she could not doubt, that had there been a *proper land-mark* on the shore, her lover and his ship would not, in all human probability, have perished.

"Then," said BIRTHA, "henceforth there shall be a land-mark on this coast, and I will furnish it. Here, at least, no fond and faithful girl shall again have to lament over her blighted prospects, and pine and suffer as I have done."

She sent immediately for the clergyman of the parish, made her will, and had a clause inserted to the following effect:—"I desire that I may be buried on the top of the tower of Caistor church, and that my grave may be made very high, and pointed, in order to render it a perpetual land-mark to all ships approaching that dangerous navigation, where he whom I loved was wrecked. I am assured, that, had there been a land-mark on the tower of Caistor church, his ship might have escaped; and I humbly trust, that my grave will always be kept up, according to my will, to prevent affectionate hearts, in future, from being afflicted as mine has been; and I leave a portion of my little property in the hands of trustees, for ever, to pay for the preservation of the above-mentioned grave in all its usefulness."

Before she died, the judicious and benevolent sufferer had the satisfaction of being assured, that her intentions would be carried into effect.

Her last moments were, therefore, cheered by the belief, that she would be graciously permitted to be, even after death, a benefit to others, and that her gravemight be the means of preserving some of her fellow-creatures from shipwreck and affliction.

Nor was her belief a delusive one. The conical grave in question gives so remarkable an appearance to the tower of Caistor church, when it is seen at sea, even at a distance, that, if once observed, it can never be forgotten, even by those to whom the anecdote connected with it is unknown; therefore, as soon as it appears its sight, pilots know that they are approaching a dangerous coast, and take measures to avoid its perils.

But if the navigation on that coast is no longer as perilous as it was, when the heroine of this story was buried, and the tower of Caistor church is no longer a necessary land-mark, still her grave remains a pleasing memorial of one, whose active benevolence rose superior to the selfishness both of sorrow and sickness; and enabled her, even on the bed of death, to *contrive* and *will* for the benefit of posterity.

It is strange, but true, that the name of this humble but privileged being is not on record. And as the conduct of this Christian sufferer was a sort of modified obedience to the command of the Saviour, "Do unto others as ye would that others should do unto you," since she undoubtedly did, we may hope that her ascending spirit was greeted by those acceptable words of promised welcome—"Well done, good and faithful servant; enter thou into the joy of thy Lord."

LOSS OF THE WAKEFIELD, MERCHANTMAN.

THE Wakefield, Captain Bruce of Hull, lost sight of her convoy on the night of October 30, 1806. On the following morning they hauled in for the land, being nearly in the latitude of Oporto, wind about north-by-east, thick and hazy, with heavy rain.

A little past five, p.m., it cleared up; no land was then in sight, and they were, by reckoning, upwards of eight leagues distant.

About six, p.m., it being then very dark, and raining hard, the mate went on deck while the captain changed his clothes, and in a few minutes the ship struck. Captain Bruce then ran upon deck, and found her surrounded by rocks: the first heavy sea struck in her stern, and hove the ship on her broadside; a second tore away Captain Bruce from the main rigging, and he then caught hold of the main-top-gallant-mast head, where he then hung, until he was so much bruised by the floating wreck, that he was compelled to let go his hold and endeavour to reach the shore by swimming, which, after having been tossed about in the surf a considerable time, and repeatedly carried back again from the beach, he at length accomplished, but so much exhausted, that he could only crawl on his hands and knees.

In this manner, with no clothes, excepting a coat and shirt, a pair of drawers all torn to pieces, and one stocking, with neither hat, trousers, nor shoes, he reached a ruined hut, where he lay about six hours.

Finding himself a little refreshed, he set out to reach, if possible, some place of shelter; and following the marks of cart-wheels about half a mile on the sand, he found Thomas Homan, one of his boys, lying there, unable to proceed any further.

About a mile and a half from thence, Captain Bruce came to a house but was refused admittance, and compelled to spend the night in the open air; about eight o'clock the next morning he was more favourably noticed, carried to a hut, and supplied with warm clothes.

After obtaining refreshment, he returned to the place where the ship was wrecked, a ledge of rocks a little to the southward of Ville de Conde; and one of his legs was so severely cut and swollen, that he was obliged to be carried back, and for some time he was unable to walk. He was carried in a litter to Oporto.

SAINT ELMO'S LIGHT.

In the month of June, 1808, passing from the island of Ivica to that of Majorca, on board a Spanish polacca ship, fitted as a cartel, and manned by about thirty ruffians, Genoese, Valencians, and Catalonians, a fine southerly gale, by seven in the evening, brought us within six or seven leagues of the anchorage in Palma Bay. About this time the sea-breeze, failing us astern, was shortly succeeded by light and baffling breezes off the land. No sooner had the setting sun withdrawn his golden beams from the tops of the lofty hills, which rise to the westward of the town, than a thick and impenetrable cloud, gathering upon the summit of Mount Galatzo, spread gradual darkness on the hill below, and extended at length a premature obscurity along the very surface of the shore. About nine the ship was becalmed; the darkness was intense, and rendered still more sensible by the yellow fire that gleamed upon the horizon to the south, and aggravated by the deep-toned thunder which rolled at intervals on the mountain, accompanied by the quick rapidity of that forked lightning whose eccentric course and dire effects set all description at defiance. By half-past nine, the hands were sent aloft to furl top-gallantsails, and reef the topsails, in preparation for the threatening storm. When re-

tiring to rest, a sudden cry of St. Elmo and St. Ann was heard from those aloft, and fore and aft the deck. An interpreter called lustily down the hatchway, that St. Elmo was on board, and desired me to come up. A few steps were sufficient, and, to my great surprise, I found the topsail-yards deserted, the sails loose and beating in the inconstant breeze, the awe-struck and religious mariners, bareheaded, on their knees, with hands uplifted, in voice and attitude of prayer, in earnest and muttering devotion to St. Elmo or St. Ann, according to the provincial nature of their speech.

On observing the appearance of the masts, the main-top-gallant-mast-head, from the truck, for three feet down, was perfectly enveloped in a cold blaze of pale phosphorous-looking light, completely embracing the circumference of the mast, and attended with a fitting or creeping motion, as exemplified experimentally by the application of common phosphorous upon a board; and the fore and mizen-top-gallant-mast-heads exhibited a similar appearance in a relative degree.

This curious illumination continued with undiminished intensity for the space of eight or ten minutes, when, becoming gradually fainter and less extensive, it finally disappeared, after a duration of not less than half-an-hour.

The seamen in the mean time, having finished their devotions, and observing the light to remain stationary, returned promptly to the yards, and, under favour of this "spirit of the storm," now quickly performed that duty which, on a critical conjuncture, had been abandoned, under the influence of their superstition and their fears. During the prevalence of the lights, as well as through the remaining hours of night, the wind continued, except in occasional puffs, light and variable; and the morning was ushered in with a clear sky, a hot sun, and a light southerly breeze, which, in due time, brought us safe to the anchorage of Palma.

Conversing with the interpreter on the nature of this extraordinary atmospherical phenomenon, he expressed his implicit belief that it was provided by the immediate power of St. Elmo, the tutelar deity of "those who travel on the vasty deep," in regard to their interests in a moment of sudden danger; and used every argument to persuade me, that the present safety of the ship was owing to the appearance of the light, and its remaining where it did; for if it had descended from thence to the keelson, as he had often seen it, the event would have prognosticated a gale of wind or other disaster, and according to the depth of the descent, so would be the nature of the evil to come. In the present instance, the light gradually disappeared, and the weather continued clear and fine for several subsequent days.

This phenomenon, by many, is held to be fabulous, and is so alluded to by the greatest of modern poets:—

"Of witch, of mermaid, and of sprite,
Of Eric's cap, and Elmo's light."

But Falconer, both seaman and poet, writing from experience says,

"High on the masts, with pale and livid rays,
Amid the gloom portentous meteors blaze."

In order, however, to illustrate more fully the character of those very pious and devoted seamen, who attracted the favour of the saint on the present occasion, it must be understood, that this visitation of St. Elmo took place immediately on the first burst of the Spanish revolution, and that these very men had but recently figured as the bloody instigators and perpetrators, along with other patriots, in the massacre of several unfortunate Frenchmen long resident in the city of Valentia, for the peaceful purposes of commerce.

BELL ROCK LIGHTHOUSE.

In the *album* at the Bell Rock Lighthouse, are the following lines by Sir Walter Scott.

Pharos. Loquitur.
Far in the bosom of the deep,
O'er these wide shelves my watch I keep;
A ruddy gem of changeful light.
Round on the dusky brow of night;
The seaman bids my lustre hail,
And scorns to strike his timorous sail.

THE ROBINSON CRUSOE OF THE POLAR REGIONS.

SOMEWHERE about the year 1757, a vessel named the *Anne Forbes*, left the port of Aberdeen for the Greenland Whale Fishery. On board, as a seaman, was a lad of the name of Gordon, who was fated to be the subject of some singular adventures in the Polar regions. The captain's name was Hughes, an Englishman, who had the character of being rash, drunken, and obstinate, and altogether unfit for such a situation. They had instructions to proceed to the Spitzbergen seas; and, accordingly, stretched away to the north-east. They had fine weather and an open sea, save that there was a girdle of ice of from ten to thirty miles broad that belted the whole coast of east Greenland, the mountains of which country were frequently

in view. They sailed between that and Iceland, and about the seventieth degree, came frequently in view of some tremendous fish, all of which appeared to be journeying rapidly northward. They captured one, and continued their route straight on for a fortnight, although the mate, an old experienced sailor, represented to the captain, again and again, the danger of penetrating so far into the Polar Seas; but he only laughed at him, and declared that they had reached the Pole, and could sail to China as soon as to Spain. There were plenty of fish, and they loaded the vessel; the captain, however, would not quit the place, but continued exulting and getting intoxicated on the merits of his grand discovery, until the needle lost all power.

For two days the mate kept pointing out to the captain some brilliant appearances at a great distance, which he said he sus-

THE ROBINSON CRUSOE OF THE POLAR REGIONS.

pected were immense floes or fields of ice, and if the wind should chance to rise in that direction, they should to a certainty be enclosed. But Captain Hughes answered him with the greatest contempt:—"Why, you old grovelling ass, you have not half the science of a sea-horse, nor half the ambition of a lobster. You do not perceive, and cannot estimate, the value of the discovery I have made; a discovery which will hand down my name to all generations, and not only my name, but the very name of the vessel, and every one on board of her will go down to posterity. Therefore, tell me not of your floes and your fields, your rainbow colours, and cowardly surmises. Am I not resting on the pole of the world, and can run from hence into any of its divisions I choose? I am like a man on the top of a hill, who, if the storm approaches on the one side, can take shelter on the other."

No. 7.

"Why it may 'be true that ye say, captain," said the mate; "I may hae little science an' less ambition. But I hae as muckle science as to perceive that you are detaining us in a very critical and perilous situation, for no earthly purpose that I can see; and my ambition is all to save the ship and cargo of my employers."

"Say, rather to save your own mean and despicable carcass," retorted the captain. "I am answerable to my employers for the ship and cargo, not you. And think you not the value of the discovery I have made, to be of more value than any ship or cargo that ever sailed the ocean?"

"Perhaps it may, captain," said he, "that point I shall not dispute with you. But if we lose the ship, we lose ourselves, and the grand discovery into the bargain."

"There you say true," returned the captain, "and it is the

first word of sense you have spoken. Come, and let us have one bottle together on the head of it. Who knows what you may yet be. I promise you, that we shall sail southward with the first breeze, and I'll take you half-a-dozen we shall be the first of the whalers on the coast of Scotland."

The captain then went and intoxicated himself as usual. In a few hours afterwards, from some unaccountable current, the mate perceived the vessel to be drifting with great rapidity, but not knowing in what direction, he called up the captain, who, though quite confounded and confused, instantly ordered all sails to be set. After he had taken the sun's altitude, he commanded the ship to be put about; and sailed in the contrary direction to that in which they had been drifting for the last eight hours. The current was strong against them, with a

light breeze on the starboard bow. The ice approached on all sides, and what was worst of all, a whitish fog covered them. The captain was now manifestly alarmed, for he kept close on deck, and gave his orders with impatience and surliness.

But in spite of all their efforts, they became completely involved in broken floating ice. They continued, however, to drift slowly toward the south-west, under short sail, passing what the crew took for a huge iceberg, but which the captain said was one of the "Seven Sisters," off the coast of Spitzbergen. That was the last land they were doomed to see. After struggling on for four-and-twenty hours longer, they perceived a vast and apparent interminable field of ice before them, which, with the floating ice behind, rendered their situation doubly

THE HOBSON CRUISE OF THE POLAR REGION

perilous. Seeing what was likely to be the issue, Gordon ran up to the mast-head. In an instant, crash went the masts and bulwarks of the goodly *Anne Forbes*, like egg-shells. By the concussion, Gordon was thrown from his position, and landed on one of the fields of ice. The whole perished in a moment, except himself, and the ship went down; but in less than half-an-hour, by some extraordinary operations of the iceberg below the water, she was thrown out on the ice, keel uppermost, a perfect wreck!

There, then, was this man left on a field of floating ice, on the great Polar ocean, without food or shelter. He happened to have in his pocket an Old Testament, of very small dimensions, which his mother gave him on his first going to sea. It wanted the prophecies, but had the psalms; and from this he afterwards derived the greatest consolation. He saw at once

the necessity of trying to reach the hulk, an attempt which was beset with danger, for the broken ice towered up in heaps, and there were gulfs of considerable extent between them. But life is sweet, and hunger began to assail him, so he determined to try. It is impossible to describe the perils he underwent in this attempt: for, when climbing over mountains of ice as firm as rocks, he came to other parts which had little more consistency than froth, and there he slumped over head and ears into the sea. But the sea was so compressed by the weight of the ice, that it always threw him up again fairly above it. The ice was so slippery at times, that he could get no hold, and he knew that, if he sunk among the soft ice into the water gradually, he was gone: therefore, when he found that he was going, he jumped in, and then he was sure to come up again with a spring. At length, when beginning to despair, he

reached a splinter of a boatmast, and then he proceeded with safety, though perishing with cold, hunger, and fatigue.

When at last he did reach the wreck, he could obtain no entrance, as the keel was uppermost, and all the other parts jammed in among the ice. Besides, he was completely exhausted, and had nothing to dig with, save the splinter of the mast. The hulk, as far as above the ice, seemed nearly complete and unbroken, but he could get no opening within. Perceiving a number of things scattered here and there at a little distance, by the aid of his splinter, he made towards them in hopes of finding something to allay his thirst, which he suffered far more from than from hunger, for all the ice which he tasted was salt. He found nothing save scraps of sails, cables, boats, and things that had been smashed on deck, when the collision with the ice took place; but when nearly exhausted, he perceived, not far from him, beyond a level plain of ice, a tremendous iceberg, which he took for a mountain; and on hastening towards it as well as he could, he found, to his great joy, that the ice of which it was composed was fresh. This was an unexpected relief, and he knelt and blessed his kind Maker and preserver for it; and committing himself to His mercy and protection, he sucked till he could hold no more.

His strength was now renewed, and his thirst somewhat allayed; but the throes of hunger were increased. He went once more to the wreck, to search for something to eat. Among other things, he found a small boat-hook used for the yawl, and a harpoon fastened to a part of the shattered long-boat. Returning to the hulk, he, with the boat-hook, with difficulty cleared away the ice astern, and was thus enabled to reach the cabin-window, by which he entered, but found it full of ice, and every thing turned upside down. He made his way to the bread-locker, which, being inverted, he broke up at the bottom, and found it crammed full of biscuits. Although they were steeped in salt-water, he thought he had never tasted any thing so delicious, so he ate until he grew as thirsty as ever, but continued clearing away the rubbish from the cabin, and on reaching the captain's secret store-closet, he broke it open in hopes of getting something stronger than ice-water to drink; but the bottles were all overturned and smashed, at which he was exceedingly grieved and disappointed. He got knives and forks, however, a cork-screw, and many other things that would have been of great use, had he had any use for them. At length, below all the rubbish, he came upon a whole cask of spirits unpierced, and certainly never man made a more joyful discovery, not even his late captain when he absurdly supposed that he had discovered the North Pole. The cork-screw was instantly applied, and flew the bung, and down went his nose to the hole. It was either rum or brandy—he believed it was a mixture of the two—and taking the tube of the old ship bellows, he put in the wide end, and sucked the small one. The liquor came liberally; but he was little aware of its potency. Having never drunk anything so good before, and his stomach and whole frame being out of order, he was of course soon overcome, grew dizzy, and fell down beside the cask, where, after one or two ineffectual efforts to rise, he soon fell fast asleep.

He slept for a considerable time, and on awaking he found himself so benumbed as to be unable to rise. He, therefore, had recourse again and again to the contents of the barrel, of which he supplied himself liberally. At length he conceived that he heard a great number of people busily engaged, and muttering round the vessel. Rendered weak by the hardships he had endured, and quite disorganized by the quantity of liquor he had drunk, he became very much alarmed, and quite confused in his ideas; and when he heard, as he thought, somebody enter the cabin at the hole which he had made astern, and soon after begin munching at the biscuits, he was overcome with terror. Being impelled, however, by an irresistible curiosity to know what sort of person it was that thus broke in upon his privacy, he arose and cautiously opened the door of the closet where he had been all the time, and saw what he supposed was a naked woman, escaping from the cabin window. He was sure, at any rate, that he saw her bare feet and toes. This, in the middle of the frozen ocean, was altogether unaccountable; but he seized his boat-hook in one hand, and a harpoon in the other, and went cautiously to the entrance hole.

Judge of his feelings on perceiving a whole herd of white Polar bears, prowling round the ship, and all busy digging and eating! It was amazing what holes these powerful persevering monsters had dug in the ice, and were preying on the fish that had been in the ship, and on the bodies of Gordon's late companions. There were two bears within twelve yards of him, tearing and grubbing at the body of his late captain, which he knew to be his from the shreds and patches of his clothes that were strewn about, and a part of his deck-hat, such as was worn by English coasters—and there was the end of his grand discovery!

Not knowing what experiment to fall upon to drive this herd of monsters away, Gordon took a speaking-trumpet and shouted through it with all his might, "A vast, ye lubbers!" on which they all sprung up on their hind feet, standing as straight as human creatures. They were all sleek, fat, and plump, and some of them stood at least ten feet high. After staring about them for a time, they again fell to munching their grateful repast. He endeavoured, with various kinds of sounds, to frighten them; but instead of flying, they began to collect together, and draw nearer to him. He was, therefore, obliged to barricade his only place of entrance, putting the fire-grate into it. He then took all the knives and forks he could get, and every sharp instrument, and tied them to the bars with oakum, putting their sharp points outward. Conceiving himself in perfect safety, he retired to the closet, swallowed a tankard of brandy, and taking the blankets from off the cabin beds, which were hard frozen, he made himself a couch, and locking the door on the inside, he, like other Polar animals, once more betook himself to a state of torpidity.

He did not, however, forget his religious duties, and often prayed to Him who had hitherto been his preserver, and whose arm, though strong to smite, is also strong to save. When he sung a psalm, which he generally did before retiring to his cheerless bed, the white bears gathered round the hulk of the vessel to listen; and when he looked out, he was sometimes amused with their strange gambols on the occasion.

The nights were now setting in, and the bears prowling all about, though rather in a more listless manner, as if gorged. He ate a good deal of salt biscuit, and could reach plenty of hoar frost, which lay nearly two inches thick, to allay his thirst. To warm him, however, and arouse his energies, he had recourse, ever and anon, to the brandy, which generally set him sleeping for twenty-four hours, and sometimes more, at a time.

He was now quite sure, from the invasion of the bears, that there was a communication with some country—most probably, Spitzbergen. He imagined he was somewhere about the middle of the sea, between Greenland and the North Cape: and as there was plenty of spirits, and provisions of all kinds within the hulk, if he could get at them, he more than half made up his mind to attempt wintering on the ice: but to do this, he required to work his way both into the hold and the fore-castle, at whatever labour, where he knew there were coals and stores of various sorts. To add to his difficulties, however, every thing was reversed, and the companion-door down among the ice. This he judged it necessary to gain, and then work his way between the deck and the solid ice below, and many a hard day's labour he spent in vain on this; for when at length he arrived at the valve of the hold, he found the whole weight of the cargo tumbled over and lying above it, so that to open it was not only impossible, but, if it had been practicable, would have been attended with certain suffocation to himself. In the course of his excavations, however, he found the captain's wardrobe, consisting of plenty of shirts and clothes; but all steeped with salt water, and frozen. He also found his shaving utensils, and his flint and materials for lighting his pipe. He reached, likewise, the cole-hole, behind the flue, containing a few coals, and an old axe for breaking them. From among the rubbish of a boat that had been fastened on deck, he groped out a square-sail and some smaller ones, besides possessing himself of a good hatchet, and many other useful things.

Fire was now the only thing he wanted, for melting the ice, for cooking, and for drying his clothes; yet although he had the materials, without a smoke-vent he could not use them. But, after trying various experiments, he at length succeeded

in carrying a flue up to the heel of the keel, and found it to answer admirably.

Winter had now fairly set in. The calls of the swans and geese, journeying southward, no more reached his ears. A few bears were occasionally prowling about; but he seldom went outside. As he had now found a use for the grate, he stuffed up the entrance with a quantity of snow, through which he had fixed a piece of cable, with which he could push it out, or draw it in, as suited his convenience.

During one of the terrible storms of wind and snow-drift common in the Polar regions, about the middle of the night, Gordon was awakened by some noise inside his cabin. He was frightened beyond measure, for he had no conception what it could be. By-and-bye, something came to his closet-door, and rapped. He held his breath, for he was unable to speak for terror. It tried to wrench open the door, but it failed. He was by this time on his feet, with a large carving-knife in his hand, as sharp as a lance in the point, which he kept always beside him. Presently, he heard the intruder go away, and attack the biscuits. He now knew that it was his first visitor the bear, and was sure that it had come to steal for its winter store. He instantly struck a light, flung open the door, and bolted out, having the light in his left hand, and the long sharp carving-knife, for cutting up beef, whales, &c., in his right. The light frightened the creature so dreadfully, that it dashed out at the window with precipitancy; and not taking leisure to put out its fore feet first, along with its head, it stuck fast, and could not move. He ran forward, and with his long knife gave the animal two deadly stabs below the fifth rib, towards the heart. The blood that gushed out, nearly filled the cabin, and the poor brute very soon gave over struggling.

He left the huge animal sticking in the hole, to keep out the cold, and retired to his couch, locking and bolting his closet-door. He could not sleep, however, so rising and taking a dram to warm and cheer him, he went to examine his prey. It was stiff, and beginning to freeze in the flank; yet strange to say, he fancied that he heard it munching the biscuits outside, and making a sort of grumbling noise over them. This again frightened him, but resolving to see if the monstrous animal was yet alive, he pulled it into the cabin, and found it quite dead, and its tongue hanging out at the mouth, hard frozen.

The animal was a huge she-bear, with milk in her dugs, which had manifestly been recently sucked. He skinned it with great difficulty, clipped it into neat square pieces, and spread it on the ice, below the inverted decks, to freeze. He calculated that he could not have less than a hundred weight of good wholesome fresh meat. He then cleared out his cabin, washing it all with hot water, and spread the bear's skin on it for a carpet. After swallowing some hot punch, he once more retired to bed.

On awaking, he heard a noise at the window, and instantly recognised the sounds which had alarmed him before, when the dead bear was sticking there. It was a sort of plaintive grumbling. Without hesitation, he opened the window. A bear cub,

just apparently dying of hunger and cold, raised its fore feet to the window, as if entreating to be taken in. He helped it in, and when it found its mother's skin, it uttered a bleat of joy, and the tears actually streamed from its eyes. It went round and round, and licked the skin for very fondness; but, alas! it was always looking for what it could not get, the mother's exhausted dug.

At length it seemed to comprehend something of the matter, that a rueful change had taken place; for, after long pauses of stupid consideration, its mutters of joy gradually changed into moanings of heart-rending pathos, and at last it laid itself down in a round form, to die contented, beside all that remained of its mother. Pitying its groans, Gordon proffered it some biscuit. It received the first piece shily and timorously, but the rest it ate so voraciously, that he was afraid it would choke.

Recollecting with joy that on the ice which he had cleared below the deck of the hold, there were huge heaps of frozen blubber lying, he crept away, with his old coal-axe and a light, and brought some large pieces of frozen blubber, which he broke into small bits, and fed the cub with them, patting it every time, and speaking kindly to it, calling it Nancy, after the only girl he ever loved, for it was a female. It licked his hand in return, and his heart bounded with delight. Their friendship was formed at that moment, with a resolution on his part that it should never be broken.

He fed it slowly, but liberally, and when he judged it had got enough, he put the remainder of the blubber away out of its reach, and sat down beside it, fondling it, and repeating its name, "Poor Nancy, poor Nancy!" She licked his hand again, and then rolling herself up once more on her mother's skin, after a few occasional heavy moans, she fell sound asleep.

Out of this sleep she did not awake for at least three days. In the meantime our hero was not idle. In the floor of the fore-castle there was a trap-door, communicating with the bilge

water, into which the crew had emptied foul water without being obliged to run up to the ship's side every instant. There was likewise one in the cabin, but that being carpeted was seldom opened. The floor, it will be remembered, was now his ceiling, and on pushing aside the latch of the trap-door above, which he easily effected with a table-knife, the door fell towards him, and hung by the hinges. On entering this hatch-hole, he found himself at the keel of the vessel, among the pig-iron, which, having fallen downward, he had a free passage, first, into the hold—where he found abundance of coals and casks of fresh water, or rather of fresh ice, and the

carcasses of five or six whales, so that he had meat for the bear-cub, Nancy, for years to come, besides plenty of blubber to burn—and then into the fore-castle, in the larder of which he found a large barrel half-full of beef, and another more than half-full of pork: also bacon, mutton, and deer hams, and about half a cask of Highland whiskey.

He returned rejoicing to the cabin, taking a good piece of solid fish with him, with pipes, snuff, and tobacco, all of which he found nicely packed up in boxes. He tried to awaken Nancy,

but in vain, and it was only by holding burning tobacco to her nose, which made her sneeze violently, that she could be prevailed upon to open her eyes. He fed her, and her eyes lighted up; he carried her into his closet, closing the door; but she would not settle nor rest from the skin of her mother; which at last he took, and spread above his blankets, when she went of herself and lay down upon it, uttering the same kind of sounds as before.

He taught her, by degrees, to follow him in and out. She was never weary of rolling among the snow; and often scraped bitterly at the ice, as if longing to get into the sea. But as she now lay in his bed, he did not encourage this propensity, especially as she continued to thrive, and was soon as plump as a calf. She never once showed the least disposition toward surliness; but seemed to consider Gordon a friend of her own species. She answered to her name, and came at his bidding; and when they walked out upon the ice, he, dressed in his late captain's holiday-clothes, took her paw within his arm, and taught her to walk upright. He often laughed heartily at the figure they cut; and as she tried to imitate him in everything, so she did in laughing; but her laugh was perfectly irresistible, with the half-closed eye, the grin, and the neigh.

The sun at length made his appearance above the southern horizon; and Gordon employed himself, daily, in cutting out a regular stair to the top of the iceberg, in order to make what discoveries he could. This he was not long in effecting, and found it a huge mountain of solid ice, very irregular in its form, having creeks and ravines innumerable.

At length the swans came north over his head, shouting day and night. This, he thought, boded bad things for him; for it told plainly that the Polar Seas, beyond this great field of ice, were open. He therefore judged, that if the ice broke up, he was sure to be carried northward, among unknown seas and frozen coasts. To prevent a catastrophe of this kind, he was more than half determined to set out in search of some country; but he knew not where to go, or where to find either continent or island. He had still plenty

of victuals. He had a fowling-piece, and had contrived to dry a box of gunpowder. He climbed the iceberg almost every day, and at length formed the resolution of digging a cavern in it; as it was impossible, he thought, that it could melt or sink. He made several neat apartments, and one with a chimney, which he formed with great labour with a bar of pig-iron. Here he carried, with great toil, a part of his provisions, spirits, &c., and he resolved, if he saw the ice breaking up, to trust himself on the iceberg as his best resource, and leave the rest to Providence, believing that he would be perfectly secure in it from any danger but starvation.

For about two months, he spent all his waking hours on the top of this romantic mountain, with Nancy, for she was constant to him as his shadow. One morning, which he supposed, from the height and heat of the sun, was about midsummer, on going to the top of the ice-mountain, and looking round, he saw that the whole sea to the northward was clear of ice to within a mile of them, while there was at the same time a strong current

running in that direction. Everything remained as usual for several days longer, only Gordon and his companion slept in one of the chambers he had cut in the iceberg.

One night he was awakened from a sound sleep, by the tottering motion of the iceberg. The motion ceased in the course of a minute, by which time he was up and out on the platform at the top, from whence he saw that the iceberg had moved a small degree round to the west. It had separated from the interminable field of ice on the east, leaving an opening there about a bowsprit over. As the wreck remained on his side of the opening, he hastened down from the mountain to see how matters stood. The sea in the opening was as bright as a mirror, and as soon as Nancy saw the water, she rushed into it, and vanished in below the ice for a space that frightened him for her safety. She at length appeared with a fish in her mouth, something like a large herring. He was glad of it, and caressed her for it, and away she flew again to the opening. Whenever she dived, she brought up a fish of some sort; and every day thereafter she kept him well supplied with fish, so that he had a treasure of great value in that singular animal.

Perceiving the strong foundation on which the wreck rested, he again slept in his old berth in the closet of the cabin, and one morning when he arose, the beautiful crystal gap of water was gone, and they had set off on another Polar voyage, and left the interminable field of ice behind; and as far as the eye could reach, all was again sea, nothing but sea.

On the ledges of this ice-mountain, the uncouth and lazy walruses were frequently seen resting and rolling themselves, and the seals would have congregated on it, had it not been for Nancy, between whom and them a perpetual and bloody warfare was carried on.

During the space of six months, at least, Gordon must have traversed these Polar Seas, without ever knowing where he was. He several times saw mountains in the early part of his tour, and twice, in particular, quite distinctly; and once he saw a headland or island straight before him. He was all anxiety to see what kind of country it was, and was on the topmost point of

the iceberg on the watch. He was even so near it, that he saw a being whom he took for a woman, moving about on the shore, staring at the floating ice-mountain. He put his two hands to his mouth in place of a speaking trumpet, and hailed the stranger with his whole strength of lungs; but ere he could prevent it, Nancy did the same, and sent forth such a bray that fairly frightened the native, who fled over the swiftness of the roe, and vanished among the rocks. The iceberg, with the ledge of ice attached, having the hulk of the *Anne Forbes* resting on it, after this got into different currents, and was driven about from one direction to another, in that vast Polar sea.

At length the fogs began to brood over the face of the ocean, the sun to near toward the horizon, and from that time forth he saw no more around him, sun, moon, or stars, but journeyed on he knew not whither. Unless when employed cleaning and laying by the fish which Nancy caught, Gordon either lay and dozed, read his Bible, which he got mostly by heart, or amused himself with the gambols and antics of his companion. Though

he often slept in his ice-cave in summer, he drew into his old cabin as winter approached, for his ante-room at the cavern had been all melted away during the summer months.

The next change he met with was the hearing of a great rushing noise like a tempest, which continued for some time, although he could perceive no alteration of the ocean. He resolved to walk round the vast mountain of ice, as far as he could get. By the time he got half way round, the mystery was cleared up. The new ice had commenced, and a strong under current bearing this irresistible mass with its broad base previously on it, it was breaking it up with tremendous violence. The ice, continuing to be rolled up before the mountain, was heaped up before it to such a height, that it at length became once more immovably fixed, and all the turmoil was still.

An intense frost now set in, the fog cleared away, the stars appeared in the zenith, and a beautiful blue twilight sky fringed the horizon. Gordon was on the top of the mountain, looking all around, and persuaded himself that he saw land right a head, and at no great distance. Whilst contemplating the scene with the deepest interest and anxiety, judge of his feelings, when the report of a gun reached his ears. He took it for a signal gun from some ship, but what it was, or whence it came, he never discovered. It sounded as if not two miles off. He hastened from the height, seized his fowling-piece, and again ascending the height, fired. After his third shot the salutation was returned with a roar louder than before. He tried as well as he could to imitate the signal of distress, but judging that there was no time to be lost, after his first signal had been answered, he hastened down once more, packed up some powder and shot, victuals, and a bottle of spirits, and posted off in the direction whence he deemed the sounds proceeded, and the land lay. Before he went away, he lighted a lamp in the cavern, which he knew would burn for a long time.

When he had travelled from sixteen to twenty miles, calculating from the length of time he had taken, and the fatigue he felt, and while making for some hills which he thought he discovered before him, he perceived Nancy a great way to the right, seeming greatly interested about something, as if following a track. He turned in the same direction, and to his joyful astonishment, found the traces of a company amounting to from thirty to forty individuals, all journeying on the same path, straight for the land. Thus encouraged, he posted on for many miles. At length he came upon some marks that were rather equivocal. Nancy had run off and left him on the track; and now straining his sight forward, he perceived on a rising ground that must have been a shore, a whole herd of white bears, all turned with their faces towards him!

He durst not run for fear of being pursued by the whole herd, and torn to pieces; and as he dared not advance, he squatted down on the ice, and wished himself under it. The monsters, however, had discovered him, and off they all came in a body towards him. He sprang to his feet and ran, without looking behind him. A certain noise, however, which he soon heard coming nearer and nearer, compelled him to look over his shoulder, when he perceived two bears in close pursuit. He flung his wallet of provisions, and his remaining bottle of rum from him, and held on, having then nothing but his loaded gun and his long dirk. The two bears paused when they came to his wallet, and soon devoured the victuals. To his joy, he perceived that the lesser bear was Nancy. Being quite outspent with running, he paused to gather breath, and look at the two. The large wild monster took up the bottle of rum, smelled it, and turned it over, when Nancy, with perfect *sang froid*, snatched it from him, drew the cork with her teeth, and putting the bottle to her mouth, took apparently a long pull of the spirits, and then handed it to her companion. He took the bottle, put it to his mouth, and, as Gordon thought, drank about the half of it. He then held up his nose at an angle of forty-five, shot out his long red tongue, and licked his chops; he seemed both delighted and astonished, and would not part with the bottle again; but wheeling himself round, with his back to Nancy, he took another pull, till he finished it; and then threw the empty bottle away in a rage, because it would not produce any more. He then fell a dancing and bobbing on his hams, nodding his head from side to side, and cutting ca-

pers innumerable; while Nancy stood straight up on her hind feet, and waltzed around him. At last, he tumbled over at full length, and after several ineffectual efforts to rise, he groaned, stretched out his limbs, and lay as if dead.

Gordon had fled with such precipitancy, that he had lost all traces of his path. After travelling several miles, Nancy quitted him, and, as he thought, returned to kill the sleeping monster he had left behind. He was hungry and thirsty, and overcome with sleep and fatigue; he had lost his only guide, yet still he was hurrying on he knew not whither. He knelt on the snow-covered ice, and prayed to God to direct and save him. He rose, strengthened and revived, and shortly afterwards, to his great gladness, he came upon his own backward track.

He now hied on with cheerfulness, but he became exceedingly fatigued, and sleep quite overcame him; and though he knew that to lie down on the ice was death, he felt an irresistible inclination to do it. When he felt himself drooping, he rested on his knees, and leant his head and arm on the muzzle of the gun, and thus obtained some momentary sleep; and when he was getting sound asleep from the effects of the frost, he fell over, which awakened him.

He proceeded in this way for some time; but at length he heard a noise coming along the ice, like the galloping of horses, accompanied occasionally with a growling murmur. He made all the haste he could, but his strength was gone. On looking back, he beheld a bear coming upon him at full speed. It was soon kneeling at his feet, and licking his hand. It was Nancy, bleeding. She instantly turned about, and went slowly back. He then perceived a gigantic bear, standing on end, like a tall obelisk covered with snow. His heart fainted within him; but he cocked his gun, and tried to run on. Nancy endeavoured to oppose the monster by throwing herself always in before him; but he would not bite or tear her; he only gave her a cuff with his paw, to make her keep out of his way. Gordon tried several times to take aim at him, but found it impossible without shooting Nancy: so that all he could do was to run on, until, fairly exhausted, he fell flat on his face. Instantly he found himself grasped, and one of the bears above him. It was poor Nancy trying to cover him with her own body from the attacks of the savage brute that pursued him. The monster struggled to reach his neck, and forced his head in below Nancy, and Gordon felt first his cold nose, and then his warm lips close to his throat. He called out, "Seize him!" the words that he used for baiting on Nancy, and which she always promptly obeyed, on which she gave him such a snap, that not only made him desist, but growl like a bull.

The huge animal, although thus foiled, at length made his attack at the same point again, and in trying to reach Gordon's neck, he seized him by the left arm, close below the shoulder. He called out furiously to Nancy, who at that moment seized the gigantic monster by the throat with her teeth and paws. He started away and swung her round and round, like a baby, bellowing fearfully; but quit her gripe, Nancy would not. He then seized her with his paws, hugged her, and threw her down, but would not tear her. With all the speed and precision his wounded arm would admit of, Gordon held the muzzle of his gun to the larger bear's ear, and fired. The shot took away the power of doing any hurt with his mouth; but his paws continued to embrace Nancy with a deadly grasp, she still keeping a fast hold of his throat. He then stabbed him to the heart again and again; and though the blood streamed through the snow as if a sluice had been opened, it was amazing how tenacious the monster was of life. But at length he slackened his hold, and rolled over and over on the ice. As soon as Nancy got free, he embraced her, and feeble and overworn almost to death, with her at his side to lean upon, they made their escape to the old hulk.

He barricaded the entrance-window, fed Nancy, ate something himself, drank a little brandy, knelt down and returned thanks to the Almighty for his deliverance, and having kindled a fire of coal and driftwood, and bathed and dressed his arm, which was much lacerated, and washed Nancy all over, he took a short and troubled sleep. As for Nancy, with the late exertion and a hearty meal, she fell into the torpid state, and dozed

away the time for nearly three months, until he was obliged forcibly to awaken her, as he had done before.

It proved a severe winter, much stormier than the last; and by the time the sun began to show his disc above the horizon, our modern Crusoe had once more resolved to make a pilgrimage over the ice, in search of some inhabited country. Accordingly he made the requisite preparations, and loaded himself and Nancy very heavily, knowing that his loads would constantly be getting lighter, and then he left his old comfortable cabin, and his mountain of ice, with many bitter tears, all uncertain whether he should ever see it again.

Away they jogged together, holding their course, as nearly as Gordon could guess, to the S.S.W. The mountains towards which he had journeyed before, were quite visible; but he called that land the Bear Island, and believing it to be inhabited by a whole colony of bears, he did not venture near it; but turning to the left, he passed it in the space of three days. Having reached the south-west corner of this country, he unexpectedly came upon the traces of three men and a number of dogs, and by following them, he arrived, in a few hours, at the shore. There he found a spot where the men had evidently rested, and his heart bounded with joy. In order to overtake them, it was necessary to leave the luggage, or the greater part of it; so, making with strong cord a muzzle for Nancy, who was an indiscriminate destroyer, and would certainly attack the dogs first, and in all probability the men next, and taking a bottle of Highland whiskey and some provisions with him, he set out on the track of the three men, and followed most eagerly. Having fastened the muzzle on Nancy, he put a cord to it, and led her. She tried to get loose by pulling the muzzle off with her paws; but his commands restrained her, although she continued to look at him with apparent astonishment and dejection.

After he had travelled about fourteen hours, he came to a place where the three men had evidently rested and refreshed themselves, and there was a great deal of blood upon the snow, from which he concluded they were hunters, and had killed some game. Here he took some refreshment, there being a spring gushing out of a rock, and likewise fed Nancy, who began scraping on a spot between two rocks, where he soon discovered a store of venison, covered over with snow, and trampled firm down. From this he perceived that this spring was the rendezvous of the hunters; and to meet with them he had only to remain where he was. With what anxiety of heart did he pass these few hours!

His suspense was at length relieved by the approach of six strong dogs coming all up hill, baying upon him in the most furious manner possible. An expedient struck him in a moment. He drew his coat tails over his head, stooped, and ran forward to meet them. After uttering a few short barks of terror, they all fled, as if the devil had been chasing them. The astonishment and dismay of their masters may well be conceived, when they met their dauntless assistants retreating with looks of such wild dismay. Peeping through the cleft of his coat, he perceived masters and dogs flying again, the latter leading the way, barking in downright terror. He instantly assumed his natural shape, and hallooed out after them. They turned round, gaping and staring, but did not stop. The sight of a human creature coming on them in the company of a white bear, the only creature of which they stood in perpetual dread, was too much for their comprehension; so they took to their heels, and Gordon had no other shift than to pursue.

Their snow-shoes, however, kept them above the snow, whereas every step that he took he sunk at least half a foot, the surface being thawed on all the south sides of the hills. He was, therefore, obliged to give up the pursuit and return. Assured that they would come back to that place, if not through hunger, at least for the fruits of their labour, he hid himself among some rocks hard by, from which the sun had melted the snow.

He soon fell asleep from fatigue and anxiety; and was awakened by Nancy struggling to get free. Hearing people speaking, he peeped over the rock, and saw the three men standing beside their buried treasure, in earnest conversation, and apparently astonished at finding all their store untouched. Gordon drew himself up to the verge of the cliff, and, at once, on his knees, implored them, for Jesus Christ's sake, to take him

under their protection. They knew the name, and each of them took off his fur cap, and kneeled on his right knee; but when Nancy appeared on the cliff, the dogs scampered off. The men were about to follow, on which he held up the cord to show them that she was muzzled and chained; and ordering her, she cowered at his feet, and kissed his hand. This astonished the men, who stared at one another, and Gordon explained to them his situation as he best could, for they did not understand one another's language. He then took out his whiskey bottle, and gave them all a tasting, which pleased them not a little.

They were now friends, and sat down to eat together. They then packed up for departure, the men having secured as much food as they could convey, although they took care to carry no bones. They gave the dogs those for their share, after having sliced the flesh neatly off them, which they stuffed into seal-skin bags, and then yoking the dogs to these in pairs, they trailed them with great swiftness over the snow. Being apprehensive of a row between the dogs and Nancy, Gordon made signs for the men to muzzle the dogs, which they did, and then they journeyed together in peace. When they came to his luggage, the sun being warm, they rested long, and slept; and the men let him understand that they had to provide for a long journey. After proceeding three days and three nights along the level surface of the ice, they beheld the open sea, and came to two canoes, and a boat, lying on the ice, near to the verge of the sea. The boat was for carrying the dogs and one man, and the canoes for a man each. As the dogs were perfectly obedient, each of the men took two dogs below the leather of his canoe, and Gordon was deposited in the bottom of the small boat, and there, with Nancy beside him, he was forbid to move, for fear of upsetting the frail bark.

They at length arrived on another coast, and were met upon the shore by twelve young women; who conducted him to their habitation, and at the entrance they were received by an old man, with hair and beard as white as the driven snow. He was the patriarch of the little colony, and their priest; and Gordon was instructed to kneel and receive his blessing, which he did, and was then conducted in, and welcomed with many tokens of veneration.

The home of these simple people was strangely constructed. The outer apartments were built and vaulted with snow; but, besides these, there was a long natural cavern stretching under the rocks, and many irregular side recesses; in one of which his bed was made, which was a good one, and there he and Nancy were left to their repose.

The colony consisted of thirty-one women and ten men, including the aged father—the rest of the men had perished at sea, or in bear-hunting—and seven children, two of whom only were boys. Gordon ascertained that he was in Old Greenland, among a remnant of a colony of Norwegians, a race of simple primitive Christians, whose progenitors had occupied that inclement shore for centuries; and once, by their own account, amounted to many thousands; but, strange to say, fell by degrees a prey to the irresistible invasions of the great Polar bears. They had a prophecy among them that the bears were one day to devour the last of them. The people were of low stature, and their fur dresses made them appear as square creatures, very near as broad as long.

Here Gordon lived for a considerable time. He married one of the women, and owing to the depressed state of the colony, was allowed two others as concubines, that they might have the chance of producing boys. This was a state of matters not at all likely to please Nancy, who would not leave his apartment while he slept, nor allow another to lie in his arms in her presence. She had soon become a favourite with the whole tribe, owing to her expertness in fishing; and accompanied them in an expedition which they made to the hulk of the *Anne Forbes*, to bring away some part of the oil, spirits, iron, &c., which had been left there, on which occasion they took with them eight light sledges, drawn by one-and-thirty powerful dogs, the whole conducted by four men, of which number Gordon was one, while poor Nancy travelled on foot.

After their return, Nancy evinced such strong symptoms of jealousy as alarmed her master very much. When the poor creature found that she was debarred from sleeping by him,

and watching over him in the night, her unhappiness was extreme. Her moans disturbed the whole community; and so, after she had spent a part of one night in such groans, as if her very heart was breaking, in the morning she was missing, and, though they searched for her far and near, she was nowhere to be found.

A considerable time passed on; but, at last, on rising one morning, they found themselves invaded by a horde of white bears, and the ice-roof of their cavern penetrated in two places. The colony at the time consisted of about sixty men, women, and children; but only one-third of these were capable of standing any deadly struggle. They resisted, however, the attacks of their ferocious assailants, in the best manner they were able. They had plenty of spears, both of bone and iron, some bows,

and arrows in abundance; but of powder and lead they had only a few charges remaining. They sallied out on the bears, not only every one who could bear arms, but every one who could carry a red clout for a flag, at which colour the bears are said to be frightened—with all their dogs and all their shells. The bears fled before the deafening noise; they pursued, but were attacked by a powerful body in the rear, and turning to defend themselves, they were again instantly attacked by those they had been chasing. The slaughter committed by the bears was dreadful. In the midst of the strife, Gordon was seized by an immense powerful bear, round the arms and the breast, and borne off with great rapidity. The huge animal never stopped until it brought him to the door of their now nearly desolate habitation, where it set him down uninjured, kneeled at his

feet, and kissed his hand. To his astonishment and joy, he found that it was his long-lost Nancy. He embraced her, and was now sure of protection.

The generous animal, on the approach of some equivocal sounds, seized him by his dress, and drew him into one of the recesses of the cavern, where she took a sealskin wallet and laid it on her back. He then knew that she wanted him to load her with provisions and fly, which he effected with all speed. They issued from the cavern with great caution, and she led him straight to the sea-side, to the very spot at which they had first landed in Greenland, and there she threw his load from her back, kneeled, licked his hand, and then scampered off to share the prey with her associates.

There were plenty of canoes lying at the spot, and some fishing-boats; but choosing the best canoe he could find, he stowed

his victuals in about his feet and legs, bound the sealskin cover around his breast, and set out to sea. He continued his voyage night and day, along a weather shore, going on land occasionally to sleep. He got some distant views of Iceland, but could not get near it for ice; so he held on his course until fairly hemmed in with ice; he then drew his canoe ashore, and climbed a hill, from which he saw the open sea at no great distance, and several ships, all apparently beating southward. He posted on, running without intermission in the direction of the ships; but before he reached the verge of the ice, they were all gone beyond hail. To his great joy, however, after spending twelve hours in the utmost anxiety, the Briel, of Amsterdam, hove in view, beating up, and as in one of her tacks she came close to him, he was taken on board, and once more safely landed in Scotland, after an absence of seven years.

LOSS OF THE EARL OF ABERGAVENNY,

Captain Wordsworth, February 5th, 1805.

The following account of this melancholy and fatal disaster is taken from the accounts which were given at the East India House, by Cornet Burgoyne, of his Majesty's 8th regiment of light dragoons, who had the command of the troops on board the above ill-fated vessel, and by Mr. Gilpin, the fourth officer, who was one of the fortunate few that escaped, and from the best information that could afterwards be obtained.

On Friday, February 1, 1805, the Earl of Abergavenny East Indiaman, commanded by Captain John Wordsworth, sailed from Portsmouth, in company with the Royal George, Bombay Castle, Henry Addington, and the Wexford, and under convoy of his Majesty's ship, the Weymouth, commanded by Captain Draper.

The Earl of Abergavenny was built for the China trade, of the largest tonnage in the service, being inferior only to the Ganges, and of at least 1500 tons burthen; she was engaged to the company for six voyages, and this was the fourth on which she was proceeding. Her company consisted of—

Seamen, &c.	160
His Majesty's and Company's troops	159
Passengers at captain's table	40
Ditto third mate's ditto	11
Chinese	32

Total number of persons on board being 402

In going through the Needles, off the Isle of Wight, they unfortunately separated from the convoy, and in consequence the fleet lay to nearly the whole of the next day, but not seeing anything of the Weymouth, they proceeded towards the next port under moderate sail, in the hope of being joined by the convoy; but as she did not appear by the 5th, they deemed it expedient to wait her arrival in the Portland Roads, more particularly as the wind was rather unfavourable, having shifted several points from the N.E. Captain Clarke, of the Wexford, being the senior commander, was consequently commodore, made the signal for those ships who had taken pilots on board, to run into the roads.

At about half-past three, p.m., the Earl of Abergavenny got a pilot on board, and bore up for Portland Roads with a steady wind; but on a sudden the wind slackened, and to their dismay they found that the tide, setting in fast, was driving them rapidly towards the Shambles. The nearer she approached, the less she was under the guidance of her helm, and becoming at last totally ungovernable, she was furiously driven on the rocks off the Bill of Portland, at about two miles distance from the shore, where she remained for nearly an hour, beating incessantly with such violence, and the shocks so frequent and tremendous, that it was with great difficulty that the officers and men who were on deck could keep their footing. At four, p.m., the shocks gradually lessened in violence, and in about a quarter of an hour they got her clear off the rocks, upon which the sails were immediately set, with an intention to run for the first port they could reach; but the ship made so much water, and the leak increased so fast, that the ship would not obey the helm. In this distressing situation, it was considered necessary to fire guns of distress, and twenty were fired; but they did not hoist out the ship's boats, as those on board did not consider the danger sufficient to render it necessary, the weather being moderate, and the ship in sight of the fleet and shore.

At five, p.m., the leak had increased so fast upon the pumps, that soon after striking, the hand-pumps started above six inches, and shortly afterwards the water had increased from six to eight feet, despite of every exertion that was made at the pumps. To their extreme mortification, they found that all their endeavours to keep the water under were fruitless, and night setting in rendered the situation of all on board melancholy in the extreme; and the more so, as they ascertained that the ship had received considerable damage in her bottom, immediately under the pumps. All hands, without distinction, took a turn at the pumps, alternately baling at the fore hatch-way.

At eight o'clock their situation became more and more dreadful. As it was found impossible to save the ship, which was sinking fast, and settling in the water, they again discharged signal guns incessantly; and the purser with the third officer Mr. Wordsworth, and six seamen, were sent on shore in one of the ship's boats, to give notice to the inhabitants of the distressed state of the vessel and endeavoured to obtain assistance; directly after a pilot-boat came off, and took into her Mr. Evans and his daughter, Miss Evans, Mr. Routledge, Mr. Taylor, a cadet, and Miss Jackson, all passengers, who embarked for the shore, notwithstanding there was a most dreadful sea, which threatened them every instant with destruction.

The attention of the crew was diverted for a few moments in observing the boats that left the ship, but these unfortunate people were quickly recalled to the sense of their own approaching fate by a heavy swell, which baffled almost every attempt to keep the ship above water. Each one appeared conscious of his danger, and certain as to his fate; and notwithstanding the most unremitting exertions of the officers to maintain order and discipline, confusion on board commenced directly it was given out that the ship was sinking.

At ten, p.m., several of the sailors begged hard to have more liquor allowed them, but this being very properly refused, they attacked the spirit-room, and were only prevented from adding to their horrors by the miserable refuge of intoxication, by the spirit and determination of the officers, who never once lost sight of that dignity of character so necessary to be preserved on such a trying occasion, but continued to the last to conduct themselves with the utmost fortitude. One of them, who was stationed at the door of the spirit-room with a brace of pistols, to guard against surprise in such a critical moment was much importuned by a sailor to grant him some liquor, as he was convinced, the man said, "it would be all one with them an hour hence;" but the officer, true to his trust in this perilous moment, had courage enough to repulse the man, and bade him return to his duty with his fellow comrades, adding, "that if it were God's will they should perish, they ought to die like men;" and although the water was pouring in on all sides, the officer remained at his post, even while the ship was sinking.

At half-past ten o'clock, notwithstanding all the exertions of the officers and crew, who behaved in the most cool and exemplary manner, the water had got above the orlop-deck. All on board were now looking out anxiously for boats from the shore, and many deeply regretting that they had not taken refuge in those that had already left the ship, as their destruction on board appeared now to be inevitable, and the most strenuous exertions were necessary to keep the ship above water, till the boats came off from the shore: but, unfortunately, in the great distress and agony of the moment, the ship's boats were not hoisted out, as it was very possible that had such been the case, every soul on board might have been saved.

At eleven o'clock, a fatal swell gave the ship a sudden shock, she gave a surge and almost instantaneously sunk, about two miles from Weymouth beach, with scarcely five minutes warning to the unhappy wretches, who were the victims of this calamitous disaster, and who were thus suddenly snatched from a career bright with hope and expectation, to

That undiscovered country, from whose bourn
No traveller returns—

She went down by the head in twelve fathom water, after a heavy heel, when she righted and sunk with her masts and rigging standing. Many clung to loose spars that floated about the wreck, and the majority took refuge in the shrouds; but the severe shock of the ship going down, made several let go their hold, whilst others, by the velocity of the ship's descent, had not power to climb sufficiently fast to keep themselves above the water.

When the ship touched the ground, it was supposed that there were above one hundred and eighty persons in the tops and rigging; their situation was wretched beyond all description, the yards only were above water, and the sea breaking over them in the middle of a cold and frosty night; but in about half an hour, their spirits were considerably revived by the sound of several boats, that appeared beating against the

waves at a short distance: but, alas! their hopes were in vain, for although they hailed the boats with all the vigour and strength which despair could lend to their lungs, not one of them came to their assistance; the sound of them died away, and again they were left to the mercy of the waves.

By twelve o'clock, their numbers were much lessened by the swell, which swept many off the wreck, and the piercing cold rendering many others unable to retain their hold: almost every moment some friend or companion was seen floating around them, and the next sinking into the vast watery abyss, to rise no more; but to the unutterable joy of the survivors, they discovered a sloop, which had fortunately heard the signal guns, and came to an anchor close by them—the weather was moderate, and they were now promised a speedy deliverance. The sloop's boat was immediately manned, and proceeded to the rigging that remained above water, taking off twenty, which were as many as the boat could safely carry, and returning three times, taking twenty each turn, the whole of the people that remained were safely taken off. Nothing could be more orderly and correct, than the conduct of the crew on this occasion; they got into the boat in the most steady and orderly manner possible, one by one, and these only as they were named by their officers. As the boat was about to put off for the last time, as it was supposed that every one was by this time brought off, a person was observed in one of the tops, whom they hailed, but he did not answer; upon which Mr. Gilpin, the fourth officer, whose extraordinary exertions on this occasion, as well as throughout the whole of this melancholy affair, entitle him to the highest commendation, returned to the wreck, and there found a man in an inanimate state, exhausted from the severe cold; he most humanely brought him down on his back, and placed him in the boat. He proved to be Serjeant Heart, of the 22nd regiment; but although every possible care was taken of him it proved in vain, as he died in about twelve hours after he was landed.

Having now as they supposed rescued all the survivors, the sloop weighed for Weymouth, but had not proceeded far, before it was observed that Mr. Bagot, the chief officer, was close astern, and the sloop, in consequence, lay-to for him; but this noble-spirited young man, although certain of securing his own life, yet disregarded his own safety, on perceiving that Mrs. Blair, an unfortunate fellow passenger, was floating at some distance from him. He succeeded in coming up with her, and sustained her above water, while he swam towards the sloop, but just as he had reached her, a heavy swell came on, and his strength being totally exhausted, he sank to rise no more, his unfortunate companion perished with him, and thus, his generous exertions proved in vain.

About two o'clock, the sloop weighed anchor from the wreck, and the wind being favourable, she soon arrived at her destination, Weymouth, where every attention was paid to the unfortunate sufferers by the mayor and aldermen, as well as by most of the principal inhabitants. Upon mustering those that had landed, it appeared that out of four hundred and two persons who had embarked, only one hundred and thirty-nine had reached the shore. A person was immediately despatched to the East India House with the melancholy intelligence.

On February 6th, at daylight, the people at Weymouth could plainly discern the tops of the ship from which the crew had the previous night been so providentially rescued, and conjectured that she must have been on a mud-bank, as, while the crew were in the tops, she appeared to have sunk about eight feet, and was now considerably lower. The Greyhound cutter was immediately stationed near to guard the wreck, and the boats from the Rover succeeded in stripping the rigging from the masts.

On the 7th, her decks had not been blown up, and she appeared to remain exactly in the same state as when she sank, the great weight of her cargo, it is supposed, being the cause of her sinking so steadily. She was supposed to have been one of the richest ships that ever sailed for India, having on board a cargo that was estimated at the value of £200,000 sterling, besides which she had on board dollars to the amount of 275,000 ounces.

The list of those that were saved, consisted of about eighty

officers and seamen, eleven passengers, five out of thirty-two cadets, forty-five recruits, and fifteen Chinese. Captain Wordsworth, who fell a victim to this disastrous calamity, was nephew to the Captain Wordsworth who formerly had the command of the Earl of Abergavenny, and who was considered one of the first navigators in the service. This was his third voyage as captain, and disdaining to survive the loss of so valuable a charge, he chose the dreadful alternative of perishing with his ship, rather than desert her in the hour of peril; and his conduct throughout the trying scene, has been spoken of in terms of the highest praise. It is an extraordinary fact, that previous to his embarkation on this ill-fated voyage, he felt such an unaccountable melancholy and depression of spirits, that he could not be prevailed upon to go through the usual ceremony of taking leave of the Court of Directors on the day appointed; and it was not until the following Wednesday, which was specially fixed for the purpose, that he yielded to the wishes of his friends, and reluctantly attended the court. In conduct and disposition he was a man of mild manners, and so even-tempered, that among his shipmates he was known by the *soubriquet* of "the philosopher." When the ship was going down, the chief officer, Mr. Bagot, went on the quarter-deck and informed him that the ship was rapidly sinking, despite of every exertion to save her; but Captain Wordsworth, who there is no doubt was in momentary expectation of such a calamity, steadfastly looked him in the face with all the appearance of a heart-broken man resigned to his fate, and faintly answered him, "God's will be done! let her go!" which were the last words he uttered; and from that instant he was motionless. A few moments afterwards the ship sunk, and many, who to save themselves were climbing the shrouds, endeavoured to save him, but without success. Mr. Gilpin, the fourth officer, was foremost in this endeavour, and, at the evident risk of his own life, made several attempts, which were equally unsuccessful.

It may be mentioned as an instance of the thoughtlessness of those whose constant occupation is in the midst of peril and risk of life, that the quarter-master, John Barnett, who was one of the fortunate few that escaped this melancholy disaster, on the first night of his arrival in London, instead of returning thanks for his providential deliverance, was one of the noisiest in the front row of the pit at Drury-lane theatre.

SUFFERINGS OF MR. HORE AND COMPANIONS, ON A VOYAGE OF DISCOVERY, IN 1536.

MR. HORE, of London, having diligently applied himself to the study of cosmography, persuaded several gentlemen, to the number of eighty, to accompany him in a voyage of discovery to the north-west parts of America. Accordingly they provided two ships, namely, the *Trinity* of one hundred and forty tons, and the *Mirror*, which were armed and well appointed, and in which there embarked about one hundred and twenty persons, gentlemen and sailors. They set sail from Gravesend at the latter end of April, 1536, and were two months at sea without touching land, till they came to a part of the American coast, about Cape Breton, from whence, sailing eastward, they came to the Island of Penguin, and landing there, found it full of great fowls as large as geese, and an infinite number of eggs; they hunted many of the fowls with their boats, and having flayed them, found them good nourishing meat: they also saw great numbers of black and white bears, some of which they killed and found excellent food.

While they lay at anchor at Newfoundland, before they had seen any of the natives, as Mr. Dewberry, one of the company, was walking on the deck, he descried a boat full of savages rowing towards the ship, upon which he called to the people to come and see them. They presently manned the boat with the intention of taking the savages, but they observing the hostile intention, made off with all the speed they could to an island up the bay, closely pursued by the men in the ship's boat, who were, however, unsuccessful in the chase, as the superior agility of the savages enabled them to effect their escape, leaving behind them a fire, and the side of a bear on a large wooden spit; they left also a boat garnished with trails of raw silk, and a

great warm mitten. With these the men in the boat returned to the ship, having seen nothing else, but numbers of fir and pine trees. In this bay they lay for some time in great want of a supply of fresh provisions, till their stock became so exhausted, that they had little or nothing to subsist upon, except the nest of an osprey, that had brought a plentiful supply of various kinds of fish to her young ones almost hourly; when this seasonable supply had failed them, they were so far reduced, as to be obliged to seek out and relieve themselves with raw herbs and roots on the main land; but this proved a miserable substitute for food, and so far from satisfying their insatiable hunger, only sharpened their appetites, till their extreme necessity forced upon them the most inhuman practice; for as they were hunting about the fields and woods for something to eat, one of the sailors killed his mate, as he was in the act of stooping to take up a root, and cutting pieces out of his body, lighted a fire, and after broiling them, devoured them greedily. Nor was he the only one guilty of this horrid crime, for such was the enormous extent to which the men carried it, to satisfy their cravings, that the officers wondered what had become of the men, until one of the crew forced to go abroad for relief, happened to snuff the smell of the broiled meat, and finding it out, upbraided the fellows who had it, for thus enjoying plenty while his mates were starving; to which the poor fellow replied, with tears in his eyes, "If thou must needs know the kind of meat that I have been dressing, it was a piece of such a man's buttock." The report of which being brought to the ship, it was presently judged what became of the men that were missing; and that they were neither destroyed by the savages, nor devoured by wild beasts. The captain was very much shocked at the report, and addressed the men in order to convince them how much they had offended the Almighty by such horrible actions, and related several instances from scripture and otherwise, how God succoured many in their utmost distress, who had called upon him, and that, though it should not please the Almighty to assist them in this extremity, it were far better that their bodies should perish than they should purchase a temporary relief at the price of their immortal souls; he then exhorted them to repentance, and besought them all to pray, that it would please God to have compassion on their miserable condition, and for his mercy's sake, to send them relief. Their prayers were heard, for the same night a French ship arrived, well provided with provisions, and which the English contrived to get into their possession; and with this providential and unlooked-for supply, they victualled their ships, and set sail for England.

On their voyage homewards, they sailed so far to the northward, that though it was the summer season, they saw great islands of ice, where the hawks and other fowls rested themselves after their long flight from the main land. They also saw birds with red beaks, and legs, larger than herons, which they supposed were storks.

About the latter end of October, they arrived at St. Ives, in Cornwall, from whence they went to the castle of Sir John Luttrell, where Mr. Butts, Mr. Rastel, and other gentlemen of the voyage were kindly entertained, and from thence they proceeded to London. Mr. Butts was so altered by the hardships he endured, that his father and mother did not believe him to be their son, until he had shown them a secret mark, which was a wart that he had on his knee.

Some months after their arrival, those Frenchmen whom they had plundered of their provisions at Newfoundland, came to England, and complained to Henry VIII. of their ill-usage; but on making inquiry into the circumstance, the king was so well satisfied that mere necessity had obliged his subjects to deal so hardly with the French, that instead of punishing them, he made full satisfaction to the French out of his own purse.

George the First, on his return from Hanover, in a violent storm which arose, had nearly been lost. The vessel he was on board was afterwards sold, and became a Newcastle collier. On this mutation of naval service, the following lines were written:

"Mark the sad change in sublunary things,—
Coals she exports that once imported kings."

LOSS OF THE SHIP ANNE, CAPTAIN KNIGHT,

ON A REEF OF ROCKS TO THE NORTHWARD OF THE SOUTHEAST-MOST SOULEHEPAR ISLAND, APRIL 19, 1804.

PREVIOUS to the 19th of April, the weather had been extremely dark, when at eleven o'clock, a.m., of that day the seaman of the watch called out that he saw land, and before it was possible to wear the ship, the breakers appeared directly ahead of them. The helm was immediately put down, for the purpose of bringing her round to the westward; but before this could be effected, the ship struck on a reef of rock, sand, and stones: all the sails were immediately furled, to prevent her going further on the reef, the boats were hoisted out, and the stream-anchor ran out to the north, to keep her forging ahead on the reef. On sounding astern, they found the deepest water to the N.N.W., and carried the small bower-anchor out in that direction, and let it go in four fathoms water, the bottom being rock, sand, and stones; after having a great strain upon the small bower, and finding that they could not succeed in getting her off, they left off heaving, and the crew were sent below to stave the salt-water casks forward, and get out the stores.

At twelve o'clock, there was an appearance of a squall coming from the southward, upon which they loosened all the sails and hoisted them, and in about half an hour the squall came on, accompanied by heavy rain, which hove all aback, and they kept heaving a great strain upon the small bower, but still without effect, upon which the crew were again sent below to heave out the remainder of the stores; but instead of their doing so, and using every exertion to endeavour if possible to save the vessel, they began to plunder everything they could lay their hands on, saying the land was so very near, that there was no danger. At three they hove again on the small bower, and commenced pumping out the water they had previously started, but still without effect. At four o'clock the gunner reported that there was four feet water in the hold; they still kept heaving unsuccessfully on the small bower, and at daylight the water had gained on the pumps to eight feet and a half; a heavy swell setting in, the ship began to strike very hard, and several large pieces of sheathing and other parts of her bottom came up alongside. At five the rudder unshipped, and carried away a great part of her stern, the counter on the starboard side was stove in, and the water was within one foot of the 'tween decks. At half-past five, the ship being bilged, fell over on her starboard beam-ends, when finding nothing further could be done for the safety of the vessel, they left off pumping, and the captain ordered the Syrang and Lascars to get the masts and sails into the boats, together with some rice and water for the crew; but instead of obeying the orders that were given them, they insolently refused, saying they could find plenty on the island; and then began to plunder the great cabin and the officers' chests and trunks of everything that was portable. While they were thus occupied, the captain was below, busily employed in securing his papers, and fortunately overheard one of the Lascars named Mahomed, say to some of those who had refused to take provisions into the boat, that they intended after their arrival upon the island, to take the first opportunity to kill the captain, officers, and sea-cunnies, and then to seize the boats and go to the Malabar coast. This timely discovery of their murderous intentions, made the captain determine to quit the wreck as soon as possible, taking with him as many as the boat could carry, and to leave the pinnace for the rest, with instructions to follow them. During this time, the sea-cunnies had got the long boat's masts and sails in, with a small quantity of water and biscuit; and at seven o'clock, after consulting with the officers of the ship, who were of opinion that nothing further could be done, the following people, namely, Thomas Knight, commander; John Wheat-pit, pilot for the Red Sea; Edward Greaves, second officer; John Lunardy, a gunner; four sea-cunnies, and six natives, making a total of fourteen, quitted the wreck in the long boat, for the purpose of making the best of their way to the Malabar coast, leaving the pinnace for the rebellious part of the crew, who left the ship in her about the same time; but the avenging arm of Providence was impending over their

guilty heads—the hour of retribution was at hand. In a short time the crew of the long-boat was safely landed, while the pinnacle was laying on her starboard beam-ends, and nearly full of water, every one on board having perished.

The reef on which the Anne struck, bore from S.W. to E.N.E.; the southernmost of the Souhelepar Islands, bore S.E. by W. and the northernmost E.S.E. The reef was about six leagues' distance from the southernmost, and about four or five from the northernmost; the extreme length being about ten or twelve miles, and of which no mention was made in any of the charts on board.

EDDYSTONE LIGHT-HOUSE.

"That, supported on a rock,
Which nor storm nor time can shock,
Amidst the snares of error's night,
Still guides bewildered travellers right."

LIGHT-HOUSES were known to the ancients. The light-house, or Pharos of Alexandria, built on the Island of Pharos, at the mouth of the Nile, was much celebrated and gave its name to all buildings erected for similar objects. This Pharos was a magnificent tower, consisting of several stories and galleries, with a lantern at the top, in which a light was kept continually burning, and might, it is said, be seen at a distance of one hundred miles. It was accounted one of the seven wonders of the world, and was erected by Sostrates, a famous architect of Cnidos, though some say it was built by his father, Deiphanes. The several stories were adorned with columns, balustrades, and galleries of the finest marble and workmanship. Some of the historians add, that the architect fixed looking-glasses against the highest galleries, which reflected the distant vessels as they sailed along. The Pharos cost Ptolemy Philadelphus eight hundred talents.

The two most celebrated light-houses in Great Britain, are those of Eddystone and the Bell Rock, the latter of which is not improperly called the Scottish Pharos, and is situated on the north-eastern coast of Great Britain, about twelve miles from Forfar.

The Eddystone Light-house is situated nearly S.W. from the middle of Plymouth Sound, and about fourteen miles from Plymouth. About three leagues beyond Plymouth Sound, in a line nearly between Star-point and the Lizard, lie a number of low rocks, exceedingly dangerous at all times, but especially when the tides are high, which renders them invisible. On these rocks it had long been thought necessary to place some monitory signal; but the difficulty of constructing a light-house was great. One of the rocks, indeed, which compose this reef is considerably larger than the rest, yet its dimensions are still narrow; it is often covered with water, and frequently, even in the calmest weather, surrounded by a swelling sea, which makes it difficult to land upon it; and much more so to carry on any work of time and labour. The uncommon tumult of the sea in this place, is occasioned by a peculiarity in the rocks. As they all slope and point to the N.E. they spread their inclined sides, of course, to the swelling tides and storms of the Atlantic; and as they continue in this shelving direction many fathoms below the surface of the sea, they occasion that violent working of the water, which the seamen call a ground swell. So that after a storm, when the surface of the sea around is perfectly smooth, the swells and agitation about these rocks are dangerous. From these continual eddies, the Eddystone derives its name.

The first light-house of any consequence, erected on this rock, was undertaken by a person of the name of Winstanly, in the reign of King William. Mr. Winstanly does not appear to have been a man of solidity and judgment sufficient to erect an edifice of this kind. He had never been noted for any capital work; but much celebrated for a variety of trifling and ridiculous contrivances. If you set your foot on a certain board in one of his rooms, a ghost would start up; or if you sat down in an elbow-chair, its arms would clasp around you. His light-house, which was built of wood, partook of his whimsical genius. It was finished with galleries, and other ornaments, which encumbered it, without being of any use. It was, however, on the whole, much admired as a very ingenious edifice, and Winstanly certainly deserved the credit of being the first

projector of a very difficult work. He had fixed it to the rock by twelve massy bars of iron, which were let down deep into the body of the stone. It was generally, indeed, thought well founded; and the architect himself was so convinced of its stability, that he would often say, he wished for nothing more than to be shut up in it during a violent storm. He at length had his wish; for he happened to be in it at the time of that memorable storm on the 26th of November, 1703. As the violence, however, of the tempest came on, the terrified architect began to doubt the firmness of his work: it trembled in the blast, and shook in every joint. In vain he made what signals of distress he could invent, to bring a boat from the shore. The terrors of the storm were such, that the boldest vessel durst not face it. How long he continued in this melancholy distress is unknown; but in the morning no appearance of the light-house was left. It, and all its contents, during that terrible night, was swept into the sea. This catastrophe furnished Mr. Gay, with the following simile in his *Trivia*, which was written a few years after the event:

"So when fam'd Eddystone's far shooting ray,
That led the sailor through the stormy way,
Was from its rocky roots by billows torn
And the high turret in the whirlwind borne,
Fleets bulged their sides against the craggy land,
And pitchy ruins blacken'd all the strand."

A light-house was again constructed on the rock, before the conclusion of Queen Anne's reign. It was undertaken by one Ludyard, who built it also of wood, but having seen his predecessor's errors avoided them. He followed Winstanly's idea in the mode of fixing his structure to the rock; but he chose a plain circular form, without any gallery, or useless projecting parts for the storm to fasten on. To give stability also to his work, he judiciously introduced, as ballast to the bottom, two hundred and seventy tons of stone. In short, every precaution was taken to secure it against the fury of the two elements of wind and water, which had destroyed the last; but it fell by a third. Late one night, in the year 1775, it was observed from the shore, to be on fire. Its upper works having been constructed of light timber, probably could not bear the heat. It happened, fortunately, that Admiral West rode with a fleet at that time in the Sound; and being so near the spot, he immediately manned two or three swift boats. Other boats put off from the shore; but though it was not stormy, it was impossible to land. In the mean time the fire, having descended to the lower parts of the building, had driven the poor inhabitants upon the skirts of the rock; where they were sitting disconsolate, when assistance arrived. They had the mortification, however, to find that the boats, through fear of being dashed in pieces, were obliged to keep aloof. At length it was contrived to throw coils of rope upon the rock which the men tied round them, and were dragged on board through the sea. The case of one of these poor fellows, who was above ninety years of age, was singular. As he had been endeavouring to extinguish the fire in the cupola, where it first raged, and was looking up, the melted lead from the roof came trickling down upon his face and shoulders. At Plymouth he was put into the surgeon's hands; and, though much hurt, he appeared to be in no danger. He constantly, however, affirmed that some of the melted lead had fallen down his throat. This was not believed, as it was thought he could not have survived such a circumstance. In twelve days he died; and Mr. Smeaton says, he saw the lead, after it had been taken out of his stomach, and that it weighed seven ounces.

The next light-house, which is the present one, was built by Mr. Smeaton, and is constructed on a plan, which it is hoped will secure it against every danger. It is built entirely of stone, in a circular form. Its foundations are let into a socket in the rock, on which it stands, and of which it almost makes a part; for the stones are all united with the rock, and with each other, by massy dove-tails. The cement used in this curious masonry, is the lime of Watchet, from whence Mr. Smeaton contrived to bring it barreled up in cyder-casks; for the proprietors will not suffer it to be exported in its crude state. The door of this ingenious piece of architecture is only the size of a ship's gun-port; and the windows are mere loop-holes, denying

light to exclude wind. When the tide swells above the foundation of the building, the light-house makes the odd appearance of a structure emerging from the waves; but sometimes a wave rises above the very top of it, and circling round the whole looks like a column of water, till it breaks into a foam, and subsides.

The care of this important beacon is committed to four men; two of whom take the charge of it by turns, and are relieved every six weeks. But as it often happens, especially in stormy weather, that boats cannot touch at the Eddystone for many months, a proper quantity of salt provision is always laid up, as in a ship victualled for a long voyage. In high winds, such a briny atmosphere surrounds this gloomy solitude, from the dashing of the waves, that a man exposed to it could not draw his breath. At these dreadful intervals the two forlorn inhabitants keep close quarters, are obliged to live in darkness and stench, listening to the howling storm, excluded in every emergency from the least hope of assistance, and without any earthly comfort, but what is administered from their confidence in the strength of the building in which they are immured. Once, on relieving this forlorn guard, one of the men was found dead, his companion choosing rather to shut himself up with a putrifying carcase, than, by throwing it into the sea, to incur the suspicion of murder. In fine weather, these wretched beings just scramble a little about the edge of the rock, when the tide ebbs, and amuse themselves with fishing; which is the only employment they have, except that of trimming their nightly fires.

Yet though this wretched community is so small, we were assured it is generally a scene of misanthropy. Instead of suffering the recollection of those distresses and dangers in which each is deserted by all but one, to endear that one to him, we were informed the humours of each were so soured, that they preyed both on themselves, and on each other. If one sat above, the other was commonly found below. Their meals too were solitary, each, like a brute, growling over his food alone.

The emolument of this arduous post is twenty pounds a year, and provisions while on duty. The house to live in may be fairly thrown into the bargain. The whole together is, perhaps, one of the least eligible pieces of preferment in Britain; and yet, from a story which Mr. Smeaton relates, it appears there are stations still more ineligible. A fellow, who got a good living by making leathern pipes for engines, grew tired of sitting so constantly at work, and solicited a light-house man's place, which, as competitors are not numerous, he obtained. As the Eddystone boat was carrying him to take possession of his new habitation, one of the boatmen asked him, what could tempt him to give up a profitable business, to be shut up for months together, in a pillar? "Why," said the man, "because I did not like confinement."

LOSS OF THE SHIP CORNELIA,

CAPTAIN BLISS, ON HER PASSAGE TO NEW YORK, JULY 11, 1804.

THE following narrative of this most deplorable disaster, was written on the day after the accident, on board the *Vigilant*, Captain Prentiss, who succeeded by his praiseworthy exertions, in rescuing the whole of the crew from their perilous situation.

The *Cornelia*, at the time of the most melancholy and singular circumstance which caused her destruction, was at eleven p.m. on July 11, in latitude 46°, longitude 40°, under full sail, going about seven knots, when she struck with such violence, on what was supposed to be a vessel bottom up, that it was some time before she could recover herself; the pumps were immediately set to work, and finding sufficient employment for them, they cleared away the fore-peak by throwing the staves overboard; when to their unutterable astonishment, they found the stern started, and several of the hood fends opened, so as to admit of several thicknesses of blanket. About four o'clock they found the gripe carried away, and only hanging by some of the lower bolts; and after five hours severe labour at the pumps, there was above four feet water in the hold. All these circumstances combined, rendered their situation hopeless and deplorable, and all their exertions to stop the leak proved fruitless. In this emergency, they employed some hands in preparing the boats, and in making every necessary arrangement, as the latest alternative for their preservation.

At ten o'clock, the crew, after all their exertions at the pumps, and finding six feet water in the hold, began to be disheartened and dispirited; but to their extreme joy and satisfaction, two ships were descried from the mast-head, which gave them all new life and spirits, and being re-animated they plied the pumps with increased alacrity, but being at a great distance to windward, and bound to the westward, it was two, p.m., before the two vessels came up, the *Cornelia* having then above eight feet water in the hold. They proved to be the *South Carolina*, Captain Steele, bound for New York; and the *Vigilant*, Captain Prentiss, bound for Portland. Captain Steele having a great number of passengers on board, it was agreed that they should go on board the *Vigilant*.

The *South Carolina* staid by them till seven o'clock, by which time they had got out most of their provisions and water on board the *Vigilant*; and when Captain Steele left them, the water was even with the lower deck. They employed themselves till nine o'clock in getting their baggage, stores, &c. out of the ship; and Captain Prentiss being willing to stay till morning, in the hope to save something of consequence, they all went on board to the number of fourteen, and left the *Cornelia* with her lower-deck under water; and early the next morning, upon the boats returning, they found her full of water. As the wind was blowing very fresh from the S.W. and the ship lying over very much, the boats were ordered to leave her; all their endeavours therefore to save something from the wreck proved abortive. At half-past eight, a.m., to their mortification, they saw her capsize, and carry away her masts; the *Vigilant* then made sail and left her. Thus fell the good ship *Cornelia*, by an accident which no human prudence could foresee, nor human assistance prevent.

Now is the ocean's bosom bare,
Unbroken as the floating air;
The ship hath melted quite away,
Like a struggling dream at break of day.
No image meets the wandering eye,
But the new-risen sun, and the sunny sky;
Tho' the night-shades are gone, yet a vapour dull,
Bedims the waves so beautiful;
While a low and melancholy moan
Mourns for the glory that hath flown.

THE SEAMAN'S BURIAL.

THE wind is hushed; the summer sun
Still lingers in the golden west,
As if it loved to look upon
A scene so calm so bless'd;
The untired wave sweeps on its way,
Unbroken in the sunset ray.
The tall ship rests, a silent thing,
Upon the ocean tide;
So calm, the sea-mew dips its wing,
Close to its wave-worn side.
The sea-boy's song is hushed, as slow
That noiseless ship rocks to and fro.
Sweet as from ocean's coral bed,
Hark! sounds of mourning come,
And warriors march, with measured tread,
To beat of muffled drum;
And faintly now uprising there,
The funeral dirge strikes on the air.
The prayer is hush'd, the solemn stave
In silence dies o'er that stern cloud,
As slowly through the clear blue wave,
Girt in his snow-white shroud,
The pallid corse is seen to glide
Far, far adown beneath the tide.
He sleeps! but o'er his ocean grave
Long peals the minute gun!
The thundering requiem of the brave,
When their bright course is done;
And night winds oft shall whisper there—
Peace to the wave-tossed mariner.

A DREADFUL MUTINY.

It takes a great deal to make a sailor mutiny: it is not done by merited punishment. A sailor knows as well as his officers do, when he deserves flogging; but if he knows he does not deserve it every lash cuts deeper than the flesh, and leaves a scar which it takes a long time to wear out, if it is ever effaced. Men in our ship were expected to do what was impossible; a whole watch of fore-top men would sometimes be flogged for being a few seconds after the main-top-men, and the last man on the topsail-yard was sure of it.

John Simmons was second captain of the top, and as smart a sailor as ever hauled out a reef-earring. One evening, some time after my being disrated, I was aft at the lee-helm, as there was a fresh-breeze wind. The captain came upon deck, and I could see by his detested face, that the devil was in him: his nostrils were compressed, and his upper lip curled up in a scowl. He took two or three short and hurried turns—looked aloft, and swore at the officer on the watch for having slackened off the lee-fore-topsail brace, called the quartermaster an old lubber, and gave symptoms of the return of his madness.

He then roared out, "Turn the hands up, reef topsails, and I'll flog the last half-dozen on the lower-deck." The men flew up the rigging like lightning, and the command, "Trice up, lay out, take in two reefs"—was hardly given, when it seemed the sail was reefed, the men off the yard, and the sail at the mast-head again. It was done within the time allotted, but on looking up a point was discovered untied in both fore and main top-sails. The captain very humanely gave them another trial, and the reefs were shaken out and the sail reefed, as quickly, and as well as before; but poor John, who was at the lee-yard-arm, in his anxiety to avoid being the last man on the yard, made a spring at the lee-rigging, he missed his hold, and fell upon the deck!—poor fellow! every bone in his body was broken! "What lubber is that?" demanded the captain, of the fore-castle officer.

"The second captain of the fore-top, sir," replied the lieutenant.

"Pitch him overboard, and be — then," returned the captain.

This horrid mandate was not obeyed; the doctor was aft, and ran forward to see what could be done; but his promptitude was useless; poor John was dying.

When he fell, I was close by him, and ran to him, and raising his head gently from the deck, supported it on my arm. The doctor wished him to be removed to the sick bay, but he said faintly, "Don't touch me—good bye, shipmates—God bless you all!"—and as the glaze was coming over his eyes, he recognised me, and his last whisper was—"Poor Jane—give—give—" his head fell back powerless on my arm, and he yielded up his last breath. "Shipmates," murmured a hollow sepulchral voice close at hand, "remember!"

Had you witnessed the countenances of the men on the lower deck at supper that night, you would never have forgotten it; I never have; and although perfectly ignorant of what was in contemplation, I saw they were at the highest pitch of desperation.

The night poor John Simmons was sewed up in his hammock, the officer of the watch read the funeral service over him by the light of a lanthorn, and as the awful words, "We therefore commit his body to the deep," pealed upon my ears, and the sullen roar of the waves as they received the corpse, which followed, the same voice before mentioned, in a still more awful manner, called out "Remember!"

The officer of the watch looked round him before he recommenced reading the latter part of the service, but all the men near him appeared to be as ignorant as to whom the sound came from as himself. A solemn "Amen!" was pronounced, and echoed by the same voice, which concluded this melancholy ceremony.

I think this was the next day, (a man-of-war brig, the D—, was in company) I observed several of the men going from one mess to the other, whispering something. One in particular, a man who had been a boatswain's mate, but dis-

rated and flogged, because the captain thought he was not laying the lash as he ought to have done, was very active. "It was his voice, I am almost certain, that I heard repeat the word—"Remember;" but every thing was so conducted that I knew nothing of what was brewing."

It was the night for scrubbing and washing clothes, always done in the middle watch. I was between two of the guns abaft on the main-deck, scrubbing a pair of duck trousers. I thought there was an unusual noise with the wash-deck buckets, and looking up, I saw several of the men apparently larking, throwing the buckets at one another. The captain sent out of his cabin word for the men to make less noise, but they took no notice of what was said; on the contrary, they made more noise than before, taking the shot out of the racks, and throwing them about the deck. At last the first lieutenant came up, to inquire into the cause of the disturbance, when one of the men insulted him. He returned to his cabin and brought up a sword, with which he went forward amongst the men, and endeavoured to restore order. He was knocked down, run through the body with his own sword, and thrown out of a port. Seeing this horrid murder, I left my trousers unfinished, ran on deck, and aloft to the main-top. From this place I heard the shouts of the infuriated mutineers, and the groans of the dying; and every now and then, the splash of some mangled victim, committed to the waves.

The men had broken open the gunner's store-room, and possessed themselves of arms and ammunition. The captain, hearing the uproar increase, opened the cabin door and came out. He was no sooner seen, than one of the men gave him a blow with a hands-pike, and he retreated to his cabin. Four or five of the men rushed in after him, armed with cutlasses, boarding-pikes and muskets with fixed bayonets. The captain endeavoured to defend himself with a short sword, and for a time kept them at bay. So much did they dread him, that they shrunk back, and were afraid to strike; when one of them—John Morris—called out, "What do you fear, men? spike the —," and gave them an example by running him through with a bayonet. They all followed his example, each one seeming anxious to satiate his bloody vengeance. He was covered with a hundred wounds, and after cutting and hacking the body, and treating it with every possible indignity, they threw him out of the cabin-windows.

My late antagonist—if it was done on my account, I am very sorry—was another of their victims, and only two or three of the officers were exempted from the carnage: among them was a midshipman, and at the time sick in his cot: his life was saved by one of the mutineers, who was his countryman. I was soon joined by two or three others of the peaceably-disposed, who, like me, were horror-struck at the bloodshed going on below; and we did not quit our station until after the day broke. The main-deck was covered with blood: it was the blood of our officers, many of whom were as good men as ever lived. I have often since that time stood upon a bloody deck and thought light of it, for it was bloodshed in our country's cause, and in fair fight. As to the captain, if he had possessed a thousand lives, he deserved to have lost them; but bloodthirsty cruelty alone called for the murder of the rest.

A boatswain's mate now took the command, and called a council of war. Some were for cruising about as a pirate, some wished to leave the West Indies, and take the ship into a French port; but the greatest number voted to run her into the first port they came to on the Spanish Main, and give her up to the Spaniards. The latter plan was carried into effect, and the next day found us at anchor under the guns of a heavy battery.

TALE OF A DISABLED SEAMAN.

BEING taken to the Savage at the tail of the bank, we were not long on board till soon it was known, fore and aft in the sloop of war, how I had entered without the bounty: all the officers came and spoke to me; even the captain, when he came off to dinner, was told the whole tot of the story, and he made me out that very day the captain of the fore-top, which gave the men under me great contentation, for all the crew were well pleased

to hear how I had come to save Robin, and for nothing.

That was my first step of promotion, and every one told me that I must get on, for I was then a steady and a tight lad, and having both my arms, was willing, brisk, and handy.

Some few days after this fracas, the *Savage* sailed with all the pressed men, to man the king's ships at Plymouth, and of course I went with her, being the captain of the fore-top.

At the time that the *Ajax* was ready for sea, the signs of war were very heartening, and it was said that the Queen of France had sent our king's wife a diamond stomacher, which, as the French are known all the world over for having false hearts, was to every sailor in the *Ajax* a sure proof that a war would soon ensue; so with this hope we put to sea, but it was all to no purpose—we sailed up and down, like a fish in the water, and met with nothing so warlike as a drove of pellocks that were tumbling like wull-cats, head over heels in the sunny calm of a blessed evening in June.

At this time I made a reflection, saying to myself, that unless a man had the good luck to be placed in a jeopardy, it could never be known how he would stand it; so I put down the sedition of my thoughts, and would have been content with any mediocrity; but I was never rated on the books of fate to be an admiral, or ordained to taste such a beverage as glory.

One day, when I was holding on by a sheet, a marlin-spike from aloft fell, and the thick end happening to be downwards, —in other words, head foremost—it struck my left arm just at the elbow, and smashed the bone, so that the doctor was obliged to saw it off to save dear life, by which, while it was healing, I lost some of the bravery of my thoughts; and now and then, when in the fog, I had no fair-weather fancies in thinking how it had pleased Providence to cast me away on the shores of sin and misery; but still I called to mind how he it is for all, that the king had built Greenwich for sailors, though I thought myself too young for a berth there.

My messmates, seeing me not so hearty sometimes when I looked at my stump, made me then cheerily, by telling of officers they knew who had lost a fin as well as me, and yet would serve the king like men, and never lost their promotion, saying, that in course of nature, while a sailor did his duty, it was not in the power of the first lord to prevent it, far less the secretary. Thus, as the putation was healing, I got into the trades of the mind; and although no longer on the ship's books as an able-bodied, having carried away the larboard arm, there was not one in the crew that knew me who did not say he would help me to make up the detriment to the king, so that the loss of my arm should not be missed in the service—for true sailors are right men, and not much sin grows on oak plank. To be sure, in their rigs, they are sometimes very troublesome to Providence, and he is obligated to look out sharp after them, being as thoughtless as small children.

Thus it came to pass, I staid in the *Ajax*, and was as handy as a Jack could be who has got mutilation. When I got well, and was used to one hand, I grew again into comfort, and could beat to windward, and thought so to weather cape Fortune, that I was not down-hearted.

At last the moonshiners, they showed their colours, which was what every king's-man long expected; for, being on sea, sailors have a better notion of politicals about ships, than the land-crabs, for all their jabber, which is the reason why we have no need of newspapers to keep us right in the fleet.

We were in Portsmouth, snug hauled, when the orders came to put to sea, with leave to grab the French. My eye, such a to-do! Every man had a balloon heart and was an admiral of the red. The very rigging glowed in the grip, and the ship was as playful as a sucking puppy whose brothers and sisters are with *Day Jones*. In less than no time we stood out to sea, the wind right aft—every stitch big-bellied, but not enough for the impatient *Ajax*.

We bore straight away for Ushant, and had not reached sight of the French land, when we saw a black thief of a lugger coming, cowering and skulking along shore. As it was not worth the *Ajax's* while to step aside, we lowered and manned the launch to take possession; and the officer in

command seeing my mouth watering to go, gave me encouragement, and I was allowed.

Cheerily we rowed, but the enemy was good stuff, and as saucy as a well geared wench on the Point. She fired—but we, seeing she would be ours, rowed right on, taking no notice. She fired again—I felt something, and there lay my right hand in the bottom of the boat, grasping a cutlass. It was the last shot, and I was handless; it was God's pleasure, and I was not consulted—but there lay the fin, and my trousers were bloody.

As the lugger struck immediately after, I was not left long to rue the damage; but being a young man, I could only wish, when I thought of the mortification, that it had been my head instead of my arm, for I don't see the use of keeping men alive who require another to stow away their prog. However, to belay the tale, I was carried back to the *Ajax*, and I saw no more of the cocked-hat ahead that had been so long the light-house of my dreams.

When I was hoisted on board, I did not think so many in the ship knew me—even the captain came to see me; but he could not light the douced hope again, though he told me of Greenwich, and that a berth was ready for me there. I wished at the time he had not so tried to cheer me; for I had not till then thought it could be no longer doubted I was born to be a hulk.

But though for a time, and while the ship was at sea, I looked with a hearty face at calamity, yet, being weak with the loss of blood, I often lay in the dark in my hammock, wondering, with watery eyes, for what purpose I had been made, thinking of old kind grannie, that used to call me admiral; but she sleeps sound in the west kirk-yard—and there was mercy in that thought, for she could not see my handless arms.

By-and-bye, when our cruise was over, we came again to anchor at Spithead. The next day it was ordered to take me on shore; and as I was sitting with a cold heart on the fore-castle unable to work—for both my hands were away—all the beautiful morning of life shone like a vision before me, and I thought how magnificently the mighty *Ajax* sailed in quest of victory. In the triumph of the dream, I forgot that my left arm was then disabled, and I sternly grasped the cutlass that I thought was in my right; but a stun shot to my heart—the hand and the cutlass were for ever gone! It was like a Molly to be so womanish, though I could not help it, and feeling my cheek grow wet, I lifted my arm to wipe it, but the stump was too short, and I could only let the sorrow faster flow.

When the hour came that I was to be handed into the boat—for I could do nothing myself—I felt, though I was so helpless, my heart grow proud and warm, and I bade my messmates good-bye as gay as a lark—but I had on a false face; and when one of them, in heedless regard, held out his hand to shake mine, I could but look in his face, and turn away my head.

At last the boat was ready. The coffin is not lowered into the grave with more sadness than I was into the boat; and I heard a stranger officer who was there say to the captain, "Poor fellow! it was not for this he came for Buntin!" I looked up, and saw it was the midshipman that pressed our men off the Point of Toward, and was so prime with his prize when he took me to the *Savage*. But grieving's a folly, and the song of "Poor Jack" being then new, I tried to sing it as we rowed towards the shore.

As it is melancholious, however, to think of these things, I will say no more of them, but mention that, in due time, I was landed at this place long ago, when I was but two-and-twenty; and I am now a gray-haired old man, who is obliged to ask a messmate to open to him his Bible, till death, that is slow of coming; but when it comes, I'll be ta'en away and not missed for I am but a cumberer of the ground, and often sin in saying to myself, that it was not right of Providence to give me such a forward heart, and so untimely, for so little purpose.

EXTRAORDINARY FAMINE ON BOARD THE AMERICAN SHIP PEGGY.

Captain Harrison in 1765.

THE dreadful sufferings produced by famine, frequently lead men to the commission of the most horrible excesses. When insensible to the appeals of reason or of nature, man assumes the character of a beast of prey, and coolly meditates the death of a companion or a brother with a remorseless determination, deaf to every entreaty or remonstrance.

One of these scenes so afflicting to humanity, occurred in the year 1765, on board the American brigantine *Peggy*, commanded by David Harrison, and freighted by merchants of New York, for the Azores. She arrived at Fayal, one of those islands, without accident; and, having disposed of her cargo, took on board a lading of wine and spirits, and, on October 24th, she set sail on her return to New York.

On the 29th the wind, which till then had been favourable, suddenly shifted, and the vessel was much damaged by violent storms, which succeeded each other without interruption, during the month of November. In spite of all the exertions of the crew, and the experience of the captain, the masts went by the board, all the sails, excepting one, were torn to rags; and to add to their distress, several leaks were discovered in the hold.

The wind abated a little during the beginning of December, but the vessel was driven out of her course; and destitute of masts, sails and rigging, she was perfectly unmanageable, and driven to and fro at the mercy of the waves. This, however, was the smallest evil; as another of a much more alarming nature soon manifested itself. Upon examining the state of their provisions, the stock was found to be almost totally exhausted; and, in this deplorable condition, the crew had no hope of relief but from chance.

A few days after this unpleasant discovery, two vessels were descried early one morning, and a transient ray of hope cheered the unfortunate crew of the *Peggy*; but the sea ran so high that it prevented Captain Harrison from having any communication with the ships, which were soon out of sight. The disappointed seamen, who were in want of every thing, then fell upon the wine and brandy with which the ship was laden, and allotted to the captain two small jars of water, each containing about a gallon, which was the remainder of their stock. Some days elapsed, during which the crew, in some measure, appeased the painful cravings of hunger by incessant intoxication.

On the fourth day, they observed a ship making towards them in full sail, and no time was lost in making signals of distress, when the crew had the inexpressible satisfaction to perceive that they were answered, and the sea was sufficiently calm to permit the two vessels to approach each other. The strangers seemed much affected by the melancholy tale of their privations and sufferings, and promised to relieve them by a supply of biscuit; but it was not sent on board immediately, the captain alleging, as an excuse for the delay, that he had just begun a nautical observation, which he was anxious to complete. However unreasonable such a pretext appeared, the famishing crew of the *Peggy* were obliged, under existing circumstances, to submit. The time mentioned by the captain had nearly expired, when, to their extreme mortification, the latter, regardless of his promises, and dead to all feelings of honour or humanity, crowded all his sails and bore away. No language is adequate to describe the despair and consternation which overwhelmed the miserable crew. Lashed into almost madness by disappointment, and destitute of hope, they fell upon whatever they had spared till then. The only animals that remained on board were a couple of pigeons and a cat, which were devoured in an instant. The only favour which they showed the captain, was to reserve for him the head of the cat; and, disgusting as it would have been on any other occasion, the captain afterwards declared, that at that moment he thought it a treat exquisitely delicious. The unfortunate men then supported their existence by living on oil, candles, leather, &c., and these were entirely consumed by the 28th of December.

From that day till January 13th, it is almost impossible to

tell in what manner they subsisted. Captain Harrison had been for some time confined to his bed by a severe fit of the gout. On the last-mentioned day, the sailors went to him in a body, with the mate at their head, who acted as spokesman on this occasion, and after an affecting representation of the deplorable state to which they were reduced, declared that it was necessary to sacrifice one, in order to save the rest, adding, that their resolution was irrevocably fixed, and that they intended to cast lots for the victim.

The captain, who was a tender and humane man, could not help shuddering at such a barbarous proposition, and endeavoured to dissuade them from their purpose: he represented to them that they were men, and ought to regard each other as brethren; that by such an assassination, they would for ever consign themselves to universal execration, and commanded them, with all his authority, to relinquish the idea of committing so atrocious a crime: but his exhortations were thrown away; he might as well have "preached to the storm." They all, with one voice, replied, that it was indifferent to them whether or no he approved of their resolution; that they had only acquainted him with it out of respect, and because he must run the same risk as themselves—adding, that in the general misfortune, all command and distinction were at an end. They then immediately left him and went upon deck, where the lots were drawn.

The lot fell upon a negro belonging to Captain Harrison; but it is more than probable that the lot had been consulted only for the sake of form, and that the wretched black was proscribed when the sailors first formed their resolution. He was instantly sacrificed. One of the crew tore out his liver, and devoured it reeking warm from the body, without having the patience to cook it in any way; but he was soon afterwards taken ill, and the next day he died, in violent convulsions, and with all the symptoms of madness. Some of his comrades proposed to keep his body to live on after the negro was consumed; but the majority of them objected to this, on account of the disease, which they supposed had carried him off; his body was, therefore, thrown overboard, and consigned to the deep.

The captain, in the intervals when he was least tormented by the gout, was not more exempted from the attacks of hunger than the rest of the crew; but he resisted all the persuasions of his men to partake of their horrid repast. He contented himself with the water which had been assigned to him, mixing with it a small quantity of spirits; and this was the only sustenance he took during the whole period of distress.

The body of the negro, which was equally divided, and eaten with the greatest economy, lasted till the 26th of January. On the 29th, the famished crew deliberated upon selecting a second victim, and again informed the captain of their intention, to which he appeared to give his consent, lest the enraged sailors might have recourse to the lot without him. They left it to him to fix upon any method he might think proper; when, summoning all his strength, he wrote upon slips of paper the name of each man then on board the brigantine, folded them up, and shook them together in a hat. The crew, meanwhile preserved an awful silence; each eye was fixed, and each mouth was open, while terror was strongly impressed upon every countenance. With a trembling hand, one of them drew from the hat the fatal billet, which he delivered to the captain, who opened it, and read aloud the name of David Flat. The unfortunate man on whom the lot had fallen appeared perfectly resigned to his fate. "My friends," said he to his companions, "the only favour I have to beg of you is, not to keep me long in pain; dispatch me as speedily as the negro." Then, turning to the man, who had performed the first execution, he added—"it is you I choose to give me the mortal blow." He requested an hour to prepare himself for death, to which his comrades could only reply with tears. Meanwhile compassion and the remonstrances of the captain prevailed over the hunger of the most hard-hearted, and they unanimously resolved to defer the sacrifice till eleven o'clock the following morning; but such a short reprieve afforded but little

consolation to the unhappy Flat. The certainty of dying the next day, made such a deep impression upon his mind, that his body, which, for above a month, had withstood the almost total privation of nourishment, now sunk beneath it. He was seized with a violent fever, and his state was so much aggravated by a delirium, with which it was accompanied, that some of the sailors proposed to kill him immediately, in order to terminate his sufferings. The majority, however, adhered to the resolution that had been taken of waiting till the following morning.

On January 30th, at ten o'clock in the morning, a large fire was already made to dress the limbs of the unfortunate victim, when a sail was descried at a distance. A favourable wind

drove her towards the Peggy, when she proved to be the Susan, returning from Virginia, and bound to London.

The captain of the Susan could not refrain from tears at the affecting account of the sufferings endured by the famished crew. He lost no time in affording them relief, supplying them immediately with provisions and rigging, and offered to convoy the Peggy to London. The distance from New York, their proximity to the English coast, together with the miserable state of the brigantine, induced the two captains to proceed to England. The voyage was prosperous; only two men died, and all the others gradually recovered their strength; and David Flat, who had been so near the gates of death, was restored to perfect health.

LOSS OF THE GROSVENOR, CAPTAIN COXON, AUGUST 4, 1782.

LOSS OF THE GROSVENOR, CAPTAIN COXON,

AUGUST 4, 1782.

THE Grosvenor East Indiaman, commanded by Captain Coxon, sailed from Trincomalee, in the island of Ceylon, on the 13th of June, 1782, on her homeward-bound voyage. On the 3rd of August, as well as on the preceding day, the wind blew very hard, and on the 4th, which was Sunday, the ship lay to under a fore-sail and mizen staysail; the captain at that time considering them a hundred leagues from the nearest land.

Before daylight, John Hynes, a seaman, with one Lewis, and several others, were aloft striking the fore-top-gallantmast. While there, Hynes asked Lewis if he did not think there

No. 8.

was land ahead, and where he thought he saw breakers; to which Lewis replying in the affirmative, they all hastened down to inform Mr. Beale, the third-mate, who then had the watch, of so alarming an occurrence.

Mr. Beale, however, instead of paying any attention to their information, only laughed at their knowledge, and refused to give the slightest credit to their conjectures; but Lewis immediately ran into the cabin and informed the captain, who instantly came out, and ordered the ship to be wore. The helm was accordingly put hard-a-weather the mizen staysail hauled down, the fore-topsail and jib let go, and the after-yards squared, by which means the ship's head was brought nearly round; but, unfortunately, before this could be accomplished her keel struck. Every soul on board in-

stantly rushed upon deck, the ship all the time beating very violently.

Horror and apprehension were now painted in every one's features, though the captain endeavoured to dispel the alarm which was necessarily created, and to pacify the passengers on the assurance that he was not without hope of being able to save them all, and earnestly entreated that all of them would be composed.

The pumps were sounded, but no water was found in the hold, as the ship's stern was lying high on the rocks, and the fore part being considerably lower, it had all run forward. About ten minutes after the ship struck the wind changed, and blew off shore, which made them fearfully apprehensive of being driven out to sea, and thereby deprived of their only chance of safety.

The gunner was ordered to fire signals of distress, but on his attempting to get into the powder-room, he found it full of water; the captain therefore ordered the mainmast first to be cut away, and then the foremast; from this, however, they derived no beneficial effect, and as the ship was lying within three hundred yards of the shore, it proved next to an impossibility to save her.

It is impossible to describe the distraction of those on board at this awful crisis; every countenance exhibited the workings of despair, and the greatest anarchy and confusion prevailed. Those who were most composed were employed in devising some means to gain the shore, and set about framing a raft of such masts, yards, and spars as could be got together, by which expedient there was a prospect of conveying the women, children, and sick persons, safely to land.

In the meantime a Lascar and two Italians attempted to swim ashore with the deep sea-line, when one of the latter perished in the attempt, though the others succeeded. By means of the small line a much larger one was conveyed on shore, and by the aid of this one, a hawser. In drawing the hawser ashore, the two men were assisted by a great number of the natives, who had now crowded to the water's edge. The masts were soon drove in by the surf and current, and whenever within reach were stripped of their hoops by the natives.

After the hawser was got out, it was fastened round the rocks by one end, while the other was made fast to the capstan on board, by which it was hauled tight. Most of the people in the wreck had been employed in constructing a raft, which

by this time was finished, and a nine-inch hawser being fastened round it, they launched it overboard and veered it away towards the stern of the ship, that the women and children might the more easily embark from the quarter-gallery. Four men got upon it in order to assist them, but although the hawser was new, the violence of the surf immediately snapped it in two, and the raft driving on shore, upset, by which three of the men were drowned.

Before the masts were cut away, the yawl and jolly-boat were hoisted out; but no sooner were they over the ship's side, than they were dashed to pieces.

All hands now began to do the best they could for themselves. Some of them had recourse to the hawser fastened ashore, and attempted to get along it hand over hand. Des-

pair gave strength and resolution, and several seamen gained the land by this difficult and hazardous expedient, while others, incapable of accomplishing it, dropped, and were drowned; and these amounted to fifteen men.

The ship now separated just before the mainmast, and the bow veering round, came athwart the stern. The wind at the same time providentially shifted to its old quarter, and blew directly towards the land, a circumstance that contributed greatly towards saving the persons who then remained on board, and who all got on the poop as being nearest the shore. The wind then, in conjunction with the surges, lifting them in the part upon which they stood, rent it asunder, fore and aft, the deck splitting in two. In this distressing moment, they crowded on the starboard quarter, which soon floated into shoal water, while the other parts continued to break off those heavy seas, that would otherwise have washed them away. Thus every one on board, even the women and children, got safe ashore, the only exception being the cook's-mate, who was intoxicated, and could not be prevailed upon to leave the ship.

By the time the whole were landed, the day was drawing to a close, and night was fast approaching. Fortunately the natives, who retired with the setting sun, had left the embers of their fire, which afforded the English the means of lighting three others with the wood collected from the wreck. They also got some hogs and poultry that had been driven ashore, and made a comparatively comfortable repast. A party of them wandering along the shore in search of articles, found a cask of beef, one of flour, and a leaguer of arrack, which were delivered to the captain, who served out a proper allowance to each person. Two of the sails had also been driven ashore, with which he ordered two tents to be made for the ladies to repose in during the ensuing night.

On the morning of the fifth the natives, who were woolly-headed and quite black, came down, and directly began carrying off whatever articles struck their fancy. This conduct excited in them a thousand apprehensions for the personal safety of the people, particularly in the women; but they were allayed by observing that the natives contented themselves with plundering.

The following day was employed in collecting everything that might be useful to them during a journey which they intended to make to the Cape of Good Hope; but the captain very prudently ordered two casks of spirits to be staved, to prevent the chance of the natives becoming dangerous by being intoxicated. He then called the survivors of the shipwreck together, and having shared the provisions among them, he represented, that as on board he had been their commanding officer, he hoped they would still suffer him to continue his command; to which they unanimously answered, "By all means." He then proceeded to inform them, that from the best calculations he could make, he trusted they would be able to reach some of the Dutch settlements in the course of fifteen or sixteen days.

On the 7th of August they set off on their journey. Mr. Logie, the chief-mate, who had been ill for some time, being carried by two men in a hammock slung on a pole, in which laborious occupation all the men cheerfully took their turns. The whole company then moved forward, and were followed by some of the natives, while others remained near the wreck. They found a beaten path from village to village, and were followed for about three miles by the Caffres, who, from time to time, took whatever they chose from them; and sometimes threw stones at them. They soon afterwards met with a party of about thirty, with red painted faces, and among them a Dutchman, named Trout, who, having committed murders among his countrymen, had fled hither for concealment. On coming up to the Englishmen, he inquired who they were and whither they were going; and on being told, he informed them that their proposed journey would be attended with unspeakable difficulties; that they had many nations to go through, and many deserts to pass, exclusive of the dangers which they would certainly experience from meeting numbers of wild beasts. They were much depressed with this information, and offered any sum of money the Dutchman would require, if he would conduct them to the Cape; but this he would not consent to, on the ground that

he dreaded putting himself in the power of the Dutch; and also, as he had a wife and children among the natives, they would not consent to let him go, even if he were so inclined.

Finding their solicitations were in vain, they pursued their journey in the same manner for four or five days. In the daytime they were constantly surrounded by the natives, who took from them whatever they chose, but as soon as the sun went down they invariably retired. As they advanced they saw many villages, but kept as far from them as possible, to avoid the rudeness of the inhabitants. At length they came to a deep gully, where they met three natives, who held their lances several times to the captain's throat, till irritated at the insult, he wrenched one of them out of the hand of the savage, and, breaking it, kept the barb. The natives then went away, seeming to take no further notice of it; but coming on the next day to a very large village, they found three or four hundred of the savages collected, all armed with lances and targets, made of the hide of the elephant. They commenced an aggression upon the English by piffling and insulting them, and then began to beat them. Concluding that they were marked for destruction, they immediately prepared to act on the defensive, and, accordingly, having placed the women, children, and sick, at some distance, under the protection of about a dozen of them, the remainder, which consisted of eighty or ninety, engaged their opponents for nearly two hours and a half, when, having got possession of a rising ground, where they could not be surrounded, a kind of compromise took place.

Towards dusk they lighted a fire, and at night they reposed in the open air. During the night they were so terrified by the noise of wild beasts, that the men were obliged to keep watch in turn to prevent them approaching too near.

On the following morning they were again joined by the Dutchman, who said he had been on board the wreck and got a load of iron, pewter, lead, and copper from it, which he was now carrying to his kraal or village. He was quite alone, and, after a short conversation, took up his load of plunder and marched off.

After passing the night, disturbed as before by the howlings of beasts of prey, the party advanced at day-break; about noon the natives came as usual to plunder them, and among other things, took away their tinderbox, flint, and steel, which was to them an irreparable loss, and obliged each of them to travel with a fire-brand in his hand.

On the following day they discovered that the provisions that they had brought with them were nearly expended, and the fatigues of travelling with the women and children being very great, the sailors began to murmur. Accordingly, Captain Coxon, the first-mate, and his wife, with some of the passengers, and five of the children, agreed to keep together and travel on slowly as before. Many of the seamen induced by the great promises of Colonel James and others, were prevailed on to stay behind with them, in order to carry what little provision was left, and the blankets; while the second, fourth, and fifth mates, Captain Talbot, and his coxswain, four of the passengers, and their servants, and the remainder of the seamen, being about forty-three in all, went on before.

This separation did not take place without great regret, as they had little hopes of meeting again; but on the next day, those who had left the captain's party, having waited all night by the side of a river for the ebb tide, were overtaken, and the whole company once more united, when they all crossed the river, and, after travelling together the whole of that day and part of the next, they arrived at a large village, where they found Trout, the Dutchman, who showed them his wife and children, and begged a piece of pork. He gave them some directions relative to their journey, told them the names of the places they were to pass, and the rivers they had to cross, and they having thanked him departed.

They spent the night in company, and in the morning a party of them went down to the sea side, where they found a number of oysters, muscles, and limpets, which they divided among the women, children, and sick. Advancing until about four o'clock, they once more agreed to separate, which they did, and, as the sequel proved, never to meet again.

The second-mate's party, which comprised the most active men of the whole, travelled until quite dark, when they made a fire at a convenient place for wood and water, and reposed for the night.

The following day they travelled about thirty miles, subsisting chiefly on wild sorrel, and such berries as they observed the birds to peck at; they also obtained some shell-fish from the rocks, and then gaining the banks of a river which was very wide and deep, they ended their journey for that day.

On the next morning the surge of the river deterred them from crossing it, particularly as several of the party could not swim. They were consequently obliged to follow its windings up the country, when they passed many small villages, in which, however, they could get no relief from the inhabitants, until they came to a narrower part, where they lashed together all the dry wood they could collect, with woodbines and their handkerchiefs, and thus formed a kind of catamaran or raft, on which those who could not swim being placed, they all got over in safety, although the river was not less than two miles broad. They then returned towards the sea-side, where, fortunately, they procured a plentiful supply of shell-fish.

On the fourth day after this they reached a high mountain covered with wood on the inland side, which they were obliged to take, on account of the rocks, which made the shore impassable. The march was extremely fatiguing as they had to beat through untrodden paths, and were frequently obliged to climb trees in order to explore their way, so that night approached before they had gained the summit of the mountain. There the wood terminated, and they entered upon a spacious plain with a fine stream of water running through it, where they passed the night.

At the return of day they found that they had another wood to pass, before again reaching the sea-side, which they did before night; but were so exhausted from the excessive fatigue they had undergone, that they contented themselves with making one fire instead of three, which were really necessary for so many; and thus they used to open their oysters and muscles, as they had been plundered by the natives of their knives, and everything else but their clothes.

About noon the next day, they found a dead whale upon the beach, which had been washed up by the tide to high water-mark. The sight of such a supply of provisions afforded them great pleasure, but not being possessed of an instrument that would cut it up, they were for some time at a loss how they should avail themselves of their good fortune. They, however, made a fire upon it and dug out the grilled parts with an oyster-shell, and on this they subsisted several days.

A fine level country inland, persuaded them that they had reached the northernmost of the Dutch settlements, and without the bounds of the Caffres. Some of the party thought it would be most advisable to strike inland, while others were of opinion that it would be safer still to keep the sea-side. After many arguments upon it, they at length agreed to divide.

The fourth and fifth mates, Messrs. Williams and Taylor, Captain Talbot, his coxswain, and twenty-two seamen, resolved to proceed inland, while the carpenter, ship's-steward, and cooper, Mr. D'Espenette, M. Oliver, their servant, and about twenty-four seamen kept along the sea-shore.

The inland party advanced during three days and nights through a fine pleasant country, in which they saw many deserted villages; but all this time they had no subsistence, except a few oysters brought from the coast, and berries, and wild sorrel, gathered on the way. They therefore judged it prudent to regain the shore, where, the tide being out, they got shell-fish to allay their hunger. Soon after their separation

from the theothers, Captain Talbot several times sat himself down to rest, and the whole company did the same, but the captain repeated this so often, through weariness, that the rest went on and left him. Not so, however, his faithful coxswain, who, seeing his master in that condition, was observed to go back and sit by him; but neither of the two have ever been seen or heard of since.

At a small river where they stopped the following noon, they found two of the carpenter's party, who, unable to swim, had been left behind. After crossing this river, they in four days came to another, so large that none of the party

thought it prudent to attempt passing it. On marching along its banks they came to a village, where they saw the inside of a watch, which some of the carpenter's party had exchanged for a little milk. They proceeded up the river for several days, and passed many villages unmolested by the inhabitants; and at length crossed on a catamaran at a place where it was a mile and a half broad, only two of them, who were terrified at the breadth of it, being left behind. On the third day, after travelling in a diagonal direction, they once more reached the shore, where they slept, and the next day got some shell-fish, but no fresh water.

They now fell in with a number of the savages, by whom they were extremely ill-used, and received many blows, as they were unable to make any resistance. In three days they overtook the party from whom they had separated, and found that the carpenter had been poisoned by some kind of fruit which he had eaten from hunger; and that Messrs. D'Espenette and Oliver, with their servant, being totally exhausted, had been left behind: but that Master Law, a little boy not more than seven or eight years of age, who had formed one of their number, had borne the fatigues of the journey in a most miraculous manner.

The parties, thus again united, had not travelled far before they found two planks on a sandy bank, in each of which was a spike nail. Overjoyed at such an unlooked-for requisition, they immediately set fire to the planks, and getting out the nails, flattened them between two stones, into something like knives; and a little farther on they found water, by accidentally turning up the sand at the side of a river, where they rested for the night.

After crossing the river on the following morning, they were agreeably surprised with the sight of another dead whale

on the shore. A number of natives, armed with lances, immediately came down upon them; however, when they saw their deplorable condition, and that they were unable to make any resistance, they behaved very gently; and one of them even lent his lance to assist in cutting up the whale, junks of which they put into bags, and carried them until they found wood and water to dress them.

One of the people was taken ill at a river the following day, and from hard necessity his companions were obliged to leave him behind. Their journey was prosecuted for about four days with great expedition, from not being retarded by seeking provisions. The rivers on the coast, however, frequently obstructed their progress, and at length they came to one where they resolved to remain for the night; and finding a quantity of large berries, ate them to allay their thirst. In the morning as it blew fresh and the weather was cold, some of the company were unwilling to cross; but John Hynes, a seaman, and about ten others, impatient to get forward, swam over, and journeyed on until they found a place with wood, water, and shell-fish. Here they halted two days, expecting that the others, among whom was the little boy, would come up; and then concluding that they had not ventured on account of the blowing weather, they proceeded.

Fortunately a dead seal was discovered on the beach, and one of the knives being in the possession of this party, they cut it up with the aid of some sharp shells, and dressing a portion on the spot, carried the remainder with them. The party that had been left behind came up after two days separation, and with them the remainder of the seal was shared.

Since the carpenter's death, the command of the party devolved upon the steward, and to his care was intrusted the charge of the child, whose tender years were inadequate to combat the perils of such a journey. He strove to alleviate his sufferings, he heard his complainings with pity, and fed him when he could obtain wherewithal to do it.

In attempting to shorten the way by rounding a bluff rock which projected considerably into the sea, the united party were nearly swept away by the violence of the surf breaking against it. Their escape was almost miraculous; four or five of them lost their portion of the seal, and all their firebrands were extinguished. Though greatly dispirited by this latter misfortune, they proceeded, until coming in sight of some females, who immediately ran off, they found the remains of a fire, where they joyfully relighted their brands, and then rested a few hours.

On the following day they arrived at a village, where they obtained a young bullock in exchange for the inside of a watch and some buttons. They killed it with one of the native's lances, and then distributed it by cutting the whole into pieces; and one of the party standing with his back to the others, named the person who should have the piece that was held up. This was the only instance of their being able to get any sustenance from the natives, except now and then that the women gave a little milk to the boy.

A sandy desert next occupied them ten days in passing, where they subsisted on the provisions they carried with them, and procured water by digging for it in the sand. Afterwards they passed for five or six days through a tribe called Tambookees, when they experienced various treatment. On the borders of the sea, a party of natives advised them to go inland; they did so, and, after advancing about three miles, came to a village, where there were only women and children. Here a little milk was obtained for the boy, and they rested from their fatigues. In the interval the men of the village returned from hunting, each bearing a part of a deer on the point of his lance. Forty of them, at least, surrounded the English, gazing on them with admiration. The natives, after partaking of a hasty meal, started up, and in an instant ran off to the woods, where they disappeared; but they were not long before they returned with a deer, which they had killed; and though the travellers earnestly solicited a part of it, they refused, and insisted on their quitting the village.

After reposing four or five miles from the village, they advanced at sunrise. For several days they saw many cattle, but had no means of obtaining any. On the banks of a river

were three or four huts containing only women and children, and they, apparently more from fear than humanity, gave the travellers part of the flesh of sea-cows and sea-lions, which were hanging up in the cabins to dry. The river being a mile broad, Hynes, and eight of his companions, swam over; but the rest were fearful of attempting it, and remained behind. On crossing another river, two of the party dropped their brands. Their method of crossing without a catamaran, was, tying up their clothes tight in a bundle, and fastening it with a band round their heads, the brand was stuck in the front of their bundle, and thus preserved dry. On proceeding farther they found another whale, and remained on the spot two days in the hope of their companions coming up. But ten days afterwards they discovered by some small pieces of rags scattered on the way, that those they had left behind had got the start of them. On entering a large sandy desert, where little wood or water was to be seen, they observed written on the sand at the entrance of a deep gulley—"Turn in here, and you will find plenty of wood and water," which they hastened to obey, and saw, from the remains of fires and other traces, that their companions had rested there.

Proceeding for ten or twelve days, they continued to pass traces that denoted the advance of their companions, and fell in with a hunting party of natives, distinguished by a kind of shoe worn on the right foot. On the following day they came to a more barren country, where the natives subsist by fishing and hunting, and in three or four days longer, reached a fine and populous district. Still they could obtain no provisions; the natives were apprehensive of their carrying away their cattle, and repulsed the English with sticks and stones, so that without the resource of shell-fish on the shore they must have perished.

A violent storm of thunder, lightning, and rain, came on one night, which they determined to pass on the sea-shore; and the rain was so heavy that they were obliged to hold their canvass frocks over the fire to prevent it being extinguished. In the morning they remained till low water, in order to get shell-fish, and to dry their clothes. About four o'clock in the afternoon, they reached a large village, where the inhabitants assembled on their approach, and wounded several of them. One had his skull fractured, which rendered him delirious, and he died soon afterwards. Hynes was knocked down, and left for dead on the spot; but recovering soon afterwards, and recollecting the way his companions intended to pursue, he followed them as expeditiously as he was able.

After travelling several days over a large sandy desert, they fell in with three savages, who immediately fled. Food was procured with very great difficulty, as the sea-side seldom proved rocky, and sometimes on finding a small reef, where they expected it, they had to wait half a day for ebb-tide.

On arriving at a large river called Boschusan's River, they found Thomas Lewis, who, being sick, had been left behind by the others. He found himself so weak, and the river so wide, that he determined to return to the nearest village, and there settle. His companions strove in vain to encourage him with the prospect of surviving all his hardships, and reaching the Cape of Good Hope in safety. In spite of their entreaties he returned to the natives, where he most probably found a speedy termination to his sufferings.

About noon of the fourth day, after crossing the river, the party came up with the little boy and the ship's steward, whom they presented with some of the flesh of a whale, which they had fortunately found a few days before, and by which they were much refreshed. After journeying in this way for eight or ten days the steward and the child complained of being ill, and requested the rest to remain for that day where they were, which was readily agreed to. The steward and the boy still continuing ill, their companions consented to stay another day; but should they not then be better, necessity would render separation unavoidable.

Having prepared early in the morning whatever could be obtained for breakfast, and willing to indulge the tender frame of the poor child as much as they could, they intended to call him when everything was ready. He still rested near the fire, where all of them had slept during the preceding night; but on going

to awake him, they found, with sorrow, that his soul had taken its flight. With great regret they bestowed a last sigh on his youthful victim and departed.

After they had walked about two hours, Robert Fitzgerald asked for a shell of water, with which Hynes supplied him; he then asked for another, which having received, he laid himself down and instantly expired. Towards four o'clock of the same day, another of the party, William Frueel, complained of being very weak, and sat down on the sand by the sea-side, where his companions were obliged to leave him, as they had to seek wood and water; but, on returning to the spot to try whether they could get him on, he was nowhere to be seen; so that they concluded he had been taken away by wild beasts. The want of water made them suffer severely; indeed the distresses of their former situation were nothing compared to what they then suffered, and on the second day of their wanting food and water, the steward and another expired.

Next morning two of the party were reduced to a very languishing state, yet dreading to be left behind, they still walked on. One of them, however, had not proceeded far before he lay down, and his companions, unable to afford him any assistance, recommended him to the protection of heaven, and left him to expire.

Morning brought no relief to their sufferings, and necessity impelled them to proceed; but their weakness was so great that another of their number dropped and was abandoned. They were now reduced to three, Hynes, Evans, and Wormington, the boatswain's mate; but their faculties were so much impaired that they could hardly hear or see.

On the following morning the torments of thirst became so dreadful, that Wormington earnestly importuned his companions to determine by lot which of them should die, in order that the others might be preserved by drinking his blood. Hynes declared that as long as he was able to walk he could not think of such a proposal, but should he be obliged to drop, they might use him as they pleased. Upon this, Wormington shaking hands with Hynes and Evans suffered them to proceed without him, and they advanced without even indulging a hope of the possibility of relief. In the course of the day they saw something before them, which had the appearance of large birds, but which, upon a nearer approach, they discovered to be men. Nearly blind and idiots, they did not at first recollect their newly-found companions; but after some time they recognised in them, four of the steward's party. One of them, a boy named Price, advanced to meet them with the pleasing information that they had fresh water. This inspired them with new life, and reciprocal inquiries were made relative to the fate of their lost companions. The three men were named Berney, Leary, and De Lasso, who hearing that Wormington was left behind, the two latter went in search of him, charging those who remained not to suffer Hynes and Evans to drink too freely of the water, as several had expired from the eagerness with which they had swallowed it.

Wormington was recovered by the humanity of those who went in search of him, and a painful detail of sufferings succeeded. It appeared that the captain's steward had been buried in the sand of the last desert over which they passed, and that the survivors were reduced to such an extremity, that two of the party had been sent back to cut off part of his flesh; but while proceeding on this horrid errand, they had the good fortune to discover a young seal, just driven on shore, which afforded them a seasonable relief.

Being now arrived at a favourable spot for water and shell-fish, they employed two days in collecting provisions for their future journey, and in refreshing themselves; and having experienced the invigorating effects of rest and food, they again proceeded.

With extreme difficulty and danger they passed a large river, supposed to be the Soutass, on a catamaran, and having reached the opposite shore, they looked back with horror and amazement on their fortunate escape from being driven out to sea by the rapidity of the current. The united party, consisting of six persons, pursued their route over a desert country, and in six days reached the Schwartz river, on the banks of which they took up their abode for the night.

The next morning they swam over the river in safety, and soon discovered another dead whale lying on the sea shore; and thus supplied with food, would have rested a few days, but for the want of fresh water; accordingly they cut up as much of the whale as they could carry, and proceeded.

On the following morning as Price was collecting fuel, he observed two men with guns, who belonged to a Dutch settlement in the neighbourhood, and were in search of strayed cattle. One of them, John Battores, supposed to be a Portuguese, was able to converse with De Lasso, the Italian, so as to be understood: and Battores having learned the outline of their melancholy story, desired them to throw away what they had been collecting, and promised them better fare when they reached the habitation to which he belonged.

On reaching the house of Mynheer Christopher Roostoff, to whom Battores was bailiff, they were treated with the kindest attention; bread and milk were ordered to be set before them, and acting rather on the principles of humanity than prudence, they were furnished with such a quantity, that their weak stomachs were overloaded; and, after their meal, sacks were spread upon the ground for them to repose on.

It had been so long since they had known anything of the calculation of time, that they were unacquainted with even the name of the month, and were given to understand that the day of their deliverance was the 25th of November; so that one hundred and seventeen days had revolved since they were shipwrecked; a period of suffering almost unparalleled, and during which they had often been most miraculously preserved.

On the following morning Mynheer Roostoff killed a sheep for the entertainment of his guests, and another Dutchman, named Quin, came with a cart and six horses to convey them towards the Cape; but they first proceeded to his house, where they were hospitably entertained for four days.

From that time they were forwarded in carts from one settlement to another, till they arrived at Swellendam, about one hundred miles from the Cape, where they were detained till orders were received from the governor at the Cape as to their future destiny, as Holland and Great Britain were at that time at war. At length two of the party were ordered to be forwarded to the Cape to be examined. Accordingly, Wormington and Leary proceeded there, and after being strictly interrogated, they were sent on board a Dutch man-of-war, lying in the bay, with orders that they should be set to work. While in this situation, Wormington imprudently threatened to give information of some fraudulent practices in which he discovered the boatswain was engaged; and the boatswain desiring him and his companion to step into a boat, conveyed them on board a Danish East Indiaman just getting under weigh, by which fortunate incident they first reached their native land.

The Dutch government at the Cape, with a humanity that does them infinite honour, on learning the particulars of the loss of the Grosvenor, despatched a large party in quest of the unhappy wanderers, although war was then raging between the two nations. This detachment consisted of one hundred Europeans and three hundred Hottentots, attended by a great number of waggons, each drawn by eight bullocks, and under the command of Captain Muller, with De Lasso and Evans as guides.

They proceeded with spirit and alacrity, until the Caffres, in consequence of their antipathy to the colonists, interrupted the expedition. In their progress they found Thomas Lewis, who had been abandoned by his companions, William Hatterley, and another. At other places on the road they met with seven Lascars and two black women, one of whom had been servant to Mrs. Logie, and the other to Mrs. Hosea, from whom they learned that soon after Hynes' party had left the captain and the ladies, they also took separate routes but what became of them after this separation was not known.

Captain Muller returned to Swellendam with the three Englishmen, the seven Lascars, and two black women, the boy Price, and the two guides, De Lasso and Evans. The people of colour were detained at Swellendam, but the English were forwarded to the Cape, where, after being examined

by the governor, they were permitted to take their passage to Europe in a Danish ship, the captain of which promised to land them in England; but, excepting Price, who was set on shore at Weymouth, they were all carried to Copenhagen, from whence they at last found their way to England.

On the 24th August, 1790, a second party of the Dutch colonists, amply provided, set out from Kaffer Keyl's river towards Cape Natal, on the coast of which it is supposed the Grosvenor was wrecked. After proceeding an immense way, they arrived on the 3rd of November, among the Hambonaas, a nation quite different from the Caffres, and from them they learned that they had subject to them a village of bastard Christians, descended from people shipwrecked on the coast of whom three old women were still alive and married to a Hambonaa chief. They were fortunate enough to obtain an interview with the old women in question, who said they were sisters; but having been shipwrecked when children, they could not say to what nation they originally belonged. They seemed much pleased at an offer to take them and their children back, but added that they wished first to gather in their crops.

These intrepid adventurers, who were now four hundred and forty-seven leagues distant from the Cape, and two hundred and twenty-six beyond any human habitation, finding that they could gain no further information relative to the wreck, or the fate of the persons who had reached the shore, determined to return. They reached their respective homes in July, 1791, after surmounting incredible difficulties in an expedition to which they were prompted solely by humanity, and the desire of relieving such of our countrymen as might have remained alive among the natives.

A WIDOW CONSOLLED.

MR. STENHOUSE, surgeon, of the Glasgow frigate, when at Algiers, gives the following remarkable relation of the undaunted courage and kind-heartedness of one of the crew:—

The captain of the fore-top, on his leg being so wounded that only a small portion of skin kept it connected with the thigh, with a view of obtaining surgical aid as soon as possible, grasped a rope, by which to lower himself upon the deck. When he had descended about half way from the fore-top, the mangled limb, over which he had no controul, became so entangled among the flying ropes, that he was under the necessity of hauling himself upwards full three feet, that he might disengage it with the assistance of the sound one, whilst he was still hanging by his arms in the air, with a shower of shot and shells flying round him. At length, having accomplished his end, he descended quietly upon the deck.

When in the cockpit, and waiting till Mr. Stenhouse had completed the amputation of an arm in which he was then engaged, the death of the bigleman, whose wife was at this time in the cockpit, was announced. The poor woman was instantly thrown into a violent paroxysm of grief, and while she was thus bewailing her loss, the wounded captain of the top, with much composure and *naivete*, called out, "Come, Poll, leave off blubbering; you shall not be a widow long; I will marry you directly I am well!" He afterwards performed his promise, to the no small gratification of the disconsolate widow, and the great delight of his jolly-hearted messmates.

THE ROVER'S FAREWELL TO HIS MISTRESS.

AWAY!—away!—o'er the sparkling tide,
In the light of hope shall our vessel glide!
The signal is given by the fairest hand
That ever waved bark from its native land.
By the light of those eyes so coyly hid,
Beneath the dark fringe of each snowy lid,
I swear that my love, like the waves at sea,
Shall flow on rejoicing eternally.

When the tempest gathers, and winds are high,
And the billows are raging tumultuously;
Thy signal shall beam on the foaming track
Of the pathless waters, to guide me back.

THE STORMY PETREL.

A thousand miles from land or tree,
Tossing about on the roaring sea;
From billow to bounding billow cast,
Like fleecy snow on the stormy blast,
When sails are scattered abroad, like weeds,
And strong masts shake, like quivering reeds,
The mighty cables, and iron chains,
The hull, which all earthly strength disdains—
They strain and they crack; and hearts of stone
Their natural hard, proud strength disown.
Up and down! up and down!
From the base of the wave to the billow's crown;
And amidst the flashing and feathery foam,
The Stormy Petrel finds a home—
A home, if such a place may be,
For her who lives on the wide, wide sea,
On the craggy ice, in the frozen air,
And only seeketh her rocky lair
To warm her young, and teach them to spring,
At once o'er the waves on their stormy wing.
O'er the deep! o'er the deep!
Where the whale, and the shark, and the sword-fish sleep,
Out-flying the blast and the driving rain,
The Petrel telleth her tale—in vain;
For the mariner curseth the warning bird,
Who bringeth him news of the storms unheard.
Ah! thus does the prophet of good or ill,
Meet hate from the creatures he serveth still:
Yet he ne'er falters—so Petrel spring
One more o'er the waves on thy stormy wing.

ANECDOTE OF THE FAMOUS ADMIRAL BLAKE.

It is well known that Admiral Blake was much distinguished by his zeal for the honour of his country; one instance of which deserves to be written in indelible characters upon the heart of every British subject. This great officer being at Malaga with his fleet, some of his seamen, out of curiosity, went on shore, at a time when the host was carrying about the streets, as is usual in all Catholic countries upon every grand festival: but instead of behaving with that decency which men ought in a foreign country, they not only refused to pay any honours to the blessed image themselves, but laughed at those that did; than which they could not be a grosser affront. One of the priests, fired with holy zeal on the supposed indignity cast upon his God, inspired the people with resentment against the scoffers so that they fell furiously upon them, and drove them to their ships, not without some loss of blood on both sides. The sailors complained to their commander of the usage they had met with from the townsmen, and one and all petitioned for leave to take their own revenge. But the admiral promised them satisfaction in a more honourable way; accordingly he instantly despatched a trumpeter to the governor of the town, to demand the priest who had been the chief promoter of the tumult. The governor returned for answer, "That he had no authority over the priests, and therefore could not comply with the admiral's demand." But Blake sent word back, "That he would not inquire who had the power to send the priest to him, but if he were not sent within three hours, he would burn the town." Upon this resolute message, the governor thought proper to deliver up the priest; who with fear and trembling appeared before the admiral, expecting no other than to be hanged that instant upon the yard-arm. But Blake thought fit to hear what he had to say in justification of his conduct. The priest very naturally laid the blame of all the mischief upon the rude behaviour of the seamen, who had ridiculed one of the most solemn rites of their most holy church. Blake answered, "That if he had complained to him of the insult, he would have punished severely the authors of it; since he would not allow his men to affront the established religion of any place at which he might have occasion to touch; but he took it heinously, that he should spirit up the Spaniards to such insolence; for he would have all the world to know, that an Englishman was only to be punished by an Englishman." However, he civilly treated the priest and dismissed him.

LOSS OF THE AGATHA.

THE *Agatha*, of Lubeck, commanded by Captain Koop, sailed from Liebau, April 3, 1808, bound for Carlserona, having on board Lord Royston, the son of the Earl of Hardwicke, and about eighteen other passengers.

They had proceeded in safety on their voyage till within forty miles of their destined port, when suddenly the wind shifted to the west and blew a gale. They were several times close to the island of Oland, but were unable to effect a landing, on account of the great quantity of ice which surrounded the shore; but this, however, would not have proved an obstacle, to their making the attempt had not the captain stated, on his own knowledge, that not only was there no harbour, but there was no

place where they could cast anchor. Thus hindered from their design, they kept tacking about until the 6th of April, the pumps being kept going all the time; and all hands that were not at the pumps, were employed in baling the ship. Notwithstanding all their exertions, they could not succeed in gaining upon the leak, and had always four or five feet water in the hold.

About noon of the 6th of April, Colonel Pollen, who was one of the passengers, inquired of the captain if he thought it probable the ship could stand the sea? To which the captain replied, that he thought it was impossible. It appears from this to have been extremely probable, that if the colonel had not fortunately put this question to the captain, the vessel must inevitably have foundered with them all on the following day;

LOSS OF THE AGATHA, CAPTAIN KOOP, APRIL 7, 1808.

but immediately upon receiving this answer from the captain, Colonel Pollen ordered him to put back directly, and make for the first port, which was Memel; and as it blew a gale at the time, with the wind quite fair, they made sure of being able to reach it by the following morning.

On the 7th of April, at two o'clock in the morning, they could see the coast; and by four o'clock of Memel. They now buoyed themselves with the hope of being able to reach the port in safety; and already offered up thanks to the Almighty for their deliverance from threatened dangers, and the prospect of a speedy termination to their unpropitious voyage. Alas! how soon were the hopes and fears of many of them to be terminated. In sight of a friendly port—and the world to close around them for ever; a place of refuge almost within their grasp—and the jaws of death open to receive them. Mr. Halliday, who was one of the passengers, and who afterwards furnished the parti-

culars of the accident, went down into the hold, where he opened his desk, and taking out a sum of money that he had previously deposited there, placed it in the pocket of his kibitker, so that in case of danger he might be able to secure it at a moment's warning.

Upon Mr. Halliday coming again upon deck, the ship was then close to the bar at the entrance to the port of Memel; and each were looking with anxious anticipation to their passing this barrier to their preservation from the horrors of shipwreck. He had, however, scarcely been there more than five minutes, when the ship struck, and that with such tremendous violence, that the ladies and children who were in the cabin, and the passengers in the hold, had scarcely sufficient time to reach the deck, when the ship immediately filled with water; and to add to their calamity, in another instant the rudder was knocked off. As a last resort, the ladies now took refuge in the sailors' cabin

upon deck, and where also some of the children were put. The scene which presented itself was now awfully terrific; the sea breaking over them literally mountains high, that they were obliged to cut away the mast to prevent the ship being laid on her beam-ends. The boats were then with great difficulty and exertion cut loose and launched, and Lord Royston, Colonel Pollen, and two or three others, jumped into one of them, but were upset in a moment, and all of them found a watery grave.

Twelve persons, among whom were Mrs. Pollen, Mrs. Barnes, their servants, and children, immediately hastened into the round-house, where they endeavoured to shelter themselves as much as possible from the fury of the raging sea; while the rest of these unfortunate creatures were at once washed overboard and perished.

They had not been long in this afflicting state of misery and hopelessness of relief, when the life-boat from Memel came alongside, and found the captain and three sailors still alive and clinging to the bowsprit; and they having informed the captain of the life-boat that they were the only survivors, not being aware of the twelve who had taken shelter in the round-house, the boat put off again, leaving the unfortunate inmates of the round-house up to their middle in water.

It may not be amiss to observe that the Memel life-boat was built by the original inventor, Mr. Greathead, and sent to Memel in the year 1802; since which time it has fortunately been the means of saving a great number of lives from ships wrecked on that bar, particularly in September, 1805, the Swedish Count Lowenhjelm, chamberlain to the Queen of Sweden, and suite.

Those who were still alive on board, found it necessary for them to show themselves occasionally, in order to satisfy the people on shore of their being there. There were only three of them who dared to venture out of the round-house, and one of these did so every quarter of an hour. The life-boat made several ineffectual attempts to relieve them in the course of the day; but could not succeed, on account of the tremendous sea which was still running.

At nine o'clock on the following morning, Anthony, one of Mrs. Pollen's two servants, whose turn was then to show himself out of the round-house, gave notice to his companions that the life-boat was then at the bowsprit; when Mr. Halliday went out with Mrs. Pollen and the youngest child. She with great difficulty succeeded in reaching the life-boat, while Mr. Halliday was twice knocked down by the sea with the child in one arm; but fortunately, he maintained fast hold with the other. Finding, however, that his strength was fast failing him, he gave the child to Mrs. Barnes's maid, and desired her to remain where she was till he could send one of the men from the life-boat to take the child from her. It could not be ascertained whether the woman rashly attempted to follow him or not, but no sooner had Mr. Halliday reached the boat, than one of the sailors called out that the woman with the child, and a man named Hearn, another of Mrs. Pollen's servants, were washed overboard. A melancholy instance, as it appeared, of the want of fortitude, coolness, and courage.

The weather was too boisterous and the sea too high to permit the life-boat to remain long where it was; it therefore put off with Mrs. Pollen, her servant Anthony, and Messrs. Halliday and Percyra. When they reached the shore, Mr. Halliday told the people that there were still four persons living on board the wreck, viz., Mrs. Barnes, her two children, and Mrs. Pollen's third servant; and such had been their previous exertions, that they were with difficulty persuaded to return; but finally succeeded in bringing them to shore.

Mr. Percyra died soon after he was brought on shore; and of the whole that left Liebau, a week previous, only eleven were now living; and these debilitated and laid up through the privations they had suffered. They had been upwards of forty hours without either meat or drink; and had they remained only six hours longer, must all inevitably have perished.

A TRANSPORT SHIP ON FIRE.

It was barely a fortnight since I had received my commission, in the year 1807, as junior lieutenant of H.M.S. D——, then on the India station, (a vacancy having occurred in her under some puzzling circumstances unnecessary to describe here, which the admiralty decided on as bringing the appointment within their jurisdiction), and along with it a letter from Lord —— himself, containing a civil hint, that if I intended remaining in the service, and looked for future promotion, the sooner I was off the better; a postscript added that as the W—— H—— (Company's ship) was appointed to carry out stores to St. Helena, and sailed in eight days, he had kindly engaged a passage forme, thinking I should be "rather hurried" on having such short notice to quit, and might not have time to see about it myself. So as there was no help for it, I sent my traps down to the ship, and joined her myself at Northfleet Hope on the day after. We thence proceeded to the Downs, and anchored in company with a fleet of about forty sail of West Indianmen and five transports, under convoy of H.M.S. A——, waiting for more moderate weather, and a favourable shift of wind.

Wishing to finish some letters, I left the cuddy rather early, and instead of "dowsing my glim," when the master-at-arms came round at four bells, I sent him up with a message to the officer of the deck, and continued writing away in my cabin long after every one else had turned in, with the exception of the anchor watch, whose quick heavy tramp on deck formed a sweet accompaniment to the peppering of the rain against the sash, until, pen in hand, I fell into a sound sleep, from whence I was aroused by the sudden report of a gun upon the larboard quarter, which I immediately concluded to be the commodore making daylight, supposing that the fleet was no longer wind-rod, but had swung to the ebb; for when I came below, the A—— was lying on our starboard bow. I was mistaken, however; the gale was harder than before, and it wanted at least five good hours of the time.

"Ready with the gun, there, for'ard—Fire—Hand up the engine from below!—Call the captain!—Pipe both cutters away!" were the orders I heard loudly issuing on board of us, followed by a rush up the hatchway ladders, and over-head, as if a man had fallen overboard.

"Hook the yard tackles!—Turn the hands up!—Out large cutter!" thundered forth the skipper, who was coming out from under the awning just as I reached the top of the companion; and in a very short time the boat was swinging in mid air much to the discomfiture of the various live stock in the launch, if one might judge from the Dutch concert they were kicking up at being with so little ceremony unroofed.

I sprang into the hammock-nettings, and looked around. A splendid but an awful scene presented itself. Broad on our larboard quarter lay the Georgian transport; the whole of one side, from the brake of the fore-castle to the gangway, enveloped in a large sheet of flame, extending as high as her main-top, and casting round a brilliant but dazzling and almost painful glare; while the blue lights that were continually burning throughout the fleet served to heighten the effect, by rendering all our countenances as ghastly and spectral as though we had been inhabitants of another world, suffered to burst the confines of the grave, and summoned, during the warring of the elements, to gaze on the misery of the helpless wretches whose fearful shrieks sounded most appalling as they reached us at intervals,—now, during the lulls, clear and piercingly distinct, and then again but faintly, as they died away to leeward, smothered in the howling of the blast.

I was too late to go away in either of the quarter-boats; but as soon as the large cutter was fairly hoisted out, I jumped in and took an oar; for on occasions like these "no more cats are wanted than catch mice." On reaching the transport, I recognised in the A——'s barge my old friend Verner, who was first-lieutenant of that ship. Short greetings, however, pass in a heavy sea alongside a burning ship; and indeed we had enough to do in receiving the poor wretches who hastily crowded into the boats, shivering and shaking—not with cold, for it was scorching hot—and depositing them in safety on board the Indianman (being the nearest ship), where fires were lighted in the

galleys, and restoratives used to many of the women, who, in a perfect state of insensibility, had been wrapt up in blankets, and lowered down the side with a rope's end. One, in particular, I remarked who seemed much more stunned by external injury than inward fear.

Although the Dealmen, usually on the look-out for accidents amongst the ships during a gale of wind of this description, were all away assisting a couple of small craft that had got upon the Goodwins, yet the master of the Georgian had reckoned so confidently on receiving prompt assistance from the king's ship and Indianan, that having (besides his long-boat, which was of course stowed on deck, and, moreover, too much damaged by the fire to be of any service,) only one quarter cutter, and an old crazy dingey, which would not have lived a minute in the sea that was then running, he had with his own hand cut them both away on the first alarm of fire, before a single soul had time to enter either.

When I returned in one of the boats, which had been sent back for the third time, with some fresh hands to help in getting out anything that could possibly be saved, I found him and about a dozen of the transport's men still on board, working away like horses, totally heedless of their danger, and literally endeavouring to cut away the part of the upper deck and starboard bulwark, which was on fire. The ship presented a most singular appearance, one side only having been at all burnt, for the flames had been driven aft too rapidly by the violence of the wind to allow of their spreading much in a lateral direction. True, mass after mass of burning rigging came thundering down on deck from aloft, which had they been suffered to remain, would have speedily set it all on fire, but they were immediately either hove overboard with crow-bars, or extinguished by the bucketsful of water that were incessantly dashed about in every direction. But it was all in vain—the flames raged fiercer than ever—the gale was rising—the only cable which remained was stranded in two places—and during a moment's breathing-time a council of war was held between Verner, first-lieutenant of the A——; Smitherson, the master of the transport; O'Kasey, sixth mate of the Indianan; and myself, as to the utility of further risking our lives by staying any longer. Under all circumstances there could not be but one opinion on the subject; and then, and not till then, did Smitherson quit the deck, saying to Verner, as he swung himself by a rope into the stern-sheets of the barge, "You will bear witness, sir, I have done my duty to the last." And sitting down, he covered his face with his hands, to hide the emotions he felt on leaving the ship, for the last time, that he had faithfully commanded for so many years.

There was some difficulty in again reaching our respective ships; and indeed it was full time we did so, for the gale was now nearly at its highest pitch. Many of the smaller vessels had parted, and were driving on board each other; while the sudden boom of minute-gun after minute-gun might be heard in all directions: and several times the boats had the narrowest escape of being swamped. Although cold and wet in the extreme, I felt so excited, that, instead of going below, I remained on the poop, gazing on the still burning wreck, in company with many of the officers, when we were suddenly startled by the shrill sound of a woman's voice shrieking, in the wildest accents of despair, "My bairn! my bairn! Gin ye've the hearts o'men, ye'll save my bairn! Its a' that God hae left me!" and the female whom I had before noticed as being injured, rushed aft; her long dishevelled hair streaming in the wind, and her pallid countenance streaked with the blood that had issued from her forehead, and dashing herself down on the deck before the captain, threw one arm round his knees, and pointed with the other, in almost speechless agony, to the wreck. The skipper looked at the weather, and shook his head—then at the Georgian—and lastly at the poor creature who lay extended at his feet. From what little I have seen of Captain S——, I should judge him to be as clear-headed and strong-minded as any man afloat: but in this case the calculating dictates of prudence as an officer gave way before his feelings as a man; and he shouted, in a voice that needed no speaking-trumpet to assist it, "Volunteers for the wreck!—I'll go myself," he added, turning round to Driver, the chief mate.

"Not while there are six officers in the ship, by G—d, sir!" bluntly replied this old roughspun specimen. "Clear away the larboard cutter!" continued he, scrambling over the hen-coops, followed by O'Kasey, five of the fore-castle-men, and myself. "Bear her off with your oars, boys! Lower away roundly! Let go-o!" sung out the old fellow directly the boat's bottom touched the water. The after tackle unhooked of itself, and was instantly rounded up high over our heads; but we were forced to "out knife," and cut right through the other one. At last we shoved off, bending to the oars in silence—small talk growing generally rather scarce when death is staring people in the face; and indeed there were fearful odds against us, for, in the words of the song, "the sea was mountains rolling;" and though the cutter was fitted with air-tight lockers, lining the sides below the thwarts, so as to prevent her going down, even if full of water to the gunwale's edge; yet, as we were not provided with the same, had any thing happened to capsize her bottom upwards, and cant us out, it would have been but poor fun to know that she swam while we ourselves were sinking.

The lower rigging of the Indianan was crowded as high nearly as the futtock-shrouds. The eyes of all were intently fixed upon us; and about two hundred voices shouted in a breath, "Give way, my fine fellows! Give way, shipmates—for your lives, give way!" But there was one on board that ship regarding our progress with the most painful anxiety, and shuddering at every wave that reared its crest on high, threatening to overwhelm us, and blast her own fond hopes. We saw her form bending over the hammock-nettings, her hands raised to heaven, and heard her voice through the roaring of the gale, as she fervently exclaimed, in a tone that I shall never forget to my dying hour—"Bless ye, bless ye! The Father o' the fatherless preserve ye in his mercy! Bless ye, bless ye!" Whether the prayers of the widowed mother were heard aloft or not, I am not clergyman enough to say; but this much I will venture to affirm, that had not another and a mightier arm than ours been stretched forth upon the waters, vain would have been the courage or seamanship of the best amongst us, officer or man.

There being six hands in the cutter besides Driver and O'Kasey, I let the latter take the bow-oar; and coiling up my legs stowed myself away in the head-sheets as comfortably as circumstances would allow. When within a couple of ships' lengths of the transport, her mainmast, which was more than half-burned through, and entirely unsupported—the standing rigging being already consumed, or now burning,—went with a tremendous crash; its scathed and scorched top-mast entirely bare of rigging, save a mass of burning cordage just below the cross-trees, (the flames of which were extinguished in their passage through the air) was still on end; and as the spar fell with his head aft, bearing a little to the larboard hand, it regularly cut asunder the mizen-topsail-yard, shattering the top, striking the cross-rick-yard with such violence, as to carry away the slings and bring it down by the run athwart the deck, and, breaking through the old, chafed, and worn mizen-rigging, like so much packthread, it lighted on the taffrail, which was ground and crushed in an instant level with the deck, and there rested quietly, with its head projecting some few feet over the stern. Not ten seconds after, a pale blue phosphoric light, similar to what is sometimes settling on the flying-jib-boom end or mast-heads of ships within the Tropics, sailed flickering along above the deck, and gradually descending as it travelled aft, finally took up its station on the maintop-mast-head, and remaining stationary there, shone steadily out as if to direct us where to pull.

We were now rapidly nearing the Georgian, and Driver, who was steering, sung out to me to stand by with the boat-hook, and stave off any floating pieces of the wreck, lest we might get a hole knocked in the cutter's bows, at the same time remarking, she was pretty full of water as it was.

"Sure, then, sir, hadn't we better be aither taking out the plug, and letting it all rin?" exclaimed one of the men, a countryman of O'Kasey's, actually putting his hand down and feeling for the cork.

"Take the devil out of h—, sir, if you like, and let him run, but leave that plug alone!" hastily roared out the choleric old chap.

It required a quick eye and steady hand on the part of our coxswain to avoid a bumping match, in which case we should most inevitably have come second best off; but he handled the cutter beautifully; although more than once she was very nearly thrown broadside on to the sea, which I thoroughly expected was going to make a clear breach over all, and send us down to Davy Jones at once. O'Kasey volunteered to board the transport, if the boat's head was brought right underneath the fallen spar, so as he could scramble up by the tangled maze of rigging which remained. I agreed to follow him. He kicked off his shoes; I tried to do the same by mine; but they were originally a tight fit, and from being successively soaked, scorched, and wetted again, stuck to my feet as though they had been nailed on; and, something like the negro's pig, the more I pulled the more they wouldn't come. "I'll cut 'em for you," said O'Kasey, and, suiting the action to the word, he succeeded in divesting me of these dangerous appendages, at the expense of having the point of the knife run about half-an-inch into my great toe. It was no time to stand upon trifles, however.

"There you are, boys—jump while you may, and catch like cats!" was the exhortation we received from Driver.

O'Kasey shut his eyes, and stepping on the gunwale, bounded lightly off like a Dublin harlequin; but I kept mine wide open, and, singling out a rope, made a desperate spring upwards. One convulsive clutch, a strenuous exertion of my arms, and I was astride the spar and on the transport's deck in the course of half-a-minute.

A great oversight had been undoubtedly committed by us all, in not ascertaining as to where there existed the greatest probability of finding the child, before we left the ship. Luckily, we espied it under the lee of one of the carronades, where it had been left and forgotten in the hurry of the moment, wrapped in a blanket, unhurt by the falling of the mast, and soundly sleeping in its innocence, amid the roaring of a gale which blew loud enough to wake the dead.

"Can you swim?" said O'Kasey, addressing me.

"Yes."

"Arrah, hauld the babby, thin!"

"Can you?"

"Divil a stroke!" replied he; and, running out to the mast-head, he fearlessly flung himself overboard, trusting to the men in the cutter to pick him up.

I looked round for a grating to lash the child to, in case of anything happening to myself, but none was to be found; and, as I was nearly scorched to death with the flames, and suffocated with the smoke, I lost no time in following the young Irishman's example; and, providentially, we were all three hooked out, and hauled into the cutter, without any material damage.

How we ever got near the Indianaman again, God only knows. Even as it was, we fetched a good half-cable's length astern of her. The other ships were still farther to windward, so she was our only chance, and a very poor one, too—at least, I thought so.

The men were terribly winded; the boat was half-full of water, which, of course, made it so much the heavier to pull. It was perfectly impossible to bale any of it out, for the biggin was anywhere but where it ought to have been; and as to hats—Lord! it was a matter of thankfulness that the hair itself was not blown off our heads.

In this dilemma, the same bright idea again struck the acute Irishman, and, laying his oar across for a moment, he addressed himself to Driver, with—"The plug, y'r honour!" but the chief mate was still inexorable; and instead of making any headway, we could now barely hold our own.

Captain S— had, however, provided against such an emergency on board the Indianaman. Some coir rope was stopped with a bit of spunyarn to the lifebuoy, having a spare end of from ten to fifteen fathoms long, the rest being coiled clear away on the hencoops in readiness for veering. The lapiard of the buoy was then cut,—sufficient scope of stray line being first paid out, to allow it to reach the water, and drift away without checking—when it came floating down to us in glorious style, The end of the coir, which was floating on the surface, and

waving about like a snake, was easily caught hold of, and a pretty severe turn taken with it round one of the thwarts. A hawser, which was then sent down to us by means of a snatch-block, with a couple of double-headed shots slung to the hook, to keep it steady and accelerate its travelling, was also made fast; and the end on board, of which there was barely enough, being brought to the capstern—"Heave round!" was the word, and away went the cutter foaming and flashing through the waves.

Had not the boat been well and strongly built, she would have been torn, and riven, as O'Kasey expressed it, into "smithereens;" for long before we were under the ship's stern, the water was up to the rowlocks, and more than once we were literally dragged right under a sea; but thanks to the lockers! with no further damage than a few good saltwater duckings; and, at last, we had the inexpressible satisfaction of seeing the child run up to the driver-boom end in a basket, and restored alive to the arms of its mother, who was craning over the taff-rails in almost frantic ecstasy.

Thank God! the deck of the W— H— was soon once more beneath our feet; and, wet and exhausted as I was, I neither stayed to hear the fine speech Captain S— had prepared for us on the occasion, nor the flattering encomiums of the lady passengers,—many of whom were up in the cuddy at the time, shedding tears enough to float a jolly-boat; but staggering down to my cabin, after fortifying the inward man, I rubbed the outward dry, and, stripping the sheets from off my cot, turned in between the blankets, and fell fast asleep, just as the morning-gun of the A— boomed over the water, announcing to the fleet that daylight had already broke.

TO THE SEA.

Thou glorious sea! more pleasing far

When all thy waters are at rest,
And noonday sun, or midnight star
Is shining on thy waveless breast.

More pleasing far than when the wings
Of stormy winds are o'er thee spread,
And every billowy mountain flings
Aloft to heaven its foaming head.

Yet is the very tempest dear,
Whose mighty voice but tells of thee;
For, wild or calm, or far or near,
I love thee still, thou glorious sea!

THE BEACON.

The scene was more beautiful far to mine eye,
Than if day in its pride had arrayed it;
The land breeze blew mild, and the azure-arched sky
Looked as pure as the spirit that made it.
The murmur rose soft, as I silently gazed
On the shadowy waves' playful motion,
From the dim distant isle, till the beacon-fire blazed,
Like a star in the midst of the ocean.

No longer the joy of the sailor-boy's breast,
Was heard in his wildly breathed numbers;
The sea-bird had flown to his wave-girdled nest,
The fisherman sunk to his slumbers.
One moment I gazed from the hill's gentle slope,
(All hushed was the billow's commotion)
And thought that the beacon looked lovely as hope,
That star of life's tremulous ocean.

The time is long past, and the scene is afar,
Yet when my head rests on its pillow,
Will memory sometimes rekindle the star,
That blazed on the breast of the billow.
In life's closing hour, when the trembling soul flies,
And death stills the heart's last emotion;
Oh, then may the seraph of mercy arise,
Like a star on eternity's ocean!

A TALE OF THE SEA.

It was in the early part of the afternoon of a fine summer's day, as the officers of his Majesty's frigate, the Dryad, were parading the quarter-deck, that a boat was observed to put off from the shore in the direction of the ship. The Dryad was at anchor off the Isle of France, in the roads opposite the castle of the French governor, waiting to take possession of the island, which, according to treaty, was to be surrendered to the British on the following day. Captain Manners, the commander, had been anxiously expecting to receive a communication from the governor, to arrange the time and place for the conference which must necessarily take place among them: at noon no intelligence having been heard from the shore, he had issued orders to have everything in readiness, to fulfil the directions he had received if driven to extremity, which were as follows:—"Should the keys of the fort not be delivered up before twelve o'clock on the day named, a fire is instantly to be opened on the place, and possession taken by force."

Captain Manners was a man who had the good fortune to be promoted from the station of a common sailor, on account of his consummate bravery, and thorough knowledge of seamanship; he was generous, noble-minded, and strict in the observance of duty, but as he had not derived his learning from books, but from actual service, he was averse to everything that had the appearance of study; and, moreover, at times, when in an angry mood, was apt to express himself in "rough unpolished terms." Amongst the midshipmen was one named Alfred Clifton, a young man who, like many others of the same profession, had nothing to trust to for promotion but his merit; he was sedentary in his habits, strongly addicted to study, and, on account of his mild and gentlemanly behaviour, was beloved by the crew: as he had neither the means nor the will, he forbore to join in the frequent festive orgies of his brother officers; in consequence of which, he had lost the good opinion of the captain, who had termed him "too much of a bookworm ever to make a good sailor." Such were the two persons who form the principal characters in the tale.

The boat had now approached the ship's side; the gangway was cleared, and the captain stood on the quarter-deck, waiting the announcement of the visitors, who proved to be two French officers bringing a letter for the captain, requesting him to attend on the following morning, at the governor's residence, to receive the surrender. The captain gave the requisite answer, and the officers left the vessel. Lots were now drawn, to decide which of the midshipmen should take charge of the ship the next day, as the attendance of every officer was required to witness the ceremony of the surrender: the lot fell upon Clifton, who joyfully undertook the duty, as he would thereby be enabled to pursue his favourite recreation unmolested: nor was Captain Manners less pleased: "The lot could not have fallen better," said he, "than upon the

bookworm; there will, no doubt, be a glorious carousal upon the occasion, the pleasure of which, I am convinced, would have been considerably damped by his unsociableness."

At ten the next morning the captain and officers left the ship, and Clifton retired to the gun-room, to grieve in secret at the harshness of his commander. In about three hours, the two officers who had visited the ship the day before, again came on board with a note from the captain, desiring Alfred to show them over the Dryad. He accordingly led them over the principal parts of the vessel, and lastly to the magazine, when he was called on deck to settle a dispute between two of the men: on his return, the two officers expressed their thanks in bad English, and requested the boat might be got ready for their return. Clifton, to pay them as much respect as possible, offered to accompany them to the shore; they accepted his offer, and the boat pushed off from the frigate. During their passage, the Frenchmen, who were not aware that Alfred was perfectly the master of their native tongue, started a conversation to the following effect:—"How long will the match burn?" "Two hours." "Is it well primed?" "Undoubtedly." "How are things arranged on shore?" "The governor will manage that—we have done our part." Clifton was greatly alarmed at this, but keeping his countenance, he politely bade the officers adieu, returned to the ship, and running into the magazine, discovered that they had placed a slow match, with the intention of blowing up the ship; he instantly extinguished it, mustered all the men that could be spared, informed them of the circumstance, armed them, and in less than half-an-hour was again on his way to the shore. Arriving at the gate of the castle, they gagged and bound the sentinel, and Alfred rushing into the apartment where the English and French were dining together, exclaimed aloud:—"Captain Manners, a mutiny has broken out on board; the men insist on your instantly returning to the ship; the boatswain has proclaimed himself captain, turned the fore-castle guns aft, and all is confusion."

Instantly the officers rose; the French tried every artifice to induce them to remain, but without effect; at last they separated, but not before a promise had been made by the captain, to return as soon as he had

set things to rights on board. During the return to the Dryad, a gloomy silence was preserved by all, till on reaching the side of the vessel, the captain, finding all quiet, asked Clifton "what he had to understand by his insolence, in imposing upon his superior officers?" To which he modestly replied, "That I have made use of an artifice, is most true; but I trust, when all is explained, you will not condemn my conduct." He then related the conversation he had overheard; the circumstance of his finding the match burning in the magazine; and, to strengthen his assertion, showed the captain the remainder still lying on the floor, as he had left it when he extinguished it.

No words can express the look of the captain at this

moment: surprise, admiration, rage, contempt, and vengeance, were all successively depicted in his countenance. At length he expressed, "Brave young man! let me clasp you in my arms; and from this moment be assured of my confidence and esteem; but, for the present, reward must give place to vengeance." He then hurried on the quarter-deck, mustered the whole ship's crew, related to them every circumstance of the plot, and its frustration by our hero, and addressing the men, said, "Now, my lads, suppose we turn the tale on them, and instead of their blowing us out of the water, and cutting us into slices, which I assure you was fully intended, let us endeavour to bring about a nearer acquaintance between their castle and the ground. So clear ship and prepare for action." Three cheers gave testimony how willing the men were to do as commanded; a heavy fire commenced, which in a little time was answered from the castle; but as the landsmen could not bring their guns to bear upon so small an object as the frigate, they threw away most of their fire, whilst every broadside from the Dryad carried with it destruction to the castle; so that, after an action of four hours, the whole was one heap of ruins, under which perished the perfidious governor and his associates. The frigate lost her second lieutenant and five seamen.

Next morning all hands were piped on deck, to perform the burial service; which being finished, the captain called Alfred on the quarter deck, and said, "Mr. Alfred Clifton, before I attempt to recompense you in any way for the very valuable service you yesterday rendered his majesty, allow me to entreat your pardon for the harsh manner in which I have usually conducted myself towards you." "Had I not been a bookworm, Captain Manners, and understood the French language—" "My dear friend, no more," interrupted the captain; "but to the point: immediately on my return to England, I shall lay the whole affair before the king in council, who, I am sure, will reward you in a manner suitable to your deserts; in the meantime, take upon you the lieutenancy which has become vacant by the death of poor Thompson." Clifton bowed; was congratulated by the officers and men; a sumptuous entertainment closed the day; and one month after the ship's coming into Portsmouth harbour, our hero received his commission as a post captain, a reward which his conduct well merited.

LOSS OF A PINNACE AT PLYMOUTH SOUND,

NOVEMBER 7, 1838.

THE melancholy event which we have to record has plunged into a watery grave, and without the warning of a moment, twenty individuals, several of whom have left widows, with, in the whole, nearly fifty children.

Three pinnaces, having on board the men employed at the Breakwater, left the Chatham hulk, which is moored inside that structure, as a rendezvous for the men; the sea was then running very high, and the wind blowing a fearful gale from S.S.W. The destination of the boats was the quarry at Oreston, but as they proceeded across the Sound they encountered tremendous seas, and especially so when approaching the Cobbler buoy, where the run of the ebb-tide from Catwater meeting the seas which came in from the S.S.W., produced a peculiarly heavy swell and very dangerous surface. When about two-thirds of the way across the Sound, a man in the leading boat exclaimed, that the second pinnace had disappeared. At the same instant the crew observed that several persons on the Old Victualling-office point, and the Batten, were waving their hands, and making other gesticulations, as if to call their attention to some particular circumstance. The boat immediately made into the Victualling-office point, where the crowds, who had assembled to witness the effects of the storm, told the crew that the second pinnace had sunk, and that some of the crew were clinging to the Cobbler.

The crew of the second boat immediately struck their sail, and at the imminent risk of their lives put about, and went back to the spot where, as nearly as could be judged, the ill-fated vessel went down. Not one of the crew was to be seen, and nothing but some of the hats and baskets belonging to the sufferers were recovered. The boat itself was seen bottom up-

wards, and in that state it floated to the rocks under Mount Batten. It appeared that the boat was coming in at a rapid rate, having a reefed lugsail set, when upon descending a heavy sea, which followed close upon another, the boat's way completely buried her in the sea ahead, and she instantly went down.

The first boat very nearly shared the same fate. She was some distance ahead of the second pinnace, and when near the Cobbler buried her bows in the same manner, shipping so much water that she was filled nearly up to the thwarts: this was fortunately baled out before the circumstance recurred, which it did several times on her way in. This boat was also in a state of the utmost jeopardy when she faced the sea to return to the spot where the pinnace sunk; she, however, ultimately reached Oreston safely, the crew being in a most miserable state from the terror which their own situation had produced, and the sorrow which they could not but feel from the loss of their "brothers," as they emphatically termed them. The third boat did not leave the Chatham until some time after the departure of the other two, so that she was too far behind to render any assistance.

The following are the names of the unfortunate men who perished, with, as near as could be ascertained, the number of their families. Jonathan Patch, mason, leaving a widow and two children; William Staddon, mason, a widow and five children; William Jewell, mason, widow and two children; William Montjoy, mason, a widow. The remainder were labourers. Henry Dyer, single; Charles Bond, widow and seven children; James Rendle, widow—this man had belonged to the Breakwater for twenty-four years; John Gitsam, cook to the Chatham, widow; Joseph Dobson; William Crocker, widow and two children; David Deering, single; William Gould, single; John Davis, single; Robert Cobbedick, widow and seven children; William Cornish, widow; Thomas Natt, widow and five children; William Luxon, widow and six children; Josias Blake, widow and five children; John Graney, widow and one child; William Sampson, widow and five children; this man had charge of the boat, and had been accustomed to the sea all his life; he had always been distinguished for his steadiness and attention to his duties.

As soon as the sinking of the boat became known at the Barbican, five brave fellows whose names we have pleasure in making public, viz. Adam Friendship, John Musgrove, James Churchwood, William Crapp and George Barker, jumped into a gig belonging to Messrs. Hawker, and pushed out to sea, with the hope of saving the men; their efforts were, however, unavailing.

The boat was thrown bottom upwards on the rocks, lying nearly in the same spot where the Jasper maa-of-war brig was wrecked some years since, when seventy persons perished. Portions of the boat had come ashore, and from the violence of the sea it was apparent that she would soon go to pieces.

The most heart-rending sight which was witnessed in the course of the day, was the return of the bereaved widows from Oreston, whither they had gone to learn the truth of the catastrophe. The condition of these poor creatures was pitiable in the extreme, and their tears and lamentations could not but move a heart made of the sternest stuff. One of them was accompanied by the children who were sharers in the calamity, and a more distressed group has seldom been seen.

A RUSSIAN SEVENTY-FOUR.

PAINTING FROM NATURE.—In the Palace of Streina, near Petersburg, are four celebrated pictures, by Hackert, painted by order of Count Alexy Orloff, in celebration of the victory of the Russian Admiral over the Turkish fleet, commanded by the Capitan Pacha. During the progress of these famous pictures, the painter took occasion to observe to the count on the difficulty of painting a ship on fire, never having witnessed that terrible and imposing spectacle. Orloff, without a moment's hesitation, issued his order for a Russian seventy-four gun-ship to be cleared, placed in a position to suit the painter, and burnt before him, to enable him to execute the subject with fidelity.

SATURDAY NIGHT IN THE COCKPIT.

Saturday night was ever, in days of yore, to which this story will carry back the reader, kept and celebrated while three or four could be brought together, or while a bottle of grog was to be had in the ship. The cockpit mess of the —, seventy-four, generally found the demand for the "stimulating liquid," although inconceivably great, not much more than the supply was equal to; and therefore Saturday night came sometimes more than once a week, and whenever it made its appearance it lost not one ray of its glory. The members of the mess at the present time were, however, considerably reduced in point of numbers, the ship having been three years in commission; but, notwithstanding the effects of "death and promotion," a sufficient number still remained to enable them to do ample justice to the all-enlivening sociality of the evening. Here the song went its merry and never-ceasing round; and, although it was pretty well known what each would sing when it came to his turn, still the same attention was apparent on the countenances of the party as if the song had been one of the last composition. One would favour them with a dozen verses of some ditty perhaps more common than proper; while the next would amuse them with some musical narrative of what took place, when

"On Gosport beach he landed."

But although applause was liberally bestowed on each successive performer, yet the championship of Tom Armstrong was universally acknowledged; and no applause equalled that which was awarded when, with a stentorian and not very well tuned voice, he sang his "Saturday Night at Sea," the burden of his song, and which formed a chorus in which all hands joined with the full force of their lungs, was nearly as follows:—

"And Saturday night still comes, my boys—
Let's drink to Poll and Bess."

Such, then, was the merry strain which found its way almost to the quarter-deck of the ship, at the moment when I would introduce the courteous reader to the resting-place of these "male sirens." At one end of a deal table, whereon accident or design had carved as many lines, forming as many angles and figures as the renowned Euclid ever invented, and exhibiting as many stains of various hues as Arrowsmith's last new-coloured map, sat one of the "old school young gentlemen," one who had long faced the storm and derided the perils of the deep—not willingly, however, but "upon compulsion," for he could get nothing better. He might, had it been possible to have procured a register of his baptism, have been found rather over than under thirty years of age; but salt junk, salt water, grog, and tobacco used in two different ways, had conspired to make him forty in appearance. Upon his head he wore a woollen nightcap, originally red, from under which escaped "unkempt" a profusion of dingy brown hair, to which was firmly united a huge pair of untrimmed whiskers of a dark clay colour. Two small twinkling grey eyes gave utterance to a thousand jokes, as their glances found their way from under a pair of bushy overhanging eyebrows; and a mouth provided by "all plastic Nature," with convenient ducts at each corner to carry off the exuberant juices of the Virginian weed, exhibited the best part of a once formidable row of teeth, now in a very blackened and dilapidated state. A striped or checked shirt, much open at the neck, was secured in some measure by a red and black bird's-eye pattern silk bandanna, tied round his throat in such a way, as proved he had never studied the "art of tying the cravat." The upper part of a pair of blue, not superfine, cloth trowsers was just visible above the table. A jacket, which had acquired a very close and intimate acquaintance with every part of the ship but the captain's cabin, adorned with what had been once shining brass buttons, bearing the impression of an anchor and cable, though now bronzed by the corroding action of the salt spray, covered a Herculean pair of shoulders, leaving exposed, from the shortness of the sleeves about six inches of wrist in addition to a hand of the most fearful description. The jacket above-mentioned, bore a close resemblance to that garment known by the shore-going people as the "spencer," afterwards so fashionable, since it reached well below the loins, and

therefore differs materially from that now in use termed "short," or by the Admiralty Dress Regulations, "a round jacket without skirts." The remaining part of this worthy's dress was of a piece with that already described; and it is much feared that the suit of clothes in his bag—for few had any use in those days for a chest—would not prove, on a close examination, to be much better.

Such at this moment was Mr. Thomas Armstrong, master's-mate in his Majesty's service, and caterer, when there was anything to eat, of the cockpit mess. The strength of his arm, more than his seniority, managed to keep him the undisputed "dictator" during a long period of troublesome times, and amongst a most mutinous, or, as they are commonly termed, radical set of messmates. Tom, by dint of good luck, had held the rating of master's-mate for the last ten years; and he was often heard to remark that if he behaved himself properly, he should most likely hold it ten years longer.

The table was garnished with a basket of broken biscuit, two bottles supporting lighted purser's dips, and a third of pretty considerable dimensions—in fact, a lime-juice bottle, half full of rum; a black jack, containing some black water, and drinking utensils of various sizes, colours, and composition, were disposed upon it in elegant confusion. The party were screened from observation by some condemned hammocks converted to that use, one of which lifted up to form an entrance. Before Tom, however, in particular, was an old "*compagnon du voyage*," a "big-bellied bottle." This said bottle found its way, as regularly as seven bells came, to the grog-tub, to which part of his duty Tom always paid particular attention. The bottle in question attended merely as an auxiliary, for the purpose of receiving the overplus which the mess-bottles would not contain; but it so happened that it always left the tub with about a quart and a half-pint in it. When, however, it reached the cockpit, it and the contents became the exclusive property of the caterer, and, barring the half-pint, was generally safe under hatches in Tom's "private spirit-room" (i. e. under his jacket) ere the summons of the master-at-arms to "douse the glim, gentlemen," was heard.

It would be unfair to pass over the congenial elements by which Tom was at this time surrounded without a remark. One of the party, a thin-faced man with a purple nose, and a narrow pair of shoulders, over which hung a quantity of lank black hair, was decidedly the best dressed man present. The sparkles emanating from his usually languid black eye now told that "Saturday Night" had imparted its all-enlivening quality to his senses. He joined lustily in the chorus, and at the end of each stanza was observed to "drink deep" of the horn cup, which else was nervously clasped in his attenuated fingers. This was the captain's clerk, the only man of the mess who wore a shirt which had ever been designated white. He performed the office of vice-president; but fearing a summons from the captain, he evidently felt that he could not give full way to the carelessness and joy so marked in every other face. The right-hand supporter of Tom Armstrong, was the doctor's mate, who permitted Tom to call him "Saundy," but no one else—to all others he was "Doctor," or "Doctor Shane." The doctor's complexion was red, hair red, his temper fiery red, when he found any one on whom he could exert it; and at this moment he was "red-hot with drinking."

Tom had some difficulty in convincing the doctor which had the strongest arm. When he had done so, however, there was no further dispute; but to all those less strong than himself, he, the doctor, was a perfect tyrant. Now, Tom was an exceedingly good-tempered man, if left alone, and suffered to do as he liked; but he was quite absolute in his sway, and as often lent the weight of his arm to keep a youngster from a drubbing as to give one. On his left was sitting, not so demurely as was his was wont, poor "Boots," the youngster of the mess a fair-haired boy of about fifteen. The situation of boots in those days was one which it requires a short digression to elucidate.

Eight bells (noon) had struck—the dinner was on the table—poor boots was hungry enough to have eaten anything—salt junk, salt pork, pea-soup, dog's body, biscuit, duff—it was all the same at that moment; he had been keeping the forenoon watch, and those who know the effect of a four hours walk on

the maw of a youth can imagine *how* hungry he was. Yet, seated at the lower end of the table, and not daring in so despotic a company to complain, he, with a longing eye, watched the good things fast disappearing ere his turn approached. At length one after another was served, and his turn was coming. A piece of beef was handed him; his knife was ready, and so were his teeth, when, lo! ere the one or the other had time to commence operations, his ears were assailed with a hoarse sound proceeding from no less a personage than Tom. Tom called "Boy!" Now, whenever Tom called out without receiving an immediate answer, he used to ask something in the shape of a question, such as "Where's that," &c. I leave the reader to dispose of the *et ceteras* as he pleases. Suffice it to say, they signify oaths, rich and racy, and which at the present day are happily "rare."

The reader will no doubt thank me for allowing him this license, and, if he is a sailor, will most likely, as the old boat-swain would say, "know what I mean." But to proceed—in this case the boy was in the gallery; and Tom asked his customary question, "Where's that," &c. This question remained unanswered, boots being the next in rank, was summoned. "Jimmy," said Tom, in a voice as full of blandishment as his commanding tongue was capable of—"Jimmy, go and fetch me a pot of beer." In an instant the knife was dropped, the untasted morsel left, and with a heavy heart, though nimble step, he ascended the cockpit-ladder, carrying with him a tin can, in obedience to the order he had received. Beer was at this time issued as long as it lasted, a cask being broached on the main-deck, from which the crew obtained as much as they liked to drink. Here a long rank of men were waiting their turns, and poor boots, standing at the top of the ladder, beckoned one of the men to go and get the can filled. The man willingly obeyed for more reasons than one—he served himself as well as his officer. "Make way for an officer's pot," the officious tar roared out, and no one offering to dispute the claim, the cunning fellow took care to help himself and assist his friends ere he returned the "officer's pot" to the impatient half-starving boots.

Having returned to the cockpit with the beer, poor Jimmy would attempt to get through the tepid morsel before him, which he would hardly finish before the dinner would be removed, and he remain almost as hungry as ever, and often be obliged to fill up the chinks with soaked biscuit. Such then, after apologizing for this departure from "Saturday Night," was the fair-haired boy. Such was once "mamma's darling"—such the treatment or schooling endured by the aspirant for naval fame. If, on the contrary, the boy had attempted to sulk, and had not cheerfully complied with the commands of an "oldster," his case might have been much worse. Seven or eight others were ranged round the table, some a little better dressed, but generally much after the "Armstrong" style; their ages might have varied from twenty to thirty. To all the chorus was alike inspiring, and loud and continued were the sounds of applause as Tom finished it. "Long life to you, Tom;" "Health and song, Tom;" "Speedy promotion to you, old boy, and soon;" "Hurrah! for Saturday night;" these and many others were the compliments heaped upon Tom, and they appeared to have an unusual effect upon him, so much so, that he produced an extra bottle of grog, much to the delight of all hands; and pouring out for his own use a good stiff glass, proposed "Sweet-hearts and Wives, and may we soon be among them." This toast was as quickly responded to as given, and each one drank a bumper. They had hardly finished, when a young man, enveloped in a large rough coat, came rushing down the ladder, calling out all the way as he came along, "The Lizard Lights! The Lizard Lights! Hurrah, my boys, Old England for ever!" In an instant there was one general cheer fore and aft, for the men heard the report; and the sound, to the ear which has been so long a stranger to it, communicates such a thrill of delight, as to be known must be felt. If the party were before elevated, they were now ten times more so. The song and the glass were resumed as soon as each one had satisfied himself of the truth of the report, and circulated with increased celerity, until all the grog was pronounced expended. Tom's stock was not, however, quite out, for, after searching again, he found two

bottles of brandy, which in the unusual warmth of his heart he placed on the table. When taking to himself the "lion's share," it soon began to make an impression which his oldest mesmate had never before witnessed. His good humour increased in an unexampled degree, but it was becoming evident that as the song went round with the sun, so Tom's optics became wilder and wilder; his speech too became thicker, and, moreover, he seemed more than ever attached to his song, which he every minute introduced, beautifully diversified, for his powers of composition seemed to come to the aid of his memory; he could not, however, manage more than two lines.

"We'll drink, we'll drink!" Here he suited the action to the word; he half-filled his tumbler with brandy, when forgetting to put any water to it, he drank its contents, and like the dying swan, "fading in music," he sang—

"And Saturday night still comes,"—

Here a pause ensued, he lost his equilibrium, gave a heavy lurch, and rolled under the table. The doctor proceeded with a grave face to feel his pulse, when, with a look of much concern, he pronounced him D. D.

It next occurred to them that they should bury him, and after a short consultation as to which was the most fit and proper place, the point was decided. In line-of-battle ships, in those days, the gun-room was merely divided from the lower-deck by a rope netting, that place being only used occasionally as a school-room. At the after part, as now, were two cabins, one occupied by the gunner, and the other by the junior-lieutenant of the ship. There was an old sailor set apart from more active duty, on purpose to keep the gun-room clean, who was rated "Lady of the Gun-room;" and abaft all, on the starboard side of the stern-post, was a scuttle which led down into the wing transom of the ship, and formed a kind of stow-hole, to which the "Lady of the Gun-room" laid claim, and the place was commonly known as "My Lady's Hold." This, then, was the place on which all parties, immediately it was mentioned, fixed, and "Jimmy" was accordingly despatched to find out "her ladyship," in order to obtain the key of the padlock which secured the hatch bar. These preliminaries settled, a grating was procured, and old Tom, perfectly unconscious, was with great form stretched out at full length upon it. A tarpaulin was then brought and spread over him, when four of the party lifted him on their shoulders, and four others walked at each corner as pall-bearers, holding the tarpaulin, which served as a pall. The remainder followed playing the "dead march" with serapers and holystones; and in this style he was carried up the cockpit ladder, and after parading him round the lower deck, the procession walked into the gun-room, and setting the body down, they chanted over him, accompanied by the instruments before mentioned, a verse of "Saturday Night," lowered him into "My Lady's Hold," and replaced the hatch.

The party then returned to the cockpit, and recommenced their carouse; they broke open and ransacked every locker in search of the "stimulus," of which they found a sufficient quantity to render each of them, Boy of the Mess and all, so gloriously, or rather ingloriously oblivious, that it might have been said with much truth, they drank of the waters of Lethe; for on the following morning most of them were under the table, and had totally forgotten their frolic with poor old Tom Armstrong.

THE PENSIONER'S TALE.

"WELL, well," said an old weather-beaten pensioner to his comrades, as they sat under the shade of that noble asylum, Greenwich Hospital, telling tales of the past, of battles fought and won by the stout hearts and wooden walls of old England, "you remember Tom Wilson, who sailed his first voyage with me in his Majesty's frigate, the Dart, on a cruising expedition. Well, Tom, poor fellow! was pressed, and torn away to serve the king, leaving behind him one of the prettiest trim-built crafts as ever you clapped eyes on. I was present at the parting. Poor Mary wept, sighed, sobbed, and clung round him, he in vain trying to console her. At length they were gently separated, and ere long Wilson was on board the vessel which

he was doomed never to leave more. I was his only confidant. He kept himself (except when duty required him) totally apart from the rest of the crew, a continual melancholy shading his fine features. One night it was our turn to watch together, and then I heard from his own lips the story of his love. Mary had been brought up with him from infancy; they were slightly related, and her parents dying when she was quite young, she was taken and adopted by his parents; and thus, as they grew together, a natural affection sprung up between them, so deep, so true, so lasting, that death itself could only break the bonds. A day was fixed for their union, but war breaking out, he was dragged away from her as he was leaving the church, and they parted in the manner before described. Thus ended his short tale, which told more than any long yarn could. I consoled him, and from that moment we were sworn friends. I often shielded him from the taunts and insults of the crew, to whom he had rendered himself obnoxious by his reserved manner. What stung him most was that his courage was doubted. And oft have I heard him on the mid-watch, in the dead hour of the night, kissing the picture of his beloved Mary (which he carried constantly in his bosom), and praying for an action, that he might wipe the stains off his wounded honour. His prayer was at length heard. We were cruising near the Cape of Good Hope one hazy morning, when the man on the look-out gave intelligence of a strange sail in sight, which soon after proved to be a French frigate of superior force, carrying forty-two guns, and we but thirty-six. All hands were piped up, the bulk-heads stove in, the hatches knocked up, and the deck in a short time cleared for action. The enemy bore down, and in less than ten minutes the action commenced. It was a hard fight. The enemy fought vigorously, relying on their superior weight of metal. The contest had lasted about an hour, and was going rather in favour of our enemy, our topmasts being shot away, and splinters flying about in all directions, when the captain gave orders instantly to board. The grapples were thrown out, and we were soon lashed side to side. During the whole contest, Wilson and I had fought together. He fought with desperate courage, rushing into the midst of danger with a fearful and reckless energy. Just as the orders for boarding had been given, I was despatched by the captain to the cock-pit with a message to the first lieutenant, who had been wounded in the beginning of the onset. He inquired if he could possibly come on deck, as the danger was imminent. Snatching his wounded arm from the surgeon, who was dressing it, and seizing his sword, he rushed up the ladder and soon reached the quarter-deck, where a desperate struggle was now taking place, and all were taking an earnest part in the affray except Wilson, who had paused for a moment to kiss Mary's picture, to nerve him in this trying hour; and just as he was about raising it to his lips, the lieutenant approached, and striking him with the flat part of his sword, exclaimed, "How now, sir, coward! thinking of love still! To your post, sir, or the marines shall prick you on with the boarding pikes." Thus saying, he rushed into the thickest of the fight, and was followed instantly by the wrongly accused Wilson. The lieutenant had thrown himself on the enemy's deck—a pistol was raised to his breast—his fate seemed inevitable; when Wilson with one bound threw himself before him, and received the shot in his own bosom. I dashed forward to revenge him, cut the Frenchman down with one blow, and then stooped to see if the wound was mortal. It was. There he lay, cold and still, with his usual calm melancholy smile on his lips, and his hand tightly grasping the portrait, which I seized, let drop a tear, and hastened to my duty; and in half-an-hour victory declared for us. The lieutenant was deeply affected at his fate. His body was discovered, and decently consigned to the deep. The prize was secured, our decks washed down, and we set sail for England. We soon arrived in the Downs, and I set off to console poor Mary with the lieutenant's promise that she should be amply provided for. But bad news flies apace, so I found she had heard of his death—and I just arrived in time to see her laid in her grave.

ANY PORT IN A STORM.

A SEAMAN, named John Coombs, who was paid off from His Majesty's ship *Victor*, on the 20th of August, 1827, was, on the day following, married, under circumstances which attracted great attention amongst the *mobility*. He had, previously to his going to sea, paid his addresses to a young woman, who had plighted her troth, and vowed eternal constancy. Happy in the assurances of her love, which were oft repeated in her letters, Jack,

"When sailing o'er the midnight deep,"
thought but little

"Of all the rude dangers of crossing the ocean," occupied, as he was, with the image of his Susan, and with the joyous anticipations of a happy meeting, when the strong cable of Hymen, twisted into a lover's knot, might bind him, for good and all, to the girl of his heart. But, alas! "Frailty, thy name is woman;" on his return home, Jack found, to his utter dismay, that the "fickle faithless quean" had been for some time married to another. Surprise was followed by grief, and grief by anger, and Jack resolved to be revenged—but after a plan of his own. It never occurred to him to bring an action for breach of promise, or to call out his rival, or publish to the world the lady's letters, or to commit suicide, but he resolved to do worse—he vowed to marry! ay, to marry the first woman he should meet, willing to take him for better or worse. Full of this "dread intent," Jack sallied forth, and ere long he fell in with Miss Paul—not *Paul*, although she was the daughter of the grave-digger of Charles' Church. Not *appalled* by that circumstance, Jack challenged this little brig, and soon brought her to, and she consented to surrender on honourable terms. She was blooming sixteen, and she did not give herself *grave* airs, therefore Jack bore off his prize without much trouble, brought her to *Dock* for a refit, took out a bishop's warrant, and next morning towed her up, with white at the main, to Charles' Church, where she was pronounced his for ever. Intelligence of these doings having spread with the rapidity of woman's tongue, or the speed of a telegraphic or semaphoric dispatch, several hundred persons were assembled at the church-door to greet the happy couple; and various were the greetings, some, we should think, exceedingly *gritting* to the ears of the new married couple, for, although many cheered, yet many hooted and hissed. The interval of quietness brought with it reflection, and reflection told the young lady that she had been a *little* precipitate. "Young she was and sore afraid," and she declared she would not be Jack's wife. Jack, however, was not to be cheated thus of his *prize-money*, and insisted upon his bargain. The lady resisted and wept, and, when evening came, it was found necessary to use much persuasion to induce her to enter the bridal chamber; but, at length, smiling through her tears, like the sunset of a rainy day, she yielded to the advice of her friends and became loyal—that is, she complied with the injunctions of the *minister*, and gave up the *opposition*.

EXTRAORDINARY INSTANCE OF DEVOTION AND SELF-POSSESSION.

In the year 1820, Captain Hastings, then on a voyage between the Island of Madagascar and the Cape of Good Hope, was overtaken by a violent storm. The furious turmoil of the ocean—the mightiness of the surging waves—the blackness of the water—and the vivid effects of the lightning coming athwart the dark curtain of the heavens, he beheld with an intensity of feeling that almost entirely absorbed every consideration of personal safety. Having taken the necessary means for the security of his vessel, and anxious to contemplate the grandeur of the scene, he ordered himself to be lashed to an elevated part of his ship, that during the raging of the tempest, he might not only study, but actually sketch, the terrific appearance around him. Collected amidst the uproar of the elements, and regardless of danger, he produced a faithful and spirited drawing of a storm at sea, full of all the fury and sublimity of his subject, which was exhibited at the Royal Academy the following year, and attracted peculiar attention.

LOSS OF THE APOLLO.

THE Apollo frigate, commanded by Captain Dixon, sailed from the Cove of Cork on Monday, the 26th March, 1804, in company with his Majesty's ship Carysfort, and sixty-nine sail of merchant ships, under convoy for the West Indies. On the 27th they were out of sight of land, with a fair wind blowing a strong gale, and steering about W.S.W., which course they kept for the three following days, the wind remaining in the same quarter; but on the 31st the wind got more round to the westward, and moderate. On Sunday, the 1st of April, by an observation at noon, they were in latitude $40^{\circ} 51' N.$, longitude, by their account $12^{\circ} 29' W.$ At eight o'clock on Sunday evening the wind shifted to the S.W. blowing fresh, and their

course S.S.E. At ten o'clock they hauled up the mainsail and set the main-staysail, but a quarter of an hour after, the main-staysail split, on account of the sheet giving way, upon which all hands were called upon deck. At half-past ten, as the wind was blowing strong and threatening squally weather, they took in the fore-topsail and set the foresail. An hour afterwards the main-topsail split, when they furled it, as well as the main-sail. The ship was now under her foresail, main, and mizen storm staysails, with the wind blowing hard, and a heavy sea running.

On Monday, the 2nd April, at about half-past three in the morning, the ship struck the ground, to the utter astonishment of every one on board; and by the above reckoning, they then conjectured on some unknown shore. She continued to strike

LOSS OF THE APOLLO, CAPTAIN DIXON, APRIL 2ND, 1804.

the ground very heavily for several minutes, by which her bottom was materially damaged; and to add to their distresses, the water in the hold was fast increasing. The chain-pumps were rigged with the utmost dispatch, and the men set to work immediately to pump; but in about ten minutes she beat and drove over the shoal. On endeavouring to steer her, they found that the rudder had been carried away, and they then got before the wind. The men were kept continually labouring at the pumps, but from the quantity of water the vessel had shipped, there was every probability of her foundering, as she was filling and sinking very fast.

After running about five minutes, the ship struck the ground again, and with such tremendous shocks, that they were fearful she would instantly go to pieces; and she kept striking and driving farther on the sands, with the sea at the same time

making complete breaches over her. They immediately cut away the lanyards of the main and mizen-rigging, upon which the masts fell over, with a tremendous crash, on the larboard side, and the foremast went directly after. The ship then fell on the larboard side, with the gunwale under water. The violence with which she struck the ground, and the weight of the guns, those on the quarter-deck tearing away the bulwarks, soon made the ship a perfect wreck abaft, while only four or five guns could possibly be fired to alarm the convoy, and give notice of the danger. On her drifting the second time, the most pitiful cries were heard from everywhere between decks, many of the men despairing of any chance of being saved, giving themselves up to inevitable death without making even a struggle for rescue. Such was the awful nature of their situation, that those who were upon deck had the same risk of pe-

rishing as those who remained below, notwithstanding which many endeavoured to come upon deck, as in the cabins they were every instant in danger of having their legs broken by the chests which were floating about, and the bulk-heads giving way; and which, after much difficulty, they effected, after having been several times washed down the hatchway by the immense volumes of water incessantly pouring down. As the ship was still beating the ground very violently, it was necessary to cling to some part of the wreck to prevent being washed off by the surges, or hurled overboard by the repeated dreadful concussions. The people held fast by the larboard bulwark of the quarter-deck and in the main-chains, while the captain stood naked upon the cabin sky-light grating, holding on by the stump of the mizen-mast, and making use of every

exertion which could have been suggested to encourage men in such a perilous situation; and to add to their distresses, most of the officers and men were entirely naked, not having had time, such was the suddenness of the calamity, even to slip on a pair of trousers.

Their horrible situation became every moment more dangerous and critical, until the appearance of daylight, at about half-past four o'clock, discovered to them the land at the distance of about two cables' length; a long sandy beach, reaching to Cape Mondego, which was about three leagues to the southward of them. As the day advanced and the weather became clearer, they could distinguish between twenty and thirty sail of the convoy ashore, both to the northward and southward of them, and several of them complete wrecks. They were now certain,

from seeing the above-mentioned cape, that they were on the coast of Portugal, though, to their discredit as seamen, no person in the ship had the least idea of being near that coast; and the wind blowing very hard, and a great swell of the sea running mountains high, there was very little prospect of them being saved.

About eight o'clock, as there appeared every likelihood of the ship soon going to pieces, and as the afterpart was the lowest in the water, Captain Dixon ordered every person forward. Mr. Cook, the boatswain, had his thigh broken in endeavouring to get one of the boats over the side; and of six fine boats not one was saved, being all staved and washed over with the booms. Soon after the people had managed to get to the forepart of the ship, she parted at the gangways. The crew were therefore obliged to stow themselves in the fore-channels, and

from thence to the bowsprit end, to the number of two hundred and twenty; for out of two hundred and forty persons which were on board the vessel when she first struck, it was supposed that twenty had previously perished between decks and otherwise. Mr. Lawton, the gunner, was the first person who attempted to swim on shore, but was drowned; he was followed by Lieutenant Wilson, Mr. Runcie, surgeon, Mr. McCabe, surgeon's-mate, Mr. Stanley, master's-mate, and several men, who shared the same fate, in consequence of the sea breaking in enormous surges over them, though they were all excellent swimmers. About forty persons, however, had the good fortune to reach the shore, among whom were Lieutenant Harvey and Mr. Callam, master's-mate. On the Monday night their situation became truly horrid, many of the old men and boys perishing through hunger and fatigue, and constant exposure

to wet and cold, and also Mr. Proby and Mr. Hayes, midshipmen. Captain Dixon remained upon the bowsprit during the whole of this long and miserable night.

Tuesday morning presented to these hapless mariners no better prospect of being relieved from the jaws of death, as the wind had increased in violence, and the sea was much more turbulent than before. About the middle of the day their drooping spirits were somewhat raised, by seeing Lieutenant Harvey and Mr. Callam hoisting out a boat from one of the merchant ships, to come to the assistance of their distressed shipmates. Several times they attempted to launch her through the surf, but the boat being very heavy, and the sea on the beach acting so powerfully against them, they could not succeed in effecting their object, though they were assisted by nearly a hundred men of the merchant sailors and Portuguese peasants. Disappointed in their hopes of assistance from the shore, they now turned their attention to the construction of rafts from pieces of the wreck; but although several of them left the ship, not one soul reached the shore.

Towards the latter part of the day the wind shifted, and the current setting out, they were all driven out to sea, among whom was the captain, who seeing the increasing dangers of their situation, and anxious to save the remainder of the ship's company, went on the jib-boom, about three o'clock in the afternoon, with three seamen; and too sanguine of being able to get safe on shore, he ventured upon the spar, saying, as he jumped into the sea, "My lads, I'll save you all." In a few seconds he lost his hold of the spar, which he could not regain, and soon after he drifted out to sea, and perished. Such also was the fate of the three brave seamen who voluntarily accompanied him.

The loss of their gallant captain, who, until this time, had animated the drooping spirits of the almost lifeless crew, as well as the noble exertions of Lieutenant Harvey and Mr. Callam to launch the boat not having been successful, they began to despair, as every gleam of hope, which they had hitherto encouraged, now totally vanished; and they looked forward to certain death the ensuing night, not so much from cold, hunger, and fatigue, as from the expectations of the remaining part of the wreck going to pieces every moment. Had not the Apollo been a new and well-built ship, that small portion of her could not have resisted the waves, and stuck so well together, particularly as all the after-part, from the chess-tree, was gone, the starboard bow under water, and the fore-castle-deck nearly perpendicular, the weight of the guns hanging to the larboard bulwark, on the outside, which it was not prudent to cut away, as they afforded resting places for a considerable number of men, there being only the fore-channels and cathead where it was possible to live in, and about which were stowed upwards of one hundred and fifty men, it being impracticable to continue any longer on the head or upon the bowsprit, by reason of the breakers washing completely over those places.

The night drawing on, the wind increasing, with frequent showers of rain, the sea washing over them, and the momentary expectation that the fore-castle would give way, when they must all have perished together, afforded a spectacle truly deplorable, the bare recollection of which makes the mind shudder. The piercing cries of the people this dismal night, at every sea coming over them, and which happened every two minutes, was melancholy in the extreme, the water running from their heads down their bodies, and keeping them continually wet. This miserable night the remaining strength of every individual on board was exerted for his own personal safety. Several of these poor wretches were suffocated from their crowding so closely together in such a narrow compass, and the want of something to moisten their mouths. Some of these unfortunate beings drank salt water, others chewed leather, while many more chewed lead, from which they conceived they found relief.

In less than an hour from the time the ship first took the ground, all the provisions were under water, and the ship a wreck, so that it was impossible to procure any portion of them. After the most painful night that ever misery lengthened into ages, the daylight appearing, they observed Lieutenant Harvey and Mr. Callam again endeavouring to launch the boat;

several attempts were made without success, and a number of men belonging to the merchant ships were much bruised and hurt in assisting. During these attempts alternate hopes and fears pervaded the wretched minds of those upon the wreck; but in the course of the morning fifteen of them succeeded in getting on shore on pieces of the wreck.

About three o'clock in the afternoon of Wednesday, the 4th of April, they had the inexpressible gratification of seeing the long-expected boat launched through the surf, by the indefatigable exertions of the brave officers, assisted by the master of the merchant ships, and a number of Portuguese peasants, who were encouraged in their endeavours by Mr. Whitney, the British Consul from Figuera. All the crew then remaining on the wreck were brought safely on shore, with fervent praises and thanksgivings to the Almighty for their happy deliverance from a shipwreck which has scarcely ever had its parallel, and as soon as they stepped out of the boat, they found several persons whose humanity had prompted them to offer them sustenance; but, in too many instances, improperly, in spirits, which many avoided as much as possible. Some idea may be formed of the weakness to which they were reduced, when it is considered, that they had not received any nourishment from Sunday to Wednesday afternoon, and during that time were continually exposed to the fury of the watery element. After eating and drinking a little, they found themselves much weaker than before, which was probably occasioned by their having been so long without either; and some of the men died soon after getting on shore, from imprudently drinking too large a quantity of spirits. All the crew were in a very weak and exhausted state, the greater part of them being sadly bruised and wounded.

About thirty sail of merchantmen were at the same time wrecked on this dreadful beach. Some ships sunk with all their crews, and almost every ship lost from two to twelve men each; yet the situation of the remainder was not equally distressing with that of the crew of the frigate, as the merchant ships drawing a less draught of water, were mostly driven close on shore, and no person remained on board of them after the first morning. The masters of the merchant ships had tents upon the beach, and some provisions which they had saved from the wrecks. These they very generously distributed, and afforded every assistance to the crew of the Apollo. Thus was lost one of the finest frigates in the British navy, with sixteen of her crew. The number of lives which were lost in the merchant ships, was also very considerable. Dead bodies were every day floating ashore in large numbers, and pieces of wreck covered the beach for more than ten miles in extent.

This fatal and unprecedented calamity, is universally ascribed to the carelessness and inattention of the commodore, in not keeping a proper reckoning; and it is confidently asserted, that had it been dark one quarter of an hour longer, the whole convoy would certainly have shared the same fate.

VOYAGE AND DISASTERS OF H.M.S. PIQUE,

CAPTAIN ROUS, ON HER PASSAGE FROM QUEBEC TO ENGLAND, 1835.

His Majesty's ship the Pique, commanded by Captain Rous, and having on board his Excellency Lord Aylmer, ex-governor of the Canadas, together with Lady Aylmer, and the officers of his staff, left Quebec for England on the 17th of September, 1835, and aided by a light air, and the current of the river, the city was soon lost sight of. An excellent run was made through all the intricacies of the navigation, and on the 19th the ship was off the Gaspé shore in a dead calm. On the 20th the wind freshened up from the southward and westward, with the usual accompaniment of fog. On the following day, the 21st, the weather cleared, that is to say, comparatively; there might have been an horizon of five or six miles, something not frequent in the Gulf of St. Lawrence. Captain Rous, foreseeing that there would be difficulty in weathering Cape Ray, the south-west extremity of the Island of Newfoundland, determined, after mature deliberation, on making the passage through the Straits of Belleisle, and the ship's course was accordingly altered. The Pique on the passage out had made a dead beat through this little-frequented strait, and sufficient knowledge of the features

of the coast had been acquired, during the operation, to cause a feeling of satisfaction to prevail, when it was known, that instead of contending with the heavy seas and boisterous winds of the south and west of Newfoundland, those on board were about to renew their acquaintance with a familiar channel.

For the information of those who may chance to be unacquainted with the geography of this part of the coast of North America, may be mentioned that the straits form a channel between the south shore of Labrador and the north coast of Newfoundland; the western extremity, or that which communicates with the Gulf of St. Lawrence, at its narrowest part, does not exceed twelve miles in width; the eastern, or Atlantic mouth, is much wider. Commander Bayfield has recently surveyed this channel, and much interesting information to mariners may be expected, when the result of his scientific labours shall be made public.

The breeze on Tuesday, the 22nd, was fresh and fair, the weather moderately clear, and before sunset the land was seen, and ascertained to be the island of St. John's, in a bay of the same name, on the Newfoundland shore; and in order to bring the ship clear of the Newfoundland coast, along which, at the western entrance of the strait, shoals and rocky islets lie scattered in dangerous profusion, the course was altered, and the Labrador shore neared. At this time it was discoverable that the fog was rising fast astern in a heavy bank, extending along the horizon to windward; and at ten the ship was completely shrouded in a mist no eye could penetrate, although half an hour before a practised person might have discerned land at a distance of two miles. No one who has not had personal experience of these shores can form an idea of the density, the absolute tangibility of a real Newfoundland particular fog. The wind was moderate, sail was shortened, and preparations for sounding were making, when, a little before half-past ten, breakers under the bow were simultaneously discovered by the look-out men forward, and the captain and master on the gangway. The helm was put a-port, but too late, and the ship struck hard, going at the time about eight knots. After a short space, her head having swung to the northward, she was backed off, but the tide unfortunately took her, the head sails filled, and she ran on again, broadside to the shore, striking fearfully; a boat was lowered, and the master went sounding, who found from four to five fathoms outside the ship.

At eleven, although there was a heavy sea up, yet things wore a most unpromising aspect; the "masts were nodding to their fall," and it seemed impossible the ship could long sustain the tremendous shocks she was momentarily receiving; and yet, with the masts buckling and writhing at every blow, the top-gallant and royal yards, with their masts, were sent down and struck with a coolness and presence of mind that reflects the highest credit on the officers and men aloft, who performed their duty under circumstances of infinite peril.

All this time there was no confusion, no disorganization; the voice of the captain was alone heard, and promptly obeyed. One hundred tons of water were started and pumped out, and the starboard after-guns and shot thrown overboard; the boats were hoisted out, and the stream-anchor laid out ahead, a little on the starboard bow; on this a heavy strain was heaved without effect. Various were the conjectures as to what part of the coast the ship was on; the general opinion was, that she had struck on either Green Island or Isle au Bois, two small islands on the gorge of the strait, near the Labrador shore; but so thick was the haze that nothing elucidative of her position could be discerned, save an indistinct line on which the breakers were fretting. At midnight, however, the sky cleared, and the land was made out rising over a rocky spit apparently parallel to the ship.

The situation of the Pique had now become serious; the wind was freshening, the leaks increasing, all efforts to get her off as yet unavailing, and she seemed to hold together by a miracle. How anxiously did the crew wish for the morning! Preceded by a brilliant aurora borealis, day at length dawned, and the ship was found to have struck on a low talus of loose granitic blocks, beyond which the land rose moderately high, and thickly set with dwarf pines. It was evident the lives of those on board might be saved, did the wind not increase to a

gale; but when landed, what was to become of nearly three hundred persons on that inhospitable coast, where winter reigns undisturbed for one half the year; where on the passage out in the month of August, the snow lay undissolved in the mountain hollows, without food, without fuel, without shelter, without raiment, the autumn considerably advanced; and should the boats be stove, no possible chance of escape? This was the dark side of the picture. On the other could be perceived the chance of saving the provisions in the ship, equal, with care, to four months' economical distribution. The probability of finding some sort of protection from the weather under the sheds erected by the cod fishers for the salting and curing their fish, which, assisted by the sails and materials saved from the wreck, might be converted into habitations capable of resisting the cold of winter. The dwarf pine would supply fuel; and, moreover, it was not so late in the year as to make it probable that the fishing chaloupes had abandoned the coast.

It was now apparent that the tide had made a flood; the kedge was carried out broad on the starboard-bow S.E. by S., the small bower-anchor suspended to the launch, the cable buoyed up by the remaining kedge to the extent of 100 fathoms, with infinite difficulty and exertion, and a heavy strain heaved. A little after seven the wind got slight hold of the land; the foresail was set. At eight Captain Rous sent the ship's company down to breakfast. At half-past eight the ship ground ahead a few feet, and struggled to free herself of the rocks, striking with a violence that it was apparent must bilge her ere long. The hands were turned up, and by dint of heaving, trimming her with the men on the bowsprit, and pitching over the two after larboard quarter-deck guns, she—(to use the well-chosen expression of the official letter)—"wormed herself out from her bed of rocks" at a quarter-past nine. The stream and bower cables were promptly cut, and, at eleven, the ship was anchored in a commodious bay, named Ance au Loup, about twelve miles eastward of the spot where she struck, which was on the west of the entrance of Forteau Bay. Seventeen inches of water was found to be made per hour, and, with the exception of the leak, and a slight obstruction to the motion of the rudder, the Pique appeared to have miraculously resisted her eleven hours beating on the rocks.

On the 24th she was under weigh at daylight, the straits were cleared, and a course shaped for England; breeze strong and fair. On the 25th the leaks increased to two feet per hour. One was got at in the junk-room, under the gunner's store-room, and some attempts made to stop it. The cut-water bolts were found driven up a foot or more: several icebergs were seen. On the 26th the wind was still fair, with a heavy N.W. swell. The foremast was discovered to work in the step, or rather, the step itself was loose.

On Sunday, the 27th, there was an increase in the leaks. To remedy this, if possible, by improving the ship's trim, and thereby rendering her less uneasy, the water was pumped from the fore into the main hold. The result was beneficial. The ship, with a press of canvass, was making rapid way through the water, when, between two and three, p.m., the rudder—no doubt previously injured—broke short off at the head, towed astern a few seconds, and then parted. The ship came right up to the wind—a severe trial for the tottering foremast. Sail was, however, shortened without any injury having been sustained.

The Pique was now in no pleasant predicament: a run of 1500 miles before her, without a rudder—making two feet of water an hour—the equinoctial gales in all their Atlantic fury hourly to be looked for, over and above her crippled mast!

At this time a brig hove in sight. Guns were fired, and signals of distress exhibited fore and aft; but, whether from accident or design, the strange sail made all sail, and left the Pique to her fate.

A new rudder, or more properly speaking, a substitute for one, was immediately commenced; a rude, undigested contrivance, to which the night was devoted by the carpenter and his crew.

The 28th found the ship's leaks not increased, the steerage contrivance complete, and it was accordingly shipped in the evening. Before noon another brig had been seen, to whom signals of distress were shown, and which was boarded, not for any assistance supposed capable to be rendered by a foreign mer-

chant vessel of 200 tons or less, but with the hope of being able to secure the safety of Lord and Lady Aylmer, and others, the passengers. The stranger proved to be himself in a sorry condition—old and leaky, bound to Marseilles, and resolute in not altering his course for England. The project was, therefore, abandoned.

On the 29th the temporary rudder, that had been loaded with a carronade and sundry pigs of ballast, in order to induce it to submerge, but which it contumaciously resisted, owing to the ship having fresh water, was cut away, and little regretted. By dint of perpetual attention and skilful seamanship, the ship was kept near her course by the sails.

Since the 24th, the officers, passengers, and ship's company had been sufficiently uncomfortable. The Pique's main-deck was of oak, within the traverse of the guns (that part of the deck had been leaky since her first cruise), and now with a flood of water poured on it from Massey's splendid pumps, with the scuppers small, and like angels' visits, "few and far between," the lower-deck became uninhabitable, although inhabited.

The morning of the 30th was ushered in by a heavy gale from the northward. An attempt was made to steer the ship by veering a cable out abaft. The barometer fell, and the wind and sea increased at noon. The ship had got near the wind, and the day was passed in vain efforts to place her head the right way: these proving unsuccessful, she was laid-to for the night, during which the leaks increased to thirty inches; and, to make her easier, the top-gallant-masts were sent on deck, the best bower cut away, two main-deck guns thrown overboard (making twenty-six), and all the weight cleared out from forward.

On Thursday, the 1st of October, the weather became more moderate; ship's head still W. and by N. No chance of reaching England on that course. Pakenham's rudder, on which the carpenter had been employed since the failure of its predecessor, was complete; yet the sea ran too high to attempt fixing it.

A brig was seen standing towards the ship; and on nearing, the weather having moderated, a boat was lowered, and a hawser sent on board of her, which parted in an attempt to wear the ship by it. She was, however, wore round at length, by sending the ship's company aft. The friendly-disposed brig proved to be the Suffrein, of St. Maloe, from Cape Rouge, in the Straits of Belleisle, in ballast, having men on board employed in the cod-fishery carried on by the French on the coasts of British America, to the injury of the commerce of the mother country.

On the 2nd, 3rd, 4th, and 5th, the ship was steered by the sails, assisted by the cable astern, and had run so far as to be within 500 miles of the Scilly Islands. On the morning of the 6th, when the wind being light, and so far to the eastward as to be foul, Pakenham's rudder was shipped, and found to answer. On the 8th the wind came from the N.W., and gradually increased to a storm.

On the night of the 9th, and morning of the 10th, when the temporary rudder was carried away, the ship came to the wind with her head to the westward. There was great room for anxiety at this time. The land not far distant—ship unmanageable—and no reliance to be placed on the chronometers, after the severe shaking they had experienced. At two, p.m., the gale had moderated, and she was kept in her course as best she might. Conscious, by observation and dead reckoning, even supposing the chronometers in error, that the Scilly Islands were to be passed, the night of the 10th was anxiously spent by all who knew the danger. It blew fresh from the N. on the 11th, and observation showed the ship to be in the latitude of Guernsey. At half-past seven, p.m., the Caskets light was seen, and at eight the ship was anchored off the island of Guernsey, in forty-one fathoms water, where she rode out the night. The next day, the 12th, at two, p.m., with a slant of wind, she got under weigh, and anchored at St. Helen's on the morning of the 13th, having run one thousand five hundred miles without a rudder!

To the admirable coolness and decision of Captain Rous, and the discipline displayed by his officers and ship's company,

ample testimony has been paid by competent judges; nor must it be omitted, that among the passengers, even those of the softer sex confronted terror without shrinking, and bore hardship without repining.

DANGERS OF THE MAELSTROM.

It was mid-day, and the sun shone with the feeble power of a Norway autumn, when his rays serve only to remind you of warmth, and fail to invigorate and cherish. Mr. Braceyard, the mate of the Island Lass, stood with folded arms beside the gangway gazing across the bay, in the direction of a little fishing town which was situate at its farthest extremity. In dress he was neat, in person clean, and his whole air bore testimony to his having known a better fortune. He was watching with interest a little boat that came towards them from the town as rapidly as the stalwart arms of two Norwegian sailors could impel it. As it approached nearer, he could discern the forms of the expected passengers; and now it came alongside the schooner, the men boarded their oars, and those in the boat prepared to come on deck.

The first who was helped up the side of the vessel was a beautiful creature, apparently of some three-and-twenty years of age. Her dark hair clustering down her cheeks, was pushed forward by the little bonnet, or hat, which fitted close to her head. Her eye, deep, dark, and full, beamed with the soul which spoke through it; while her elastic step as she trod the deck, her elegant figure, her commanding and dignified presence, won you to admiration, but checked you with reverence. There were few more fitted for manly love than Ellenore Macfarlane. She was followed by her youngest sister, Grace, a beauty of a different cast. She was shorter and of slighter make than her sister, and her timid and shrinking air formed a striking contrast with the dignified bearing of Ellenore. Their father was a noble figure, who carried in his air and face the stamp of gentleman. He was dressed in an antique coat, meant to be black, with threadbare breeches to match, and huge steel buckles; below these were a pair of grey woollen hose and unblackened shoes, also secured by immense buckles. The old family servant, Donald Brae, with his plaid oddly bundled upon his back, brought up the rear and the luggage.

After having inspected their berths, and with somewhat rueful countenances beheld the miserable accommodations afforded by the schooner for female passengers, the whole party returned to the deck and watched the preparations made by the sailors for their departure. The listless and nerveless behaviour of the crew soon caught the eye of the old man, who was himself something of a sailor; and he therefore moved forward with his daughters to the post of the mate, who was still stationed by one of the gangways, and asked the reason of this slackness and dulness at such a time.

"Sir," answered Mr. Braceyard, at the same time making a salute to the ladies that was far from ungraceful, "the captain is determined to sail upon this day of all others d'ye see, and the men don't like it—the same being on Friday; and in my mind (but that's nothing) I don't think it very well in the captain myself."

"What!" said Ellenore, "do you, yourself, then, lay any weight upon this common superstition?"

"Why, madam," replied the sailor, with a somewhat perplexed countenance, "upon the land, d'ye see, I care nothing for such yarns, but upon the blue water it is a very different sort of thing. You have seen a storm on shore, but you have not beheld a brisk gale at sea. Often have I stood leaning against the bulwarks when the night, lighted only by a flash of lightning, was as dark as the cockpit with an unsnuffed candle, while the sea broke in waterfalls over our bows, and the foam flew as high as the gallant yards, and the wind roared over the deep—ay! often have I stood there and looked up aloft, and seen things clustering round the mast as thick as a swarm of bees. Ah, ladies, you may laugh, but there are beings which live upon the waters, that are not known to shoremen."

Grace Macfarlane was about to ask him some question concerning the spirits of the deep, when the sailor suddenly roused himself from the fit of abstraction into which he had fallen, and

looking towards the shore, exclaimed, with a tone of interest, "Ha, here he comes at last, poor fellow!"

"Who is he?" asked the Scottish pastor.

The mate looked keenly at him before he replied, and then made answer, "Why they say on shore yonder, that he is an exile; but from where and for what cause matters nothing to Nicholas Braceyard. He has been living in this part of Norway for the last six weeks, and does not seem to have a friend in the world; and so, like me, he stands alone."

The boat which conveyed the exile was alongside. He slowly ascended the deck, and one of the boatmen brought after him a small portmanteau. He was a young man, apparently about five or six-and-twenty years of age, in height upwards of six feet, his figure stately and erect, and his countenance and deportment noble and dignified. His principal garment was a black cloak, lined with sable.

"Please you, sir," said the old mariner, advancing towards the captain, stroking down his hair, whilst the rest of the crew were all grouped round the foremost watching the effect of the embassy, "the men respectfully hope you will put off sailing till to-morrow. The Island Lass never did sail upon a Friday, and no good can come of it." Donald Beg, the Skye man, had had a vision, and he says—

"Curse you all," interrupted the rough captain, fiercely, "and doubly d—n Donald Beg! I will have the rascal put in irons if he has any more visions. Curse you all, I say," he continued, loud enough for the whole crew to hear him, "for a set of cowardly lubbers: if you have a mind to desert me and the vessel, go ashore with you, and be hanged. Have we not been kept here by the wind for a week; and is there not a good land breeze at last; and do you think I will wait here till it changes again? In the bracing of a yard, as it were, we shall reach the Orkneys, and then you may grumble as much as you like; but now hoist away and be d—d."

The men looked at each other with lowering faces, and muttering inarticulately, like the sullen moan of a rising storm, they dispersed to their respective duties.

The waning sun was shining over the waters as the Island Lass stood away towards the west. The rugged mountains of Norland were fast softening in the distance; and though the breeze was not of that steady character which sailors like, the good vessel continued to make rapid progress through the deep.

Hark! that low moaning sound aloft—it is the breeze sighing through the cordage—sure forerunner of a gale. And now there comes from the south a small black cloud, whose edge is fringed with silver. And now the whole horizon is thick with heavy clouds, that throng after their messenger. The wind comes cold and keen, and far ahead, stretching away into the darkness, runs a line of foam that approaches with the rapidity of a race-horse. "Put the ship about—in with every shred of canvass—and prepare to scud before the gale!"

It is an awful suspense to watch the storm approach, while every moment brings it nigher; to wait for the shock which you can only abide; and the bravest holds his breath "for a time," when the furious tempest strikes the poor ship, and sends her reeling beneath the wave to emerge again covered with foam, and trembling through all her timbers. And now she yields to the irresistible storm, and without a sail set, plunges her rapid passage through the seas, while the spray flashes above and around her in waterfalls.

The hurricane raged furiously, the thunder roared, the lightning flashed without intermission, and the ocean boiled around the good ship like a hell! The Island Lass, close-reefed, scudded before the wind in a direction exactly contrary to that it was intended she should pursue. Sea after sea continued to strike her heavily; and though she paused and trembled for a moment after every shock, yet she always resumed her career without having received any material damage. Captain M'Leary had done his duty like a man and a sailor, and he now stood watching how his vessel bore herself beneath her trials. The pastor and his daughters were gone below, but the exile remained upon deck, where he stood, partly sheltered by the mast from the waves which dashed over the vessel; his eye looked prouder as the storm waxed more boisterous, and over his countenance passed a smile of scorn and triumph, as a mountainous wave

swept over the ship, and carrying away with it the long-boat and a considerable portion of the bulwarks, threatened to annihilate the entire fabric upon which he stood. In the fore-castle stood a group of seamen holding on, as they might, and dripping with spray like water-fowl, and heeding it as little. Among them was Donald Beg, the Skye man, who, for the tenth time, narrated his vision, and informed his wondering auditors that its accomplishment was being gradually fulfilled.

It is day, but what a day! scarcely to be distinguished from the night. There is no sun to cheer and invigorate, and the dark storm rages with unabated fury. The crew of the Island Lass had been for several hours hard at work at the pumps; but their incessant exertion scarcely sufficed to keep the water under, and now they began to flag and despair. The foremast had gone by the board, and they were obliged to cut away its companion, so that nothing but the hull of the vessel remained. Over this poor relic of a vessel, lately so beautiful, the waves continued to dash with remorseless violence, inasmuch that the stout heart of the exile, who had remained upon deck during the whole night, and had been thoroughly drenched for the last ten hours, could endure it no longer. He disappeared through the hatches, went to his cot, flung off his clothes, and in a few minutes slept.

The storm had considerably abated towards the evening, the rain had ceased, and the thunder passed away, but the wind continued to impel the labouring hull of the Island Lass, at a rapid rate through the water. The skill of Mr. Braceyard, to whose management the captain entirely submitted the vessel, had contrived to stop the leak, either by inserting the foresail into it from the outside, or by some other ingenious device, with which his long experience had made him acquainted. The crew were now released from the pumps, but firmly impressed with the conviction that the storm, and their consequent peril, were entirely owing to the obstinacy of the captain in having set sail upon a Friday; and nothing but their instructive fear of the superiority and determined spirit of Braceyard, had kept them from open mutiny. Exhausted by the fatigues they had undertaken, they departed to their respective cots, while the Island Lass continued to drive through the water.

The second morning came; the heavens had lost their terrors, the sun rose cheerfully, and a few gay clouds only remained to flit across his course, and for a moment intercept his rays. The Island Lass still drifted in a northerly direction, and afforded the only trace of the late furious gale. One by one her crew appeared upon deck, and, with hope rebuoyed, stood prepared to execute any command that might be issued for the purpose of putting the vessel once more in sailing trim. Upon deck, too, having partaken of a hasty meal, again stood the Scottish pastor and his lovely daughters; hope and gratitude were beaming in their pale features and glistening eyes; and they looked up to Heaven and poured forth their silent thanks to Him who had protected them through the great peril of the tempest. Beside them stood Donald Brae, who imitated their actions and shared in their devotions. At a little distance, and apart from all, was the exile, stern, gloomy, and wrapped in the contemplation of his own private sorrows.

As the morning mist rolled back into the distance, several small islands were discovered ahead; and now the breeze, which had been long flagging, lulled into a calm; and soon a low continual hum, like that of an army of bees, which seemed to rise out of the stilled ocean, became audible to every ear. The mate, who was giving orders for the erection of a jury-mast, paused as he caught the sound, and bent forward his head in the attitude of strained attention. The boatswain stood still with one hand half upraised, whilst his countenance darkened with dismay, that was not often to be seen upon his rugged features. Not a word was spoken, every one held his breath, whilst he listened with an anxiety of eagerness that betokened the awe that was fast filling his heart. The sailors looked upon each other, and then upon the forlorn and helpless state of their ship, and a flash of wildness seemed to run from face to face.

"My God!" at length cried the boatswain, at the same time making two strides towards the spot where stood Mr. Braceyard—"it is the Moskoeström!"

The charm was broken. "The Moskoestrom! the Moskoestrom!" cried Ellenore and Grace. "The Moskoestrom!" echoed the crew.

"Away men!" shouted Braceyard, in a voice like a thunder-clap, "down to the hold! Bring up the spare sail, clear the deck, set up a spar for a mast—away!"

Away jumped the men in every direction; some fetched the sail, some prepared to rig the spar, and the carpenter laboured more strenuously than he had ever laboured before to prepare a hole in the deck to receive it. None were unemployed, save the exile, the pastor, and his daughters, and the captain, who stood helplessly looking on, with a surprised and vacant countenance that showed he had not recovered his faculties since the debauch in which he had indulged the previous night. The din of preparation drowned the stern hum of the distant whirlpool, and an hour passed away before the apparent confusion on deck once more died into silence. There was, however, an anxious pause when the new sail was stretched into the air, and the experienced sailors suffered themselves to be cheated with the hope that there was still breeze enough to make the good ship answer to her helm. But, alas! the heavy canvass refused to expand its folds, and not a breath of wind ruffled the dull surface of the sullen waters. They had not another hope; both the boats had been washed overboard during the storm, and the sailors looked upon each other in blank dismay, while they heard with awful distinctness the roar of the terrible Maelstrom, and saw the frowning rocks of Loffoden but too plainly visible on the right. It became evident to all, that the ship, borne along by the tide, was fast approaching the dreadful whirlpool. Whilst they stood thus looking upon one another in mute horror, a large Newfoundland dog, belonging to the captain, suddenly set up a wild dismal howl that pierced through the hearts of the hearers, and the animal ran yelping about the deck, with his tail between his legs, in a manner that plainly evinced his desire to escape from the fated vessel.

And now, as the roar of the Maelstrom waxed louder, there arose a wild cry from the fore-castle; it came from the Skye-man, Donald Beg: "I knew it, I knew it!" he shrieked. "There is the very mountain—there the very rock which I told you of! Oh, the accursed Friday! Oh, the damned, damned captain!"

Louder than the "allala" of the charging Greeks, wilder than the war-scream of the savage Mohawk, was the yell of the answering seamen. With one impulse they rushed in a body towards the poop of the vessel, and before the ill-fated captain was aware of their design, he was in the power of his infuriated crew. Only one man attempted his rescue—it was the exile. He sprang across the deck, and felled with a blow of his fist the most forward of the assailants; but in a moment he was surrounded, and held fast. It was now all over with Captain McLeary; he was hurried to the ship's side, and without a moment allowed for preparation, with all his many crimes unatoned for and unrepented of, he was hurled, struggling, screaming and blaspheming, into the sullen depths of the insatiable sea. He had but one friend in the world, and this friend was his dog, who did not desert his master in his last moments; but, leaping from the deck, swam to him, and seizing him by the collar of the jacket, endeavoured to pull him towards the vessel. For a long time they struggled together with the billows and death; but at last the arms of the sailor were thrown wildly, for a moment, into the air, and grasping his poor companion round the neck, they both together, with a bubbling groan, sunk down into the fathomless abyss.

The vessel continued slowly to approach the vortex, and the certainty of unavoidable death became every moment more overpowering and intense. The certainty of approaching death acted strangely upon the majority of the sailors. At first they stood together in a group, gazing gloomily upon one another; but as the roar of the whirlpool became louder and louder, and the conviction of inevitable destruction became stronger, they dispersed to various parts of the ship. Some went aside, and seemed engaged in earnest prayer; some hung down their heads, and, seated upon the deck, appeared sunk in dejection; while some went below, broke open the store-room, and drank madly of the spirits which they found; then rushing furiously

on deck, they raged like emancipated demons. They flung overboard the poor substitute for a mast and sail; and shouted, yelled, and laughed, and danced in hideous glee. But they could not drive away the knowledge that their end was at hand; and in a moment the thought would flash across their minds, blasting their maniacal revelry like the breath of the simoon. They then would stand still in the midst of their furious mirth, and weep, and wail, and beat their breasts in agony; while some would throw themselves upon the deck, and writhe and roll about in the height of despair.

It was a beautiful day; the sun shone forth without a cloud to dim his lustre, the waves sparkled beneath his influence, and the white plumage of a thousand busy sea-birds became more dazzling with his rays. The island of Moskoe was close at hand, and looked cheerful and inviting; but the Island Lass might not approach any nearer to its shores. The mate, who was seated upon the stump of the mast, looked to the neighbouring coast of Loffoden. Upon the shore, beneath the mountain of Helseggen, stood a group of people watching the doom of the helpless vessel, which glided on to her destiny, with all around so calm, so peaceful, and so beautiful, that it was almost impossible to conceive that death was anywhere within reach.

The ship went on faster and faster, she began to toss and roll uneasily in the angry rapids that now boiled around her; her race was nearly run. The prolonged suspense was intolerable. A pen of fire could not paint the agony that scared the souls of many of the wretched sailors; their fortitude had been wrought up to the highest pitch, and now it entirely gave way. Some gave vent to their anguish in loud and dismal yells, some stood with open mouth and fixed eyes, gazing upon the hell of waters before them, whilst cold drops of sweat started from the face and brows. The bravest and coolest could only breathe by gasps; and the bitterness of death, though in different degrees, was in the hearts of all.

The ship hurried on to her doom with mad impetuosity, swift as a flash of light. She is in the rapids—she is in the whirl of waters—round and round she goes, while her inmates catch hold of her bulwarks and of each other to steady themselves. And now her bowsprit is under the waves, and a wild shriek of despair rises unto the sky. The whirlpool, with greedy jaws, is sucking her under. The stern of the schooner was heaved high into the air before she went down for ever, and then disappeared, leaving no trace behind.

— "Each sent to his account
Unknelled, uncoffined, and unknown,
With all his imperfections on his head."

LOSS OF THE BRIG TYRREL.

THE following circumstantial account of one of the most dreadful shipwrecks on record, is given by T. Purnell, the chieftmate, and the only person who had the good fortune to escape.

On Sunday, June 28th, 1759, the brig Tyrrel, commanded by Captain Arthur Cochlan, sailed from New York to Sandy Hook, and there came to an anchor, to wait for the captain, who was coming down with a new boat, and some other articles. He came on board early the succeeding morning, and the boat was cleared, hoisted in, stowed, and lashed. At eight o'clock, a.m., they weighed anchor, sailed out of Sandy Hook, and the same day, at noon, took their departure from the High Land Never Sunk, and proceeded on their voyage to Antigua. As soon as they made sail, the captain ordered the boat to be cast loose, in order that she might be painted, together with rudder, oars, and tiller, which he undertook to do himself.

At four, p.m., they found the vessel made a little more water than usual; but as it did not cause any additional labour at the pumps, nothing further was thought of it. At eight the leak did not seem to increase; but at twelve it began to blow very hard in squalls, which threw the ship upon her broadside, and created an apprehension that she wanted more ballast; upon which the captain came on deck, it being the starboard watch, and ordered both topsails to be close reefed.

At four the following morning, the weather moderated, which enabled them to let out both reefs; and at eight it became still more moderate, when they made more sail, and set top-gallant-sails; but the weather being still thick and hazy no further observation was taken, except that the vessel made more water. The captain was chiefly employed in painting the boat, oars, rudder, and tiller.

On Monday, June 30, at four, p.m., the wind was at E.N.E.; it freshened very much, and blew so hard that the brig began to lie along in such a manner as created a general alarm. The captain was earnestly entreated to put back for New York, or steer for the Capes of Virginia. At eight they took in the top-gallant-sail, and close-reefed both topsails, still making more water; but afterwards, becoming more moderate, they made more sail.

On Tuesday, July 1, at four, a.m., it began to blow in squalls very hard: took in one reef in each topsail, and continued so until eight—the weather still thick and hazy, but no further observations.

The next day she continued to make still more water, but, as every watch pumped it out, this was not much regarded. At four, a.m., took in a second reef in each topsail—close-reefed both, and down top-gallant-yard—the gale still increasing. At four, p.m., the wind got round to N., and there appeared no likelihood of its abating. At eight the captain was well satisfied that she was very crank and short of ballast, and agreed to make for Bacon Island Road, in North Carolina; but in the very act of wearing her, a gust of wind suddenly laid her down on her beam-ends, and she never rose again. At this time Mr

LOSS OF THE BRIG TYRREL, OVERSET IN A GALE OF WIND, ON HER PASSAGE FROM NEW YORK TO ANTIGUA, JULY 1ST, 1759.

Purnell, the chief-mate, was lying in the cabin, with his clothes on, not having pulled them off since they left land; and being rolled out of his bed, which was on his chest, he managed, with great difficulty, to reach the round-house door, where the first salutation he met, was from the step-ladder that went from the quarter-deck to the poop, which knocked him against the companion; this proved a fortunate circumstance for those below, as by laying the ladder against the companion, it served him, and those who were in the steerage, as a conveyance to windward. Having transported the two after-guns forward, to bring her more by the head, in order to make her hold a better wind, they got through the aftermost gun-port on the quarter-deck; and being all on her broadside, everything moveable rolled to leeward: and as the vessel overset, so did the boat, and turned bottom upwards, her lashings having pre-

viously been cast loose by the captain's order; and having no other prospect of saving their lives but by the boat, Purnell, with two of the sailors and the cabin-boy, who were all excellent swimmers, plunged into the water, and, with great difficulty, righted her; but she was still full of water, and washing with the water's edge. They then made fast the end of the main-sheet to the ring in her stern-post; and those who were in the fore-chains sent down the end of the boom-tackle, to which they made the boat's painter fast, and lifted her a little out of the water, so that she swam two or three inches free. They then put the cabin-boy into her, and gave him a bucket, which happened at the time to float by, to bale her out as quick as he could; soon after a sailor got into her with another bucket, and in a very short time they got her free. They then put two long oars, that had had been stowed in the larboard quarter of

the Tyrel, into her, and pulled her round to windward; for as the wreck drifted, she made a dreadful appearance in the water: and Mr. Purnell and two of the crew put off from the wreck in search of the rudder, tiller, and oars, which, after a long time, they succeeded in picking up one after another. They then returned to their wretched companions, who were overjoyed to see them, having given them up for lost. By this time night drew on very fast, and they began to feel the effects of hunger; but while they were rowing, about half a peck of white biscuit, in a small cask, floated out of the round-house, but before they could get at it, it was so completely saturated with salt water, as to be almost in a fluid state. They found also about double the quantity of common ship-biscuit, likewise well soaked; and this was all the provisions they had. They could not get a drop of fresh water, neither could the carpenter get at his tools to scuttle her sides; for could this have been accomplished, they might have supplied themselves with plenty of provisions and water. By this time it was almost dark; and, having saved one compass, they determined to quit the wreck, and take their chance in the boat, which was nineteen feet six inches long, and six feet four inches broad—this was about nine o'clock, and very dark. They had run 360 miles, by their dead reckoning, in a S.E. by E. course. The number that sought refuge in the boat, which was very deep, was nineteen in all, with little hope that they should ever either see land, or long survive their calamitous disaster. The wind got round to westward, which was the course they wanted to steer; but it began to blow and rain so very hard, that they were obliged to keep the boat before the wind and sea, in order to keep her above water. Soon after they had left the dismal wreck, the boat shipped two heavy seas, one after the other, and fortunately there was not a third, or she must certainly have been swamped.

By sunrise the next morning, July 3, they judged that they had been running E.S.E., which was contrary to their wishes; but the wind dying away, the weather became very moderate. It was now proposed to make a sail of some frocks and trousers, but they had neither needles nor twine; one of the crew, however, had a needle in his knife, and another several fishing lines in his pocket, which were unlaid by some, while others were employed in ripping the frocks and trousers. By sunset they had provided a tolerable lug-sail; and having split one of the boat's thwarts, which was of yellow deal, with a large knife which one of the crew happened to have in his pocket, they made a yard, and lashed it together with the strands of the fore-top-gallant halliards, that had been thrown into the boat promiscuously. They also made a mast of one of the long oars, and set their sails with sheets and tacks made out of the strands of the top-gallant halliards, having the north star only for their guide, as the compass which they had brought with them was rendered useless, by one of the men having trodden on it. They had a tolerable good breeze all night; and the whole of the next day, July 4, the weather continued very moderate, and the people were in as good spirits as their dreadful situation would admit.

On Saturday, July 5, the wind and weather continued much about the same; and by the north star they knew that they were standing in for the land. The next day some of the men seemed rather fatigued, and began to drink salt water: the wind, they imagined, had got round to the southward, and they steered, as near as they could guess, by the north star, to the north-west quarter; but on the 7th, they found that the wind had got back to the northward, and blew very fresh. They got their oars out the greater part of the night; and the next day, the wind still dying away, the people laboured alternately at the oars without distinction. About noon the wind sprung up again, so that they lay by their oars, and steered as near as they could guess about N.N.W., continuing so until about eight or nine in the morning of July 9, when, by the coldness of the water, they all thought they were upon soundings. In general they were in very good spirits; the weather still thick and hazy; and they found, by the north star, that they had been steering about N. by W.

Thursday, July 10. By this time the people had drank so much salt water, that it began to have a visible effect upon their constitutions: the second mate had lost a considerable

share of his strength and spirits; and about noon the carpenter became delirious, his malady increasing every hour, till he became so violent that, about dusk he almost overset the boat, by attempting to throw himself overboard: as his strength, however, failed him, he became more manageable, and they succeeded in getting him to lie down in the middle of the boat among some of the people. Mr. Purnell drank once a little salt water, which he did not relish, but preferred his own urine, which he drank occasionally as he made it. Soon after sunset the second mate lost his speech. Mr. Purnell desired him to lean his head on him, and he died without a groan or a struggle on the 11th July, being the ninth day they were in the boat. A few minutes afterwards the carpenter breathed his last, almost in a similar manner. These melancholy scenes rendered the situation of the survivors more dreadful: it is impossible to describe their feelings—despair became general, and each man, in the sad spectacle before him, of the dead bodies of his companions, imagined his own dissolution was at hand. Their first impulse was prayer; and some in the Welch language, some in Irish, and others in English, fervently prayed to the Almighty for a speedy release from their sufferings: then, after a little deliberation, they stripped the dead bodies, and committed them to the deep.

The weather having become very mild, and almost calm, they turned to, cleaned the boat, and resolved to make their sail larger, out of the frocks and trousers of the two deceased men. Purnell got the captain to lie down with the rest of the people, excepting the boatswain and one man, who assisted in making the sail larger, which they completed by about six or seven o'clock in the afternoon, having made a shroud out of the boat's painter, which served as a shifting back-stay; Purnell also fixed his red flannel waistcoat at the mast-head, as a signal most likely to be seen. Soon after this, some of them observed a sloop at a great distance, coming, as they thought, from the land; this roused every man's spirits; they got out their oars, at which they laboured alternately, exerting all their remaining strength to come up with her; but night coming on, and the sloop getting a fresh breeze of wind, they lost sight of her, which occasioned a general consternation: but the appearance of the north star, which they kept on their starboard bow, gave them hopes that they stood in for the land. This night died one of the seamen, named William Wathing, at the age of sixty-four years, having been fifty years at sea: worn out with fatigue and hunger, he earnestly prayed to the last moment for a drop of water to cool his tongue. Early the next morning another seaman, named Hugh Williams, also died, and in the course of the day, another of the crew entirely exhausted.

Early in the morning of July 13, it began to blow very fresh, and increased so much that they were obliged to furl their sail, and keep their boat before the wind and sea, which drove them off soundings. In the evening the gunner died, being six that had perished since their disaster. The weather becoming now more moderate, and the wind in the S.W. quarter, they made sail, not one in the boat being able to row, and they ran all this night with a fine breeze.

The next morning, being July 14 they lost two more, and in the evening two others of the crew died. They were on soundings again, and concluded the wind had got round to the N.W. quarter. They stood in for land all this night, and early on the following morning two others died: the bodies of the dead were committed to the deep as soon as the breath had departed. The weather was now thick and hazy, and they were still certain that they were on soundings.

The cabin-boy was seldom required to do anything; and as his intellects at this time were very good, and his understanding clear, it was the opinion of Mr. Purnell that he might survive them all, but this he prudently kept to himself. The captain appeared likewise to be tolerably well, and to have kept up his spirits. On account of the haziness of the weather, they could not so well know how they steered by day as in the night time; for whenever the north star appeared, they endeavoured to keep it on the starboard bow, by which means they were certain of making the land some time or other. In the evening they lost two more of the crew, and also, before sunset, one named Thomas Philpot, an old and experienced seaman, and

very strong; he died rather convulsed, and having latterly lost the power of articulation, his meaning could not be comprehended: he was a native of Belfast, in Ireland, and had no family. The survivors found it a difficult task to heave the corpse overboard, as he was a very corpulent man.

The next morning, July 16, about six or seven o'clock, they stood in for the land, according to the best of their judgment, but the weather was still thick and hazy. Purnell now prevailed on the captain and boatswain to lie down in the fore part of the boat, to bring her more by the head, in order to make her hold a better wind. In the evening the cabin-boy, who had lately appeared so well, and of whom the mate had such hopes of his surviving them all, breathed his last, leaving behind him only the captain, the chief-mate, and the boatswain, of all the nineteen that left the wreck.

The next morning, July 17, Purnell asked his two companions if they thought they could eat any of the flesh of the poor cabin-boy, who had died the day previous, and they having expressed an inclination to try, and the body being quite cold, he cut a part of the inside of the thigh, just above the knee, and gave a piece to the captain and boatswain, reserving a small piece for himself; but their stomachs were so weak, from long protracted abstinence, that neither of them could swallow a morsel of it; the body was therefore consigned to the deep.

Early in the morning of the 18th, Mr. Purnell found both his companions dead and cold! Thus, on the sixteenth day of his exposure to the elements, left destitute and alone, in an open boat on the vast expanse of ocean, without food and without shelter, he began to think of his own dissolution. Though feeble, his understanding was still clear, and his spirits were as good as his forlorn and desolate situation could possibly admit. By the colour and coldness of the water he knew he could not be far from land, and still maintained hopes of making it. The weather continuing very foggy, he lay-to all this night, which was very dark, with the boat's head to the northward.

On the morning of the 9th it began to rain, but cleared up in the afternoon, and the wind died away; still he was convinced he was on soundings.

On the 20th, in the afternoon, he thought he saw land, and stood in for it; but the night coming on, and it being very dark, he lay-to, fearing he might get on some rocks and shoals.

On the 21st, the weather was very fine all the morning, but towards afternoon it became thick and hazy; his strength was now almost exhausted, though his spirits remained good, and he continued to drink his own water occasionally.

On the 22nd, he discovered some barnacles on the boat's rudder, very similar to the spawn of an oyster, which filled him with greater hopes of being near land. He unshipped the rudder, and scraping them off with his knife, found they were of a salt, fishy substance, and ate them; but he was now so weak, and the boat having a great motion, that he found it a difficult task to re-ship the rudder.

On July 23rd, at sunrise, he became so confident that he saw land, that his spirits were considerably heightened. In the middle of the day he got up, leaned his back against the mast, and receiving considerable warmth and succour from the sun, contrived to steer the boat in this position. The next day he saw, at a very great distance, some kind of sail, which he judged was coming from the land; but this he soon lost sight of. In the middle of the day he stood up as before, and received warmth from the sun, and stood on all night for the land.

Very early in the morning of the 25th, after drinking his morning draught, to his inexpressible joy, he saw, while the sun was rising, a sail, and when the sun was up, found she was a two-masted vessel: he was, however, considerably perplexed, not knowing what to do, as she was a great distance astern, and to leeward. In order to watch her motions better, he tacked about, and soon after this perceived she was on her starboard tack, which was the same he had been standing on for many hours. Seeing she approached him very fast, he lay-to for some time, till he believed she was within two miles from the boat, but still to leeward; he therefore thought it best to steer larger, when he found she was a top-sail schooner, nearing him very rapidly. He continued to edge down towards her, until he had brought her about two points under his lee

bow, having it in his power to spring his luff, or bear away. By this time she was within half a mile, and he saw some of her crew standing forwards on her deck, and waving for him to come under their lee-bow. At the distance of about two hundred yards they hove the schooner up in the wind, and kept her so until Purnell got alongside, when they threw him a rope, still keeping the schooner in the wind. They interrogated him very closely, as they imagined he belonged to a man-of-war, by the manner in which the boat and oars were painted, and that he had run away from one of his Majesty's ships at Halifax; consequently, if they should take him up, they would be liable to some punishment. They also thought they might expose themselves to some contagious disorder, as the bodies of the captain and boatswain were lying in the bottom of the boat, Purnell being too weak to throw them overboard; this kept him in suspense for some time. They told him they had made the land that morning from the mast-head, and that they were running along shore to Marvelhead, to which place they belonged, and where they expected to arrive the next morning. At last they told him he might come on board, which, as he could not do without assistance, the captain ordered two of his men to assist him; they conducted him aft on the quarter-deck, and left him resting against the companion. They were now for casting the boat adrift, but Purnell told them she was not above a month old, built at New York, and would well pay them for their trouble if they would hoist her in. To this they agreed, and having taken out the clothes that were left by the deceased, and thrown the two corpses overboard, they hoisted her in and made sail.

Being now on board, Purnell asked for a little water. Captain Castleman, who commanded the schooner, and had two sons on board, ordered one of them to bring him some, and thinking it too much, threw some of it away, and gave him the remainder, being the first fresh water he had tasted for twenty-three days. As he leaned against the companion all this time, he felt very cold, and begged to go below: they helped him down to the cabin, where they left him, leaning on the lockers, all hands being engaged in securing the boat. After this they made some soup for him, which he thought very good, but could eat but little; and, in consequence of his late draughts, he had broke out in many parts of his body, which put him in intense pain every time he stirred. They made a bed for him out of an old sail, and were very attentive. While they were at breakfast a squall came on, which called them all upon deck, and during their absence, Purnell took up a stone bottle, and without smelling or tasting it, but thinking it rum, took a hearty draught, and found it to be sweet oil.

They still ran along shore, with the land in sight, and were in great hopes of getting into port that night, but the wind dying away, they did not get in till about nine o'clock the next night. All this time Purnell remained like a child, some one or other always with him, to give him whatever he wished to eat and drink.

As soon as they came to anchor, Captain Castleman went on shore, and returned the next morning with the owner, John Picket, Esq. Soon after they got Purnell into a boat, and carried him on shore, as he was still so feeble that he was obliged to be supported by two men. Mr. Picket took a comfortable lodging, and hired a nurse to attend him; he was immediately put to bed, and in the course of the day was visited by every doctor in the town, who all gave him hopes of recovering, but that the stronger his constitution was, the longer time it would take to recover his strength; and though treated with every kindness and attention that humanity could dictate, it was three weeks before he was able to come down stairs. The nails of his fingers and toes withered to nothing, and it was many months before they began to grow again. The boat and oars were sold for ninety-five dollars, which paid all his expenses, and procured him a passage to Boston.

SHIPWRECK OF A CHINESE JUNK.

THE dark sullen waters of the Chinese sea never looked less friendless nor more portentous than on the morning of the 12th of January. Tempestuous weather, and the sea rising in mountains around and over the ship's side, hurled her rapidly on her passage homeward, when, suddenly, in lat. $11^{\circ} 11'$, a wreck was discovered to the westward. The order to shorten sail was as promptly obeyed as given, and the vessel was hauled towards what was discovered to be a Chinese junk without masts or rudder, having many persons on deck, vehemently imploring assistance. The exhibition of their joy, as they beheld our approach, was of the most wild and extravagant nature; but it was doomed to be transient. The violence of the elements driving the ship swiftly past the wreck, it became necessary to put her on the other tack—a manoeuvre which they construed into abandonment, and the air rung with the most agonizing shrieks of misery; hope appeared to have been rekindled at the eleventh hour, but to render despair more desperate and death more frightful.

The excitement on board was intense; a boat was immediately lowered, in which the hawser was placed, with a small line attached to it as a messenger, and was thrown to the wreck for the purpose of towing her to the ship; but this intention was frustrated by the breaking up the windlass to which it was fastened. The anxiety of these unfortunate people to quit their perilous position was so great, that it became dangerous to approach them; one man in a paroxysm of despair, jumped overboard after the hawser, as the windlass broke, in the vain hope of reaching the boat; he was an expert swimmer, but no human power could prevail against that sea—the furious ocean mocked his efforts—he rose and sunk upon the swelling billows until nature was exhausted: he was lost in sight of his companions in misfortune, and the persons sent to their aid, without any being able to afford him relief.

Fears were entertained for the boat and her crew, as seen from the ship, contending with the violence of the element in which she floated; and a moment of doubt passed the mind as to the expediency of permitting another attempt. It was only for a moment; the piercing cries borne upon the hollow blast fell upon the ear with terrific horror, that indecision seemed a crime; directions were then issued to keep the boat away, and a rope, with a bowling-knot at one end, was thrown to the junk, into which signs were made for each man to place himself, and then plunge into the water, whence he was dragged into the boat, and eventually, in like manner, to the ship. Thus were eighteen persons rescued from the very grasp of death at a moment when every ray of hope appeared to be utterly extinguished. Their gratitude was boundless; they almost worshipped the officers, the crew, and the vessel—prostrated themselves, kissed the feet of the former, and the very planks of the latter.

Now that they were lodged in safety, all hearts were interested about the gallant fellows who had behaved so humanely and so courageously. The short space which elapsed from the time they threw out the last man to be hauled into the ship, and that of getting up the boat, was a season of exquisite anxiety—every eye watched with intense feeling, but no one spoke a word—the stillness of death reigned through the decks. The fury of the elements had considerably increased, and their violence appeared resistless: the heavy sea rendered it dangerous and difficult to bring the boat alongside, a too sudden or too tardy approach would be equally destructive; but they were ultimately got on board in safety, and were welcomed with shouts of kindness from their shipmates, in whom their intrepidity excited enthusiastic admiration.

The greatest praise was due to the second officer, who had charge of the boat, and the four men with him, for the zeal and coolness with which they executed their arduous duty, upon a sea in which it appeared almost impossible to live; but for the salutary precautions, above-mentioned, she would probably have been swamped and all hands perished. The boat was, however, speedily made fast to the davits again, and the ship once more on her course.

With so large an addition to her numbers, it became a question of importance what was to be done with them. They were first visited by the surgeon, who prescribed water in sparing quantities, it appearing from signs which they made, that they had been eight days without any; and so great was their eagerness to obtain it, that several amongst them offered purses of dollars for a single draught; but the crew were strictly forbidden to accept anything from them; an order which, I have pleasure in stating, was strictly complied with.

They were Chinese Tartars, from some of the northern provinces, principally young men, of fine athletic forms and good features. Their chief, or commander, was a remarkably well-made man, about five and thirty, with piercing raven eyes, and generally handsome countenance. Neither he nor his companions understood any European language; nor we theirs. Yet there was an indefinable grace and interest about this man which gave a peculiar charm to his pantomimic gestures, to which his singular and very becoming style of loose dress, handsome turban, and abundant black glossy hair, did not a little contribute. His religious feeling confined him to beef only as his food; whilst to the others, that and swine's flesh, or whatever else was offered, was indifferent.

After being on board five days, we made Paulo Aor, in lat. $2^{\circ} 40' N.$, where they found one of their own countrymen, or, at any event, a person who could jabber with them; and an arrangement was entered into with the rajah to send them, at their own request, to Singapore, upon payment of a certain sum, and to maintain them until their arrival, whence they could proceed to their own land.

We took in water at this place, and so desirous were those simple-hearted people of testifying their gratitude, that they would not permit the men to carry it, but filled the casks themselves; and, at parting, knelt down and kissed each man's feet with the fervour of devotion. Here we separated from seventeen men who had been nine days at sea upon a miserable wreck, water-logged, without water to drink, and scarcely food to eat. One of them, an old man, died on the preceding evening from the effects of fatigue and exhaustion: the others, I doubt not, have long ere this time reached their homes, and taught their friends and children to bless the Englishmen and the English ship, which, under Providence, snatched them from a watery grave.

THE FAIRY OF THE SEA.

THERE'S a frigate on the waters, fit for battle, storm, or sun,
She dances like a life-boat, though she carries flag and gun;
I'm rich and blest while I can call that gallant craft my own,
I'm king of her; and Jove himself may keep his crown and throne;
She'll stem the billows, mountain high, or skim the moonlit spray,
She'll take a blow and face a foe like lion turned at bay,
Whate'er may try, she'll stand the test, the brave, the stanch,
The free.

She bears a name of stainless fame, the Fairy of the Sea,
The gale is up, she feels the breath, the petrel is behind,
She travels through the white foam like an arrow on the wind,
Softly, softly—hold her in—let her slacken in her pace,
She'll do the pilot's bidding with the greyhound's gentle grace,
The rocks are round her—what of that? she turns them like a swan;

There are boiling breakers near, but she is safely creeping on,
Hurrah! hurrah! she's clear again! More canvass, helm a-lee!
Away she bounds, like deer from hounds, the Fairy of the Sea,
I've met with life's rough-weather squalls, and run on shoals ashore;

All passed me under studding-sails, and friends were friends no more;

But when the storm-flood did its worst, and blanched the firmest crew,

No timber yaw'd, no cordage broke, my bark, my bark was true,
We've lived together closely bound too long to lightly part,
I love her like a living thing, she's anchor'd in my heart.

But death must come, and come he may, right welcome he shall be,
So that I sleep ten fathom deep in the Fairy of the Sea.

WHALE HUNTING.

One of our party of mids, who has since turned out a valuable and enterprising officer, took it into his head to make a trip in one of the whale-boats of the Bermuda fishery. Having ascertained the time of starting, he obtained leave to go on shore, and completely succeeded in his object by being present at the capture of a whale. The monster, however, led them a considerable dance off to sea, and it was long after the time appointed for his return when the youth made his appearance, delightfully perfumed with blubber, and with a glorious tale to tell of his day's adventure. This was voted by acclamation to be something like an expedition, and the youngster, of course, gained great credit for his spirit.

I was one of another party who, I suppose, being a little jealous of our companion's laurels, took the earliest opportunity of trying to signalise ourselves in a similar way. A monstrous whale was seen one morning playing about the Leander, in Murray's anchorage, at Bermuda, and of course far within the belt of reefs that fringed the roadstead on its eastern and northern sides. How this great fellow had got into such a scrape we could not conjecture. Possibly, in placing himself alongside of the rugged coral ledges to scrub off the incrustations of shell-fish which torment these monsters of the deep, he had gradually advanced too far; or, more probably, he may have set out in pursuit of some small fry, and before he was aware of it have threaded his way amongst this labyrinth of rocks, till escape was impossible. At all events, he now found himself in comparatively deep water, from eight to ten fathoms, without any visible means of retreat from his coral trap. All hands crowded into the rigging to see the whale floundering about, till at length some one proposed—rashly enough, certainly—to pay him a visit in one of the ship's boats, with no better implements, offensive or defensive, than a small harpoon, and the ordinary boat-hooks. These are light poles with a pike, not unlike a shepherd's crook, at the end of them, and not bad things for fishing up a turtle when caught napping, but slender reeds, in all conscience, against a fish forty or fifty feet long.

Away we went, however, in our wild-goose whale chase, without any precise idea as to what we were to do if we should come up with the game. When we got near the great leviathan, his aspect became more and more formidable; and it was necessary to think of some regular plan of attack, if any were to be made; as to defence, it may easily be imagined that was out of the question, for one whisk of his tail would have sent the cutter and her crew, boat-hooks and all, spinning over the fore and yard-arm of the flag ship. All eyes were now upon us, and after a pause, it was agreed unanimously that we should run right on board of him, and take our chance. So we rowed forward, but the whale, whose back was then just showing above the water, like a ship keel upwards, perhaps not approving of our looks, or possibly not seeing us, slipped down clean out of sight, leaving only a monstrous whirlpool of oily-looking water, in the vortex of which we continued whirling round for some time, like great ninnies as we were, and gaping about us. At this time we were not above half a ship's

length from the Leander, so that our disappointment caused considerable amusement on board, and the people came down laughing from the rigging, where they had been perched to see the grand fight between the whale and the young gentlemen.

As we were lying on our oars, and somewhat puzzled what to do next, we beheld one of the most extraordinary sights in the world—at least I do not remember to have seen many things which have surprised me so much, or made a deeper impression on my memory. Our friend, the whale, probably finding the water disagreeably shallow, for as I have said, it was not above fifty or sixty feet deep, or perhaps provoked at not being able to disentangle himself from the sharp coral reefs, or for some other reason of pleasure or of pain, suddenly made a spring out of the water. So complete was this enormous leap, that for an instant we saw him fairly up in the air, in a horizontal position, at a distance from the water not much short, I should think, of half his own breadth. His back, therefore, must have been at least twenty feet in perpendicular height over our heads. While in his progress upwards, there was in his spring some touch of the vivacity with which a trout or a salmon shoots out of the water, but he fell back again on the sea like a huge log thrown on its broadside, and with such a thundering crash as made all hands stare in astonishment, and the boldest hold his breath for a time. Total

demolition, indeed, must have been the inevitable fate of our party, had the whale taken his leap one minute sooner, for he would then have fallen plump on the boat. The waves caused by the explosion spread over half the anchorage; nor if the Leander herself had blown up, could the effects have extended much farther. As we rolled about in the cutter from side to side, we had time to balance the expediency of further proceedings against the tolerable chance of being smashed to atoms under the whale's belly at his next leap.

All idea of capturing him was now, of course, given up; if, indeed, any such frantic notion could have seriously entered our heads. But our curiosity was vehemently aroused to witness such another feat, and after lying on our oars for some time, we once more detected the whale's back at a little distance from us.

"Let us poke him up again," cried one of the party. "Agreed, agreed!" roared the others, and away we dashed in hopes of producing a repetition of this singular exploit. The whale, however, did not choose to exhibit any more, though we were often near him. At last he fairly boiled, and took the direction of the north rock, hoping to make his escape by the narrow passage, known only to the most experienced pilots of these intricate regions.

FRIENDS AT COURT.

A NAVAL officer begging Villiers, the celebrated witty Duke of Buckingham to employ his interest in his behalf at court added that he had nobody to depend upon except God and his Grace. "Then," said the duke, with a deprecatory shrug of the shoulders, "your condition is indeed desperate: believe me, you could not have named any two beings who have less interest at court."

LOSS OF THE SKYLARK.

THE following particulars relating to the late wreck of her Majesty's brig Skylark may be relied on as authentic, being an extract from the private letter of an eye-witness:—

"The Skylark, 2, Lieutenant Commander George Morris (1823), sailed from Plymouth on Thursday, April 24, with 68 supernumeraries on board for Portsmouth, which, together with her own crew, made about 110 men. She passed the Portland Lights on the morning of the 25th early; it soon after became very foggy. At a few minutes after ten o'clock, when the ship was going about four and a half knots, with top-gallant sails set, she struck; attempts were immediately made to put her about, but being between two ledges of rock she again struck, and would not go about. Attempts were then made to back her off, the hands were turned up, and every precaution and exertion used; all, however, was ineffectual. About eleven o'clock, a.m., the fog cleared off a little, and the ship was found to be within hail of the shore, and the people on board the brig could hear voices from the cliffs calling to them that a boat was coming to their assistance from the coast-guard station. One of the guns was then hoisted overboard, and an anchor dropped with a halser to it, to lighten her and haul her off; at this time the water started; the hands were immediately set to work at the pumps, and the boats were got out, but the tide, being on the ebb, soon left her with two feet of water under her bows, and three quarters of a fathom in her channels; aft there was a greater depth. She had run ashore on Coalpit Ledge, near Kimberage, a short distance to the eastward of the tower which stands on the eastward point of Yellow-bay. There was not much wind blowing at the time, but a tremendous surf setting in shore. The coast-guard boat above-named was nearing the brig under the guidance of Lieutenant Smith, when the brig's second gig (which had been got out to communicate with the shore), in which, besides the boat's crew, was the commander's son, a boy eleven years old, upset. Master Morris sank several times, and was on the point of sinking to rise no more alive, when one of the crew of the coast-guard boat, named Crawley, swam out to him and supported him until Lieutenant Smith, of the coast-guard, at the imminent risk of his own life, rushed in, and saved them all, and returned to the bay with them. The brig's cutter was then hoisted out, and filled with men, after immense difficulty, who were safely landed on the shore of the bay. Lieutenant Smith, having landed the commander's son and the boat's crew, returned, and went as near the brig as the breakers would admit, and put one of his men in the Skylark's 'dingy,' who directed two boys who were in her to put her alongside the lee-quarter of the brig. They did so, and took in six men, and put them on board the coast-guard boat, but Lieutenant Smith, observing the awkwardness of the boys in the dinky, put two more of his men in her, who went to and from the stranded brig in a most dextrous and intrepid manner, bringing each time as many of the brig's crew as the dinky could safely hold, and placing them on board the coast-guard vessel until it was full; when it pulled away with them for the bay. The tide having gone down, and the surf decreased in violence, the dinky was enabled to land her men on the ledge, which was but a stone's throw from the brig's bows, until nearly all were landed. A boat, the Bee, of Weymouth, then came alongside and took the rest of the crew and the master out. Commander Morris, having the gout in one of his legs, and having used almost superhuman exertions to save his ship, was quite exhausted when the last boat went alongside; so far, indeed, was his strength prostrated, that he was incapable of getting into the boat to save himself, and was thrown overboard, and picked up by the first gig. Lieutenant Smith had returned in the mean time, and advised the officers to send the cutter off to the wreck to endeavour to get some sails and spars wherewith to make tents for the men, as the tower was not large enough for them all to sleep in, and also to save as much from the wreck as possible, as it appeared most probable she would go entirely to pieces when the tide flowed, and offered to assist with his men and boat, which was thankfully accepted. Accordingly, every exertion was immediately used, and a great quantity of

of the sails, spars, provisions, and some of the officers' property, were got ashore. Commander Granby arrived from Swanage Bay in his tender, the Gertrude, in the after-part of the day (having received information by express from Lieutenant Smith respecting the wreck of the Skylark), and immediately took his boat to the brig and rendered all the assistance in his power. By ten o'clock at night, the wind still blowing fresh, the Gertrude had a great quantity of stores, arms, and some of the officers' goods on board, with which she got under weigh, and, after considerable danger and difficulty, cleared the ledges and safely got into Swanage Bay with them by twelve o'clock at night.

"The officers and crew were on Wednesday engaged in endeavouring to save all possible, and did not leave the place until the wreck had been cleared of everything of value."

LOSS OF THE FRANCIS SPAIGHT.

DECEMBER, 1836.

THE Francis Spaight, a fine vessel of 345 tons burthen laden with timber, sailed from St. John's, Newfoundland, on the 24th of November, 1836. The crew amounted to fourteen men, with the captain and mate, many of whom were indifferent hands. They were mostly Irish boatmen, trained on the Shannon—some from Kilrush, a few from the Tarbert, and one or two from Foynes. Nothing could be finer than the weather for the first eight or ten days of the voyage; but it afterwards came on to blow so hard, that they were obliged to drive before the wind under a mizen-topsail.

At three o'clock in the morning of December 3, an alarm was raised by a cry and confusion on deck. The vessel, it appeared, either steering wild, through the carelessness of the helmsman, or perhaps from her bad trim, suddenly broached-to, and lay like a log in the trough of the sea. The day had not dawned at the time; it was still very dark, and the waves broke so frightfully over her, that the captain or mate could not get the men to obey their directions; nor even when she was filling rapidly with water, could he get them to the pumps. In less than an hour she lay on her beam-ends, the greater part of her crew saving themselves by climbing on her side, and clinging to the rigging. Pat. Cusack and Pat. Behane, however, were drowned in the forecabin, and William Griffith, the mate, in the after cabin, into which he had gone accidentally only a few minutes before. The captain, and a man named Murville, now got to the fore and mainmasts, and cut them away; the mizen-topmast went with them over the side, and the ship almost immediately righted. As soon as she righted, being already filled with water, she settled down in the sea, and there was scarcely any portion of her to be seen, except the poop and bulwarks. No situation could be more hopeless or miserable than that of the unfortunate crew, standing ankle deep on the wreck, in the depth of a winter's night, and clinging in the darkness to whatever was nearest, as sea after sea rolled successively over them; but they knew not the full horror of their condition, until the dawn of morning, for which all were looking eastward with intense anxiety. They then discovered that their provisions had been washed overboard, and as the hold was filled by the sea, they had no means of coming at any fresh water. The gale continued unabated through the morning, and the dreadful swell every now and then swept over the decks, so that for safety, as well as for shelter, they gathered into the cabin under the poop. Even here, she was so deep with water, that a dry plank could not be found on which they might lay; their only rest was by standing close together, huddled up, and leaning against one another. At about ten o'clock in the forenoon, a vessel was suddenly descried to the westward, and for some time it was thought possible her course might be near them; but she stood far away beyond the reach of signal, and was soon out of sight. That day and the next passed away without the slightest change in the weather. On the third it began to moderate, during the whole of which period they remained standing in the cabin, leaning against one another, or against the ship's sides, unable to take rest or sleep.

Their greatest suffering was hunger, or rather a sinking at the stomach, and from thirst, neither of which had they any

conceivable means of allaying. There were fifteen hands alive, and of these, not one had tasted a morsel of food since the wreck; and for drink they had only three bottles of wine, which were found in the cabin: this was served out in wine-glasses at long intervals. There was some occasional rain, which they were not prepared at first for saving, getting but a scanty supply by holding the cover of a tureen under the mizen-mast. Horrible as this situation was, it was made yet worse by the conduct of the crew towards one another. As their sufferings increased, they lost all command of temper, and became cross and selfish in the extreme—such as were strong, securing a resting-place on the cabin-floor, and pushing aside those that were weak, to shift for themselves as they could in the wet and cold.

On the 19th of December, the sixteenth day since the wreck, and since they had tasted food, many of the men were gathering together in groups, and something seemed to be in agitation amongst them. The mystery was cleared up in the course of the day. When they all happened to be assembled in the cabin, the captain came off deck and seriously addressed them about their desperate condition. His opinion was, that one should suffer for the rest, and that lots should be drawn between the four boys, as they had no families, and could not be considered so great a loss to their friends as those who had wives and children depending on them. The lot having been cast, it fell upon a boy named O'Brien. The poor fellow heard the announcement without uttering a word. His face was very pale, but not a feature of it was changed. The men now told him he must prepare for death, and the captain said it was better it should be done by bleeding him in the arm; to which O'Brien made no objection. The captain then directed the cook, John Gorman, to do it, telling him it was his duty; but Gorman strenuously refused. He was, however, threatened with death himself by the men if he continued obstinate; and he at last consented. O'Brien then took off his jacket without waiting to be desired, and, after telling the crew, if any of them ever reached home, to tell his poor mother what had happened to him, bared his right arm. The cook cut his veins across twice with a small knife, but could bring no flow of blood, upon which there seemed much hesitation amongst the men as to what could be done. They were relieved by the boy himself, who immediately desired the cook to give him the knife, as he could not be looking at them putting him to pain. When he got the knife, and was about to cut the vein, the captain recommended him to try his left arm, which he accordingly did. He attempted to open the vein at the bend of the elbow, with the point of the knife, as a surgeon would, but, like the cook, he failed in bringing blood. A dead consternation now fell upon all; but in a minute or two the captain said, "This is all of no use; 'tis better to put him out of pain by at once bleeding him in the throat," and some of them said it was true. At this O'Brien, for the first time, looked terrified, and begged hard that they would not do so, but give him a little time. He said he was cold and weak, but if they would let him lie down and sleep for a little time, he would get warm, and then he should bleed freely. To this wish there was some expression of dissent from the men, and the captain shortly after said to them, "that it was useless leaving the boy this way in pain, 'twas best at once to lay hold of him, and let the cook cut his throat!" O'Brien, now, roused and driven to extremity, seemed working himself up for resistance, and declared he would not let them; the first man, he said, who laid hands on him, 'twould be worse for him; that he'd appear to him at another time—that he'd haunt him after death. The poor youth was, however, among so many, soon overcome, and the cook was once again called upon to put him to death. The horror-stricken man, over and over again endeavoured to summon up hardihood for the deed; but when he caught the boy's eye, his heart always failed him, and then he looked supplicatingly to the men again. Their cries and threats were, however, loud for death—he made a desperate effort—there was a short struggle, and O'Brien was no more!

As soon as this horrid act was perpetrated, the blood was served to the men; but a few of them, among whom was

Mahony, refused to partake of it. They afterwards laid open the body, and separated the limbs; the latter were hung over the stern, while a portion of the former was allotted for immediate use. Shocked, as for the sake of human nature it is to be hoped many were, at the scene they had just witnessed, a gnawing hunger came upon them all when they saw even this disgusting meal put out for them, and almost every one, even the unwilling boys, partook more or less of it. This was the evening of the 16th day. They ate again late at night, and some greedily; but the thirst, which was before at least endurable, now became craving, and, as there was no more blood, they slaked it with salt water. They then lay down to rest, but several were raving and talking wildly through the night; and in the morning the cook was observed to be quite insane—his eyes inflamed and glaring, and his speech rambling and incoherent; he threw his clothes about restlessly, and was often violent. His raving continued during the succeeding night, and in the morning, as his end seemed to be approaching, the veins of his neck were cut, and the blood drawn from him. This was the second death. On the night of that day Michael Behane was mad, and the boy George Burns on the following morning; they were both so violent that they were obliged to be tied by the crew, and the latter was eventually bled to death, like the cook, by cutting his throat. Michael Behane died unexpectedly, or he would have suffered the same fate. Next morning the captain came off deck, and feeling too weak and exhausted to keep a look out any longer, desired some one to take his place above. Harrington and Mahony went up very soon after: the latter thought he could distinguish a sail, and raised a shout of joy, upon which those below immediately came up. A ship was clearly discernible, and, apparently, holding her course towards them. Signals were hoisted with as much alacrity as the weakness of the survivors would allow; and when she approached, and was almost within hail, their apprehension of her passing by, like the former vessel, was so great, that they held up the hands and feet of O'Brien to excite commiseration.

"How did we long, as memory rose,

And our very heart-strings yearned

For a sight, or a sound from that dear land

To which our thoughts were turned;

As on the waves we spied a sail

In the distance, blue and clear;

And we fondly gazed on the stranger ship

As though our home was there."

The vessel proved to be the *Agenor*, an American. She put off a boat to their assistance, without any hesitation, although the weather was so rough at the time, and there seemed to be such an apprehension of its swamping, that the crew came out in their shirts. The survivors of the *Francis Spaight* were all at length safely got on board the American, where they were treated with the utmost kindness.

RELIGIOUS FEELING OF SAILORS.

OLD BENBOW, after many years' service, visited Shrewsbury, his native town, and on his arrival, proceeded to the house of his nativity, which was then occupied by people in no way related to him; yet he entered the house as if it had, walked up stairs, went into the room where he first drew breath, fell on his knees, and returned thanks to the great Disposer of Events, for his protection and support through his past eventful life.

HUMOROUS REPLY.

WHEN the late Earl Howe was captain of the *Magnanime*, during a cruise on the coast of France, a heavy gale of wind obliged him to come to an anchor. It was on a lee shore, and the night was extremely dark and tempestuous. After everything was made snug, the ship rode with two anchors a-head, depending wholly on her ground tackle. The captain, at this time, was laid up with the gout, and was reading in his cabin, when the lieutenant of the watch came abruptly in, and told his lordship, in a hurried manner, that the anchors came home. "They are very much in the right of it," answered the captain, coolly; "I don't know who would stay out in such a night as this."

A NAVAL EPITAPH.

Here peaceably beneath this old oak tree

Two sailors sleep

For years they wandered o'er the fickle sea

And braved the deep,

All fearlessly.

They heard the cannons roar in deadly fray

When Nelson lost his life, but won the day;

And France and Spain

Their banners humbled, and themselves distressed,

The British ensign candidly confessed.

Pride of the main—

Of flags the best!

But not alone amid the battle strife

A foe they've met—

The gale has seen them struggling for life,

Storm-staysails set,

And mischief rife,

When baffling leaks the carpenters provoked,

And pumps, by swallowing overmuch, got choked

'Mid heavy swell:

It might be said when'er she lurch'd a-lee,

So dropsical from suction would she be,

"All's well—all's well."

Malum in se.

Peace and old age at length brought promised rest;

They anchored here;

The turf lies lightly on the gallant breast

That ne'er knew fear

When danger pressed.

Now safe from raging storm or battle's din,

Their souls, redeemed by Him who knew no sin,

Find calm retreat.

And when all bodies, from the general wreck,

Are mustered by the angel of the cheque—

Their souls to meet—

First upon deck!

A SCENE AT SEA.

A CRY on deck awoke all in the cabins early on the succeeding morning. It was scarcely light, but a common excitement seized on every passenger, and ten minutes had not elapsed when Eve and her governess appeared in the hurricane house, the last two of those who came from below. Few questions had been asked, but all hurried on deck with their apprehensions awakened by the gale, increased to the sense of some positive and impending danger.

Nothing, however, was immediately apparent to justify all this sudden clamour. The gale continued, if anything, with increased power; the ocean was rolling over its cataracts of combing seas with which the ship was still racing, driven under the strain of a reefed forecourse, the only canvass that was set. Even with little sail the hull was glancing through the raging seas, or rather in their company, at a rate little short of ten miles in the hour.

Captain Truck was in the mizen-rigging, bare-headed every lock of hair he had blowing out like a pendant. Occasionally he signed to the man at the wheel which way to put the helm; for instead of sleeping, as many had supposed, he had been conning the ship for hours in the same situation. As Eve appeared, he was directing the attention of several of the gentlemen to some object astern, but a very few moments put all on deck in possession of the facts.

About a cable's length, on one of the quarters of the Mohawk, was a ship careering before the gale like themselves, though carrying more canvass, and consequently driving faster through the water. The sudden appearance of this vessel in the sombre light of the morning when objects were seen distinctly, but without the glare of day; the dark hull, relieved by a single narrow line of white paint, dotted with ports; the glossy hammock-cloths, and all those other coverings of dark glistening canvass which give to a cruiser an air of finish and

comfort, like that of a travelling-carriage; the symmetry of the spars, and the gracefulness of all the lines, whether of the hull or hamper, told all who knew anything of such subjects, that the stranger was a vessel of war. To this information Captain Truck added that it was their old pursuer, the Fame.

"She is corvette-built," said the master of the Mohawk, "and is obliged to carry more canvass than we, in order to keep out of the way of the seas; for if one of these big fellows should overtake her, and throw its crest into her waist, she would become like a man who has taken too much on a Saturday night, and with whom a second dose might settle the pursuer's books for ever."

Such in fact was the history of the sudden appearance of the ship. She had lain-to as long as possible, and on being driven to scud, carried close-reefed main-topsail, a show of canvass that urged her through the water about two knots to the hour faster than the rate of the packet. Necessarily following the same course, she overtook the latter just as the day began to dawn. The cry had arisen on her sudden discovery, and the moment had now arrived when she was about to come up, quite abreast of her late chase. The passage of the Fame, under such circumstances, was a grand, but thrilling thing. Her captain, too, was seen in the mizen-rigging of his ship, rocked by the gigantic billows over which the fabric was careering. He had a speaking-trumpet in his hand, as if still bent on his duty, in the midst of that awful warring of the elements. Captain Truck called for a trumpet in his turn, and, fearful of consequences, he waved it to the other to keep more aloof. The injunction was either misunderstood, the man-of-war's man was too much bent on his object, or the sea was too uncontrollable for such a purpose, the corvette driving up on a sea quite abeam of the packet, and in fearful proximity. The Englishman applied the trumpet, and words were heard amid the roaring of the winds. At that time, the white field of old Albion, with the St. George's cross, rode over the bulwarks, and by the time it had reached the gaff-end, the bunting was whipping in ribbons.

"Show 'em the gridiron!" growled Captain Truck through his trumpet, with its mouth turned in board.

As everything was ready, this order was instantly obeyed and the stripes of America were soon seen fluttering nearly in separate pieces. The two ships now ran a short distance in parallel lines, rolling from each other so heavily that the bright copper of the corvette was seen nearly to her keel. The Englishman, who seemed a portion of his ship, again tried his trumpet; the detached words of "lie by,"—"orders,"—"communicate," were caught by one or two, but the howling of the gale rendered all connection in the meaning impossible. The Englishman ceased his efforts to make himself heard, for the two ships were now rolling-to, and it appeared as if they would interlock their spars. There was an instant when Mr. Leach had his hand on the main-brace to let it go; but the Fame started away on a sea, like a horse that feels the spur, and, disobeying her helm, shot forward as if about to cross the Mohawk's forefoot.

A breathless instant followed, for all on board the two ships thought they must now inevitably come foul of each other, and this the more so, because the Mohawk took the impulse of the sea just as it was lost to the Fame, and seemed on the point of plunging directly into the stern of the latter. Even the seamen clenched the ropes around them convulsively, and the boldest held their breaths for a time. "The port, hard a-port, and be d—d to you!" of Captain Truck; and the "Starboard, starboard hard!" of the Englishman, were both distinctly audible to all in the two ships; for this was a moment in which seamen can speak louder than the tempest. The affrighted vessels seemed to recede together, and then they shot asunder in diverging lines, the Fame leading. All further attempts at a communication were instantly useless; the corvette being half a mile a-head in a quarter of an hour, rolling her yard-arms very near to the water.—Homeward Bound.

DREADFUL STEAM-BOAT DISASTER.

The *New York Sun* publishes the following particulars of the loss of the steam-boat *Swallow*, having on board 350 passengers:—"The steam-boat *Swallow*, having on board about 350 passengers, left Albany last Monday evening at six o'clock, for this city. When opposite Hudson, near Athens, she struck a rock and broke in two. All was consternation on board; the ladies were terribly alarmed and agitated, and many were for jumping overboard in efforts to reach the rock, or to save themselves in any way. The gentlemen endeavoured to prevent any of the ladies leaving the boat, considering all safe in clinging to the wreck. What rendered the scene more appalling was the total darkness of the night—the water coming up to the hurricane deck, and the ladies being drawn up through the skylights drenched in water. The heeling of the boat brought the fire of the furnaces in contact with the wood, and a lurid flame burst forth, lighting up at once, and adding to the horrors of the scene. Surrounded by fire and water, every effort was made by each person to provide for his own safety. The terror seemed to be at its highest when the boat broke in two, the water put out the fire, and the stern sank. At this critical moment the steam-boats *Express* and *Rochester*, came up, and immediately got out all their boats, to pick up those who were in the water, and save the residue who were clinging to the wreck—of these the *Rochester* took on board 150, and the *Express* 50. Many were known, however, to have reached Hudson and Athens, as boats were promptly dispatched from both places. The rock is well known and had the pilot kept in the channel the accident would not have occurred." We have received the following particulars from Mr. C. Pratt, of Covert, Seneca county, New York, who was a passenger in the *Swallow* at the time of the disaster:—"On going into the ladies' cabin after the vessel struck, he found it full of ladies, and seizing his two daughters, he rushed forward, in company with his grandson, leaving in the ladies' cabin two ladies named Coffin, who were in company with an aged lady from Troy, these being the only ladies whose names were known to his daughters. Passing to the forward deck, he was met by some one who told him to keep off the bows, as the boat was going down; and as he turned to get to the hurricane deck, with his daughters and grandson, he was met by a rush of water sweeping over the lower deck from the stern, and, turning round caught a glimpse of the two Misses Coffin behind him, but on gaining the upper-deck with his charge they were missing; search was made for their bodies on the lower deck and one of them recovered, but quite dead. The other could not be found. As the boat sank down, about 20 or 25, or more, took refuge in the state rooms, believing that they would be safe, but they were soon overwhelmed, some escaping on settees, chairs, and tables, and floating away, while a few gained the hurricane deck, but it is feared that several remained in the rooms and were drowned. Of those who floated off (about 15 or 20) two gentlemen and a lady were found clinging to a settee about a mile and a half below the wreck, all three alive, but greatly exhausted. They were taken to Athens. Of the others who tried to save themselves by similar means, nothing was known up to yesterday afternoon, and it is feared they have perished. Passengers saved:—204. The gentleman of Detroit, named Huest, having a bag containing 1500 dollars in gold, jumped overboard with the bag upon his arm, but was soon obliged to let it go. He was only saved by having fortunately grasped a narrow strip of board as he jumped."

DISASTROUS EVENT.

THE following impressive and disastrous story was related by the captain of a ship, in which the writer was a passenger from the United States to England:—

"As I was once sailing (said he) in a fine stout ship across the banks of Newfoundland, one of those fogs that prevail in those parts, rendered it impossible for us to see far a-head, even in the day-time; but at night, the weather was so thick that we could not distinguish any object at twice the length of the ship. I kept lights at the mast-head, and a constant watch

forward to look out for fishing-smacks, which are accustomed to lie at anchor on the banks. The wind was blowing a smacking breeze, and we were going at a great rate through the water—suddenly the watch gave the alarm of "a sail a-head!" it was scarcely uttered before we were upon her. She was a small schooner at anchor, with the broadside towards us. The crew were all asleep, and had neglected to hoist a light. We struck her just a-midships. The force, the size, and the weight of our vessel, bore her down below the waves; we passed over her, and were hurried on our course. As the crashing wreck was sinking beneath us, I had a glimpse of two or three half-naked wretches rushing from their cabin they just started from their beds to be swallowed by the waves. We heard their drowning cry mingling with the wind. The blast that bore it to our ears swept us out of all further hearing. I shall never forget that cry. It was some time before we could put the ship about, she was under such headway. We returned, as nearly as we could guess, to the place where the smack had anchored. We cruised about for several hours in the dense fog. We fired signal guns, and listened if we might hear the halloo of any survivors. But all was silent: we never saw or heard anything more of them."

ON THE LAUNCH OF THE VANGUARD, OF EIGHTY GUNS, AT PEMBROKE, AUGUST 25, 1835.

Away, bold ship!—'tis thine no more

In cradled stillness here to rest;

Away!—'tis time thou quitt'st this shore—

Thy home shall be the billows' breast.

For, like long-severed friends ye meet,

Disparting waves thy bed prepare;

And thou, so pleased the embrace to greet,

A woman's arm propels thee there.

Yet ere we part, a word—this land

Forget not as thy bounteous mother;

Guard her who nurtured thee—whose hand

Makes thee the awe of every other.

Then onward!—far as ocean flows,

Though storms be rife and surges sweep;

O'ercome what'er thy course oppose,

For thou and thine must rule the deep.

Where'er the weak require a friend,

Where force or fraud deserve a foe,

Where England tyrants' chains would rend,

Be there—the first to strike the blow.

Not conquest be thine aim—but right—

So freedom's friends in thee shall trust;

And foemen, while they feel thy might,

Confess that thou, if strong, art just.

And bear, as kindred bulwarks bore,

Untarnished still by foes or time,

That flag triumphant as of yore,

Unfurld and fear'd in every clime.

Wreath victory round the seaman's brow—

Rear future Nelson's from our isle,

Like him whose form adorns thy prow—

Thus did thy namesake at the Nile,

SELF-DEVOTION.

AFTER the mutiny at the *Nore*, in 1797, it was long before the fleet entirely recovered that sound discipline which had characterised the British navy. Partial eruptions frequently occurred on board the ships of the line. Among others, the *Marlborough* was particularly conspicuous for its turbulent spirit. The captain, finding all his efforts vain, repaired at once to the Admiralty, where his conduct not having given entire satisfaction, he was refused an audience. After repeated and fruitless solicitations, he drew his dirk in the waiting room, and plunging it into his breast, exclaimed, as he expired—"I have always done my duty!"

LOSS OF H.M.S. WAGER.

AN expedition on a great scale against the settlement of the Spaniards having been resolved on by the British government, six vessels of war and two store-ships sailed from England for South America, on the 18th of September, 1740, one of which was the Wager, the subject of the following narrative.

The Wager was an old East Indiaman, which was purchased and fitted out as a man-of-war for this occasion, and being used as a store-ship, was deeply laden with military and other stores for the use of the other ships, besides being encumbered with bale goods and other merchandize. For some reason the expedition was delayed beyond the proper time, and proper regard was not paid to the necessary requisites for a voyage round Cape Horn, in a vessel of her quality and condition. The crew consisted of

men pressed from long voyages and the land forces, of infirm and decrepid invalids from Chelsea Hospital, in despair at the prospect of such a long and arduous expedition.

On October 27th the Wager anchored in Funchal Road, in the island of Madeira, where they obtained a supply of water. On the 4th of November, Captain Kidd was removed to the Pearl, one of the squadron, and was succeeded by Captain Murray; but on the 17th of February, 1741, another change ensued by the death of Captain Kidd in the Pearl, who was succeeded by Captain Murray, and Captain Cheap had the command of the Wager.

On the 1st of April the commodore ordered the carpenter of the Wager on board the Gloucester, and during his absence they experienced a great deal of bad weather, and when near

LOSS OF HIS MAJESTY'S SHIP WAGER, CAPTAIN CHEAP, MAY 14, 1741.

the southernmost mouth of the Straits of Le Maire, a sudden shift of wind almost drove them on the rocks of Staten Island. They, however, contrived to weather them contrary to the expectations of the squadron, with whom they kept company for some time.

On the 8th of April the mizen-mast was carried away by the great roll of a hollow sea, which broke all the chain-plates to windward; and on the 12th there was a heavy gale with a great swell. At seven in the morning a sea broke over the ship, which carried the gunner over the wheel, bilged the cutter, and canted her off the sheets, bottom up, athwart the barge. The long-boat was also half-filled, when she was scuttled, and the cutter was recovered to her place. The spritsail-yard and jib-boom were got in for fear of endangering the bowsprit. The

No. 10.

rigging was all gone, and broke fore and aft, and almost the whole of the crew were at this time sick.

The carpenter having returned on the 14th, the tempestuous weather and swell of the sea being previously too great and dangerous for boats, a cap was fitted on the stump of the mizen-mast, and a lower studdingsail-boom of forty feet got up. This, however, and patching up the rigging, proved only a temporary expedient; for on the 1st of May, after a consultation of the officers, it was resolved to cut away the best bower-anchor, as there was no possibility of securing it without putting the foremast in extreme danger, as all the shrouds and chain-plates were broke, and the ship in a crazy condition.

Thus shattered and disabled, the Wager lost sight of the squadron; and from an error in conjecture as to their situation,

there being no charts of that coast, and the weather being unfavourable for observation, they had the additional mortification to find themselves bearing for a lee-shore. It had been generally understood in the ship, that the place of rendezvous was the island of Juan Fernandez, to which, considering the condition she was in, the officers advised the captain to repair. A quantity of weeds and the flights of certain birds indicated their approach towards the land, and alarm began now to be excited for the danger of a lee-shore. The gunner informed the captain, that by his desire, he had calculated the longitude, and judged them to be sixty leagues from land; and then the captain told him that the place of rendezvous was the island of Socoro. The captain stated that he had no intention of coming to an anchor, but that he meant to stand off and on for twenty-

four hours; and if in that time he saw none of the squadron, he should then go to Juan Fernandez. "Sir," replied the gunner, "the ship is a perfect wreck, our mizen-mast gone, with the standing rigging fore and abaft, and all our people down, twelve only being fit for duty; it may therefore be dangerous to fall in with the land." The captain observed, it did not signify, as he was determined to obey his orders and go to the first place of rendezvous. It may here be necessary to observe, that the island of Socoro is in the neighbourhood of Baldivia, the capture of which place could not be effected without the junction of the Wager, which carried the naval and military stores. On the 13th the captain unfortunately fell and dislocated his shoulder, which confined him to his cabin; and at eight in the morning the straps of the fore-gear blocks breaking the fore-

yard came down, which was some time before it could be got up again, so many of the crew being disabled by sickness. At nine o'clock the carpenter going forward saw land from the fore-castle, and pointed it out to the lieutenant on deck, who would not believe it to be the case; till at length, when the fact would admit of no doubt, the gunner informed the captain, who immediately gave orders to swing the fore-yard up, to set the foresail, and wear the ship with her head to the southward. Every exertion was made to crowd her off the land, but from the wind being tempestuous, had now increased to a perfect hurricane and blowing right in upon shore, that every attempt from so small a number of hands was rendered utterly useless.

The night came on dreadful beyond description; during the first and middle watch it blew and rained tremendously, and in

throwing out the topsail to claw off the shore, they were blown from the yard. It was at the same time so extremely dark, that the people could not see the length of the ship.

On Thursday the 14th, at four in the morning, the ship came up with her head to the west, so that she was then standing off the shore; but in half-an-hour afterwards she struck abaft on a sunken rock.

The shock, though very great, so nearly resembled that of a heavy sea, such as they had often experienced in the preceding storms, that they took it for nothing else; they were, however, soon undeceived, by the ship striking a second time more violently than before, which laid her upon her beam-ends, the sea making a fair breach over her.

In this dreadful situation the vessel lay for some little time,

every one on board expecting the present moment to be his last; and numbers, who being in the last stage of the scurvy, unable to leave their hammocks, already drowned. Around them nothing was visible but breakers, till at length a mountainous sea threw her off the rock, upon which she immediately struck again and broke her tiller, so that they were obliged to steer with the main and fore sheets, easing off one and hauling aft the other as she came-to or fell off.

In this terrific crisis of their fate, to have observed the various modes by which this accumulation of horrors operated upon the different characters and dispositions of individuals, would have required an observer free of all impressions of his own danger. One man in particular, was seen stalking about the deck in the ravings of despair, and flourishing a cutlass about his head, called, himself king of the country, and struck at every one he came near, till his companions knocked him down, as a security against his violence. Some who had been reduced by long sickness and the scurvy, became bereaved of sensation, and were tossed to and fro upon the deck like inanimate logs; indeed so fearful were the foaming breakers all around, that one of the bravest men on board, dismayed at their threatening appearance, would have thrown himself over the rails of the quarter-deck had he not been prevented. There were, however, several instances of presence of mind that were truly heroic. The man at the helm kept his station when the rudder and tiller were gone; and on one of the officers asking him if the ship would steer, he steadily made a trial by the wheel, and then answered with the same respect and coolness as if the ship had been in perfect safety. Mr. Jones, the mate, who not only survived the wreck of the Wager, but afterwards that of the Litchfield, on the coast of Barbary, was not only himself undaunted at the threatening danger, but endeavoured to inspire the same confidence in others. "My friends," he said, "let us not be discouraged. Did you never see a ship among the breakers before? Come, lend a hand; here is a sheet, and here is a brace; lay hold. I don't doubt but that we may yet bring her near enough to land to save all our lives." This ready address contributed to keep up the spirits of the people who now went to work in earnest.

They now ran in between an opening of the rocks, steering by the sheets and braces, till providentially they stuck fast between two great rocks, the one to windward sheltering them in some measure from the violence of the sea. The mainmast and foremast were immediately cut by the board, and the sheet-anchor from the gunwale; but the ship continued beating so violently, that they had very little hopes of her holding long together.

The long-expected day at length broke on the horrors of this long night, and the weather clearing up for a few moments gave them a glimpse of the shore. Their only consideration now was to save their lives, as the land did not seem above a musket-shot off; it was, however, a work of some time to get out the boats, and the first that was launched over the gunwale, had so many leap into her, that she was almost overloaded. The captain sent the barge ashore, to see if the land was inhabited, but not returning so soon as expected the yawl was sent after her.

The captain being confined to his bed from the accident he had met, Mr. Byron, a midshipman, went down to him, and asked whether he would not go on shore, but he answered as he had done before, that he should be the last to leave the ship, and ordered Mr. Byron to assist in getting out the men as speedily as possible. The scene within the ship became suddenly changed; those who had exhibited the strongest signs of fear, conceiving themselves now out of immediate danger, grew riotous; they broke open every box they could reach, stove in the heads of the casks of wine and brandy as they were brought up from the hold, and got so completely intoxicated that several of them were drowned on board, and lay floating about the decks for several days afterwards.

As long as any liquor could be got at, the boatswain and several of the crew would not leave the ship. Captain Cheap allowed himself, therefore, to be assisted out of bed, put into the boat, and carried ashore along with the other officers; but the master, boatswain, gunner, and carpenter remained on board.

It would naturally be supposed that gaining the shore was the most desirable object to be attained by men thus on the point of perishing by shipwreck—yet, all things considered, it was doubtful whether those who landed were bettered by the exchange. Whichever way they turned their eyes a scene of horror and desolation presented itself; upon the one side the wreck, and with it all they had in the world to subsist upon, and a boisterous element presented a hideous prospect; while on the other, the bleak and barren aspect of the shore promised no other advantage than merely preservation from the sea.

In exerting themselves against impending evils, and searching for some shelter for their benumbed and almost helpless limbs, they discovered an Indian hut, in a wood, at a small distance from the beach, and into this, as many as possible, crowded themselves during the night, which was extremely tempestuous and rainy.

In this wretched hovel, a lieutenant of marines died during the night; and of those who took shelter under a tree for want of room in the hut, two also perished from the inclemency of the weather.

The calls of hunger, which had hitherto been quelled by more immediate dangers, in the morning became too importunate to be resisted. Many of them had fasted forty-eight hours, and several a much longer time; it therefore became necessary to examine what they had brought ashore. Only two or three pounds of biscuit dust had been saved, and those who had been sent out were only enabled to kill one seagull, and gather some wild celery; these were put into a pot, with a considerable quantity of water, and made into soup; but no sooner had they swallowed it than they were seized with a most painful sickness of the stomach, violent retchings, and other symptoms of being poisoned. This was attributed to the wild herbs; but upon examination, it was found that the biscuit dust, which was the sweepings of the bread-room, had been put into a tobacco bag, whose contents had mixed with the dust and proved a strong emetic.

About one hundred and forty had by this time got on shore, but some few still remained on the wreck, among whom was the boatswain. An officer was sent in the yawl to visit them and endeavour to prevail upon them to join the rest, but he found them in such disorder and disposition to mutiny, that he was obliged to abandon his purpose and return without them.

Those on shore were strongly induced to make a survey of the land, but apprehensive that the Indians might be in the vicinity, they limited their excursions, the ground being morassy and unpromising. The spot which they occupied was a bay formed by hilly promontories; that to the north, which they called Mount Misery, was so exceedingly steep that they were obliged to cut steps in it to enable them to ascend, as the proximity of the sea prevented them going round it.

The next night proved extremely tempestuous, and the sea running very high, threatened those who were on board with destruction from the ship parting asunder. They were then as solicitous to get ashore as they were before obstinate in rejecting assistance; and not finding the boat come to their relief the instant they expected it, they fired one of their quarter-deck guns at the hut. The ball passed just over the covering, and was distinctly heard by the captain and others who were within. Another attempt was therefore made to bring these inconsiderate people on shore, but owing to the violence of the sea the attempt proved abortive.

The people on board now became outrageous at the delay, and carrying their intemperance to excess, broke open chests and cabins for plunder, that must be useless to them; and so intent were they on pillage, that one man had evidently been murdered for his share of the spoil, as his corpse presented all the marks of strangulation. In the perpetration of these outrages, they did not forget to provide themselves with arms and ammunition, of which the officers were greatly in need; but of these they were soon deprived on coming ashore by the resolution of Captain Cheap and Lieutenant Hamilton, who held loaded pistols to their breasts.

Among the mutineers who had been left on board was the boatswain, and he instead of exerting the authority he had over the rest to restrain them as much as possible, was himself

a ringleader in the riot. This man came on shore, dressed up in laced clothes; but notwithstanding the figure he then made, Captain Cheap, by a well aimed blow with his cane, felled him to the ground. It was scarcely possible to refrain from laughter at the whimsical appearance which was made by these fellows, who, having rifled the chests of the officers' best suits, had put them on over their greasy trowsers, and dirty checked shirts. They were, however, soon stripped of their finery as they had before been obliged to resign their arms.

As the incessant rains and extreme cold rendered it necessary to obtain some more shelter than the hut afforded; the gunner, carpenter, and several more, turned the cutter keel upwards, and fixing it on props, it formed no despicable habitation. This allowed them more time to look after provisions, and they soon supplied themselves with sea-fowls, limpets, muscles, and other shell-fish in tolerable abundance; but, notwithstanding the utmost industry, the supply was far short of the necessities of so many. The wreck was, therefore, resorted to as frequently as possible, which at best formed only a precarious addition, and several officers always stood armed on the beach as the boats arrived to prevent the men embezzling what was brought.

In order to secure what had thus been obtained, Captain Cheap ordered a store-tent to be erected near his hut, from which nothing should be served unless in certain measure and proportions. The petty officers were appointed to watch the tent by night, which was a severe duty, considering their being engaged by day in search of food; but, notwithstanding their utmost vigilance, frequent robberies were committed on the stores; and one night when Mr. Byron had the watch he came unawares on a thief, and, presenting a pistol to his breast, compelled him to submit to be tied to a post until he had an opportunity of more effectually securing him.

The proportions that could be afforded were so small that, even with what they could find on the coast, many perished of hunger.

A boy, who had picked up the liver of one of the drowned men, could, with difficulty, be restrained from making a meal of it; while the shore was searched night and day, and those who were less fortunate than their neighbours, if they did not perish of hunger, were driven to the utmost extremity. It was only on the 25th of May that provisions began to be regularly served out from the store-tent, whereas the wreck took place on the 14th.

On the 20th of May, the long-boat was got out by cutting away the gunwale of the wreck, and several men were found drowned in it; the decks were also scuttled in order to get at the contents below. While engaged in these operations, three canoes with Indians came alongside the wreck, from around a point to the southward, but they could not be induced to enter into any intercourse with the people of the *Wager*, till having received presents of cloth and other things, they allowed themselves to be conducted to the captain, with whom they bartered for a dog or two, which those on shore roasted and ate. In a short time after their departure, they returned, bringing with them three sheep which it was thought they had brought from a distance, as there was no appearance of them in the surrounding country.

It was now ascertained that the place of the shipwreck was about ninety leagues to the northward of the western mouth of the Straits of Magellan, in latitude between 47° and 48° south. The Cordilleras could plainly be seen from it, and by two lagoons stretching north and south, it was supposed to be an island.

The difficulties which the crew laboured under, and the uncertainty of relief, soon caused their disobedience of conduct, which prevailed from the first, to break out into insubordination. Ten of the men deserted, and after rambling up and down the woods for some time without being able to advance, returned and settled about a league distant from the others; but being still resolved to get to the main land, they constructed a punt, and having converted part of one of the ship's masts into a canoe, they went away up the lagoon, with the exception of three or four of their number, and were never more heard of.

The separation of these people was not to be regretted, as they were a factious and desperate set of men, and there was great reason to believe that James Mitchell, one of them, had

perpetrated no less than two murders; and on the day of their desertion, they had actually plotted to blow up the captain in his hut, together with the surgeon, and Lieutenant Hamilton, of the *Marines*. One of them less wicked than the rest, had great difficulty in dissuading them from their purpose, and half a barrel of powder, together with the train, were found actually laid.

A circumstance occurred soon after, that tended to increase the dissatisfaction which already existed. Mr. Cozens, a midshipman, being in confinement for intoxication, behaved very disrespectful and insolent to the captain, and became exceedingly riotous. A day or two afterwards, he came to blows with the surgeon, who being the stronger man, tied his hands behind him and left him. This conduct was probably the effect of liquor, as, when sober, he was universally esteemed for good-nature. A short time after this, at the hour of serving provisions, on the 10th of June, Mr. Cozens was at the store-tent, and having lately had a quarrel with the purser, high words arose. The latter told him he was come to mutiny, and immediately discharged a pistol at his head, which would have shot him, had not the cooper canted up his arm at the instant. Lieutenant Hamilton hearing the report, ran out with a fire-lock, and calling the captain, told him Cozens was come to mutiny; the captain came running out, and without making any inquiries, shot him through the head. Cozens fell, and lay on the ground weltering in his blood; but he took Mr. Byron, and several others, by the hand, as if to bid them farewell.

The people who were alarmed by the noise of fire-arms, were extremely exasperated, when they learned the cause, as Cozens was beloved by all the men; and it was naturally expected, from the state of their minds, that something desperate would be attempted. The captain, therefore, addressed the people, and told them he was resolved to maintain his authority, which remained as much in force as ever, and then ordered them to return to their tents, with which they complied.

As the long-boat had been recovered from the wreck, it was judged expedient to enlarge her. She was therefore hauled up on the 18th of June, put on two blocks and sawed in two, and lengthened about twelve feet in the keel. All hands that could be spared from obtaining subsistence, were employed in assisting the carpenter in cutting and shaping timber. As the weather had lately been very tempestuous, a number of things were thrown on the shore, which parties were employed in collecting.

On the 25th, fifty Indians, men, women, and children, came in five canoes to settle with the *Wager's* people, and immediately began to build four wigwams. Their canoes were laden with seals, shell-fish, and four sheep; and their presence might have proved of great use: but the seamen being under little or no controul, endeavoured to seduce their wives, which gave them such offence that they departed in a fortnight, carrying everything along with them.

From the progress of the long-boat, the people now began to think of the course they should take in getting home; and having obtained Sir John Narborough's voyage from Captain Cheap, they thought the best way would be by the Straits of Magellan. The captain's opinion was different, as he planned going northwards, seizing a ship from the enemy, and joining the commodore of the squadron.

After the Indians had gone, the distresses of the people for want of food became almost insupportable. Their number originally one hundred and forty-five, had been reduced by famine to a hundred. Mr. Byron had built a small hut, fit to contain only himself and an Indian dog which he had found straying in the woods. At low water, he provided for himself by feeding on limpets along the shore, and the dog guarded his hut; but the general distress became now so urgent that a party came to the hut, telling Mr. Byron that they must eat his dog or starve; and in spite of his entreaties, took him away by force, and killed him. Mr. Byron thinking himself at any rate entitled to a share, sat down and eat with them. Three weeks after, recollecting the spot where the dog was killed, he went to it, and was glad to make a meal of the paws and skin, which he found thrown aside and rotten.

The calls of hunger became so pressing, that the men were

put to many shifts in endeavouring to satisfy it. Among the most ingenious of the expedients resorted to, one Phipps, a boatswain's mate, having got a water-puncheon, scuttled it, and then lashing two logs, one on each side, went out to sea in quest of subsistence. By this means he would frequently provide himself with wild-fowl when all the rest were starving. He was at last unfortunately overtaken by a heavy sea at a great distance from the shore, but being near a rock, he contrived to scramble to it. There he remained for two days with very little prospect of relief; till, fortunately, a boat which had gone out that way in quest of wild-fowl, discovered his signals and rescued him. But this accident did not discourage him; for soon after, having obtained an ox's hide used in sifting powder, he formed it into something like a canoe, with the assistance of some hoops, and made several successful voyages in it.

When the weather would permit, they seldom failed of getting some wild-fowl; but they were visited by almost incessant tempests, which were productive of disastrous consequences. On one occasion, Mr. Byron and two others, having gone on an excursion in a wretched punt of their own making, had no sooner landed on a high rock, than the punt was driven loose by a sudden squall, and had not one of the men jumped into the sea at the risk of his life, and swam to her, they must, in all probability have perished, as the rock was more than three leagues from the island.

The long-boat being nearly finished, a party of fourteen, consisting of Mr. Byron, Mr. Bulkley, Mr. Jones, the purser, and ten men, were sent out in a barge to reconnoitre the coast. In this expedition they had the usual bad weather, and on the third day, having landed in a fine bay, they pitched a bell-tent which they had brought with them, in the wood opposite to where the barge lay; but this not being large enough to contain them all, four of the men went to the end of the bay, about two miles distant from the tent, to occupy an old Indian wigwam which they had discovered. This they covered with sea-weed, and lighting a fire, laid themselves down in the hope to find a remedy for hunger in sleep; but they had not long composed themselves before one of them was disturbed by the blowing of some animal in his face, and on opening his eyes, what was his astonishment to see, by the glimmering of the fire, a large beast standing over him. He had presence of mind, however, to snatch a brand from the fire, which he thrust at the nose of the animal, which then made off. He awakened his companions, who were horror-struck at his recital; but such was their excessive drowsiness that they were soon asleep again, notwithstanding their dread of another visit. In the morning they traced the impression of the animal's foot, which was large, and provided with claws, and then proceeded, with considerable anxiety, towards their friends in the bell-tent, whom they found had been visited by the same unwelcome guest, which they had driven away by the same expedient.

The party returning to Wager's Island, found that six canoes of Indians had been there during their absence, and had brought some supplies of provisions with them. But the murmurings and dissatisfaction of the people had also in that interval increased to a great extent. They held frequent assemblies, which ended in a written declaration, on the 4th of August, that they considered the safest passage homeward by the straits of Magellan; and when they found that the captain would not alter his resolution, but insisted on the full exercise of his authority as before, they carried their mutinous designs to the utmost extremity, and resolved to deprive the captain of his command.

The people being in arms on the 28th of August, respecting the punishment of depredators upon the stores, gave three cheers while the captain was consulting with the officers, calling out for England, and sailing by the Straits of Magellan. The captain hearing the noise, came out from the tent, and was informed of their design to take the command from him, and bestow it on the lieutenant; on which he exclaimed, in an authoritative tone:—"Who is he that will take the command from me?" and turning to the lieutenant, said, "Is it you, sir?" but the lieutenant dismayed by the captain's aspect, and growing pale as ashes, answered, "No, sir!"

The mutineers then returned to the captain of marines, and informed him that the lieutenant had declined the command.

All order and discipline were now entirely at an end, and soon afterwards another device was adopted to wrest the command from the captain. They determined to seize him for having killed Cozens, the midshipman, and carry him a prisoner to England. Accordingly, their project was executed on the 9th of October, when, well aware of his resolution and intrepidity, they rushed into his tent in a body, surprised him in the morning in bed, and carried him, exposed to insult on the way, to the purser's tent.

The captain, a few days afterwards, sent for the gunner, and learning their intention of carrying him a prisoner to England, he said that he would rather be shot, and desired the gunner to ask the people to let him remain on the island. This they readily assented to; and Lieutenant Hamilton, of the marines, and the surgeon, consented to stay with him. The mutineers also allowed him an equal proportion of provisions, and the same for eight deserters, together with some arms and ammunition. They then conferred the command on Lieutenant Beans, and set sail on the 13th of October, in the long boat, cutter, and barge, to the number of eighty-one persons.

On running along the coast, they split the foresail of one of the boats, and in two days it was thought necessary to return to the wreck, and endeavour to recover some canvass. Mr. Byron had pre-determined to leave the mutineers; and, therefore, returned with those who were sent back in the barge. In the course of this excursion, a portion of the party declared the same intention of returning, and they were gladly received by Captain Cheap, on their arrival at the island.

As the captain was now relieved by the departure of the long-boat from the menaces and disturbance of an unruly crew, and his strength increased by the accession of so many, he determined to put into execution his plan of going to the northward; a message was therefore sent to the deserters, who had settled on the other side of the neighbouring lagoon, to obtain their consent to join in the undertaking. This they readily agreed to, and the number of persons in all amounted to twenty; but the only boats remaining to carry them were the barge and the yawl, both very crazy bottoms; the broad-side of the latter entirely out, and the former had suffered materially from the late bad weather. They, however, managed to patch them together, so as to be fit for a voyage.

In the height of their distress, when hunger, which seems to include and absorb every other species of misery, was most prevailing, they were once more cheered by the appearance of the friendly Indians; but as they had nothing left to barter with them, their stay was but of short duration.

A fine day, so unusual in that climate, enabled them to get off to the wreck, where they were fortunate enough to find three casks of beef, which was equally divided, and enabled them to recruit their lost health and strength.

On the 15th of December they left the island; Captain Cheap, the surgeon, Mr. Byron, and nine men, being in the barge; and Lieutenant Hamilton, Mr. Campbell, a midshipman, and six men in the yawl. They steered for a cape, or head-land, apparently about thirty leagues distant; but they had not been above two hours at sea before the wind shifted to the westward, and a heavy gale came on. The men were obliged to sit close together to windward to receive the seas on their backs, and soon after they were under the necessity of throwing everything, even their beef and grapnel, overboard to prevent the boats sinking. Night was approaching, and they were fast driving on a lee-shore, when the sea broke over them in such a frightful manner that they did not think it possible any boat could live. In this dreadful situation, expecting every instant to be dashed to pieces, those in the barge discovered an opening in the rocks, which they made, and found within a harbour as smooth as a mill-pond; and, to add to their joy, they found that the yawl had got there before them.

Here they passed the night without food or firing, and put to sea the following morning. After tugging all day, they reached a small swampy island, where bad weather confined

them several days. They then continued running along the coast, generally without anything to eat except sea-tangle, till at length they ate the shoes from their feet, which consists of raw seal-skin. Soon after this, the weather being extremely bad, and judging it to be Christmas-day, all hands went ashore except two, in each boat as boat-keepers. Mr. Byron was on this duty with another man, and the yawl lay between them and the shore at a grapnel, when overcome by fatigue, they fell asleep. At last, Mr. Byron was awakened by the excessive motion of the boat and roaring of breakers, and, at the same time, heard a shrieking of persons in distress; when looking out, he saw the yawl overset, and soon afterwards she disappeared. Dreading the same fate, he and his companion struggled to row the barge without the breakers, and then letting go the grapnel, they lay the whole of the day struggling with hunger and cold.

On the next day, the weather admitted of their going near the shore, when their companions threw them some seal's liver, which they devoured greedily; but after suffering severely from sickness, their whole skin peeled off from head to foot.

The yawl thus being lost, and the barge too small to carry off all the men, it was indispensable to leave four of them behind; but the fatigues and distresses they had endured, made it a matter of indifference to them whether to remain or take their chance in the boat. Four marines remained, to whom they gave arms, ammunition, and some necessaries. At parting they stood on the beach and gave them three cheers; a short time afterwards, they were seen helping one another over a hideous tract of rocks, and in all probability met a miserable end, as they were never afterwards heard of.

The rest of the adventurers rowing along, still made an attempt to double the cape in view; but a terrible sea was running, and the swell carried the barge in upon the breakers, that it was with the utmost difficulty they could get her off again, so that they found it impossible to double the cape; and after remaining all night, lying upon their oars, they resolved to return to Wager Island.

They were fortunate enough to kill some seals which served for stock, and then proceeded on their voyage; they arrived at the island, after having been out exactly two months on this fruitless expedition. One of the huts they found, to their surprise, was nailed up; and on breaking it open, they concluded from the iron-work collected within, that the Indians had been there. They had, however, little to expect from any further intercourse, as they had nothing left to barter with them.

They were once more driven to the greatest distress for want of food, as the supply of shell-fish was quite exhausted; and, as a last resource to alleviate the misery they endured, the sacrifice of one for the preservation of the remainder began to be talked about in whispers. Indeed they had so long been in the habit of eating their food raw, that many of them were little better than cannibals.

Happily this project was prevented being put into execution, by Lieutenant Hamilton finding some pieces of rotten beef, which he generously brought and distributed among his companions; and a few days afterwards a party of Indians came to the island in two canoes, and were not a little surprised to find them there again. Among them was a chief, or cacique, of the tribe of the *Chonos*, who live in the neighbourhood of Chiloe, an island on the west coast of America, and the southernmost settlement under the Spanish jurisdiction. He spoke the Spanish language, but with that savage accent, as to be almost unintelligible. Mr. Elliott, the surgeon, being master of a few Spanish words, contrived to explain that their intention was to reach some of the Spanish settlements, but were unacquainted with the safest way, or what track would afford subsistence during the journey; and promised that if the chief would conduct them in the barge, he should have it, and everything in it for his trouble, to which, after some persuasion, the cacique agreed. Accordingly having made the best preparation they could, they embarked on board the barge to the number of fifteen, including the cacique, whose name was Martin, and his servant, Emanuel.

On the second day the barge reached the bottom of a great bay, where their Indian guide had left his wife and two chil-

dren in a hut, and here they remained for two or three days, employed in searching along the coast for shell-fish, and then again embarked with the Indian's family. The cacique conducted them to a river where the current was so rapid, that after a hard struggle to get up, they were obliged to return. Exhausted with fatigue, one of the men dropped from his seat and died; and Mr. Byron, who had hitherto steered the boat, was obliged to take his oar. While thus engaged, John Bosman, who was considered the stoutest man among them, fell from his seat under the thwarts, where he lay for some time, breaking out into the most pathetic exclamations for some little sustenance to save him from dying. Captain Cheap had a large piece of boiled seal by him, and was the only one in possession of anything like a meal; but had become so familiarised with misery, and hardened with sufferings, that the dying man's entreaties were in vain. Mr. Byron, who sat next him, had about a half-a-dozen dried shell-fish in his pocket, one of which he put from time to time into the dying man's mouth; but this only served to prolong his sufferings, till death soon after released him. The men could not repress their indignation at the captain's neglect of the deceased, saying that he ought to be deserted for such savage conduct.

The cacique departed in the canoe along with his family in quest of seals, and the English employed the time, during his absence, in traversing the coast for shell-fish; but not being successful, they returned to the barge. Six of the men, and the Indian's servant, being a few paces in advance of the others, jumped into the barge and put off, leaving their unfortunate companions overwhelmed with astonishment at such treachery.

All the dangers they had hitherto experienced, seemed but light in comparison to the present unexpected blow; for independent of being thus betrayed, everything that could have contributed to save their lives, was carried away in the boat. The cacique, on his arrival, inquired first after the barge and his servant; and concluding from the unsatisfactory answers, that Emanuel had been murdered, he began to dread the same fate for himself and family. They assured him that his servant would return, which, fortunately, happened a few days afterwards; for the Indian contrived to make his escape from the barge on their landing some distance to the westward, and returned to them overland.

The cacique being thus deprived of his stipulated reward, another was substituted in a fowling-piece belonging to Mr. Byron, and some little articles of Captain Cheap's. As they were then on an island, it was arranged that the canoe should be hauled across to a bay on the other side, from whence the cacique should go in quest of some other Indians whom he expected to join him; but as the canoe was incapable of carrying more than four persons, he thought it advisable to take only Captain Cheap and Mr. Byron, and to leave his wife and children as hostages with their companions.

Mr. Byron had to assist in rowing the canoe, and after two days' hard labour they landed at night near six or seven wigwams, into one of which Captain Cheap was conducted by the cacique; but Mr. Byron was left to shift for himself. He ventured to creep into the next wigwam, on his hands and knees, for the doors of these buildings are too low to allow of any other kind of entrance. There he found two women, one of whom appeared to be very young, and very handsome for an Indian; the other, old and as frightful as it is possible to conceive anything in human shape to be. Having stared at him for some time, they went out, on which he sat himself down by the fire to warm himself, and dry the few rags he had on. The two women came in again soon after, chattering and laughing immoderately, till perceiving the cold and wet condition he was in, they seemed to have compassion on him, and the old woman fetched a quantity of wood for the fire, while the young one, rummaging in a corner of the wigwam, produced a fine large fish, of which he made a hearty meal, and then lay down to sleep.

All the men of the village, excepting one or two, were absent on an expedition, and till their return, which was shortly expected, Mr. Byron enjoyed the good fare provided him by his two hostesses. On the return of the men, the two women approached an elderly Indian man, of a remarkably stern and

forbidding appearance, which was evinced by the signs of dread apparent in them. He seemed to be a chief or cacique, and the two women proved to be his wives. His dissatisfaction was clearly shown after some conversation, and breaking out into a savage fury, he took the young woman in his arms, and brutally dashed her to the ground. Mr. Byron could not, without sincere regret, behold these injuries inflicted on his benefactress, and could hardly restrain his resentment; but, fearful of her meeting with fresh severity, and the apprehension of adding fuel to the flame, prevented him from interposing.

The cacique then carried Captain Cheap and Mr. Byron back to their companions, intimating that the Indians they saw would join them in a few days, when they should all set out, in a body, to the northward. They found Mr. Elliott, the surgeon, in a bad way, and Lieutenant Hamilton and Mr. Campbell almost starved, their only food being a sparing supply of eggs, brought up by the wife of the cacique, which she dealt out to them as haughtily as to slaves. Their condition was greatly relieved by the arrival of the Indians, and a more plentiful supply of provisions obtained, consisting both of birds and seals; yet their food was still served out very sparingly, through the caprice of the Indians and the arbitrary conduct of their own captain towards the men.

About the middle of March the Wager's people embarked with the Indians, no two of them being put into the same canoe. The oar fell to the lot of Mr. Campbell and Mr. Byron. Lieutenant Hamilton could not row, and Captain Cheap was out of the question. The surgeon lay at the bottom of the canoe in which he was put, and died the same day, as many had done before him, of absolute starvation.

After crossing a great bay, the canoes were emptied and carried over a small neck of land to a river, up which they rowed two or three days and then again landed. The canoes were taken to pieces, and each man and woman of the party, except Captain Cheap, had something to carry. Mr. Byron had a piece of wet, heavy canvass, with a bit of stinking seal wrapped in it, to carry for the captain. The way was through a thick wood and quagmire, often up to their knees, and stumps of trees in the water obstructing their progress and wounding their feet. Fatigued with his load, which was sufficient for a strong man in health on such a road, he was left behind by two Indians who accompanied him, and soon after, in his exertions to overtake them, he fell over a tree into a deep swamp, where he narrowly escaped drowning. Exhausted with the labour of extricating himself, he sat down under a tree, where he gave way to the most melancholy reflections; but, sensible that if he indulged in inactivity, all chance of rescue would be at an end, he marked a great tree, and depositing his burthen, hastened after his companions, with whom he came up in a few hours. Captain Cheap immediately began asking for his canvass, and on being told the disaster that had befallen Mr. Byron, instead of having compassion for his sufferings, there was nothing but grumbling for the loss of the canvass and putrid seal. Mr. Byron made no further remark, but after resting himself a little, walked back at least five miles to the tree where he had left the parcel, and returned just time enough to deliver it to his companions before they embarked with the Indians. He wanted to accompany them, but was told he must wait for some Indians who were to follow them; and they left him alone upon the beach without even a morsel of the stinking seal, about which he had suffered so much.

Night coming on, he retired into the woods, and worn out with fatigue, he fell asleep. As the day appeared, he discovered a wigwam in the woods, where he found five Indians, three men and two women, who gave him a small piece of seal; after a little rest, the whole of them departed in a canoe, and after rowing for two days, Mr. Byron joined his companions. From hence they journeyed northward; Mr. Byron, Mr. Campbell, and the servant only rowing, and having little to eat, they suffered most dreadfully. After working like galley-slaves all day, when they landed at night, instead of rest, they had often to walk miles to get a few shell-fish, and just as they had lighted a fire to dress them, they have been ordered into the boat again, and kept rowing all night, till they got into the

most horrible state from emaciation and disease, that it is possible for the imagination to conceive.

One day they fell in with about forty Indians, but the cacique on board the canoe did not seem to understand their language. They, however, made them comprehend that a ship had been upon the coast not long before, and that she had a red flag; this they afterwards understood to be the pink Anne.

As there was but one small canoe that intended to accompany them any longer, and that in which Mr. Hamilton was intended to proceed no farther northward, the cacique proposed to him to join his canoe, but this he refused, as the insolence of the Indian was to him insupportable, and rather chose to remain where he was; so they left him, and it was some months before they saw him again.

They got on by slow degrees to the northward, till at last they reached an island about thirty leagues to the southward of Chiloe, where they remained till a favourable opportunity should occur for crossing the bay. After a dangerous passage from the boisterous sea and insecurity of their frail bark, they landed upon the island of Chiloe, though in a part not inhabited. After remaining a day in the snow to recover themselves from their fatigue, they set off on their journey; and on the evening of the second day, to their great joy, they observed something that had the appearance of a house. This belonged to an acquaintance of the cacique, and, having made himself known, they brought down to them some fish and plenty of potatoes, upon which they made the most comfortable meal they had made for many long months; and as soon as it was over, they rowed about two miles farther, to a little village where they landed. Here they were kindly received by the inhabitants, who seemed to vie with each other in compassionate tenderness to these poor creatures; though it was midnight they went out and killed a sheep, of which they made broth, and baked a large cake of barley meal. After they had feasted till they could eat no longer, they went to sleep about the fire, which the Indians took good care to keep up.

Upon their first coming, a messenger had been despatched to the Spanish corregidor, at Castro, to inform him of their arrival; and at the end of three days the messenger returned with an order to the principal caciques, to carry them directly to a certain place where a party of soldiers should be ready to receive them. They embarked in the evening, and it was night before they reached the appointed spot. They were met by three or four officers, and a number of soldiers, with swords drawn, who surrounded them as if they had the most formidable enemy to take charge of, instead of three poor helpless wretches who, notwithstanding their good living amongst the Indians could hardly support themselves.

After remaining at Castro some time, under a state of military surveillance, not being allowed to go ten yards without a military attendant, they were sent on to Chaco, another Spanish settlement, where they underwent the same severe discipline; but had sometimes the honour of dining at the governor's table. Some time after they had been here, a ship arrived from Lima, which occasioned great joy amongst the inhabitants, as no ship had been there the year before, on account of the alarm of Lord Anson's squadron. The captain of her was an old man, well known upon the island, who had traded there once in two or three years, for thirty years past. He had a remarkably large head, and was commonly known by a nickname they had given him, of Cabugo de Toro, or Bull's-head; and not a week had elapsed after his arrival before he came to the governor, with a melancholy countenance, saying, that he had not slept a wink since he came into the harbour, as the governor was pleased to allow three English prisoners to walk about at liberty, whom he expected every minute would board his vessel and carry her away, although he said he had above thirty hands on board. The governor assured him that he would be answerable for them, but could not help laughing at the man, as all the people in the town did. Notwithstanding these assurances, he used the utmost despatch in disposing of his cargo, and put to sea again, not considering himself safe till he had lost sight of the island.

The governor carried the strangers on an annual tour which he made through the districts of his Government; the first

place he visited was Carelmapo, on the main, and from thence to Castro, where they enjoyed the same liberty which they had done at Chaco. After some little time, and visiting a few unimportant places, they returned to Chaco, when the governor informed them that a ship arrived annually from Lima, which they expected in December, and that they should be sent in her to Lima. This vessel arrived towards the middle of December, 1742; and on the 2nd of January, 1743, the officers embarked in her. She was a fine ship, deeply laden, inasmuch that the sea continually washed her decks; the captain was a Spaniard, quite ignorant of maritime affairs; the crew, all Indians and negroes, but the latter being slaves, were never suffered to go aloft, lest they should fall overboard, and the owners lose their value by the accident.

Having made the land near Valparaiso, a great western swell

hurried the ship in towards the shore; but a short time afterwards there sprang up a slight wind from the land, which contributed to bring them in in safety. The officers were carried ashore at Valparaiso, and put in the condemned hole in the fort, and a sentinel, with a fixed bayonet, posted at the door.

In a few days Captain Cheap and Lieutenant Hamilton were ordered up to St. Jago, as they were known to be officers by having saved their commissions; but Mr. Campbell and Mr. Byron were left in prison, where they were supplied with very scanty fare. However, the people of the place charitably supplied their wants, and even the sentinel who stood over them laid aside half his pay for their sustenance, though he had a wife and six children.

After they had been confined a few weeks, Mr. Byron and his companion were, by an order of the president, marched up

to St. Jago, the capital of Chili, ninety miles distant from Valparaiso, to which they were conducted by a muleteer, conveying large quantities of goods.

At St. Jago they were treated with hospitality and attention, and immediately after their arrival, Don Manuel de Guiros, an officer of Admiral Pizarro's squadron, generously offered them two thousand dollars, of which they accepted six hundred, upon condition that he would take their draft upon the English consul at Lisbon. With this sum they got themselves suitably equipped, and being on their parole, amused themselves as they chose about the city; and they had also liberty, on asking it, to make excursions into the country during ten or twelve days at a time.

After remaining here two years, during which time Mr. Campbell changed his religion, and left the other three, viz.,

Captain Cheap, Lieutenant Hamilton, and Mr. Byron, the governor informed them that a French ship, bound from Lima to Spain, had put into Valparaiso, and that they should embark in her. After taking leave of all their acquaintance at St. Jago, they set out for Valparaiso, having mules and a guide provided for them; and the first person they met on their entry into the town, was the poor soldier who had been so kind when they were imprisoned in the fort, and whom they made quite happy by an unexpected present for his kindness.

On December 20, 1744, they were embarked on board the Lys frigate, belonging to St. Malo, a ship of four hundred and twenty tons, sixteen guns, and sixty men. She had several passengers on board, Spaniards of distinction, and was then bound to Concepcion, in order to join three other French ships that were likewise bound home; but on account of the

southerly winds, were obliged to stand a long way to the westward, so that they did not make the bay of Conception till the 6th of January, 1745, when they anchored at Talca-guana, and there found the Louis Erasme, the Marquis d'Autin, and the Deliverance, the three French ships that they were to accompany.

On the 27th of January they sailed from Conception; but in eight days after the ship sprung a leak, forward, but so low that there was no possibility of stopping it without returning into port. They accordingly left the other ships and returned to Valparaiso, which, as it happened, proved a fortunate circumstance, as the other vessels were soon afterwards taken, which would most certainly have been the fate of the *Lys* had she not returned.

After the necessary repairs they put to sea again on the 1st of March, and made the island of Tobago on the 29th of June, and then shaped their course for Martinico; but not seeing it when they expected, they imputed their mistake to the currents, and concluded they were too much to the eastward, they accordingly steered S. W. by W., but having run this course about thirty leagues, and no land appearing, it was resolved to stand to the northward till they should gain the latitude of Porto Rico, which they made on the evening of the 4th of July.

It was now determined to go between the islands of Porto Rico and St. Domingo, for Cape François; after laying-to all night, in the morning they made sail along shore. About half-past ten they saw two sail to leeward, and soon afterwards observed that they were in chase of them, yet in a short time fell off; but the two ships had heard them so much that they could plainly make them out to be English men-of-war, the one a two-decker, the other a twenty-gun ship. The Frenchmen and Spaniards on board became so frightened, that they intended, when a breeze sprung up, to run the ship on shore; but recollecting the banditti that inhabited the coast, they resolved to take their chance and stand to the northward.

The breeze soon afterwards freshened, and the ships were fast nearing them, so that they expected nothing less than being taken. A fine moonlight ensued, and every moment they were in expectation of seeing the ships alongside; but they saw nothing of them during the night, and in the morning there was not a ship to be seen from the mast-head. Thus did these two cruisers lose one of the richest prizes by not chasing an hour or two longer. There were nearly two millions of dollars on board, besides a valuable cargo. On the 8th they were off Cape La Grange, and what is remarkable the French at Cape François told them that it was the only day they ever remembered since the war, that the Cape had been without one or two English privateers cruising off it.

They lay at the Cape till the end of August, when a French squadron of five men-of-war came in, commanded by Monsieur L'Etanducré, who were to convey a fleet of fifty merchantmen to France, and all sailed early in September. On the 8th they made the Cayo Grande, and the next day a Jamaica privateer hove in sight and kept to windward, resolving to pick up one or two of them in the night, if possible; when the French commodore ordered them all to keep as close as possible. This occasioned frequent accidents, to avoid which a fine ship of thirty guns, belonging to Marseilles, hauled somewhat to windward, a little out of the rest of the fleet. Monsieur L'Etanducré having observed this in the morning, ordered the frigate to send her captain on board of him, and then making a signal for all the convoy to close round him, he fired a gun and hoisted a red flag at the ensign staff. Immediately afterwards, the captain of the merchantman was run up to the main-yard-arm, and from thence ducked three times. He was then sent on board his ship again with orders to keep his colours flying the whole day, to distinguish him from the rest. The victim of this cruel treatment was said to be a young man of good family in the south of France; and as he also possessed great spirit, he would not fail to call Monsieur L'Etanducré to account when an opportunity should offer, and the affair made much noise in France afterwards.

On the 27th of October they made Cape Ortegal, and on the 31st came to an anchor in Brest Road. The *Lys* having

so valuable a cargo on board, was towed into the harbour next morning, and lashed alongside one of the men-of-war. The money she contained, amounting to two millions of dollars, was soon landed; and the officers and men being impatient to get on shore from whence they had been so many years absent, left no one on board except the three English prisoners, who were not suffered to leave the vessel, and a man or two to look after the ship.

The weather was extremely cold, was felt more severely as they had lately been used to hot climates, and were but thinly clad, and no fire or candle were allowed on board of any ship in the harbour for fear of accidents, and had not some of the officers belonging to the ship been kind enough to send them off some victuals every day, they might have starved, for Monsieur L'Etanducré never sent them even a message.

They had passed seven or eight days in this melancholy manner, when, one morning, a kind of row-galley came alongside with a number of English prisoners, belonging to two large privateers, which the French had taken. They were ordered into the same boat with them, and were then carried four leagues up the river to Landernaw, where they lived upon their parole, took the best lodgings they could get, and did very well for three months, when an order arrived from the court of Spain to allow them to return home by the first ship that offered.

Hearing that there was a Dutch ship at Morlaix ready to sail, they took horses and travelled to that town, where they had to wait six weeks before they had an opportunity of getting away. At last, they agreed with the master of a Dutch dogger to land them at Dover, and for which they paid him beforehand. When they had got down the river into the road, they were hailed by a French privateer that was ready to sail upon a cruise, with the threat of sinking him if the Dutchman offered to sail before him. This command he was forced to comply with, and lay three days in the road cursing the Frenchman, who, at the end of that time put to sea, leaving him at liberty to do the same.

They had a long uncomfortable passage, and before sunset on the ninth day, were in sight of Dover, when they reminded the Dutchman of his promise to land them there. He said he would; but instead of keeping his word, in the morning they were off the coast of France. They loudly complained of this piece of villany, and insisted upon his returning to land them; when an English man-of-war appeared to windward, and bore down upon them. She sent her boat on board with an officer, who informed Captain Cheap that the ship he came from was the Squirrel, commanded by Captain Masterson.

Captain Cheap, Lieutenant Hamilton, and Mr. Byron, went on board the Squirrel, and Captain Masterson immediately sent one of the cutters he had with him to land them at Dover, where they arrived that afternoon, and set off directly for Canterbury upon post-horses; but Captain Cheap was so tired by the time he got there, that he could proceed no further that night. The next morning he still found himself so much fatigued, that he could ride no longer; it was therefore agreed, that he and Mr. Hamilton should take a post-chaise, and that Mr. Byron should ride on horseback. But here an unfortunate difficulty presented itself; for upon sharing the little money they had, it was not found to be sufficient to pay the charges to London, and Mr. Byron's proportion fell so short, that it was, by calculation, bare enough to pay for horses, without a farthing for eating a morsel upon the road, or even to pay the turnpikes; but these he was obliged to defraud by riding as hard as he could through them all, not paying the least regard to the men who called out to stop him. The want of refreshment he bore as well as he could.

When Mr. Byron arrived at the Borough he took a coach and drove to Marlborough-street, where his friends lived when he left England; but, on his arrival, he found that the house was shut up. Having been absent for so many years, and not having heard in all that time a word from home, he knew not who was dead or who was living, or where to go next, or even how to pay the coachman, till recollecting a linen-draper's shop not far from where he was, at which his family used to deal, he ordered the coachman to drive there: he made himself

known, and the linen-draper paid the coachman. He then inquired after his family, and was told that his sister had been married to Lord Carlisle, and was at that time in Soho-square. He immediately walked to the house, and knocked at the door; but the porter not liking his appearance, which was half French and half Spanish, with the addition of a large pair of boots covered with dirt, was going to shut the door in his face, till Mr. Byron prevailed upon him to let him in.

It must be unnecessary to state, with what surprise and joy his sister received him. She immediately supplied him with money sufficient to appear like the rest of his countrymen, till which time he could not properly be said to have finished all the extraordinary scenes in which he had been involved, by a series of adventures, for the space of five years and upwards.

Some of those who abandoned Captain Cheap, and had pursued a different route through the Straits of Magellan, in the long-boat, had previously reached their native land; but the number of those who had this good fortune was comparatively small, and their distresses, for variety and duration, almost without a parallel.

THE SHIPWRECK OF THE HINDOSTAN.

EAST INDIAMAN, OFF MARGATE, JANUARY 11TH, 1803.

The Honourable the East India Company's ship Hindostan, of 1,248 tons, Edward Balston, Esq., commander, sailed from Gravesend, on her fourth voyage, on Sunday, the 2nd of January, 1803, with a light westerly breeze and brought-to in the Upper Hope. Here the ship's company received their river pay, and two month's wages in advance, as usual, and all the women were sent on shore.

On the 4th she sailed from thence with a foul wind, dropped anchor at various places for the tide, passed the Nore, and anchored with her best bower on Sunday, January the 9th, in a good berth, in the Queen's Channel, off the Wedge Sand, the wind blowing hard from the eastward. The wind continuing to increase, they the same evening sent down the top-gallant yards, and struck the top-gallant masts, after which the ship rode much easier.

On Monday, the 10th, they unstowed the sheet anchor, and cleared away the sheet cable, that it might be ready in case of any emergency. On Tuesday morning, between three and four o'clock, the ship parted from her best bower, and drifted with the ebb-tide towards the sand. They then cut loose the sheet-anchor with all possible expedition, and veered out about a cable and a half. She now appeared to ride secure, and the pilot entertained no apprehension for the safety of the ship, though she was very near the Wedge Sand, off Margate.

At four p.m., the pilot thought it necessary to get under weigh, for the purpose of placing the ship in a clearer berth, as the gale continued to increase in violence, and accordingly gave orders to heave in the cable. While the crew were engaged in this operation the ship struck. They now discovered that while the anchor had been coming home, the vessel had drifted faster than they had hove in the cable, and that she was a-ground on the Wedge Sand, in four fathoms and a half water, without a probability of removal.

The pilot instantly ordered the head sails to be loosed and set as fast as possible to pay her head off; this was accordingly done, but without producing the wished-for effect. At this moment the ship struck on the sand a second time, with such violence, that the fore-top-mast went over the lee side, and hung by the rigging. In the fall it struck a man overboard that was on the lee fore-yard-arm, and he was seen no more.

The captain, finding the ship in this desperate condition, striking on the sand, and the wind, which grew more and more furious, together with the tide forcing her still farther on the sand, ordered the boatswain to cut away the mizen-mast, and afterwards the main-mast likewise. Every effort, however, proved ineffectual, and it was found impossible to get her off.

Some of the men were then directed to start the water, and others stationed at the pumps. A large quantity of pigs of block-tin were got up from the hold, upon the orlop and gun-deck, for the purpose of being thrown overboard to lighten the vessel.

The ship, meanwhile, kept continually striking on the sand, the sea at the same time, dashing violently into her: in consequence of which the men in the hold found the water gain so fast upon them that they were obliged to quit it and come upon deck.

The anchors were then cut away from the bows, and every possible expedient was employed to lighten the ship, the pumps being kept going till they became so choked with sand that they could not work them any longer. Signal guns of distress were fired until no more dry powder could be procured. Being about eight miles distant from the nearest shore, and the wind blowing tremendously, the guns were not heard, though it afterwards appeared that the flashes had been seen. The company's yacht had before been at anchor at a little distance to windward, but when the storm became so furious she left the Hindostan, and did not return till the next morning.

About half-past eight o'clock it was discovered that the rudder was unshipped, and that the tiller was tearing up the gun-deck. The bulk-head of the cuddy, the galleries, and one of the gun-room ports were also stove in, but the carpenter nailed some plank over the port-hole to prevent the entrance of the water.

Finding all the exertions for the preservation of the ship unavailing, the crew attempted to get out the boats; but having only one mast standing, this proved a task of considerable difficulty. At length, by means of the fore-tackle and jigger, they contrived to hoist the pinnace, but she was swamped in getting her over the side, with one man in her, who was fortunately saved. The jolly-boat, that was hanging on the ship's stern, by some means or other broke loose and went adrift, but she was soon swamped. The yawl was then hoisted, but while the men were getting her over the side, she was dashed in two by a heavy sea, the fore part remaining suspended by the fore-yard tackle on the starboard side of the fore-castle.

The officers then directed two rafts to be constructed of the spars and booms, in the hope of being able to save some of their lives upon them. They placed the spars across the ship, and lashed them together as well as they were able, and placed the long-boat in such a situation as they thought would be most likely for her to be washed overboard with the rafts. The captain, officers, and men then got upon the rafts, sitting as close as possible to each other, and holding fast by the lashings; while others in the long-boat waited the arrival of some furious wave to launch them overboard. Having waited some time in this situation, several got off again; among these were the captain and the officers, excepting Mr. Hackett and Mr. Hammond, two young midshipmen, and Mr. Kent the captain's clerk. The two former had fastened themselves together on the raft, and held by a piece of the lashing. At length came the fatal wave, which washed the rafts overboard, together with about fifty or sixty of the crew. The long-boat was partly washed overboard at the same time, and hung upon the wreck.

Those who imagined they were seeking the means of safety now found they had only involved themselves in greater danger. The raft, when swept from the deck, rushed into the sea in a slanting direction, and one end of it sunk to a considerable depth.

Of those who had placed themselves on this part, some were overwhelmed for a time, others washed entirely away, and others dreadfully hurt by the spars and booms which beat against each other. The raft, too, became so entangled in the wreck of the main-mast as to preclude every hope of its being drifted to the shore. It was exposed to all the fury of the tempest, and the unhappy men who clung to it had no other resource than to abandon that on which a little before, they had placed their greatest reliance. They therefore sought to recover the wreck; the efforts of some were successful, but the strength of others was, by this time entirely exhausted.

The two young midshipmen, with Mr. Kent, and about sixteen of the crew, among whom was the captain's cook, were lost on this occasion; the others, by clinging to the spars, and swimming as well as they were able, regained the ship. John Newman, a quarter-master, and another, after remaining two hours on a part of the raft, were at last saved.

About half-past eleven o'clock the ship was under water,

excepting a small part of one side of the fore-castle. The captain, officers, and men were then obliged to repair to the fore-top, and into the fore-rigging, it being the only refuge they had left, as the whole of the fore-castle was at times under water; the waves frequently rising as high as two or three rattlings of the fore-rigging.

Meanwhile, the ship was continually striking on the sand, with such violence that the stumps of the main and mizen masts were frequently raised ten or fifteen feet from their steps; and what appears almost incredible is, that during the night she actually hove the stump of the mizen-mast completely overboard.

The fore-top-sail yard hanging down before the fore-sail, the captain and some others got upon it, to be a little screened from the severity of the weather; others hauled the main-top mast-staysail, which hung loose abaft the fore-mast, round the fore-shrouds, to shelter themselves as much as possible, expecting every moment that the fore-mast would go over.

In this critical situation they remained five or six hours, suffering the greatest hardships from the violence of the sea, and the inclemency of the weather, even the hair of their heads being clotted with icicles, when at length a boat, with lug-sails, came off from Margate to their assistance.

The flashes of the guns, fired on the evening, on which the Hindostan struck, had been observed on the shore to continue at uncertain intervals till ten o'clock. The supposition among the mariners at Margate was, that the Hindostan had stood in need of assistance from the Indian yacht, which was in attendance, and from her leaving off firing, that it had been afforded.

From the state of the wind and sea, it was impossible for any boats to put off from that harbour till twelve o'clock, when the Lord Nelson, manned with sixteen brave fellows, among whom was one of her owners, John Brothers, by whose solicitation principally they were induced to go, put off from the pier, at the hazard of their lives and the risk of their boat. They reached the ship soon after two in the morning, little expecting to find her in the distressing and deplorable situation which they then beheld, with only one mast standing, the greatest part of her hulk under water, and unaccompanied by the yacht which had attended her before dark.

They had hitherto supposed that the sloop had preserved the crew; but what were the feelings of these brave men, when, upon a nearer approach, they beheld the bows of the ship, and what rigging remained blackened with the bodies of the distressed sufferers; and when they came within hail, the cries of the unfortunate beings caused tears to bedew those faces which are not used to turn pale at the approach of death in the most terrific forms. It was about four o'clock before the boat could come near enough for the pilot, officers, and men to get on board, a few at a time: some catching hold of her shrouds as she approached, and others jumping into her from the fore-castle and cat-head. By these means about ninety of the ship's company got safely on board of the boat.

Some of the crew happening to mention that the ship's anchor had been cut away from the bows, the master of the boat was afraid to stay any longer near the wreck; he therefore hauled off to his anchor, where he lay till daylight, leaving on board the wreck about thirteen men, among whom was Mr. Turner, the second mate.

During the night, the company's yacht had picked up the Hindostan's jolly-boat, and approaching the wreck about half-past seven on Wednesday morning, she despatched the boat to the relief of those who had been left behind.

After taking three turns of these men to the Margate vessel, the remainder, being about nine or ten, with Mr. Turner, the second mate, were safely conveyed to the yacht.

Before their departure, the baker was found frozen to death in the fore-rigging, and the third officer's servant lifeless on the fore-castle. Many, through the severity of the weather, had their limbs frozen, and some were even deprived of their speech.

Mr. Turner was the last person that quitted the wreck. It was then about nine o'clock, and nearly low water. The water had left the upper deck, and the ship was severed into three

pieces; one parting being even with the mainmast, and the other behind the foremast.

The Margate boat then set sail for Whitstable, where she safely landed all the officers and men she had on board. The yacht proceeded with Mr. Turner, and the remainder of the crew to London.

Thus, out of 143 persons, on board at the time of the fatal accident, 129 were saved; the sufferers, therefore, were 14, most of whom were swept from the raft before the arrival of the boat. The captain, officers, and crew lost everything they had on board, as well as the passengers, who were waiting at Deal to join the ship; some of them were females, and were thus fortunately exempted from the dangers and hardships they would otherwise have had to encounter.

Among those who were missing was Mr. Clarke, a cadet and passenger for Madras, who was at first supposed to have perished when the raft was washed overboard. If this were the case, he must afterwards have regained the ship, for, on Sunday, the 22nd, his body was drawn up out of the hold by some boat-men of Whitstable, who were endeavouring to save what they could from the wreck. He was carried to Margate, and interred at that place by his brother.

The East India Company, with that liberality which it has been invariably distinguished, rewarded, with a present of five hundred guineas, the exertions of the brave men whose intrepidity preserved the lives of such a number of citizens to the community, to their families, and friends.

The value of the cargo of the Hindostan was estimated at seventy thousand pounds. She had on board about forty-five thousand ounces of silver bullion, being private property, on freight, and was completely stored for sea.

Soon after the wreck was abandoned, it went to pieces, but through the perseverance and indefatigable labours of the sailors from Margate and the neighbouring ports, a considerable part of the lading was recovered from the bottom of the deep, and, among the rest, about £11,900 worth of dollars, which were safely lodged in the hands of Messrs. Cobb, of Margate.

In this distressing narrative we are aroused from our feelings of sympathy for the unfortunate sufferers by admiration of the noble and daring conduct of their preservers; men who, although accustomed from their birth to know and calculate the danger of venturing in a slight vessel, upon the irritated bosom of this all-powerful element, yet dared its power and chanced eternity, every other feeling becoming absorbed in that of sympathy for their fellow-creatures in distress. It is by generous and noble acts like this that human nature is elevated, and glory and honour has been, in every portion of the globe, shed around the name of the British sailor.

DISCOVERY OF A YOUNG WOMAN SERVING AS A SAILOR ON BOARD THE ROBERT SMALL, EAST INDIAN.

EXTRACT of a letter from an officer of the Robert Small, dated in that ship, off the Cape of Good Hope, the 20th of October, 1839.

"A very singular case has been discovered on board our ship. We have detected a young lady in the person of a sailor who has done duty with our crew from the time we left the Thames until it was found that she belonged to the fair sex."

"Her name is Mary Ann Arnold. She is the daughter of the late Lieutenant Arnold, of the Royal Navy, who served in that capacity on board the Ganges and Prince Regent men-of-war. Being a man of dissolute habits, he lost his commission in consequence, after which he resided with his wife at Sheerness, where, by continuing his habits of dissipation, he and his family were reduced to great distress. By the intercession of some friends, Mr. Arnold was admitted a pensioner in Greenwich Hospital, in which asylum he died recently. During the latter interval, and after her husband's death, Mrs. Arnold lived at Sheerness, supporting herself and her children by manual labour until the summer of 1835, when, after great exertion in the harvest field, she was attacked by bilious fever and died, leaving her children totally unprovided for. Mrs. Arnold's furniture was sold to pay the expenses of her funeral, and some

charitable neighbours took the orphans into their house and supported them for a time.

"Mary Ann, the subject of the present statement, was ten years old when her mother died. Partly by labouring in the fields, and partly by going on errands, she at first supported herself, and contributed to the sustenance of her little sister, who was only eight months old when her mother died. Mary Ann next obtained permanent employment in a rope-factory at Sheerness, where she earned two shillings and sixpence a week. Going frequently in boats, and amongst the shipping, she found that boys of her age, who went to sea, earned more money, were better fed, 'thought more of,' and in every way in a superior condition to her; and upon this Mary Ann determined to renounce the petticoats, and to become a sailor. Borrowing an old jacket, trowsers, and shirt from a boy of her acquaintance, to whom she said she was going to have a lark in them, she took leave of the rope-factory and the owner of the clothes, without the ceremony of a farewell, and succeeded, to her great joy, in getting employment as a cabin-boy in the *Williams*, a Sunderland collier, then lying at Sheerness. Mary Ann was kindly treated, and she continued to do the miscellaneous hard work of a collier's cabin-boy, abow and abaft for two years and two months, to the satisfaction of six captains, who successively commanded the *Williams* during that period. A seventh captain came, and this time man and boy did not like each other, so Mary Ann for ever abandoned the coal-marine and its black-moor service, and on the 22nd of October, 1838, she entered as cabin-boy at Shields on board the brig *Anne*, bound for London and Quebec. She made several voyages in this vessel. Unfortunately, the *Anne* was wrecked off Blakeney, in the last equinoctial gales; but the captain and crew had the luck to escape, after enduring great hardships. Returning to Shields, Miss Arnold entered again as a cabin-boy in the *Choice*, bound for London, with stores for the Robert Small, East Indiaman, in which ship she next succeeded in getting an engagement as a sailor-boy the day before she sailed from London.

"She has well done her work as a strong, active boy, in this ship. I have seen Miss Arnold amongst the first aloft to reef the mizen top-gallant sail, during a heavy gale, in the Bay of Biscay. When we crossed the equator, she underwent the ceremony of tarring and shaving in its roughest form. On the 20th of September last, some of the crew expressed suspicions to Captain Scott that the boy Arnold was a girl.

"The captain upon this ordered the surgeon to examine the youngster. The surgeon did so, and declared that he was a girl. Miss Arnold then gave the foregoing history of herself. The captain, and all the passengers and crew, praised and pitied her. She was at once prevailed upon to abdicate the sailor's jacket and trowsers, and resume the clothes proper to her sex. She now appears a pretty bashful girl of fifteen years of age. The lady passengers have given her lots of presents. Her hair is already getting long, and I suppose she will soon think of ringlets. Captain Scott behaves in the kindest manner to her, and he has promised that she shall receive her pay just the same as if she were to continue to do a young mariner's duty during the whole passage out and home. Miss Arnold is, though rather bashful, considering the short time she has had to learn ladies' ways, like other heroes and heroines, capable of being drawn out. I frequently see her surrounded by applauding listeners, while she pitches a long yarn about 'the dangers of the sea.'

"Our heroine has two brothers, older than herself; one is boatswain of the Royal *Adelaide*, the other is carpenter on board the *Britannia*, stationed at Portsmouth. The latter, she says, knew that she had turned sailor, and he approved of the metamorphosis, when he saw her in the trust and occupation of cabin-boy on board the *Williams*."

DISCOVERY OF ICELAND, A.D. 900.

The following account of the discovery of Iceland is taken from the "Iceland Chronicles," as quoted by Dithmar Blefkens, in the description of his voyage in 1563.

"In the year of Christ 900, in the time of Alebrand, Bishop of Bremen, certain of the nobility of East Friesland, and of the

country of Bremen, desirous to discover strange countries towards the north, set sail from the Weser, and passing beyond the Orcaades, found this island almost in the skirts of Europe, yet habitable though full of snow, which they called Iceland, from the coldness and roughness thereof; and when they had sailed farther towards the north, about two hundred leagues, they found another island, which by contraries they called Greenland. Endeavouring to sail farther towards the north, through the frozen or congealed sea, being long hindered by the ice; at length, with great labour, getting out, they fell into whirlpools of the sea and thick darkness.

"In these whirlpools and darkness this fleet, one ship only excepted, perished. They were preserved, after long labours and perils, sailing through the Tartarian sea, came into a very hot country, and entering into a large bay, they went on shore upon the next land. And when the inhabitants had hid themselves in secret places, by reason of the great heat and scorching of the sun, they saw gold and other precious things set here and there without a guard. And when they had carried away as much as they would, and hastened to the ship they saw some persons pursue them with dogs of strange bigness; and one who was hindered, and laden with a prey that he could not escape, was torn in pieces by the dogs. The rest, after long sailing, shunning these whirlpools, arrived in Muscovy, thence by the Baltic sea returning into Bremen, they brought back these tidings to Alebrand, the bishop, with part of the prey."

RESCUE OF A BRIG AND THIRTEEN MEN FROM SHIPWRECK.

GALLANT CONDUCT OF THE COAST GUARD AT ST. ANDREWS.

WE have had several opportunities of remarking upon the prompt and successful efforts of Lieutenant Cox and his Coast Guard in rescuing vessels and men from death and destruction, or in assisting, as on a recent mournful occasion, to secure property and assist sufferers when a shipwreck has actually taken place; but on no occasion have the intrepidity and judicious conduct of this humane and highly meritorious officer been more signally and happily evinced than on Friday evening last. For many days a dreadful sea has been breaking upon our rocky and unapproachable coast, and even when the wind had, on the night of Thursday, shifted to the south-west, the rolling of the sea from the east was undiminished. Six vessels which were labouring all day in the bay, and now and then trying to take the harbour, were deterred by the heavy swell which rolled in the fairway from making the attempt. It was indeed, about one o'clock, a most magnificent scene, and witnessed by hundreds of spectators, the vessels lying-to, or slowly tacking, presenting their broadsides to the unbroken swell, and sinking alternatively so deep as to render their hulls altogether invisible, and then coming slowly and majestically into view, and tilting lightly aloft, as if in danger of being projected into the air—very much after the fashion of the sea fowl which rode the waves in miniature fashion at no great distance. At this period, and when the shore was one mass of fermenting turbulence, the life-boat was seen making its way most majestically through the ground swell, "taking the ruffian billows by the tops," and boldly bearding the overtopping and all but overwhelming surge, it was the undaunted lieutenant and his crew, with the addition of a few strong and fearless fishermen, resolved to save from a watery grave or themselves to perish in the noble attempt. A brig had been observed for a considerable time in the neighbourhood of the fatal Broach Bank, near the mouth of the Tay, manifestly in the greatest danger of striking, and consequently, with such a sea on, of going immediately to pieces, with the loss of all on board. Captain Cox saw and at once estimated the danger—knowing that, if the wind should shift (as, from the run of the waves, it was likely to do) towards the east, no power on earth would prevent the most fatal consequences. About four o'clock he and his brave crew were seen in the bay nearing the poor vessel, which, on account of the ebb-tide, was now every instant in danger of striking the bottom. Their approach, however, was not perceived by the captain or crew till they were close upon them, and the effect which the discovery had upon all on board

may be more correctly imagined than can be expressed. Life was now, in all human probability, secured, and this very feeling gave energy and effect to the efforts which followed to save property likewise. With great care, and no little risk, the ship was at last conducted into the pool, or deep water, and the life-boat lay alongside of her till the following morning. The vessel proved to be the *Isabella* and *Ann*, of Aberdeen, James Hutchinson master, with a cargo of coals from Shields to Dundee. She was quite new, of 227 tons register, and she was built for the West India trade. The crew amounted to twelve, exclusive of the son of one of the owners, who was on board as a passenger.

SAILOR BOY.

In a great storm at sea, when the ship's crew were all at prayers, a boy burst into a violent fit of laughter; being reproved for his ill-timed mirth, and asked the reason for it, "Why," said he, "I was laughing to think what a hissing the boatswain's red nose will make when it comes into the water."

REMARKABLE PRESERVATION OF JAMES ALMS FROM SHIPWRECK.

SEVERAL vessels having been wrecked on the coast of Comorandel, among the number was the *Namur* of 74 guns, in which Mr. Alms was midshipman, who himself has related the particulars of his wonderful preservation, in the following letter sent to England soon after his escape.

"Syren Frigate, near Madras, Sept. 22 and 23, 1749.

"We were at anchor in the *Namur*, in Fort St. David's Road, Thursday, April 12th, 1749: in the morning it blew fresh, wind at N. E.—at noon we veered away to a cable and a half, on the small bower—from one to four o'clock we were employed in setting up the lower rigging; hard gales and squally, with a very great sea. At six o'clock rode very well; at half an hour after, had four feet water in the hold. Immediately we cut the small bower cable, and stood to sea under our courses; our mate, who cut the cable, was up to his waist in water at the *bits* (a frame composed of two strong pieces of timber, fixed perpendicularly in the fore part of a ship, to fasten her cables to when she rides at anchor). At half past seven we had six feet water in the hold; when we hauled up our courses, and hove overboard most of our upper and all the quarterdeck guns to leeward: by three quarters after eight the water was up to our orlop gratings, and a great quantity between decks, so that the ship was water-logged. We now cut away all the masts, by which the ship was righted, and at the same time manned the pumps, baled, and soon perceived that we gained upon the ship, which put us in great spirits. A little after nine o'clock we sounded, and found ourselves in nine fathom water. The master called out to cut away the sheet anchor, which was done immediately; and we veered away to a little better than a cable—but before she came head to the sea, she parted at the chess-tree; by this time it blew a hurricane.

"You may easier conceive than I can describe, what a dismal, melancholy scene now presented itself.—The shrieking cries, lamentation, raving, despair, of above five hundred poor wretches verging on the brink of eternity! I had the presence of mind, however, to consider, that the God almighty was also God all merciful; with this comfortable reflection, and hope, that I had ever put my whole trust in him, I made a short prayer for his protection, and jumped overboard.

"The water at this time was up to the grating on the poop from whence I leaped.—The first thing I could grasp was a capstan bar, from which, in company with seven more, I got to the davit (a beam of timber, whereby the flukes of the anchor are hoisted to the top of the bow, without injuring the ship's sides as it ascends), but in less than an hour I had the melancholy sight to behold them all washed away, and myself remaining alone upon it, almost spent and worn out with fatigue. I had now been almost two hours in the water, when, to my unspeakable joy, I saw a large raft with many men driving towards me; when it came near I quitted the davit,

and with much difficulty swam to it, and by the assistance of one of our quarter-gunners I got upon it. The raft proved to be the *Namur's* booms: as soon as we were able we lashed the booms closer together, and fastened a plank across, and by this means made it as secure as we could. It was by this time one o'clock in the morning: soon afterwards the seas were so mountainous as to turn our machine upside down, but providentially with the loss of only one man. About four o'clock, a.m. we struck ground with the booms; and, in a short time, all that survived reached the shore. After having returned God thanks for his miraculous goodness towards us, we took each other by the hand, for it was not yet day, and trusting in the Divine Providence for protection, we walked forward to find some place to shelter us from the inclemency of the weather: the spot where we landed afforded nothing but sand. When we had wandered about for a whole hour, but to no manner of purpose, we returned back to the place where we had left the raft, and to our no small uneasiness perceived it gone. Daylight appeared soon afterwards, when we found ourselves on a sandy bank, a little to the southward of Porto Novo (which is on the western shore of the bay of Bengal, where the Dutch have a factory), and as there was a river running between us and the Dutch settlement, we were obliged to ford it; after which we soon arrived at Porto Novo, where we were received with much hospitality. From our first landing to our arrival at Porto Novo, we lost four of our companions; two at the place where we drove ashore, and two in crossing the river.

"After we had sufficiently refreshed ourselves at Porto Novo, the chief there was so obliging as to accommodate me with clothes, a house, and a guide to carry me to Fort St. David, on the west side of the Bay of Bengal, where I arrived about noon the day following, and immediately waited upon the admiral, who received me very kindly indeed; but so excessive was the concern of that great and good man for the loss of so many poor souls, that he could not find utterance for those questions he appeared desirous of asking me, concerning the particulars of our melancholy story. Until I reached Porto Novo, you beheld me shipwrecked, naked, and deprived of all the few valuables I possessed, and also some friends who perished in that abyss from which I was preserved, and yet the very source of my distress proved ultimately, through the blessing of God, the immediate cause of that advancement I had long anxiously expected. I must again repeat it, that the Dutch received, refreshed, and kindly conveyed me to my truly honourable patron, through whose kindness and humanity I am not only well clothed and comforted, but am also made lieutenant of the *Syren*, from which ship I date this letter.

"I am, &c.

"JAMES ALMS."

"P.S. There were only twenty-three of us saved from the wreck; twenty of whom came on shore on the booms."

WILLIAM AND NANCY.

"BILL NEVILLE was brought up in a country village, and loved his wife when only a little girl; and he went to sea, thinking to make his fortune for her sake. Well, he got to be master of a merchantman, and then they married. Who can describe the pleasures of that moment when their hands were spliced at the altar, and he hailed her as his own! But he was obliged to sail again.

"Oh!" said Nancy, 'should you never return?—what shall I do—where end my wretched days?'

"His heart was too full to speak; one hand clasped in hers, the other pointed to the broad expanse where the noon-day sun was shining in meridian splendour." It had a double meaning—Nancy felt it: 'There is a God, trust in him!' 'If not on earth, we meet in heaven!'

"Well, sir, eighteen months rolled away, during which, in due time, Nancy brought into the world a dear pledge of affection—a lovely-boy. But, oh the agony of the mother as every day dragged on without intelligence from William! When she looked at the sweet babe—was it indeed fatherless, and she a widow? You'll excuse my stopping, sir, but indeed I can't help it—I've shed tears over it many a time.

"Well, sir, eighteen months was turned when one morning Nancy arose to pour out her heart before her Maker, and weep over her sleeping child. The sun had just risen above the hills, when a noise in the little garden which fronted the cottage, alarmed her. She opened the casement, and, putting aside the woodbine, beheld—delightful, yet agonising sight—her dear, her long-mourned William, handcuffed between two soldiers, while others, with their side-arms drawn, seemed fearful of losing their prey! His face pale, and his emaciated body worn down with fatigue and sickness, his spirit seemed ready to quit its frail mansion, and was only kept to earth by union with his wife. Nancy forgot all, and clasped him in her arms; but the rattling of the irons pierced her soul. "I do not mean to condemn the policy, sir, but 'tis a cruel practice that of pressing." Ah! I well remember it—though I always served my king, God bless him! yet I have witnessed many an aching heart, and heard many a groan of agony.

"But to proceed: William was pressed: Nancy hastened into the cottage, and, wrapping the sleeping babe in its blanket, she prepared to accompany them. Cannot you picture to yourself the first glance which the wretched parent cast upon his child? Oh, it was a sad sweet joy, that wrung the soul? I shall pass by their meeting, their dear delight, their bitter anguish. If you can feel, it is already engraven on your heart. Suffice it to say, William had been shipwrecked on the African coast, and though he had lost the whole of his property, yet heaven had spared his life, and his the only one. Sickness came on him, and but for the humanity of a poor untutored negro, he might have breathed his last. She was black—she was a negro—but God searches the heart. He had procured, with some difficulty, a passage home; he set out, and walked many a weary mile, led on by love, and cheered by hope, till the roof of his cottage appeared in view. Here he sunk upon his knees, and poured forth his heart in trembling anxiety and fervent petition. A sailor can pray, sir, and it matters not so it be right, whether it is in a matted pew at church, or swinging like a cat at the mast-head. He arose, and with haster steps reached the wicket, when—but I dare not repeat the story—I've told you already he was pressed. Well, he was drafted on board of us, and his dear Nancy permitted to be with him.

"The evening before the action, she was sitting on the carriage of the bow-gun, with her baby cradled in her arms, and William by her side—they were viewing, with admiration and delight the beautiful scenery displayed by the sinking clouds in a thousand fantastic shapes, tinged with liquid gold, streaming from the setting sun, and caressing the little innocent, while all the parent kindled in their hearts.

"But hark! a hoarse voice is heard from the mast-head—all is hushed.

"*"Hullo!"* said the captain.

"*"A sail on the larboard bow, sir,"*

"*"What does she look like?"*

"*"I can but just see her, sir, but she looms large."*

"*"Mr. Banks,"* said the captain, *"take your glass aloft, and see if you can't make out what she is. Call the boatswain—turn the hands up—make sail."*

"In a moment all was bustle; the topmen were in their station, and every man employed; and in a few minutes every stitch of canvass was stretched upon the yards and booms. The officer that was sent aloft reported it to be a ship of the line, which looked like a foreigner.

"Every heart was now elate but Nancy's—it might be an enemy! Oh, that thought was dreadful! and as William conducted her below, the tears chased each other down her pale face, and the heavy sigh burst from her gentle bosom. William mildly reproved her, and again pointing to heaven, flew to his post.

"The stranger had hauled to the wind, fired a gun, and hoisted French colours. Up went ours with three cheers: and there's seldom a moment of greater pride to a British tar than when he displays the ensign of his country in presence of the enemy. Three cheers resounded through the ship, and broadside upon broadside shook her groaning timbers. Where was Nancy? William was first in every danger. Three times we boarded the foe, but were repulsed. Dreadful grew the

scene of blood, and horror through the darkening shades of coming night.

"No one bore the tidings of the fight to Nancy—save one, the poor sailor, whose shattered limb came to suffer amputation, or the wounded wretch to be dressed, at which she assisted with fortitude. Two hours had passed in this awful suspense and heart-rending anxiety, when a deep groan and piercing shriek from the lower-deck, convulsed her frame. She knew the voice, and snatching the infant in her arms, rushed to the spot. Soon she found the object of her search: his manly form mangled and shattered; that face once ruddy with the glow of health, now pale and convulsed; the blood streaming from his side and breast! He saw her too.

"*"Nancy!"* said he, and rising his feeble hand, pointing to heaven, it fell—and William was no more! Sinking on the lifeless body of her husband, Nancy fainted with her dear babe still in her arms! when, oh, mysterious Providence! at that very moment—while senseless and inanimate—at that very moment a ball entered through the vessel's side—it pierced her bosom!

"Need I tell the rest! They were pleasant and lovely in their lives, and in their death they were not divided."

Greenwich Hospital.

PIRACY AND MURDER ON BOARD THE SHIP VITTORIA, MAY, 1830.

A MOST atrocious act of the basest mutiny and murder took place at the above-mentioned period; a time when the world was at peace, and the ocean only ploughed by the keels of friends vying with each other in commerce, and being only honourable rivals in fair trade.

Our merchant vessels do not carry many men, in peace, as they hire labourers when in harbour to do the drudgery, and carry no more to sea than are sufficient to manage the sails and keep a look-out: in truth, they carry much too few, and many losses occur for want of hands, as the splitting of a top sail for want of hands to furl it, costs more than the wages of three men in a six months' voyage. The Vittoria appears to have been very weakly manned, and at Manilla they took on board six Spaniards, we presume, because they were to be had cheap, and Britons were left upon a lee-shore; for it is an undoubted fact, that there are always numbers of English sailors to be had at Manilla, where they congregate on account of the high wages given by the Spaniards to navigate their Acapulco ships, as they well know that Britons are the best and most steady seamen.

Captain Smith cleared out from Manilla to London, and he had not been long at sea ere the Spaniards began to be obstreperous, and refused to perform their duty; they were, however, brought to reason, and by threats of punishment, conducted themselves with assumed forbearance. They had contemplated their murderous intentions from the hour they first went on board, and had secretly provided themselves with stilettoes and short pistols. As to the captain of the vessel and the officers, they had no arms whatever, and only one gun on the quarter-deck for the purpose of making signals; and for that there was no shot, only a few cartridges. They resting in perfect safety when this dreadful conspiracy was going on, and Mr. Andrews, alone, had some suspicion of the Spaniards and their pretended propriety; which was all under the mask of deceit, and they were harbouring the most villanous designs.

In the dead of the night, when all the crew were asleep, except the man at the helm, the Spaniards stole upon deck quietly, and secured the crew as they were asleep, murdering three of them with their long Spanish knives, and wounding several others. They then burst open the captain's cabin-door, and stabbed him in his bed in about thirty places; and to secure their act, they also shot him with their pistols, and threw him on the cabin-floor.

The second mate and the carpenter were killed in their sleep, and thrown overboard in their beds. The chief mate, Mr. Andrews, they put in irons, and a consultation was held what was to be done with him; some were for instantly murdering him; but others knew that they could not navigate the ship without

his assistance, and they therefore, from necessity, released him, and compelled him to enter into all their plans. The steward was also spared: but it was agreed among them, that when they made the coast of California, they should murder Mr. Andrews and the rest of the crew, and then dispose of the vessel as well as they could; for there are Spanish merchants who will purchase any vessel, and encourage piracy on all sides.

They are under no control by the old Spanish government, and are as careless as the Arabs of the desert. This the Spaniards well knew, and thought to make a good bargain; but Mr. Andrews, who had got an inkling of the intentions of the pirates, consulted with the steward, and this they had many opportunities of doing, for the Spaniards got drunk almost every day.

On the eighth day after the murder of Captain Smith, the mate and steward put their plan into execution. They were well aware of their disparity in point of numbers; but it was life against life, and they knew that by remaining quiet, death would be their portion the moment that they came so near to the land that the pirates could carry the ship into a harbour, without the aid of navigation. Mr. Andrews got possession of a hatchet, and the steward of a knife; and the two principal leaders were struck dead by Mr. Andrews, and one of the others by the steward, who had a short struggle with him on deck, but succeeded in stabbing him to the heart, though he was himself desperately wounded: the remainder of the Spaniards were all secured by the crew, who had joined their officers, and the vessel was once more in the possession of her original crew. The mate, Mr. Andrews, made immediately for the French coast, where the mutineers were brought to trial before a French tribunal; and after a patient hearing they were all condemned to die. The sentence was soon put in execution, and they were put in chains and hung on gibbets as a warning to others.

Mr. Andrews made his voyage to London, and arrived in security; but the security was a painful one, when the loss of Captain Smith and the others of the crew was considered.

The Vittoria was insured at the Royal Exchange Office for £6,000, and they made a handsome present to Mr. Andrews, and also to the steward, and all the crew. Mr. Andrews has since been made a captain, and is a very young, but an experienced seaman, who must be a valuable servant to those who employ him. Great part of the ship's cargo belonged to the firm of Thornton and West, and was uninsured, so that they were indebted to the intrepid conduct of Mr. Andrews for the safety of their goods, and rewarded him accordingly.

Captain Smith left a wife and five children, and most of them left families. They had a good round sum of money collected for them, and the sailors who were on board, all got respectable employment on board of ships out of the port of London, and were much respected.

This ought to be a lesson to ship-owners not to send their ships to sea with so few hands; and, above all, not to engage foreigners where Englishmen are to be had, as one Englishman is worth three Spaniards or Portuguese, at any time; he is a better sailor, and more willing and able to work. But for the sake of a saving of some few shillings, they run the risk of losing not only their vessels but their lives. No blame could be attached to Captain Smith, who acted up to his given instructions, and contrary to his own opinions; for he complained to his mate, Mr. Andrews, previous to their leaving Manilla, that he was so restricted by the owners to the sum he was to give for wages, that he could not get Englishmen to enter at so low a rate, and must take Spaniards. The event was lamentable, and cost him his life; and for the saving of a few pounds, the owners were nearly losing the whole of their valuable property.

It may not be amiss to mention here, that a small schooner, commanded by a Mr. Jones, and belonging to Liverpool, went from the port of Manilla at the same time the Vittoria did. She had on board only three Englishmen, the captain, mate, and carpenter, and seven Spaniards. She was bound to Jamaica, and when off the Keys, the Spaniards rose and murdered the three Englishmen. They then shaped a course

for Peru, but were met on their passage by the Dryade, a British frigate, and one of the Spaniards impeached the others. Captain Dale took the schooner into Jamaica, and there the mutineers were tried, and all of them hanged. This is another melancholy instance of trusting to foreigners. These Spaniards, on islands, are much more ferocious than those in Old Spain, where they possess some sense of honour, and may be trusted to a certain extent.

The native of the Spanish West India islands are all of them pirates in boats, and live upon plundering each other, under the pretence of fishing the soil in Drogen, and have arms concealed in their holds. The vessels of the United States have suffered very severely by them, and now go all armed as security, for the Congress do not grant convoys unless they are paid by the merchants.

THE WAVE.

Mr being I take from the fountains that break

In the depths of the ocean sand,

And my form is curl'd through the liquid world, b'neath

To freshen the green dry land;

And the drops I fling from my watery wing,

As it mounts to meet the day,

Are gems from the hair of the sea-girls fair,

That rise on my shining way.

I glide with a smile o'er the coral pile,

By the ocean snake entwined,

And sweep in my track the whale's broad back,

With the scattered foam behind.

Then I sing for hours to leaves and flowers

That never beheld the moon;

But sprinkle their sheen of gold and green,

To thank my lingering tune.

The white cloud on high (the wave of the sky)

I choose for my shadowy bride;

And she comes sometimes from her shoreless climes,

And kisses my conscious tide.

But like all that's fair, in earth or air,

She dissolves in silent pain,

And weeps on my flood her silvery blood,

That gushes in sparkling rain.

FRAGMENT OF A LOG.

ABOUT six o'clock in the evening.—A good smart breeze all standing under the hurricane-house, and enjoying the washing of the spray over the fore part of the ship, when our amusement was interrupted by the cry of "a man overboard!" What an awful change came over our feelings—the poor fellow had been washed off the bowsprit, and came up again astern:—we thought we heard his screams for help through the gushing noise of the water:—we were sailing at the rate of nine knots an hour; the boat, the only one we had, was lashed at the top of the round-house, and would not have lived in such a sea. Three or four fenders were thrown overboard—every effort was used to put the ship aback—but the rate at which we seemed to fly from the struggling man was magical. The passengers who, but the minute before had been all careless gaiety, now, with convulsive features and strained eyes, watched the little diminishing speck which still floated on the large waves that heaved him up and down, now giving him to and now taking him from our sight. The women clambered into dangerous places, which at other times they would have shrunk from with fear, and waved their handkerchiefs to cheer him in his struggle; their eyes were fascinated to that small spot which assured us that a fellow creature was still buffeting in mortal agony for existence; still we sailed from him, and he could only now be seen at prolonged intervals.

"I think he's making for one of the fenders," said a man in the shrouds.

"Then he may be saved!" convulsively inquired one of the ladies.

"I hope so"—"God grant it,"—"God save him," was responded by voices husky with emotion.

"It's of no use," mournfully answered the man; "he's gone."

All eyes were fixed on the spot where he should be seen—but no one could say they saw him. Still all hope was not abandoned—we kept beating about until dark; we must have gone close to the spot at which the poor fellow sunk, for we saw again all the fenders which had been thrown overboard, and from which we had sailed away as we also distanced the poor lost man. All in vain. He was gone. While this was going on upon deck, the black man in the cabin below was calmly laying the tea-things—the click of the cups and saucers made me feel unpleasant.

Eight o'clock.—A dead calm—the storm had received its victim, and was appeased.

All hands—captain, crew, and passengers, gloomy and sad. The poor lost man was the sailor I saw taking his farewell kiss at Liverpool of his wife, to whom he had been married only a fortnight. The mate, on looking up his things to place them under the captain's care, found a sort of log-book which the poor fellow used to keep; money—memoranda—observations—and sums in the rule-of-three, were interspersed with scraps of poetry which he had copied out. The last line he had written was the title of the poem he had intended to copy—it was "The Mariner's Farewell."

SAILOR'S WIFE.

DURING an action of Admiral Rodney with the French, a woman assisted at one of the guns on the main-deck, and being asked by the admiral what she did there, she replied: "An't please your honour, my husband is sent down to the cock-pit wounded, and I am here to supply his place. Do you think your honour, I am afraid of the French?" After the action, Lord Rodney called her aft, told her she had been guilty of a breach of orders, by being on board, but rewarded her with ten guineas for so gallantly supplying the place of her husband.

ANECDOTE OF SIR JOHN MOORE.

DURING the passage of the commanders to Porto Ferrara, in 1724, to assemble the troops, and collect ordnance stores for the projected invasion of Corsica, the captain of the ship one night burst into the cabin where general Dundas, Sir James St. Clair, and Sir John Moore were lying, and exclaimed—"Rise, gentlemen, for the ship is driving on a lee-shore." He then passed into the inner cabin, and repeated the same alarming news to Lord Hood, adding that he feared the ship would soon strike. Moore, from the position of his cot, could see into Lord Hood's cabin, and he observed that his countenance was in no way discomposed. He saw him also carefully draw on one pair of worsted hose over another to protect his thin legs from the cold. This precaution tranquillized Moore, who being aware that a landsman could do nothing to avert the danger, remained in bed, and fell fast asleep. On awaking next morning, he learned that the ship had weathered the lee-shore.

THE DYING TAR.

The battle's o'er, the foe is fled,
The wounded sailor lifts his head,
And asks the chance of war;
"And is the glorious combat won?"
"I go with joy, my work is done!"
Exclaims the dying tar.

"But, brother messmates, ere we part,
Take this dear locket from my heart,

Tell Mary how I fell:

When she with sorrow hears my death,
Oh, say that with my parting breath

I bade my love farewell."

NAPOLEON AND THE SAILOR.

I LOVE contemplating, apart
From all his homicidal story,
The traits that soften to our heart
Napoleon's glory.

'Twas when his banners at Boulogne,
Armed in our island every freeman,
His navy chanced to capture one
Poor British seaman.

They suffer'd him, I know not how,
Unprison'd on the shore to roam;
And aye was bent his youthful brow
On Scotland's home.

His eye, methinks, pursued the flight
Of birds of Britain half way over,
With envy! they could reach the white,
Dear cliffs of Dover.

A stormy midnight watch he thought
Than this sojourn would have been dearer,
If but the storm his vessel brought
To England nearer.

At last when care had banished sleep,
He saw, one morning—dreaming—doting
An empty hog'shead on the deep
Come shoreward floating.

He hid it in a cove, and wrought
The live-long day, laborious lurking,
Until he launched a tiny boat
By mighty working.

Heaven help us! 'twas a thing beyond
Description; such a wretched wherry
Perhaps ne'er ventured on a pond,
Or cross'd a ferry.

For ploughing in the salt-sea field,
'Twould make the very boldest shudder;
Untarr'd, uncompass'd, and unkeel'd—
No sail! no rudder!

From neighbouring woods he interlaced
His sorry skiff with wattled willows,
And, thus equip'd he would have passed
The foaming billows.

The French guard caught him on a beach, dashed
His little cargo sorely jeering;
Till tidings of him came to reach
Napoleon's hearing.

With folded arms Napoleon stood,
Serene alike in peace or danger;
And in his wonted attitude
Addressed the stranger:—

"Rash youth! that would'st yon channel pass,
With twigs and stones so rudely fashioned,
Thy heart with some sweet English lass
Must be impassioned."

"I have no sweetheart," said the lad,
"But absent years from one another,
Great was the longing that I had
To see my mother."

"And so thou shalt," Napoleon said,
"You've both my favour justly won;
A noble mother must have bred
So brave a son."

He gave the tar a piece of gold;
And with a flag of truce commanded
He should be shipped to England old,
And safely landed.

Our sailor oft could scant'ly shift
To find a dinner plain and hearty;
But never changed the coin and gift
Of Bonaparte.

THOMAS CAMPBELL.

LIFE AND ADVENTURES OF CAPTAIN DAMPIER.

This extraordinary man, whose whole life seems almost to have been spent in distant wanderings and adventures, was descended from a family of wealth and respectability, settled at East Coker, near Yeovil, in the county of Somersetshire, where his father was a farmer. He was born in the year 1652, and received a common day-school education; but his father dying when he was young, and his thoughts and inclinations excited probably by the exploits of the renowned Admiral Blake, he gave a decided preference to a maritime life, and went to sea as an apprentice to the master of a Weymouth ship. His first voyage was to France, in 1669, and his second to Newfoundland; but, disliking the rigour of that comfortless climate, he returned to his friends.

He soon became weary of home, and repairing to London, he embarked as foremast man on board the *John and Martha*, an Indiaman, in which he sailed direct for Java; and he greatly improved his nautical knowledge during the voyage. He arrived in England after an absence of little more than a year, and a short time previous to the attack made on the States' Smyrna fleet by Sir Robert Holmes, in 1672, which occasioned the second Dutch war; in consequence of which Dampier spent the remainder of that year with his brother George, who it seems had always treated him with affectionate kindness. In the ensuing year, however, he became tired of his indolence and entered the navy, although his ability as a mariner only procured him a berth before the mast.

The ship into which Dampier entered was the *Royal Prince*,

LIFE AND ADVENTURES OF CAPTAIN WILLIAM DAMPIER.

a first-rate, of the burthen of fourteen hundred tons, carrying one hundred pieces of brass cannon, a compliment of seven hundred and fifty men, and bearing the flag of the gallant Sir Edward Spragge. He fought in two engagements against the fleet of De Ruyter and Van Tromp; but being taken suddenly ill on the 11th of August, he was put on board an hospital-ship, from whose decks he witnessed the battle, which destroyed the *Royal Prince* and proved fatal to his gallant commander. His strength not quickly returning, he passed a few months quietly ashore with his brother; and on recovering went out to Jamaica, where he accepted an offer made to him by a townsman, Col. Hellier, of East Coker, to assist in the management of one of his estates.

This employment, though sufficiently lucrative, was too fixed

and uniform for Dampier's roving genius; and finding himself clearly out of his element, he undertook some coasting trips round the Island, with a trader named Fishhook, in whose service he attentively studied, and made himself acquainted with all the ports and bays of Jamaica, their manufactures, and also the benefit of the land and sea winds.

He grew tired of this coasting navigation in about six months, and, therefore, shipped himself with a Captain Hudson, on board a ketch, bound to Campeachy, to load logwood, and sailed from Port Royal about the beginning of August, 1675. Having a fair wind they arrived at Triste, in the lagoon of Terminos, in a fortnight; when, having completed her lading, the ketch sailed for Jamaica: and, after escaping from the close pursuit of two Spanish cruisers, who would have made them slaves, striking

on the rocks off the Alacranes, encountering several severe gales by which she well-nigh foundered, and towards the end of the voyage nearly starving for want of provisions, she arrived at Negril, the westernmost point of Jamaica, after a passage of thirteen weeks. "And so," says Dampier, "ended this troublesome voyage;" in which they had obtained as much experience as if they had been sent out on a voyage of survey.

Dampier had seen among the logwood cutters at Campeachy Bay, a scene of independence—an adventurous mode of life, and a field for enterprise that perfectly suited his romantic disposition; no sooner, therefore, was he paid off from the unlucky ketch, than he provided himself with axes, knives, saws, and wedges, also a tent, a gun, and some ammunition, and made the best of his way to Triste Island, where he arrived in the spring

of 1676, and settled among nearly two hundred and seventy logwood cutters, chiefly English, and mostly reduced buccaneers and privateer's men, who were living at large, in a sort of republic, with no laws but their own will or caprice.

The English were at first unacquainted with the value of logwood, till the importance of this commodity was detected by a Captain James, who brought home to England a ship that he had taken, and sold the wood at a high price; though before he had valued it so little, that he used it for fire-wood during the passage. On his return to the West Indies, he sought out the place where it grew; the commerce rapidly increased, and logwood soon became worth £90, £100, or £110 per ton. At first the English run to parts of the coast where the Spaniards had cut and piled the wood for embarking, and there helped them-

selves with all the free license of buccaneers, till the number of troops sent to guard the posts rendered such descents hazardous. But by this time they knew the trees in their growing state, and searched the shores of the main till they discovered large groves of it—first at Cape Catoche, where they commenced cutting, and, after nearly clearing the grounds of that coast, in the creeks and mangrove lands around the great lagoon of Terminos, in the south-east quarter of the bay of Campeachy.

The manner of living of the logwood cutters, which was certainly not without its hardships, is admirably described by Dampier. Their abodes were log-huts, covered with palmeto leaves to defend them from the violent and soaking rains: they were erected close by creeks or inlets, for the benefit of the sea-breezes during the oppressive heats, and as near to the logwood

groves as possible, that they might not have to carry the heavy material far. As they exhausted the trees, they removed their huts to another grove. Their bedding was raised three feet and a half above the ground, on a wooden frame; four stakes or poles, rising above this frame, supported a light tent, "out of which there is no sleeping for mosquitoes." Another frame covered with earth served as a cooking-place, and for stools and chairs they used logs. During the wet season, the land where the logwood grows is so overflowed that they step from their beds into the water, perhaps two feet deep, and continue standing in the wet all day, till they go to bed again; but nevertheless account it the best season in the year for doing a good day's labour in.

For food they hunted the wild cattle, with which, and with

alligators, the savannahs of the country swarmed. "When they have killed a beef," says Dampier, "they cut it into four quarters, and, taking out the bones, each man makes a hole in the middle of his quarter, just big enough for his head to go through, then puts it on like a frock and trudges home; and if he chances to tire, he cuts off some of it and flings it away."

For flour, bread, and most other luxuries, they depended on the ships that visited them to purchase their logwood. The arrival of one of these vessels was a signal for the commencement of a scene of almost general riot and debauchery; and in a few days these uneducated, imprudent men would spend the earnings of months of hard labour in a dreadful and dangerous climate, where, moreover, they were constantly liable to be surprised by the Spaniards, who, with some reason, denied the legality of their settlement, and who treated them as pirates, and made slaves of those they took.

Yet Dampier remained among such dissolute associates for nearly three years, and escaped the moral contamination of their vices and excesses; he never relaxed into the improvidence around him, and, instead of expending his money in riot and ruin, he saved it for the better purpose of investment. In fact, the remuneration so equitably given to the really industrious, must have been the main inducement to bear with so hard a life, in so wild a place.

Dampier kept to his work of cutting logwood till he was suddenly incapacitated by "a hard, red, and angry swelling" in his right leg; this proved to be occasioned by the *jiggers*, or *echeques*—a sort of worm, or larva, giving the most severe pain, and frequently leading to amputation of the affected part, unless most carefully drawn out. After attempting to doctor himself, the unpleasant intruders were extracted by a negro, who received in compensation a white cock. The cure was effected by a powder rendered more efficacious by means of a supposed incantation.

Scarcely was he recovered from this mischance, when one of the most violent storms that ever was known in those parts reduced the whole community to great inconvenience, inasmuch that at last the forlorn and flooded woodmen were compelled to quit the place in their canoes, as the highest land near them was almost three feet under water; and of the four ships anchored at Triste, one drove out and floundered, another was forced into the woods, and one was thrown on a bank. Most of the provisions being spoiled, he was thus unexpectedly deprived of the means of continuing his labour; and not having a stock, like the old standards, with which to re-establish himself, Dampier was compelled to become a rover for nearly a year, cruising about the bay and its shores to seek a subsistence, in company with some small privateers, visiting all the rivers from Terminos to Alvarado, and making descents among the villages. At the latter place, with two barks, having each thirty men and four guns, they took the fort, and had ten or eleven killed or desperately wounded in the attack; but they were obliged to abandon it on the second day, by the unexpected appearance of seven sail of Spanish armadillos, with fourteen guns and between 400 and 500 men. This was a most unwelcome sight, for, though they obtained no solid booty, they had hampered their vessels with bullocks, poultry, maize, and salt-fish. Not a moment was to be lost—overboard went the lumber—sail was instantly made—and the buccaniers glided over the bar before the enemy, who could scarcely stem the current, had reached it. Having gained the open waters, they had now to engage with their formidable opponents; and, notwithstanding the odds of strength against them, ultimately made their escape.

The effects of the hurricane, which compelled the "brethren" to exchange the axe for the sword, having abated, the industrious occupation of woodmen was resumed. After labouring for some months, and becoming intimately acquainted with the nature of the trade, Dampier determined to return to England, for the purpose of obtaining everything requisite to carry on the business with the capital he had saved, and which seems to have been sufficient to start him advantageously.

With these intentions he quitted the bay of Campeachy, touched at Jamaica, and landed at London in the autumn of 1678.

He invested the money he had made as a logwood cutter in

English merchandise, and having completed his arrangements by the beginning of 1679, he again started as a passenger on board the Loyal Merchant, for the West Indies, in order to rejoin his companions in the woods of Yucatan. His venture of English merchandise, he disposed of at Port Royal, in order to stock himself with commodities for his proposed trade; but some maturer considerations induced him to relinquish his design of returning to the shores of Campeachy, and he remained the rest of the year at Jamaica.

While at Jamaica he exhibited a pleasing proof that a wandering wild life had not extinguished the local attachment, which is strikingly characteristic of a man of true feelings. Happening to hear that a person residing on the island had a small estate in Dorsetshire, near his native county of Somerset, and prudently assuring himself of the validity of the title, he purchased it, and forwarded the writings to England.

This business settled, our navigator left Jamaica for the Mosquito shore; but, the vessel having put into Negril Bay, found there Coxon, Sharp, Sawkins, and other privateers, mustered in great force. Seduced by the plausible and splendid prospects held out by the adventurers, every man on board the ship, except the master and Dampier, went and joined them; and, being thus left alone, he was persuaded to go with them too.

It must excite surprise to see how readily a man of a decent character, and of an enlightened mind, joins an association which, we fear, after all, was piratical. A short account of those bodies, and of the notions of right and wrong prevalent at the time, will somewhat diminish this astonishment, and is necessary to make out Dampier's curious history.

The Spaniards, who were the discoverers of America and the first European settlers in the West Indies, were actuated by a most jealous and illiberal spirit. Spain, indeed, considered the New World as treasure-trove, of which she was lawfully and exclusively the mistress. A bull of the Roman Church, granted by Pope Alexander VI., gave what was then esteemed as a sacred recognition of these exclusive rights, and the government of Spain determined that none but Spaniards should trade with, or land upon, the American continent and islands. Not all the power of Spain, comparatively great as it then was, nor all the cruelty exercised in support of her extravagant pretensions, could deter the enterprising mariners of France and England from attempting to share in the greatly-exaggerated wealth of the New World. To repress these intruders, the Spaniards employed armed ships, or *guarda-costas*, the commanders of which were instructed to take no prisoners! On the other hand, the English and French, to whom were soon joined many Dutchmen and some Portuguese, closely combined among themselves, treated every Spanish ship as an enemy, made descents on the coasts, ravaging the towns and settlements of the Spaniards, and repaid cruelty with cruelty. A continual warfare was thus established between Europeans in the West Indies, entirely independent of the governments of their respective countries.

When the court of Spain made formal complaints to the different governments of Europe, of which the adventurers in the West Indies were the natural subjects, the general answer received was, "that the men, against whom they complained, acted entirely on their own authority and responsibility, not as the subjects of any prince; and that the king of Spain was at liberty to proceed against them according to his pleasure." Far different, however, was the reply of our high-minded Queen Elizabeth. She said boldly, "that the Spaniards had drawn these inconveniences upon themselves by their severe and unjust dealings in their American commerce; for she did not understand why either her subjects, or those of any other European prince, should be debarred from traffic in the West Indies. That as she did not acknowledge the Spaniards to have any title by the donation of the Bishop of Rome, so she knew no right they had to any places other than those they were in actual possession of; for, that their having touched only here and there upon a coast, and given names to a few rivers or capes, were such insignificant things as could no ways entitle to a proprietary, further than in the parts where they actually settled and continued to inhabit."

Shortly after Christmas, 1679, the buccaneers, commanded by Captains Sawkins, Coxon, and Sharp, and accompanied by Dampier, Wafer, and several other men of decent conduct and honourable sentiments on all subjects unconnected "with the service," set off for the Spanish main.

The buccaneer's maxim of "No peace beyond the line," being duly acknowledged, their first expedition was against Porto Bello, a place which had scarcely revived from its sack by Sir Henry Morgan. Their design being successfully accomplished, they shared to the amount of one hundred and sixty pieces of eight a-man, which inspired them to the bold measure of crossing the Isthmus of Darien, to gather wealth in the South Seas.

On the 3rd of April, 1680, the buccaneers assembled to the amount of seven sail, at the Golden Island, an anchorage to the east of the Samballas group; and two days afterwards, having taken proper precautions for guarding the ships in the interim, they landed three hundred and thirty-one men, all or most of them armed with a fusil, a pistol, and hanger; and each man was provided with four cakes of bread, called dough-boys, besides implements and toys wherewith to gratify the natives, through whose country they had to pass. They were accompanied by a party of those Dariens who were the hereditary foes of the Spaniards; and some of the faithful, active, and intelligent Americans called Moskito Indians. On commencing their journey they were marshalled into divisions, with distinguishing flags, under their several commanders, Bartholomew Sharp taking the lead. After a march of nine days they arrived at the town of Santa Maria, which they easily took; but, as the Spaniards had received notice of their intended visit in time to send off most of their valuables, little booty or provisions were taken. Twenty-six Spaniards were killed and sixteen wounded in the assault, and many others were deliberately butchered in the woods, subsequent to the surrender, by the Indians.

After holding Santa Maria for three days, the buccaneers and their allies embarked in canoes and boats for the South Sea; having previously, in their summary way, deposed Sharp from the chief command, and elected Coxon in his stead.

On the 23rd of April they arrived in sight of the city of Panama, which they found too well prepared for them to attack. No sooner were they descried from the shore than three armed Spanish ships made towards them, two of which, after a fierce and sanguinary conflict, were carried by boarding, and the third saved herself by flight. The Spanish commander, with many of his people, fell; while of the buccaneers eighteen were killed and above thirty wounded, and among the latter was Captain Harris, mortally. The valour and skill of Capt. Sawkins contributed mainly to this victory; wherefore, on Coxon's returning to the North Sea in a "huff," he was unanimously chosen commander. He enjoyed this dignity but a few days, for, leading his men to the assault of a breast-work at Pueblo Nuevo, he was slain on the 23rd of May; and on his fall, Sharp, the next in command, was so disheartened that he ordered a retreat.

The death of Sawkins proved a serious blow to the buccaneers, it being followed by fresh discontents and defections, on account of the dislike in which Sharp was held by the followers of his predecessor. Those who remained with the re-elected chief now changed their course for the southward, touching at several islands, taking the coast town of Ylo, and burning the city of La Serena on the route. On Christmas-day they reached the isle of Juan Fernandez, where Bartholomew Sharp, who had always been unpopular with the ablest men, and had been chosen by but a small majority, was again formally deposed, and Captain Watling elected in his stead. Under his command an attempt was made to introduce regularity, and on the 9th of January, 1681, the Sabbath was observed for the first time since the death of Sawkins; "who once," says Ringrove, "threw the dice overboard, finding them in use on the said day."

On January 12th they were suddenly alarmed by the appearance of three Spanish men-of-war, and embarked in such a hurry, as to leave William, one of the Moskito Indians behind. Neither party being particularly anxious to

fight, the ships separated, and the rovers resumed their predatory attacks along the coast. At length they made an attempt upon the town of Arica, but were repulsed with a loss in killed and prisoners of twenty-eight men, and eighteen wounded. Among the slain were Captain Watling, the boatswain, both quarter-masters, and some of the best hands.

Disheartened by this severe miscarriage, the band of marauders retired to the Isle Plata, where dissensions now broke out amongst them. One party was for re-electing Capt. Sharp, who had ingratiated himself with the meaner sort, as commander-in-chief, whilst another, thinking him deficient in courage and enterprise, would not sail under his orders. Dampier, Wafer, and some of the best men were of the party adverse to Sharp, whose faction, being the most numerous, kept the ship and remained in the South Sea; and on the 17th of April, 1681, Dampier and his hardy companions quitted the ship with the launch and a couple of canoes, one of which had been sawn in half, and was now patched up again for the occasion, and made for the Isthmus of Darien, which they were determined to recross. The party consisted of forty-four white men, two Moskito Indians, and a Spanish Indian, all well armed; and they had five black slaves taken in the South Seas, who fell to their share. They had about twenty-six pounds weight of chocolate rubbed up with sugar, and as much flour as they could conveniently stow away. All things being prepared, in order to deter the weak or inactive from engaging in so perilous an enterprise, they now entered into a mutual compact, that, if any man faltered on the journey he should be shot by his comrades, as but one man falling into the hands of the enraged enemy must betray the others to certain destruction.

As they approached the Isthmus, the buccaneers discovered that the Spaniards were on the look-out for them, having three men-of-war cruising off the coast, and some hundreds of soldiers posted at different stations along shore. Though several times in extreme danger, they continued to elude their implacable foes, and land in safety at the mouth of a river in the bay of St. Michael, where, taking out all their effects, they sunk the boats, that no traces might be seen of them. On the 1st of May they began their march over a country difficult from pathless forests, torrents, rivers, and rude mountains, and directed themselves to the north-east by pocket compasses. On the evening of the second day, when they had already become fatigued and dispirited, they fell in with an Indian, who, for the reward of a hatchet, conducted them to a native capable of putting them into the proper course. When, however, they had arrived at his dwelling, and explained their wishes, he behaved with a sullenness which the impatient buccaneers could scarcely brook, though this was neither a time nor a place to be angry with the Indians. The moment was critical. They used every endeavour, and had recourse to every means which they thought likely to propitiate his good-will, but he continued obdurate, and replied in angry tones. It was not their policy to irritate or injure him, and yet it was absolutely necessary to secure him as their guide, either by threats or bribes. Neither the temptation of axes, dollars, beads, nor knives would operate upon the churlish Darien, and they began to suspect that he was desirous of handing them over to the Spaniards; when one of the seamen, pulling out a sky-coloured petticoat from his bag, threw it over the lady of the house, who was so exceedingly delighted with the gift, that she immediately began to talk to her husband, and soon wheeled him into a better humour; and he now not only gave them information, but provided them with a conductor.

Thus reinforced under the powerful influence of petticoat interest, the hardy adventurers resumed their journey. During the greater part of the route the rain fell in torrents, and, by swelling the streams, frequently compelled them to stop. At one of their halts made to dry their clothes, fire-arms, and ammunition, Dampier informs us that the surgeon, Mr. Wafer, came to a sad disaster; as he was drying his powder, a careless fellow passed by with his pipe lighted, and set fire to the powder, which blew up, and scorched his knee, and reduced him to that condition that he was not able to march; wherefore they allowed him a slave to carry his

things, being all of them the more concerned at his accident, because liable themselves every moment to misfortune, and none to look after them but him.

The poor surgeon contrived to keep up with the party for some four or five days longer; but then the slaves ran away, and the negro appointed to attend on him, absconded with his medicine chest, clothes, &c. Not being able to proceed farther through rivers and woods, he took leave of his companions, and remained with the Darien Indians. Richard Jopson, an accomplished Greek scholar, who had served an apprenticeship to a druggist in London, and three sailors, incapable of proceeding, also remained with the surgeon. As he had no means of alleviating the anguish of his wound, he put himself in the hands of the natives, who undertook his cure, and effected it in twenty days, by daily applying some herbs which they first chewed in their mouths to the consistency of a paste, and putting it on a plantain leaf, and laying it upon the sore.

In other respects, however, the Indians were not so kind; only throwing them unripe plantains for food. This incivility increased as time went on, without the return of the Indians of their tribe, who had gone with Dampier and the main body of the buccaniers as guides. They suspected their friends had met with foul play; and at length, as there was still no news of them, the savages determined to sacrifice their guests. One morning they prepared a great pile of wood, and told Wafer that he and his companions must expect to be burned on it when the sun went down, if the guides were not returned.

In this horrid suspense, when they thought their doom inevitable, Lacenta, the king or chief of the Indians, happened to pass that way, and dissuaded the enraged people from their cruel purpose. The Englishmen were then sent under the escort of two of the Indians, towards the northern coast of the Isthmus, where they might find their comrades, or obtain some means of leaving the country. For three days they marched through incessant rains accompanied by terrific lightning: the country was swamped; they had nothing to eat but a little dry maize, and when this was expended on the third day, the Indians ran off and abandoned them in the wilderness. They had now no food; but on the fifth day they found some maccaw-trees, the berries of which afforded a trifling nourishment. Their only guide was a pocket compass, and they lost their way among forests, mountains, rivers, floods, and torrents, the rain never ceasing. After eight days of wandering, being completely bewildered, they concluded it best to follow the track of a peccary, hoping it might lead them to some plantation or potatoe field, which the wild hogs frequent for food. The track, indeed, led them to an old plantation, in sight of a new one, which proved to be close to the Indian village where they had been threatened with burning, and whence they had set out so many days before.

On reaching the huts of the Indians, Wafer swooned from long fasting and fatigue; but the disposition of those people had undergone a very advantageous change. Their brethren, the guides, had not only returned safely from the coast to which they had accompanied the buccaniers, but were delighted with the kind treatment and handsome presents they had received for their services. Accordingly they treated Wafer and his companions with extreme kindness, entertained them hospitably for seven days, and then gave them a proper escort and provisions, that they might reach the northern coast.

After marching for six days they arrived at the residence of the merciful Lacenta. This chief insisted that they should not proceed farther during the rainy season, which still continued; and as, after such long delays, they had little hope of finding their comrades on the coast, the Englishmen the more willingly resigned themselves to a residence among savages.

In a short time the surgical ability of Lionel Wafer exalted him to honours. One of the chief's wives fell sick, and bleeding was prescribed. Wafer volunteered to bleed the lady, and Lacenta consented that he should perform the operation; but after the incision made by the lancet, when that chief saw the blood spout out in a stream, instead of falling drop by drop, as it did in their method, he laid hold of his lance, and swore by his tooth (the most solemn of their oaths,) that if his wife

did otherwise than well, he would have the doctor's heart's blood.

It was soon seen, however, that the stranger's mode of bleeding was every way better than their own; and when, after her venesection and a little repose, his wife had recovered from her fever, Lacenta came, and, before all his train, bowed, and kissed the surgeon's hand.

We must now return to Dampier and the buccaniers, who, on the twenty-third day of their daring expedition, procured canoes to carry them down the river Conception to the sea-side; and they soon after arrived at La Sound's Key, one of the Samballas islands, a known resort of the rovers. Here the weary wanderers embarked on board a French cruiser, commanded by Captain Tristian, and, seduced by example, remained with him.

Thus was completed one of the boldest undertakings ever ventured upon by so small a number of men; and as they generously loaded their Indian guides with knives, scissors, hatchets, and toys, which they purchased for the purpose out of a privateer, it had the happiest effects on the condition of the party left behind with Lionel Wafer. The exhaustion which resulted from the fatigue undergone by the travellers may be estimated by the fact, that, in crossing a river where the current ran very strong, George Gayny, who carried his fortune of 300 dollars on his back, was swept away and drowned; and, fond as his comrades were of lucre, on finding the corpse in a creek, with its lading, they would not burden themselves with the money. Yet, in the midst of all this labour, Dampier's mind supported his frame, and he still contrived to describe the material occurrences. On commencing this arduous journey, he displayed a happy forethought for the preservation of the narrative which he had written up to that period. Foreseeing a necessity of frequently wading through rivers, he took care before he left the ship to provide himself with a large joint of bamboo, which he stopped at both ends, closing it with wax, so as to keep out the water; in which he preserved his journal and other writings from being wet.

The French vessel in which Dampier and his companions embarked, having beamed, was moved over to Springer's Key, another of the Samballas group, where eight sail more, containing upwards of 500 men, were lying; having gathered together for the purpose of making another descent upon Panama. The arrival of isthmus travellers, however, created great commotion, for nothing had been heard of them since the departure of Captain Coxon, a year before. No sooner had Tristian anchored than all the buccaneer commanders, among the foremost of whom was Coxon himself, repaired on board to greet the sojourners, and all hands were overjoyed to see them. After numerous inquiries, the relation of the fatigues and inconveniences they had undergone disheartened the listeners from their design, and the assault of other places was taken into consideration. Dampier and his friends were now placed with a Captain Archenbo, because all the other ships were overmanned; but our hardy fellows quickly conceived such a dislike to their foreign shipmates, that they prevailed on Captain Wright to fit and arm a prize tartan for them to cruise in. Thus accommodated, the companions sailed from place to place in quest of provisions, being so distressed as to depend upon manatees, or seacows, parrots, gulls, boobies, monkeys, and warree.

The barks of Captain Wright and Yanky now stood to the eastward, and, passing before Carthagea, had a fair view of Madre-Popa, a monastery of incredible wealth, and famous for the rich offerings continually made there to the Virgin.

Shortly afterwards, they had a smart engagement with, and captured, a ship of twelve guns and forty men, who had all good small arms; and she was well laden with sugar, tobacco, and marmalade. Although these commodities were not exactly what the rovers craved, she was a valuable prize, and the vessel herself a desirable object for cruising in; whence she proved a source of contention, both captains claiming her; but at last it was determined in favour of Yanky, who took possession. This occasioned a change throughout; for Wright, losing the prize-ship, burned his own bark, and took command of the larger one vacated by Yanky; and Dampier's vessel being sold

to a Jamaica trader, he engaged with Captain Wright. After these arrangements they made sail for Curagoa, in hopes of disposing of the cargo they had obtained; and, having arrived there, Wright waited on the Dutch governor to make him the first offer; but the cautious magnate declined admitting them into the port, on account of his connexion with the Spaniards; yet, if they would go to St. Thomas, which is an island and free-port belonging to the Danes, and a sanctuary for privateers, he would send a ship with such goods as they wanted, and money to buy the sugar. The terms of the conscientious Dutchmen were not acceded to, and the rovers sailed in quest of another market, to the isles east of Curagoa.

The rovers remained some time at Aves, during which they careened their vessels. In the beginning of February, 1682, they went to the isles of La Rocca, where they landed their ordnance, built a breastwork, and erected a house for the reception of their goods and provisions. While thus prepared for defence, a French man-of-war, of thirty-six guns, came through the keys, and bought ten tons of their sugar; on which occasion Dampier was very kindly welcomed both by the captain and his lieutenant, who was a cavalier of Malta; and they both offered him great encouragement in France, if he would go with them; but he designed to continue with those of his own nation.

Having got what water they could obtain here, the cruisers left La Rocca in April, after which they took several prizes on the Spanish main; but, not being able to dispose of their cargoes, they divided the spoil and separated. Dampier, and nineteen others, took one of the captured barks, and with their share of the plunder sailed for Virginia, where they arrived in July, 1682.

Among those who accompanied Dampier in his journey across the Isthmus, and in his subsequent cruises along the Spanish main, was Mr. John Cook: he was a man of good sense and capacity, whatever might be his notions upon the questions of right and wrong. He had acted as quarter-master under Captain Yanky, which, being the second place in the ship, according to the laws of the buccaneers, entitled him to command the first prize worthy of converting into a cruiser. In virtue of this enactment, Cook obtained an excellent Spanish ship; but it happened that there were then present some French privateers having legal commissions, and their commanders could not brook that men who sailed without lawful authority should possess a finer vessel than any belonging to themselves; they therefore took an opportunity of seizing the Englishmen, and, having plundered them of their arms and goods, turned them ashore at Isla Vacca, on the south of St. Domingo. A fellow-feeling for his old friends induced Captain Tristian, who was also probably short of hands, to ship ten of the marooned men, among whom were Cook, and a buccaneer, afterwards of greater note, named Edward Davis. Tristian then sailed to Petit Guaves, where, being one day on shore, with many of his men, the English party, in revenge for the late spoilation, overpowered the rest of the crew, and made themselves masters of the ship. Putting the Frenchmen ashore in their turn, they weighed, and sailing close under Vacca, before the alarm could be given, collected and embarked the remainder of their old company. Being now sufficiently strong to set up for themselves, they resolved to make prize of whatever came in their way; accordingly two French ships were quickly taken, one laden with wine, and the other of considerable force. Having thus fairly cheated Tristian out of his vessel, and committed open piracy on the French commerce, they considered it unsafe to remain in that neighbourhood; and therefore made sail for the Capes of Virginia, where they arrived, with their prizes, in April, 1683.

Whether repairing to the Chesapeake was a preconcerted plan to meet their former shipmates is not noticed, but Dampier and his associates readily joined the new adventurers; and as Cook must have been apprehensive of having raised a hornet's nest in the West Indies, he proclaimed his intention of sailing round South America, to cruise on the coasts of Chili and Peru. After selling two of their vessels, together with the wines and other prize goods, they purchased provisions, stores, and every requisite for equipping the principal ship for the arduous enter-

prise. From the occurrence at Isla Vacca, they named her the *Revenge*. She mounted eighteen guns, and their crew soon amounted to seventy men, who were bound by certain restrictions, on account of the length of the projected voyage; the most remarkable was that enjoining temperance and sobriety. Such were the men who engaged on an expedition which, in point of variety and interest, has never been surpassed; and all proper arrangements having been duly made, they bade farewell to Virginia, on the 23rd of August, 1683.

Before they had well cleared the land, and while still in the Virginian waters, they commenced operations by bringing a Dutchman to, and took six casks of Canary out of him, with some victuals and linen, telling him, they might as well rob him as he the king, he being bound to rob the king of his duties. They then stood for St. Jago, in the hope of picking up a more desirable ship than that in which they were sailing; and upon approaching it, before they came into the harbour, they saw from the topmast-head, a ship at anchor in the road; she proved to be a Dutch vessel, and one of their great East Indianmen of fifty guns, and about four hundred men. Most of whom were got on shore; but, seeing a strong ship standing in toward the road, they instantly repaired all on board, clapping a spring upon the cable, heaving her broadside to them, struck out her lower ports, and presently, running out her lower tier of guns, was ready to receive them. The sight of two rows of teeth, however, was sufficient, and the pirates bore up and regained the sea, after the Hollander had opened her fire upon them. Thus disappointed, they made over for the Coast of Guinea, where being under the land, they came to an anchor at the mouth of Sierra Leone river. As soon as the day broke they saw a ship pass by them to the west, and their anchor being almost up, they got it up in great haste, making sail after her.

The tide of ebb being done, the Dane got in to an anchor. The English agent went on board of her, with the captain of a Brandenburg ship that lay by her, and the Brandenburg agent. The English agent, seeing the buccaneers without, sent his boat to know whether they were a company's ship, or an interloper; the messenger telling them if they were a company's ship they should fire and he would come aboard. Being willing to get him out of that ship, they fired a gun; but he did not come out of the ship. They kept the other two men of the agent's aboard, and sailed into the river. Cowley then caused about thirty men to go down below, having their arms by them, and when he stamped on deck to come up and enter her. Keeping with him upon the deck about eighteen men; he ordered the quarter-master, when he called to put the helm a-port, to put the helm a-starboard, and the boatmen to let go the anchor, and four men ready to lash them together, with a guard by them for their security, and the rest, all hands, to enter. The Dane having some jealousy of us, was clear; but they had her aboard on her bow, and her fore-topsail yard, being squared with the braces fast, took the bolt-rope of the pirates fore-topsail, so that their ship swung along her side, the anchor not holding.

When they were made masters of that ship, they went and secured the ship of the Duke of Brandenburg, a ship of ten guns, for fear of their doing them damage, sending all the prisoners ashore, except the officers, giving them victuals, until they had made the other ship fit for sailing from thence, putting as much of the goods as they could aboard the Brandenburg ship for the captain of the Dane, till they would have no more; and having got what water-casks they could, they weighed from Sierra Leone river about the middle of November.

On the buccaneers returning to La Sound's Key two guns were fired for the Indians of the Main to come on board, in order to obtain tidings of the five men left among the Dariens. Those persons having actually arrived, the signal was immediately answered by their repairing to their old associates. It appeared that Mr. Wafer had been kindly entertained by the chief of the country, who, in admiration of his surgical ability, had offered him his daughter in marriage, refusing nothing save the liberty of going away; and all the natives vied in attention and kindness to the whole party. At length he obtained permission to depart,

under pretext of going in search of English sporting dogs for the copper-coloured Nimrod, whose own kennel consisted of dogs that would hardly run by sight or by scent—they were sad curs. Wafer had been painted by the women, and went about in the costume and ornaments of the affectionate savages.

After a most fatiguing journey, Wafer and his comrades reached the Atlantic shores of the Isthmus of Darien; but there were no English or friendly ships on the coast, and they found themselves still obliged to abide among the Indians. At day-break of the tenth day after their arrival on the coast, the anxious Englishmen heard a gun at sea, and presently another was fired. The Indians, well knowing these signals, went off in their canoes, taking Wafer and his friends with them.

The four seamen, not having been honoured like the surgeon, were presently recognised and heartily welcomed by their old shipmates. But Wafer, sat awhile, cringing upon his hams among the Indians, after their fashion, painted as they were, and all naked but only about the waist, and with his nose-piece hanging over his mouth. He was willing to try if they knew him in this disguise, and it was the better part of an hour before one, looking more narrowly upon him, cried out, "Why! here's our doctor!" and they all congratulated his arrival.

The buccaneers were now highly delighted, and exultingly named their fine new vessel the *Bachelor's Delight*. Directing their course across the Atlantic, they fell in with the Falkland islands.

Dampier was very averse to passing through the Straits of Magellan; he was well acquainted with the delays and danger attendant thereon, even when a vessel was well found, and the crew skilful, expert, and completely disciplined; but he was apprehensive that their men, being privateers, and so more wilful and less under command, would not be found ready at a minute's call, to work the ground tackling; and, unless they were thus active and obedient, he knew the passage could not be made without risk. He therefore endeavoured to dissuade Captain Cook from this design, but in vain. They made the attempt, but, meeting with contrary winds, they were compelled to give it up, and go round by Cape Horn. On the 6th of February they fell in with the Straits of Le Maire, where opposing tides made such a short cockling sea as to toss about the *Bachelor's Delight* like an egg-shell.

Soon after they entered the South Seas, they met with an English ship, the *Nicholas*, of London, commanded by Captain Eaton, and as they were both destined for Juan Fernandez, they sailed there together. This ship was fitted out as a trader, but mounted twenty-six guns, and was in reality a buccaneer.

On the 23rd of March they anchored in Cumberland Bay, and, being anxious to ascertain the fate of the Moskito Indian left behind, when Watling escaped from Juan Fernandez three years before, Dampier and a few of William's old friends, together with a Moskito-man named Robin, jumped into a canoe and made for the shore. As they neared the beach they had the satisfaction to see William standing ready to welcome them. How great was the delight of the poor solitary when Robin leaped from the boat, and, running up to him, fell flat on his face at his feet; William raised up his countryman, embraced him, and in turn, prostrated himself at Robin's feet, who lifted him up also. The first burst of feeling over, they retired to his hut, where they found ample refreshment provided; for, having seen the ships in the offing, and, from their manœuvring, believing them to be English, he had killed three goats, which he dressed with vegetables, in readiness to treat his friends on their landing.

At the time this Indian was abandoned to utter solitude, he had with him his gun and knife, and a small quantity of powder and shot. When these were spent he ingeniously contrived, by notching his knife, to saw the barrel of his gun into small pieces; and of these he made harpoons, lances, hooks, and a long knife. In order to accomplish this, he first heated the pieces in a fire which he kindled by striking his gun-flint against a bit of iron, hammered them with stones,

sawed them into shape with his jagged knife, and ground them to an edge by long labour: thus furnished with implements for fishing and the chase, he readily supplied himself with food, having nothing else to do; and dwelt in a hut about half-a-mile from the sea, which was lined with goat-skins. The Spaniards knew that he had been left upon the island, and had frequently endeavoured to discover his retreat; but he had always contrived to elude their search.

This island is described as particularly healthy, and possessing numerous advantages; the hills were partly savannah and partly woodland, intersected by pleasant valleys. The sea around it abounded in fish, and the seals were so plentiful that it was remarked, there were always thousands, possibly millions, of them, either sitting on the bays or going and coming in the sea. The sea-lion was also very numerous; it is shaped like a seal, but is six times as large, with "great goggle eyes," and teeth the bigness of a man's thumb, of which dice were made by Sharp's men.

The ships remained at anchor sixteen days, when, having refreshed their companies and completed their water, they weighed and stood over for South America, which they generally coasted at the distance of twelve or fourteen leagues, lest they should be despoiled from the high land. Nothing particular occurred till the 3rd of May, when they captured a vessel bound to Lima, laden with timber, by which they learned that the Spaniards were aware of their arrival, and had been making active preparations for their reception.

The consorts continued their cruise, touching at various islands, but without any signal success. Indeed it became sufficiently evident, from the information they had obtained, that, while the alarm respecting them continued, either the Spaniards would send no vessels to sea, or they would be sent so well protected as not to fall into their hands; the towns also, they were apprehensive, would present formidable obstacles to a successful attack; but, as they could not be idle, and were not easily daunted, they determined upon an expedition against one of them. Many places were suggested, but at last Truxillo was pitched upon as the most important, and therefore the likeliest to make them a successful voyage, if they could conquer it; but, while arranging their plan, three sail were caught sight of, pursued and captured. They proved to contain flour and quince marmalade; and in one they found an immense image of the Virgin Mary, curiously carved in wood, but unfortunately upon the rumour of English adventures being in the vicinity, the vessel had previously landed what would have pleased them much better, viz., no less a sum than 800,000 pieces of eight. From the prisoners thus taken they learned that the inhabitants of Truxillo were fortifying their port, therefore the design against it was abandoned; and, finding that the whole coast of Peru was in alarm, the buccaneers determined to go with their prizes, first to the Galapagos islands, and afterwards to the coast of New Spain.

On the 31st of May they arrived at the then little-known group of the Galapagos, where they remained for ten days, during which they deposited a large portion of their prize-flour against future necessity. As plenty of salt was found here, much assistance was afforded to their refreshment; and though the isles were mostly destitute of fresh water and vegetables, pigeons, flamingos, guanoes, turtles, and enormous terrapins, all of the most delicious quality, abounded; so that the place was well adapted for buccaneer resort.

The rovers were now induced by the advice of an Indian prisoner, a native of the place, who promised them a rich harvest in plunder, to sail for Ria Lexa, a town on the coast of Guatemala. Having overshot the isle of Cocos, where they intended to make another deposit of flour, they fell in with the main land at Cape Blanco, the west point of the Gulf of Nicoya, in the beginning of July; when, on nearing the shore, Captain John Cook, who had been taken ill at Juan Fernandez, expired. On the loss of this commander, Edward Davis, the quarter-master, was unanimously elected to succeed, and a capital choice it proved; for, of all the buccaneer chiefs, he was one of the most popular, evincing courage without rashness, and moderation, prudence, and ability, of no common order.

Having anchored his ships before a brook of running water, in a bay called Caldera, about a league within Cape Blanco, the first concern of the new commander was to honour the memory of his predecessor by interring his remains on shore; and the next day having observed some cattle grazing near the shore, Davis despatched a couple of boats with a party to procure a supply of fresh meat—an object of no small moment to men who had tasted no sort of flesh since leaving the Galapagos. Under the guidance of one of the Indians whom they had captured at the burial of Cook, they were conducted to a pen in a large savannah, where they found many fat bulls and cows feeding, which some of the sailors were for attacking immediately, while others insisted upon

waiting till morning, and then to kill as many as they needed. On this difference of opinion, Dampier and eleven more thought proper to return on board that night. Hearing nothing of their companions next day, at four p.m., a canoe was sent to look for them; when they found their comrades on a small rock half a mile from the shore, whither they had waded to escape from forty or fifty Spaniards, who had burned their boat, which ought to have been kept afloat. They gained the rock at half ebb tide, and having remained there seven hours, were standing up to their waists in water with the tide still flowing, so that they must have perished in another hour, if they had not been rescued.

From Caldera Bay they directed their course for Ria

LIONEL WATER DISCOVERED BY DAMPIER AND HIS ASSOCIATES.

Lexa; and when they arrived there, Dampier and others pushed off for the shore: but the Spaniards apprehensive of an attack, had erected a guard-house, in which men were placed to be constantly on the watch night and day, with horses always in readiness; and, as soon as they perceived the ships, they set off full speed for the town. As they had got the start of our adventurers, at least three hours, they thought it best to defer their design till another time, since their object was surprise and plunder, and not fighting against great odds; accordingly they steered for the gulf of Amapalla, intending there to carreen their ships. As it was necessary to procure the aid of some natives for this business, it was resolved, when they neared the gulf, that Davis himself should proceed in the boats to obtain them. He landed at the island of Mangera, where a great number of Indians, with a friar among them, were on the shore; the Indians ran

off and escaped, but the friar, stumbling, fell into Captain Davis's hands, and with him a couple of boys.

Whatever might be the terror of the friar, on being so unexpectedly captured, Davis assured him that his only object was to procure the assistance of the natives in carreening the ships. From the information gained, they then made for Amapalla island. On coming near they were hailed from the shore to demand who they were, and what were their objects? To which Davis replied that he and his men were Biscayners in quest of pirates, and that their business in the gulf was to carreen. This account was satisfactory; the secretary warmly welcomed them, and the buccaneers, with the friar at their head, marched up the hill to the church, which was the usual place of public assembly, whether for duty or pastime. Aware of this custom, Davis intended, when the unsuspecting people were all in the sacred edifice,

to shut the doors upon them, announce his calling, and dictate the terms upon which they were to maintain friendship and mutual assistance; but the project was frustrated. It happened that a buccaneer being impatient at the leisurely movement of the inhabitants, rudely attempted to hasten their way by pushing one of them into the church before him; but the native, being frightened, ran off, and the rest, taking the alarm, immediately followed him; so that Davis, who was ignorant of the cause, was surprised to see only himself and the friar left. Nor was this the worst; for some of the English immediately fired, and among other injury committed, the poor secretary was slain.

Notwithstanding this serious rupture, the cacique of the Indians became reconciled to Davis, and afterwards rendered material assistance in directing the ships to proper anchorage for refitting and obtaining supplies of refreshment and water.

The Bachelor's Delight and the Nicholas here broke off consorship, and determined to try their fortune separately—a resolution carried by an unreasonable claim of Davis's crew, who, having the stouter and better ship, would not consent that Eaton's men should share equally with themselves in the captures. This measure being decided upon, and both ships ready for sea, Captain Eaton embarked four hundred packs of the prize flour, and sailed out of the gulf on the 2nd September, 1684.

On the 2nd of October, while lying at the Isle Plata, Captain Swan, in the Cygnet, joined company. He had been fitted out by reputable merchants of London, for a trading voyage, under a license from the Lord High Admiral; but meeting with a company of buccaneers, who had crossed the Isthmus to seek a ship, his men compelled him to receive them on board, to which he yielded, in despair of being able to execute the purpose of his equipment, from the hostility with which the Spaniards treated him at Baldivia. To accommodate the ship for her new vocation, the finer goods with which she was laden were sold to every freebooter who would purchase, various bulky commodities were thrown overboard, and the iron-bars were kept for ballast. In lieu of these sacrifices, it was agreed that ten shares of all booty should be set aside for the owners. Thus the Cygnet mounted sixteen guns, and had 140 men; and Swan quickly proved himself as eager a rover as the best of them, not only in their martial undertakings, but in their habits of life.

The 2nd of November, in the evening, they sent away 110 men to Paíta, where they landed at six o'clock on the following morning, about four miles to the southward of the town; and after a short struggle, without the loss of a single man, took possession of it: but they found it emptied both of money and goods, from precautions adopted by order of the viceroy. For the ransom of the town they required a supply of provisions, which not being complied with, they set it on fire, and quitted the place. Their next attempt was upon Guayaquil, but in this failed from mismanagement; they seized a bark with cloth, and three others laden with one thousand negroes of whom they selected forty to perform the laborious work of their ships, and turned the remainder on shore.

The year 1685 opened by their intercepting a packet-boat, containing intelligence from the president of Panama that the armada had arrived from old Spain, and desiring the late fleet to hasten its departure from Lima. This joyful intelligence determined them to run for the Pearl islands, in order to intercept so precious a prize.

They brought up at Taboga, a pretty islet in front of Panama, which is styled the garden of that city, where an attempt to set their vessels on fire was made by a fellow who committed an outrage at the Canary Isles, and who was now in the Spanish service; but through vigilance and good fortune they escaped by cutting their cables. The following morning, while regaining their anchors, they were thrown into consternation at seeing a large fleet of canoes full of men advancing towards them. These proved to be rovers, who had travelled over the Isthmus of Darien. There were two hundred French, and eighty English, commanded by a Captain Grognet. The Englishmen joined themselves to the Bache-

lor's Delight and the Cygnet, and the Frenchmen were ordered to man the prize. Shortly after this, another large party who had travelled over the same road were received on board, so that by a fortuitous train of incidents their force was augmented, in an hour of extreme need, to 960 men, in two ships mounting great guns, and eight smaller vessels with fire-arms.

For several weeks the freebooting squadron lay nearly opposite Panama, till at length, on the 28th of May, the Spanish fleet, upon which their whole attention had been concentrated, hove in sight. From precise information which they afterwards obtained from prisoners, it consisted of fourteen sail, besides several periagos, rowing with twelve or fourteen oars a-piece. Six sail were large ships; the admiral, forty-eight guns, four hundred and fifty men; the vice-admiral, forty guns, four hundred men; the rear-admiral, thirty-six guns, three hundred and sixty men; a ship of twenty-four guns, and three hundred men; another of eight guns, two hundred men; two large brulots, six vessels with small arms, having eight hundred men, besides two or three hundred in the row-boats. Such was the formidable array of that object for which the rovers had so impatiently waited.

But this disparity did not daunt the courage of the gallant Davis, who, unacquainted with the fact of the Spanish admiral having prudently landed the treasure before seeking the fight, resolved to acquire wealth and the dominion of the South Seas, by close combat and boarding. He therefore resolutely bore down upon the advancing foe, and exchanged broadsides, till night coming on he forbore further engagement, as, from Swan not acting up to his orders, and Grognet sheering off without coming into action at all, he was deprived of the support of his most able ships.

From an unpardonable neglect on the part of the buccaneers, the Spaniards gained the weather-gage in the night, by the simple stratagem of sending a false light to decoy their adversaries to leeward; the loss of which point was fatal to the method of attack proposed by Davis, since it enabled the enemy to choose his own distance. Such being the case, all hopes of conquest vanished with the returning dawn, and they sought self-preservation. The Spanish ships now became the assailants, steering for them under full sail. There was no alternative for the rovers but to make off, and a running skirmish was maintained till the evening; when, having been chased completely round the bay of Panama, they anchored at the very place they had quitted in the morning.

The buccaneers' hopes of enriching themselves by the plate fleet having ended in smoke, and the dreams of the prodigious sea-traffic of these coasts being annihilated, they resolved to try what the land would afford. Among other descents, it was planned to secure the port of Ria Lexa, and from thence march inland to assault Leon, a place described by an early English writer as the "Paradise of the Indies." On the 9th of August, Captain Davis, with five hundred and thirty men, in thirty-one canoes, quitted the ship about eight leagues from the shore. In the course of the day and following night they encountered several of those heavy and sudden tornadoes, which are common in tropical climates; but escaping from these dangerous squalls, which had nearly proved fatal to their expedition, they landed at daybreak; when Dampier being left with a party of sixty men to guard the canoes, the remainder marched for Leon in separate divisions; and at three in the afternoon, Captain Townley, who led the van with only eighty men, entered the city. He was briskly charged by about two hundred cavalry, who all retreated on seeing two or three of their number fall; and this example was followed by five hundred infantry, leaving quiet possession to Townley and his little band.

Their endeavours to procure 300,000 pieces of eight, and as much provision as would subsist 1000 men for four months, as a ransom for the city, proving ineffectual, they set it on fire, and withdrew their men to Ria Lexa, where they remained a week; when some of their destructive crew set fire to that place likewise, and embarked leaving it burning.

After this expedition no object of enterprise occurred to the confederacy of sufficient magnitude to induce them to

keep together in such large force; therefore Captains Davis and Swan thought it meet to break off consortsip; the former being resolved to revisit the coast of Peru, in quest of adventures, and the latter feeling inclined to go farther to the northward, previous to returning by a western course over the Pacific. The fraternity therefore parted company by general consent; and as Dampier, whose thirst of knowledge was insatiable, wished to obtain a more intimate cognizance of the Mexican shores, and was inclined to go to the East Indies, he determined to leave Davis, and accompany Captain Swan.

Captain Swan continued to cruise on the coast of Mexico; but without any occurrence of material importance till the 16th of February, 1686, when a descent was made upon Santa Pecaque, in order to procure provisions. They now learned from a prisoner that 1000 men-at-arms were marching upon them from Santiago. On this the captain wished his people to proceed together, in regular order, with what they could carry; but they refused to obey him till all the provisions were embarked, and persisted in continuing their occupation without any extra precaution. They, however, paid dearly for their reckless hardihood, as they were suddenly attacked by the Spaniards and the whole of one division killed.

This disheartening misfortune determined Swan to quit the coast with his diminished company; he therefore sailed with the intention of gaining the South Cape of California, there to clean his ship for her lengthy voyage across the Pacific; but adverse winds drove him to the desolate isles of Tres Marias. While they lay here, the scheme for returning by the great western route was unfolded to the crew; but there was some difficulty in persuading the ignorant sailors to consent to this, for having never heard of such a route to that part of the world, they thought it impracticable. The science of Dampier (who was enraptured at the prospect of so new and long a voyage), and the eloquence of Captain Swan and others of the officers, triumphed, however, over the ignorance of the men; and the Indian voyage being determined upon, they made sail for some uninhabited islands off the Californian coast, where they careened their ships.

On the 31st of March, 1686, these daring mariners set out from Cape Corrientes to traverse the vast, and then very imperfectly known Pacific Ocean; till at length, after a run of fifty days, when the people were half-starved and mutinous, they opportunely made Guahan, one of the Ladrone islands. A friendly intercourse was soon established, and continued to be kept up between Swan and the Spanish governor, notwithstanding the latter was well aware of the profession of his visitors, he being as little able to withstand an attack, as the ships, under existing circumstances, were little inclined to make one. While a brisk trade was going on, and provisions and refreshments were being procured in abundance, the Acapulco galleon arrived in sight of the island, and would probably have been captured, but for the governor giving her timely advice of the danger, by means of a flying proa.

After staying twelve days at this island, the hardy adventurers shaped their course for the Philippine Islands, among which they arrived on the 21st of June, and where they remained, chiefly at Mindano, till the 14th of January. This place had so many attractions, that six or eight of the buccanniers ran away, resolved to stay there; and as Captain Swan lived constantly ashore, showing little disposition for future enterprise, and as the mariners were suspicious of his projects, they seized the ship and sailed away without him.

The ship was now in the hands of "a mad crew,"—who seem to have proceeded from place to place, chiefly between the promontory of Malacca, Cochin China, China, and the Philippines, as their random necessities prompted them; sometimes rioting in luxuries, at others subsisting on a small portion of rice, and nearly reduced to a state of starvation; in all which vicissitudes the inquiries of our zealous navigator were continued with ardent constancy.

From the vigilance of the new captain, who was fearful of any one getting away who could inform against him, Dampier was unable to effect his escape from this unruly crew, till they had cruised in this manner for nearly seventeen months; when,

after considerable altercation, he was beached at the Isle of Nicobar, in company with two Englishmen and five prisoners, on the 6th of May, 1688.

They went in a canoe to the east side of the island, and thence, on the 15th of May, 1688, being eight individuals crowded in a small and fragile boat, they intrepidly started for Acheen in Sumatra, with no other guide or means than the experience of Dampier, and his pocket compass.

On the 18th of May the appearance of the sky was alarming. The wind and sea rose to an enormous height—while thunder, lightning, and rain, combined to render the night the most dreadful one he had ever experienced. The tempest at length abated, and the boat reached Sumatra; but the whole party were in such a state of exhaustion, from their hardships and fatigue, that they were unable to manage it without assistance. Two of the party sunk under their sufferings, and the rest were conveyed, by the friendly Malays among whom they had fallen, to Acheen, where Dampier thought to end his wanderings in the grave. But his constitution rallied; and with returning strength he made various voyages to Tonquin, Malacca, Madras, and other places; and, whether in sickness or in health, assiduously continued to acquire knowledge and keep up his journals. After escaping many dangers, he at length arrived at Bencoolen, where he was well received, and appointed master-gunner of the fort there; till anxiously waiting for an opportunity to return to England, he succeeded in getting on board the *Defence*, an Indiaman, on the 2nd of January, 1691, abandoning all his property, save his manuscripts. The *Defence* sailed from the Cape of Good Hope, and, after touching at St. Helena, arrived in the Downs without meeting with any remarkable occurrence, on the 16th of September, 1691.

His first occupation was the compiling and publication of his "Voyage round the World," and afterwards of a supplement, entitled "Voyages and Descriptions," to which was appended an elaborate discourse on meteorology. The intrinsic merits of his work, the charm of the narrative, and the unostentatious yet strongly perspicuous style, were at once acknowledged by the public; and it, moreover, brought him under the notice of government. He was appointed commander of the *Roebuck*, of twelve guns and fifty men, by commission dated the 26th of July, 1698.

The *Roebuck* sailed from the Downs, with a fair wind, on the 14th of January, 1699. She proceeded by Teneriffe and Brazil to the Cape of Good Hope, and from thence to New Holland, where considerable progress was made in exploring its coasts. Captain Dampier's zeal for fulfilling his instructions was soon thwarted, being compelled to bear away for the island of Timor, in consequence of his people being terribly affected with the scurvy. Having recruited the crew, and careened his ship, he left Timor, and arrived off New Guinea on the 1st of January, 1700. Here he made a considerable number of discoveries, particularly of a large island which he called New Britain; and on the strait between it and New Guinea, his own name has since been deservedly bestowed. He intended to have examined these tracts thoroughly, but was prevented by the foul and inefficient state of his ship, the fewness of his home-sick crew, and the danger of continuing, in these circumstances, among unknown rocks and shoals during the eastern monsoon, which was approaching. He therefore resolved to direct his course for Batavia, where he arrived on the 3rd of July.

The *Roebuck* rode before Batavia till the 17th of October, when, being refitted and supplied, she took advantage of the proper season for making the passage, and sailed for Europe. Nothing particular occurred till the 21st of February, 1701, when they came in sight of the island of Ascension. On the day after, the ship sprung a dangerous leak, which increased so rapidly and violently, that in a short time the chain-pumps could not free her. At length, by great and unremitting exertions of pumping and baling, the water was got under, and the place of the leak ascertained. It soon became evident that the disaster was now so incurable, that their whole attention was directed to keeping her afloat till daylight. Early on the following morning Captain Dampier stood for the bay, and an-

chored there. Every measure to remedy the accident was immediately put into execution. These were, unhappily, all fruitless; for after ripping the ceiling near the leak, in order to get at it within board, the plank was discovered to be so rotten, that it broke away. It was now too evident that if they remained on board they would perish, and that nothing was left for Dampier to do in this distressed situation but to endeavour, if possible, to save the lives of his people. The pumping and baling were continued unremittingly to keep the vessel afloat during the night, and the boats were hoisted out, although it was dark, that if she gave any indications of foundering at her anchor the crew might be rescued. When day broke they endeavoured to run in shore, but the land wind baffled their intention. The case was critical, as it was momentarily expected that the *Roeback* would go down. At length, in the afternoon, on the springing up of the sea-breeze, they managed to bring the vessel into three-and-a-half fathoms water, where they secured her. The greatest exertions were now made to save such articles as were more immediately necessary for future existence and preservation: the seamen's chests and bedding were got safe to land upon a raft, and all the sails were unbent and carried on shore for the purpose of being converted into tents.

Captain Dampier remained on board the sinking ship till the very last. He had to regret the loss of many of his books and papers, and a collection of shells gathered in New Holland. The plants he contrived to save, and they were afterwards placed in the hands of the ingenious Dr. Woodward.

The condition of the party was more fortunate than that which generally falls to the lot of shipwrecked seamen. They had saved most of their property, and were tolerably housed: the island abounded with turtle, goats, land-crabs, and tropical birds, and the air was exceedingly wholesome. To add still further to their satisfaction, they discovered a spring of excellent water, about eight miles distant from the bay where they landed.

In this state the shipwrecked company remained about five weeks, when they were relieved from their anxiety by the arrival of three English men-of-war, and an Indianan, on the 3rd of April. Captain Dampier immediately embarked on board the *Anglesea*, of 48 guns, with the greater part of his people, the remainder being accommodated in the other ships.

On the breaking out of the war of the Spanish succession, Captain Dampier was induced to accept the command of a couple of privateers, the *St. George*, of 26 guns and 120 men, and the *Cinque Ports* galley, of 16 guns and 63 men, which were intended to cruise in the South sea, on the compact—"no prey no pay." The outfit being brought to a close, the privateers quitted their moorings on the 11th of September, and stood out to sea.

Having touched at Madeira, the privateers stood for the Cape de Verd Islands, and on the 7th of October, anchored at Port Praya, in St. Jago, where, after tarrying a week, the ships sailed for the coast of Brazil; and on the 19th of November anchored at St. Ann's, from whence they moved to Isla Grande, in order to procure wood and water. Here Captain Pickering died, and was buried with respectful ceremony at the watering-place; being succeeded in the command of the *Cinque Ports* by Thomas Stradling, his lieutenant.

The voyage was rife of quarrel and dispute to an extraordinary degree, much of which may be imputed to the shameful principle of "no purchase, no pay," by which the crew were not entitled to wages, and much to the irritation resulting from successive dissensions. Scarcely was a reconciliation effected, when a strange sail hove in sight of Cumberland Bay, to which both ships gave chase. She proved to be a French cruiser of 400 tons burthen, and thirty guns, and after a running fight, in which both ships suffered considerably, they parted.

This was, in all respects, a most unlucky occurrence, since a necessary consequence of the unsuccessful encounter would be, the announcement of the arrival of a pair of English privateers in the South sea. They again stood for Juan Fernandez, and regained sight of that noted resort of buccaneers on the 3rd of March, 1704, when they despatched two large ships, which were soon made out to be French, and necessary for them to avoid.

They therefore stood from the island, and made sail for the coast of Peru.

Arriving before Lima, the privateers had the mortification to see the Frenchman they had lately engaged, in company with another vessel, enter the port of Callao. It being then unsafe to remain in that neighbourhood, they stood to the northward, and took a couple of prizes, laden with sundries, and a good sum of money. Dampier dismissed both these vessels, after taking their boats and as much of their cargoes as suited his present occasions.

On the 28th of April, the privateers attempted to surprise the town of Santa Maria, in the Bay of Panama. After a wet and stormy night in the boats, Dampier and Stradling, with one hundred and two armed men, entered the river, when one of the sailors imprudently firing at a canoe which approached them, created an alarm, and they were ultimately obliged to retreat, with the loss of one of their party killed, and several wounded by shot from ambushes. They regained their ships at Point Garachina on the 6th of May. Fortune very unexpectedly favoured them, for at midnight a ship of 550 tons, without any suspicion of an enemy being on the coast, anchored close to them, and was immediately made a prize of. She proved to be deeply laden with flour, sugar, wine, brandy, salt, and about thirty tons of quince marmalade, besides many bales of linen and woollen cloths. Both the English vessels fully victualled themselves from the cargo, after which she was dismissed.

The two commanders now determined to part company, and cruise independently of each other; on which occasion liberty was given to both the crews severally to choose their ship, and five men changed.

While beating to the southward, on the 7th of June, the *St. George* took a vessel of about one hundred tons burden, laden with dry provisions, and some wrought silks. The *St. George* now steered to the northward, to try the Mexican shores, and look out for the Manila galleon.

On the 6th of December, a sail was descried, which, being chased, proved to be the long-expected galleon. An action ensued, but her superiority compelled Dampier to sheer off to save his vessel from sinking; and the galleon pursued her course without further molestation.

The crew were now busily occupied in refitting the *St. George* as well as they could. The carpenter applied tallow and charcoal to the shot-hole, not daring, as he said, to drive in a nail, for fear of making matters worse. Having by such means put himself in an apparent state of efficiency, Dampier stood again for the coast of Peru, with a courage that must command admiration; for here was a crazy tub, with a complement of twenty-eight men and boys, about to wage war upon a whole nation; yet, in spite of these disadvantages, he and his small band surprised and plundered Puna, and afterwards hovered on the coast till their coffin-ship was no longer able to keep the sea. At length they removed into a little brigantine which they had taken from the Spaniards, and left the old *St. George* riding at her anchor among the isles of Lobos de la Mar. They then sailed across the Pacific Ocean to the East Indies in their cockle-shell of a craft, and arrived at the Dutch settlements, where, Dampier having no commission to show them, the authorities seized his vessel and goods, and detained him a prisoner for some time.

Previous to the return of our intrepid navigator at the close of 1707, a company of Bristol merchants had plotted a cruise against the Spaniards, and the Duke and Duchess, privateers, were accordingly fitted out; the command of the former, a ship of 30 guns and 183 men, was given to Captain Woodes Rogers; and of the latter, which carried 26 guns and 121 men, to Captain Courtney. On such an occasion, the co-operation of a man who had been three times to the South Seas, and twice round the world, was most desirable; and arrangements were made by which Dampier consented to embark in the quality of pilot, and also as one of the council by which the affairs of the two ships were to be directed.

Several prizes were captured in the waters of Peru; and at Guayaquil, where Dampier commanded the artillery and reserve, they obtained plunder to the value of £21,000, and 27,000

dollars as a ransom for the town. "They afterwards stood" for California, and fell in with a Manilla ship, richly laden with merchandise, and £12,000 in gold and silver; and after a brisk action, in which Captain Rogers was wounded in the mouth, she surrendered.

They now turned their thoughts homeward, after a cruise which was successful on the whole. Having made all the requisite arrangements, they quitted Porto Seguro with their prize, and keeping the usual track of the galleons, they reached Guahan on the 10th of March, 1710, where, hoisting Spanish colours, they procured provisions and refreshments in abundance. Having amply supplied their wants, and made equitable returns for what they had received, the ships made sail to the westward, visited Bouton, Batavia, and the Cape of Good Hope; at which last place they waited for the benefit of convoy. At length, returning to Europe by the "north about" passage, they anchored in the Texel in July, 1711, and arrived in the Thames on the 14th of October.

The voyage of the Duke and Duchess, was the last in which our illustrious navigator ever engaged. He died in the parish of St. Stephen, Coleman-street, London, in the month of March, 1715, new style, in the 63rd year of his age.

His will bears date the 29th November, 1714.—"I, Captain William Dampier, of London, mariner, being diseased and weak of body, but of sound and perfect mind (praised be God therefore), considering that whereas nothing is more certain than man's death, yet, that nothing is more uncertain than the time of man's dissolution, do make this my last will and testament," &c. He then leaves all his goods and household stuffs to his dear cousin, Grace Mercer, of London, spinster. Then, disposing of his remaining property—be it in the hands of Captain Newton, of Eagle-court, Strand, or be it in the hands of Thomas Jones, of London—divided into ten parts. One tenth he leaves to his brother George Dampier, of Porton, near Bridport, Dorset, Gent., and the remaining nine-tenths to his cousin Grace Mercer, whom he appoints executrix; from which disposition of his property, it seems that he had become a widower.

PRESENTATION OF AN ADDRESS BY THE OLD VETERAN.

"MAY it please your Majesty, Mr. Breeze, of your Majesty's Royal Navy, with an address from the seamen at Plymouth," said the Admiralty Lord, displaying the old seaman in full figure.

"Breeze, Breeze?" said the King, giving Joe one of his peculiarly shrewd looks; "what ship, eh? what ship?"

"The Roaring Boreas, an't please yer Majesty's honour," responded Joe, laughingly, and giving first a knowing twist to his club tail, and, secondly, a characteristic hitch to his silk tights.

"What? what?" uttered the King—"Roaring what?—Oh, ay—Boreas—Boreas—a Breeze in the Roaring Boreas, eh? What rank, what rank? steady Breeze, I hope, but what rank?" when observing the silver chain and call round the veteran's neck, he added, "Oh, I see, I see—boatswain, eh? boatswain—boatswain Breeze; handsome call—blow it well, Mr. Breeze, eh?" and the good-humoured monarch laughed.

"God bless your honour's Majesty!" answered Joe, touching the forelock of his silvery hair, and making a scrape with his foot and a bend with his head that threw his enormous tail over his shoulder, "I ar'n't a bo'sun, seeing as I never had the honour of sporting a warrant whilst under the pennant; but I've served your Majesty man and boy five-and-forty years, and ud be ready to sarve yer Majesty again whensomever you should be pleased to ax me. Though, for the matter o' that, your Majesty, I strive to do my best, even out of commission, as Billy Pitt there—I humbly axes honour's pardon—I means Muster Billy Pitt, can testify."

"Good, good—very good!" said the easily-pleased Monarch; "Mr. Breeze and Billy Pitt! But—but—the address—the address." Observing Joe was again about to speak, he added, "What—what!—stay—stay!—the address—read the address."

This Joe did with a very good grace, giving the words their proper emphasis, to the infinite delight and gratification of the good-tempered King, who had a strong regard for his navy, and of Mr. Pitt, who had in some measure apprised his Majesty of the veteran's claims to consideration.

"The seamen of the fleet at Plymouth, eh?" said the King, when the veteran had ceased reading the document; "and signed too—signed by—let me see—let me see—"

"Upwards of four thousand, an't please yer Majesty," responded Joe, again twitching his tail behind him, "all hearty souls, and ready to fight the devil, if so be as he should hoist the tri-colour ensign."

"Hush, hush!" returned the King, "never, never call names. But tell them, Mr. Breeze, tell the seamen I receive their congratulations with pleasure, and am gratified by their expressions of attachment; it shall ever be my study to watch over and promote their welfare, as much as they have manifested a determination to defend their king and country."

In the excitement of this narration, which had induced him to throw himself into attitude, Joe's tail had again, somehow or other, swung bodily over his shoulder, and looked like a swivel on the present.

"Siege of Gibraltar, eh?" said the King; "siege of Gibraltar; grand tail; wonderful tail;—kneel down, Mr. Breeze;—eh, Pitt, eh?"

The minister bowed with stiff formality.

"There—kneel, kneel, kneel!—kneel down, Mr. Breeze!—Joseph, isn't it, eh?—isn't it, Joe—Joseph, eh?—Joseph Breeze, kneel down."

The words, "grand tail," "wonderful tail," Joe had promptly applied to his tale of Gibraltar and the call, and it tended to gratify the old tar's self-love; but to kneel in his silk tights was another matter—it amounted to almost impossibility—and the repeated commands of the sovereign still urging him, he exclaimed, "Well, then, I'm —" the rest was stoppered, for the eye of his royal master was still upon him, and he felt rebuked before he uttered the oath.

"But it's all in regard o' these here consarns, yer Majesty," said he, somewhat abashed at the predicament in which he was placed. "They would brace me sharp up, though I knew it was going free before yer Majesty, I should be; and now here I am, worse off nor a marine in purser's slops—hard up, jammed like Jackson. Howsomever, here goes for a bend, anyhow, as I hopes yer Majesty's honour and glory is a going to giv me a blessing;" and down he dropped upon both hands and knees, ultimately raising himself upon the latter, whilst the ripping of seams, the cracking of stitches, and the chattering of the main stuff itself, gave evident testimony that there was something "rotten in the state of Denmark."

The monarch having received a sword from the hands of an attendant, held it over the veteran's head, and then applying the flat part pretty smartly to his shoulders, he uttered, "Arise, Sir Joseph Breeze; there, there, there—get up, man, get up—rise, rise; I've knighted you, and you are now Sir Joseph; get up. Now, now; go, go," said the King; "tell the sailors, tell them not to mutiny again, but to be good lads, and beat the French."

"Then I'm d—d if I don't," returned Joe, so overpowered by his emotions, as to forget the anointed presence in which he stood.

"Mustn't swear, never swear," said his Majesty, in a tone half reproof, half remonstrance; "Bible says, 'Swear not at all' read, read the Bible. Go, now go;" and turning to the Admiralty Lord who had introduced the veteran, he added, "Take, take, take him away. Never swear, bad habit, swearing, meant honestly enough; large tail, monstrous tail. There, there, good-bye, sailor, good-bye!"

"God Almighty bless yer Majesty!" responded Joe, with a schoolboy expression of contrition on his countenance. "I owns to the slapsis lingo, and is heartily ashamed on it."

DISTRESSING ACCOUNT OF THE VOYAGE OF THE
SCHOONER, LITTLE PATTY.

REENMAN GREER, MASTER.

With a Melancholy Relation of her Foundering in the Gulf, and the Sufferings of her unfortunate Crew, in the year 1806.

THE following condensed account of this truly calamitous voyage is furnished by one of the passengers of the schooner:—

“Left Charleston Bar, bound to St. Mary’s, the 26th of July. On the 27th, being headed by the wind off Tybee, put into Cockspar for a harbour—lay there until the 7th of August, wind favouring, put to sea. At eleven o’clock same evening was overtaken by a severe squall from the north, which carried away the top and fore-sails; afterwards, the wind being variable, endeavoured to proceed under the remaining sails, until Tuesday the 12th; the winds heading, and finding ourselves unable to beat to the south, and the schooner taking in more water than usual, called a general council, and thought it advisable to put back to Savannah—got into harbour the same evening; next day, the 4th, got the vessel up to the town, and immediately employed some carpenters to overhaul and repair her. After being thoroughly repaired and pronounced seaworthy, we put to sea again on Monday the 18th, winds fair but light, we proceeded on until the 21st, with our port full in view, we considered our voyage nearly at its close. While indulging these pleasing ideas, the wind sprang up from N.W. and blew hard; we endeavoured to hold our course beating on and off, in hopes soon to experience a favourable change; wind increasing, and by twelve at night might be termed a gale. Our vessel labouring hard, sprang a leak; and in order to ease her, at two a.m. bore away before the wind; the passengers and crew indefatigably employed at the pump and baling, the leak overbalancing our efforts. In order to lighten her, the masts were cut away by the board, the anchors and cables dropped, the camboose thrown away, and every other heavy article that could be come at; we continued every possible effort to free her, until about one p.m., when finding the water more than five feet in the hold, and all hands being exhausted, we gave her up. We then indulged hopes, that although she must fill, she would not sink, having but few heavy articles of cargo. Under this impression, we prepared provisions, water, clothes, and bedding on the quarter-deck; also quadrants, compasses, books, charts, &c. that would be likely to aid us, or render our situation comfortable, lashing many of the articles fast, as we expected at best to be severely washed by the sea, we had the precaution to prepare the boat in the best possible manner, as a last, though dreadful resource—the gale severe and the sea tremendous, being then about the middle of the gulf.

“About four o’clock came the horrid hour—a most distressing and terrific moment!! Death seemed to have extended his all-devouring jaws, ready to inclose us in eternal night! Our vessel had filled much sooner than we expected, and was sinking. The shrieks of females, the confusion and danger of all, with the violence of the seas, that were continually breaking over us, presented, perhaps the most solemn and distressing scene ever beheld by mortals. One man had been stationed in the boat, and was continually employed in baling to keep her afloat. When the schooner filled, two old ladies, nearly eighty years of age, lost their holds, and were by every sea washed about the decks; one, however, soon went overboard, but was so fortunate as to be drove directly against the painter of the boat, which she firmly seized, and was drawn on board by the seamen. About the same time a young lady Miss M. Osborne, was by a violent wave washed overboard. Mr. Curtice, a passenger, beheld her at this moment, seized a rope’s end, and sprang overboard, caught her by the gown, and restored her again to the deck, and advised her to lay hold of the quarter rail until he could procure a rope. While he was in the act of getting a lanyard, another tremendous billow swept across the deck, carrying away the binnacle, which struck violently against him, knocked him off his feet, and in its destruction, swept three persons overboard, Mrs. Greer, the captain’s wife, with her son, and the unfortunate Miss Osborne. Mrs. Greer, though overboard, did not lose her hold, and soon recovered; her little son

held fast by her clothes; every possible exertion was made to save the fair Maria, but alas! was made in vain. Her mild looks seemed to solicit assistance, but all our efforts failed—no earthly power could save her. She at length, as if resigned to her fate, extended her arms to Heaven, and seemed to smile even in death. All the others (seventeen in number) with difficulty succeeded in getting into the boat; took in two small dogs and a cat that came alongside; we lost all oars but one, which served to keep the boat direct before the sea, being destitute of a rudder. The names of the persons thus escaped, were Mrs. Parris, of St. Mary’s; Mrs. Dunham, of Charleston; Mrs. Greer, wife of the captain; and Miss Eliza Blew, of St. Mary’s; Captain Greer and son; Captain John Clarke, of Connecticut, who served as mate; Amos Arnold and Daniel Smith, both of the above place; Hance Patterson, a Dane; and John Curtice, of New York, a passenger; and six blacks—all stowed away in a small boat, with strict orders not to move, except the helmsman and balers: had two buckets, which were in almost continual use, the sea breaking violently over us. In this manner we rode out the storm, during a tedious night; at day-light the wind abated, the sea growing more moderate.

“Having taken little or no nourishment during the gale, and being very much fatigued, we needed refreshment; overhauled our stores; found them to consist of a gallon and a half of water, one bottle of gin, one ditto wine, and twelve or thirteen pounds of raw pork; this was the whole amount on which we had to subsist. In this deplorable situation, we found ourselves to the east of the gulf, far from any succour from land, and out of the tract most frequented by mariners. Saturday, got an easterly wind, which we endeavoured to improve by hoisting a small blanket for a sail to drift us back towards the American coast. On the 24th, 25th, 26th, and 27th, the winds were mostly from the eastward. In the afternoon of the 27th of August, saw a distant sail—joy brightened in every countenance; we hoisted and waved red and white handkerchiefs to attract their attention towards us, and although the sail was at the distance of several miles, gave repeated shouts in the hope they might possibly hear; but to our inexpressible grief and disappointment she neither saw nor heard us; and as her course took her from us, we gradually lost sight of our hoped-for relief.

“At evening, the wind grew high, during the night had rained, caught some water by means of our blanket, handkerchiefs, &c., though rendered very brackish by the salt spray, answered us a very valuable purpose. At two o’clock, 28th, wind changed, blew up a tremendous swell and cross sea; it was with the greatest difficulty we kept above water. In the evening moderate, moon shone, wind favouring, we again steered westward. While recrossing the gulf had severe squalls, in some of which we were enabled to catch some water, though not enough to allay our thirst, afforded us a very necessary relief. On the 29th, weather extremely warm, no shelter from the scorching rays; no room to stretch our weary limbs; heat, abstinence, and fatigue began to overpower our debilitated frames—now parched with the piercing beams of the sun, next wet with salt spray, and chilled with cold night air, no water. The 30th, calm, towards the middle of the day extremely warm, no water to cool even our parched lips, some of our crew fainting. At two o’clock, p.m., saw a sail; all efforts to get to her vain; those who were sick grew more discouraged, and those who wished to keep up their own and comrades’ spirits, had no resource but to call their attention to the wonderful escapes they had already experienced, and the favours and all-sufficiency of that Providence, already so abundantly manifest, and to excite them to remember they were in the hands of that God, who disposed of all things rightly, and was incapable of error. Sunday, nothing remarkable, wind at east. Monday morning, at one o’clock, being 1st of September, Mr. John Clark, yielded up this life, while his head was supported, and eyes closed by Mr. Curtice: the unhappy crew viewing this ghastly spectacle as an example which, without providential relief, they must all soon follow.—Next morning, calm, keep the corpse till twelve o’clock, the wind increasing, and the weather threatening, we then consigned him to his watery home; while in the act of burying him, a little negro girl expired; we cast her into the sea. At four we had a shower, caught some water; after the shower the

wind increased; the sea grew rough, and by sun-set might be termed a boisterous gale; all hands stationed, without liberty to move, except those selected for the helm and brackets; the prohibition was unnecessary, as several of the crew were unable to rise; the storm increased, fully equal to any we had before experienced; the night was dark, no glimmering of light, but what was reflected by the breaking of the fiery billows; our little bark kept above the surface, now mounting in an almost perpendicular direction high in air, now plunging headlong almost to the earth; the sea bursting over our heads, frequently filling our boat at a single dash. Hands all exhausted, and were it not the last effort for preserving life, could not have performed their offices. Thus passed on this dread, gloomy time, until about three o'clock, a.m., at which time the bright empress of the night burst forth her radiance, dispelling the sable curtain, by which she had been so deeply enshrouded, shooting forth her rays in the mildest lustre, the wind fast abating; about fifteen minutes after we were thus illuminated, as if the all-protecting hand of omnipotence had predetermined it, as a singular instance whereby to manifest his power—just at the expiration of all earthly hope, extended his saving arm; in this case the rays broke suddenly forth, and immediately appeared a sail in view; close at hand; welcome sight! when we were both mounted on the seas, could distinguish her to be a brig bearing towards us.

"Never had we seen a sight so hopeful, or even so needful. The brig was lying to not far to leeward; we soon drifted down within hail; at the fourth hail was answered by her crew—joyful sound! it was then our hearts bounded with joy!—Then was made manifest the outstretched hand of God! Even those who lay helpless in the boat, exerted their weak lungs in joyful exclamations. The brig's men were attentive to our safety; we dropped under her stern, and after several attempts, with considerable difficulty caught a tow-ropes, and notwithstanding the extreme roughness of the sea, and the deep rolling of the brig, were soon conveyed safely on board, except an unlucky blow which Miss Blew received from an oar in the hands of a seaman, while endeavouring to bear off the boat to prevent her staving against the brig. This fortunate circumstance took place between four and five o'clock on Tuesday morning, 2nd of September. Found the brig to be the Polly, Captain S. Hubble."

"To Captain Hubble's humanity and attention, as well as that of his crew, were greatly indebted, yet notwithstanding all their kind attentions, and every possible human aid, meagre death continued its ravages. At two o'clock the same day, H. Paterson, seaman, departed this life, and several others were ill. On Wednesday, the 3rd, at one o'clock, Mrs. Parris, yielded up her spirit to the God that gave it. The remainder of the crew soon recovered."

CONJUGAL AFFECTION OF A FRENCH FEMALE.

THE following affecting account of the heroism and affection of a French female, we extract from the Log of a foremast man.

Whilst we were engaging the combined fleets of France and Spain, at the battle of Trafalgar, a French ship caught fire, the crew of which made every effort to escape from the flames, and as

"Britons fight but to conquer, and conquer to save."

our frigates and schooners, which had been lying off during the battle, sent their boats to endeavour to save as many lives as possible. Amongst those who were thus preserved from a watery grave was a young French woman, who was brought on board our ship in a state of complete nakedness. Although it was in the heat of the battle, yet she received every assistance which at that time was in our power; and her distress of mind was soothed as well as we could, until the officers got to their chests, and from whence they supplied her with needles and thread, to convert sheets into chemises, and curtains from their coats, to make somewhat of a gown, and other garments, so that by degrees she was made as comfortable as circumstances would admit; for we all tried who could be most kind to her; and as the history of this adventurer may acquire some interest from the account she gave of it, the following is the statement as collected from herself:—

The combined fleets had received orders to proceed from Cadiz, where they lay, to make an attack upon and capture the British fleet; for, from their superior force they were confident of success, and elated at the same time with the idea, that it would be but an easy task. That no impediment might be in the way, all the females were ordered to go on shore; she was married, and could not endure the thought of quitting her husband; she was resolved, therefore, to share his glory or his death. No time was lost in carrying her plan into execution; for having rigged herself out in a suit of sailor's clothes, thus disguised she entered on board in the same ship with him, as a seaman.

In this state she remained, doing duty, during the engagement, when, whilst fighting by the side of her husband, a ball killed him on the spot. On seeing him fall dead, the conflict was too great; nature displayed itself, and through excess of grief she betrayed her sex.

To add to the distresses which the discovery occasioned, an alarm was now spread that the ship was on fire; she seemed to care very little about it: life to her was not desirable, whilst all hands were employed in the endeavour to check the progress of the flames. This seemed to be impossible, and it became necessary to think of the means of escape; for the fire raged with great fury, and there was every probability that, in a few minutes, the ship would be blown into the air, as the fire was fast approaching the powder magazines.

The resolution to take to the water being now unavoidable the men commenced to undress themselves; in this dreadful situation she was strongly urged to do the same, to make every effort for self-preservation, and it being the only chance she could possibly have of saving her life. After some entreaty, persuasion, and remonstrance, she summoned up sufficient resolution, and prepared herself to endure the agonizing alternative, for the only choice, which her unfortunate case presented, was, either to strip, or perish in the flames.

She was then lowered into the ocean by a rope from the taffrail, the lead of which was melting at the time; and whilst letting her down, some of it dropped and burned the back of her neck. On reaching the water, one of her shipmates, who was a good swimmer, staid by her side, and supported her until she was picked up by a boat belonging to the Pickle schooner, and brought on board the ship she was then in.

Her name was Jeannette, of French Flanders, and she remained with us until our arrival at Gibraltar, when, a cartel took her to a Spanish port. On leaving our ship, her heart seemed overwhelmed with gratitude; she shed abundance of tears, and could only now and then, with a deep sigh, exclaim, "*Les bons Anglois.*"

SHIPWRECK OF CAPTAIN GEORGE ROBERTS,

IN THE YEAR 1721.

NUMEROUS are the disasters to which mariners are exposed, and the fortitude with which many of them have undergone the most mournful reverses of fortune, teaches an useful lesson of patience and resignation; and shows what man is capable of acting or suffering.

Captain Roberts, who had been bred to the sea, in the year 1721, entered into a contract with several merchants of London to sail to Virginia, and there to load with a cargo for the Guinea trade. Having purchased slaves to the amount of his investments, he was to proceed with them either to Barbadoes or Virginia, as he found most likely to be conducive to the interests of his employers; and having disposed of his live freight, he was to load with the produce of the country, for the London market. This was a complex and tedious enterprise, and fortune forbade that it should be more than partially accomplished. Captain Roberts indeed reached Virginia, and purchased a sloop and suitable cargo, with which he steered towards the Cape de Verd islands; but here calamities and distress overtook him.

Near St. Nicholas, one of those islands, he fell into the hands of pirates, and finding him a man of spirit and integrity, they anxiously strove to unite him in the same nefarious confederacy. These attempts he steadily resisted; but

his unhappy situation rendered it necessary to conform more than he seems to have liked with their humours and prejudices. One of the commanders among the pirates treated him with much indulgence, probably from a wish to draw him into his lure. By the interest of this person he was to be allowed to go on board his own ship, and to be supplied with some necessaries; but unfortunately refusing to drink the Pretender's health, which surely had not been a very venial offence, circumstanced as he was, one of the piratical captains threatened to shoot him through the head; and after having insulted him in the most inhuman manner, barbarously forced him on board his own vessel at midnight, without provisions, water, or sails, and with only two boys to assist in the navigation, one of whom was not more than eight years of age. He was not even allowed a light, and his ship being leaky, darkness was doubly horrible.

That men of the most abandoned characters should so far forget what humanity is due to their fellow men, as to expose any one to almost certain destruction, merely on account of a foolish toast, may excite the astonishment of the reflecting; nor perhaps shall we wonder much less at the romantic resolution of Captain Roberts, who braved death rather than submit to an insignificant form. Sullen obstinacy is sometimes dignified with the title of heroic constancy, and many have been esteemed martyrs in a good cause, who only felt sacrifices to their own perverse disposition, or unsubmitting tempers.

Thus abandoned to his fate, and with a mind composed and resigned, Captain Roberts first set about pumping his vessel, by the assistance of the elder boy. Having pretty well gained on the water, daylight appeared, when he saw the full extent of his miserable situation. The unfeeling wretches who had turned him adrift, had left him scarcely anything to support life. On rummaging the vessel, he found only a few crumbs of bread, ten gallons of rum, a little rice, and some flour, with two gallons of water.

With much labour he patched up a sail in three days time, during which space himself and his two youthful companions fed on raw flour and rice, drinking nothing but rum. But the heat of the climate, and the fatigues to which they were exposed, rendering this kind of food unwholesome, they made cakes of dough with the little water they had left; but this operation exhausted their stock; they soon felt the extremes of drought, which spirits could not assuage.

Providence now favoured them with a plentiful shower of rain, with which they quenched their thirst, and saved about a gallon over.

Small as their stock of provisions was, they husbanded it with so much care, that with the addition of a shark which they caught, it lasted them for three weeks. When famine began to stare them in the face, they had the good fortune to discover the Isle of St. Anthony; but before they could reach the landing-place, darkness had set in, and they determined to wait in anxious expectation of the day. Thirst, however, was so pressing, that the elder boy solicited permission to go on shore for a little water in a small boat, and to return directly.

No sooner was he gone than Captain Roberts, worn out with fatigue, was taken ill, and retiring to his cabin, insensibly dropped asleep. At midnight he waked, and running on deck, to his extreme distress found the ship almost out of sight of land. Astonished and afflicted at this misfortune, he began to lose all hopes of recovering the shore without the assistance of his companion; and to aggravate his misery, the ship was making water very fast, and the anchor was out, which he had not strength to haul up.

The danger of sinking being most imminent, he applied himself to the pump, and in a few hours sucked it dry. His next labour was to heave the anchor on board, and in this, too, he succeeded beyond his first hopes. Parched with thirst, and without a drop of water, he now endeavoured to regain the island, and at last cast anchor in a sandy bay.

The same evening, some negroes came to his assistance, bringing with them a very seasonable supply of water. This raised his drooping spirits; and by the help of these poor people, who had been engaged by the boy on shore, he at-

tempted to steer the ship into the port of Paraghesi. In the night, the main-sail split, which so daunted the negroes, that they instantly took to their boat, leaving Mr. Roberts in a more forlorn situation than ever.

Next day, while he was exerting himself to steer the vessel to land, he heard the voices of some people in the hold; and found three negroes, who had been left dead drunk by their companions, from applying themselves too freely to the rum, and were now just recovering their senses. These people giving themselves up for lost, when they discovered their situation, at first would render him no assistance; but on a little reflection, and finding they were near St. John's, they began to labour for their preservation. One of them pretended to know the harbour; but when he approached the shore, he was utterly at a loss, and insisted on running the vessel on the rocks.

In this dilemma, Captain Roberts threatened to despatch the first person who should attempt this desperate deed, on which the pretended pilot leaped overboard and swam to land. Soon after the captain hauled in so close to Punto de Sal, that he could almost leap on shore, and in this situation the other negroes left him.

That evening, the moon shone bright, and Captain Roberts saw several of the natives on the rocks, who next morning swam to the ship, and congratulated Captain Roberts on his arrival, and offered him any assistance in their power, if he would go on shore, where they had made a large fire to welcome him. Unfortunately he could not swim, and for the present was obliged to remain on board; but the natives made his situation more comfortable by bringing him fish and other provisions.

The succeeding day the weather looked threatening, and Mr. Roberts was justly afraid of being driven out to sea. The negroes kindly interested themselves in his preservation, and after trying in vain to fasten a rope to the rocks, offered to swim with him and his boy to land. Unwilling, however, to quit the ship while a hope remained of saving her, he resolved to persevere; but next day in spite of all his efforts, the storm drove her on the rocks, which pierced her bottom. The water now rising rapidly, the affrighted negroes left him; but as soon as the storm abated, returned and swam off with the boy. The captain now consented to leave the vessel, when two of them, taking him by the arms, bid him be of good courage, for St. Anthony would protect him. However, they had not proceeded half way, when a surge parted one of his assistants, and had not a third instantly supplied his place, this unhappy man must have been lost. At last he reached the land, and soon saw his vessel part asunder, while the natives employed themselves in swimming backwards and forwards to the wreck, to save what articles they could.

Thus was the captain happily rescued from a boisterous sea, and the attentions of the natives were exerted to dissipate all reflections on his still distressing situation. The negroes then took him to the fire to warm him and dry his clothes, and expressed their admiration of his fortitude and perseverance.

The governor too, hearing of his misfortunes, sent the most humane offers of assistance, and he was now well supplied with milk and fruit. But with all the alleviations of humanity, not only the perils he had just escaped, but his present situation, filled him with awe and apprehension. He was now fixed on a shelf of rocks, under the covert of others which impended over his head. These rose to an amazing height, and it was not without great danger that the friendly natives descended such frightful precipices to his assistance, which it was impossible for him to climb; and as he could not swim, as they did, to a landing place, his immediate prospects were those only of prolonged misery.

In this place, Mr. Roberts and his boy had continued for several days, still visited by the natives, who exerted themselves with increasing benevolence to relieve him. Among those who now came off to him was a man who, to his surprise, addressed him in English. On inquiry what could bring him here, he said his name was Franklin, that he was a native of Wales, and having been some time detained by

pirates, had found means to escape, and to reach this island.

The conversation of Franklin gave Captain Roberts much consolation; and he indulged the hopes of having the only boat belonging to the island sent round to take him off; but as it did not arrive at the expected time, he became impatient, and resolved to attempt to climb the rocks, by the assistance of the friendly natives.

With extreme difficulty he ascended half-way up the first rock, some hundred feet, when looking down his head grew giddy with the horrid view, and, had he not been supported, he must have been dashed to pieces, by falling to the bottom. At last he reached the first landing place; from thence he proceeded about three quarters of a mile in a narrow path, open towards the sea, and sometimes found it so contracted as barely to allow him footing. His guides, however, assisted him with poles across the most difficult places; but at last they came to an ascent almost perpendicular, when two of the negroes striking a crag, to try if it was fixed, a huge fragment tumbled over them, and from the noise it raised, Roberts expected that the cliffs above would instantly fall upon them, and involve them in undistinguished ruin.

When this alarm was over, they concerted measures for farther operations; and finding it impossible for Roberts to climb the remaining space, his guides descended with him in an oblique direction, to the bottom, without any accident. The fatigue he had undergone threw him into a fever, which lasted near a month; but still he had the happiness to experience the unwearied assiduities of the natives; and on his recovery found the boat ready to receive him, and safely reached the harbour.

Unable to walk or support himself, he was fastened upon the governor's horse, and in that state was conducted to his house. This gentleman, in a manner honourable to his feelings, sympathised with Captain Roberts' distresses, and after some time, he was invited to take up his residence with the son of a former governor, who received him with the pleasure of a friend. Meanwhile the natives continued their attentions, and daily supplied him with various presents. As soon as Roberts was able to walk abroad, he returned, the visits of these kind people, and amused himself in joining their hunting parties. That the breed of wild goats may not be destroyed, no one is allowed to hunt without the governor's consent, and this is one of the principal privileges he enjoys.

With the mildest disposition and most benovolent intentions, the natives appeared to be the most ignorant and superstitious. They had a negro priest who officiated among them, but his learning and understanding were nearly on a level with those of his flock.

St. John's Island, where Captain Roberts landed, is situated in 15° 25' north latitude, and is very high and rocky. It produced amazing quantities of saltpetre in several natural caverns, where it hangs like icicles, or forms a crust like hoar frost.

By the favour of the governor, Captain Roberts set about building a boat to carry him thence, and having saved several of the materials from the vessel which was wrecked, the business was carried on with spirit. The idea of visiting his native land inspired Roberts with resolution to persevere in this arduous undertaking, and his operations were well seconded by the friendship and attachment of the islanders. It is impossible to do adequate justice to their general conduct and zealous good services in favour of our countryman; and though shipwrecked in such a situation, where he was cut off from all hopes of deliverance, except by his own endeavours, must have been painful enough, yet it appears he could not have been more fortunate than in falling into the hands of such a gentle and benovolent race of men.

The boat being completed in the best manner that circumstances would allow, and supplied with an adequate stock of provisions, Roberts devoted a few days to make his thankful acknowledgments to the natives, who desired no other reward but his favourable report of them to his countrymen; and having taken his leave, he embarked with his boy, two negro mariners, who belonged to St. Nicholas, and three

of these islanders; Franklin choosing to remain in his present situation.

The evening after they sailed, they came to St. Phillip's, and landing next morning, were courteously received. Here they fell in with a person who had the title of Proanador, of St. John's, who wanted to go to that island. The boat being found inconvenient for a voyage of any length, this gentleman proposed to Captain Roberts to return with him to St. John's, and to carry with them some artificers, who would soon equip his little vessel in a more commodious manner. This offer was very grateful, and as several other persons wished to visit that island, Captain Roberts accommodated them with a passage, for which he received an adequate recompense.

The same day that they weighed from St. Phillip's they reached St. John's, to the great satisfaction of all the passengers and crew, some of whom being unaccustomed to nautical expeditions, plumed themselves not a little on the voyage they had made.

The natives showed our countryman the same humane and friendly attention as before; and by the assistance of the carpenters they had brought from St. Phillip's, the boat was considerably improved, and much better adapted for any navigation.

Having carried back the artificers, Captain Roberts sailed to St. Jago, and continued trading for some time among the different islands, carrying provisions to Mayo, and loading back with salt; till at length, being at St. Nicholas, his boat was staved to pieces on the rock, while himself and crew were on shore. The inhabitants, however, at St. John's, gave him the most convincing proofs of their beneficence, and purchased the broken fragments of his boat for twelve dollars.

Once more reduced to the necessity of attempting some new expedient, or of remaining where he was, the prospects of our author began to brighten before he could come to any decisive resolution of his own. An English vessel arrived, commanded by Captain Harfoot, who intended to trade among these islands for clothes, and then proceed to Barbadoes. This officer finding Captain Roberts likely to promote the objects of commerce which he had in view, made overtures to him for entering into the scheme, a proposal which was gladly accepted.

They visited Bona Viste, Mayo, and St. Jago. In the harbour of Port Praya, in the latter island, they found an English vessel from Guinea, freighted by Portuguese merchants. She had lost the greater part of her crew, and having still a voyage to Lisbon to perform, her captain was anxious to engage the service of Roberts; and the hope of his finding the way to England much earlier than he could otherwise have done, prevailed on him to detach himself from Captain Harfoot, and embrace the present offer.

Having embarked in this ship, they had scarcely left St. Jago, when the most dangerous leaks were discovered; and as the trade winds would not permit them to return to the Cape Verd Islands, they had no alternative but to bear away for Barbadoes, which island they at length reached on Christmas-day, 1724.

At this place the ship was completely repaired, and after a stay of three months in that island, they again directed their course to Lisbon, when Captain Roberts eagerly seized the first opportunity of obtaining a passage to London, which he reached in June, 1725, after an uniform series of distresses and disappointments during the period of four years.

NEW ARRIVALS AT BATH.

A HUMOROUS tar of the name of Jack Simpson, of the Dreadnought, went to Bath, with his "she messmate," and had their names inserted in the journals of the pump-room, as new arrivals to drink the waters.

On his return, Jack brought the newspaper with him, and the ship's barber read the article aloud on the main-deck, to the no small merriment of "a crowded house," astonished at his abstemious habits.

DESTRUCTION OF THE DROITS DE L'HOMME.

The action which was fought between the *Droits de l'Homme*, a large French two-decker, and two British frigates, under the command of Sir Edward Pellew, and Captain Robert Reynolds, on the 13th of January, 1797, was one of the most remarkable in naval history, both from the singularity of its circumstances, and the appalling nature of its result.

The *Droits de l'Homme*, commanded by Commodore (cic devant Baron) La Crosse, belonged to the expedition which was intended for the invasion of Ireland, in 1796; but which, after reaching Bantry Bay, was prevented from landing, and driven off the coast by gales. The *Droits de l'Homme* afterwards proceeded to the Shannon. She was the flag-ship of Rear-admiral Bouvet; but this officer embarked in a frigate.

General Humbert, who commanded one of the expeditions to Ireland, in 1789, had taken his passage in her. On the morning of the action, she had arrived within twenty-five leagues of Bellisle, and as the weather appeared threatening, she stood to the southward, fearing to approach nearer to the shore.

Lord Exmouth, then Sir Edward Pellew, having put to sea with the *Indefatigable* and *Amazon*, in the supposition that the enemy had gone to the southward, cruised off Capes Ortugal and Finisterre, until the 11th of January. Returning towards the Channel, on the 13th, at a little past noon, the ships being about fifty leagues south-west of Ushant, and the wind blowing hard from the westward, with thick weather, a large ship was discovered in the north-west steering under

DESTRUCTION OF THE DROITS DE L'HOMME, COMMODORE LA CROSSE, JANUARY 13TH, 1797.

an easy sail, towards the coast of France. Chase was instantly given.

The wind had now increased to a gale, and the sea was fast rising. At half-past four, the enemy carried away her fore and main-topmasts, in a heavy squall. About six, the *Indefatigable* came up with her, and having shortened sail to close-reefed topsails, poured in a broadside as she crossed her stern. The enemy returned it from some of the upper-deck guns, and by showers of musketry from the troops, of whom there were nearly a thousand on board. The action continued to be well supported, on both sides, till shortly after seven, when the *Indefatigable* unavoidably shot ahead. At this moment the *Amazon* appeared, and gallantly supplied her place; but the eagerness of Captain Reynolds to second his

friend, had brought him up under a press of sail, when, after a well-sustained and close fire for a short time, he also went ahead. The enemy made an ineffectual attempt to board the *Indefatigable*, and kept up a constant and heavy fire of musketry till the end of the action.

Shortly after eight o'clock, as soon as Sir Edward Pellew had replaced some of the disabled rigging, and brought his ship under proper sail, and the *Amazon* having reduced hers, they commenced a second attack, placing themselves, after some raking broadsides, upon each quarter, often within pistol-shot. The ships were now engaged in a running fight, with a heavy sea, until about twenty minutes past four in the morning; at which time the moon opening rather brighter than before, Lieutenant Bell, who was quartered on the fore-

castle, and who had kept the ship's reckoning during the night, discovered land, which he had scarcely reported to Sir Edward Pellew, before the breakers were seen. Immediately, the *Indefatigable* stood to the southward, after making the night signal of danger to the *Amazon*, which, with equal promptitude, wore to the northward. The enemy, who did not yet see the danger, thought they had beaten off the frigates, and poured a broadside into the *Indefatigable*, the most destructive she had yet received. Seven shot struck her hull, the three lower masts were wounded, and the larboard main-topmast-shrouds were all cut away. It required extraordinary activity and coolness to save the topmast, the loss of which, at that time, would have made that of the ship inevitable. Under the direction of Mr. Gaze, who immediately sprang

aloft, the captain of the main-top cut away the topgallant-yard; while Mr. Thompson, acting-master, got up the end of a hawser, which he clinched around the mast-head. Thus they saved the main-topmast, and prevented the mainmast itself from being sprung. Mr. Gaze, who received a master's warrant a few weeks after, continued with Lord Exmouth to the last day of his command. He was master of the fleet in the Mediterranean, and it was he who carried the *Queen Charlotte*, in such admirable style, to her position at Algiers.

None at that time knew how desperate was their situation. The ships were in the bay of Audierne, close in with the surf, with the wind blowing a heavy gale dead on the shore, a tremendous sea rolling in. The *Indefatigable* had four feet of water in her hold, and her safety depended on her wounded

spars and damaged rigging bearing the press of sail she was obliged to carry; while the crew, thus summoned to renewed exertion, were already quite worn out by fatigue. The fate of the other ships was certain, for the *Amazon* had all her principal sails disabled, and the *Droits de l'Homme* was unmanageable.

The *Indefatigable* continued standing to the southward; but before daylight they again saw breakers upon the lee-bow. The ship was immediately wore in eighteen fathoms, and she stood to the northward. Not knowing exactly upon what part of the coast they were, the lingering approach of daylight was most anxiously looked for. About half-past six, land was again seen close ahead on the weather-bow. Returning to the southward, she passed the *Droits de l'Homme*,

lying on her broadside in the surf, a tremendous sea beating over her, at the distance of about a mile, but without the possibility of giving the smallest assistance to their gallant but unfortunate opponent. Her own situation was almost hopeless; and Sir Edward Pellew himself was deeply affected, when, all having been done which seamanship could accomplish, he could only commit to a merciful Providence, the lives of his gallant crew. "The miserable fate," says Sir Edwards, "of those on board the *Droits de l'Homme*, was, perhaps, the more sincerely lamented by us from the apprehension of suffering a similar misfortune."

Sir Edward Pellew was now able to ascertain his situation, and their fate depended upon the possible chance of weathering the Penmark rocks. By the uncommon exertions of her

fatigued and exhausted crew, in making all the sail they could set, the *Indefatigable*, at eleven o'clock, with six feet water in her hold, passed about three-quarters of a mile to windward of the *Pennmarks*; enabling her officers and men, after a day and night of incessant exertion, and about ten hours' fighting, at length to rest from their toil, and to bless God for their deliverance.

The fate of the *Amazon* was not so fortunate. She struck the ground about ten minutes after she ceased firing. Her crew displayed the most admirable discipline. From half-past five until nine o'clock, they were employed in making rafts, and not a man was lost, or attempted to leave the ship, except six, who stole away the cutter from the stern, and were drowned. Captain Reynolds and his officers remained by the ship until they had safely landed, first, the wounded, and afterwards every man of the crew. Of course, having landed in an enemy's country, they were made prisoners, but they were treated well, and exchanged not many months afterwards.

The *Droits de l'Homme* saw the land soon after the frigates hauled off, and after hopeless attempts, first to avoid it, and afterwards to anchor, she struck the ground almost at the same moment the *Amazon* did. The mainmast went overboard at the second shock; the foremast and bowsprit had fallen a few moments before, in her attempt to keep off the land. When the danger was first seen, the crew gave an alarm to the English prisoners below, of whom there were fifty-five, the crew and passengers of a letter-of-marque which the *Droits de l'Homme* had taken a few days before: "Poor English, come up quickly, we are all lost!" Presently the ship struck on a bank of sand, nearly opposite the town of Plouzenec. Cries of dismay were now heard from every part. Signals of distress were fired, and several guns were hoisted overboard. Many of the people were soon washed away by the waves which broke incessantly over her. At daylight, the shore was seen covered with spectators, but they could afford no assistance. In the mean time, the stern was beaten in by the sea, and no provisions or water could afterwards be obtained.

At low water, an attempt was made to reach the shore; but two boats, which were brought alongside, drifted away, and were dashed to pieces on the rocks. A small raft was constructed to carry a hawser to the shore, by the aid of which it was hoped that preparations might be completed for safely landing the people. A few sailors having embarked on it, the rope was gradually slackened to allow it to drift to land; but some of these people being washed away, the rest became alarmed, cast off the hawser, and saved themselves. After a second unsuccessful attempt with a raft, a petty officer attached a cord to his body, and tried to swim on shore; but he was soon exhausted, and would have perished, but that he was hauled back to the ship.

On the second day, at low water, an English captain and eight other prisoners launched a small boat, and landed safely. Their success justly restored confidence to the multitude, proving, as it did, how easily all might be saved, if proper means were adopted.

Perishing with cold, and thirst, and hunger, for the ship, her stern now broken away, no longer afforded shelter from the waves, and they had tasted nothing since the ship struck, the unhappy crew saw the third day arise upon their miseries. Still the gale continued, and there was no prospect of relief from the shore. It was now determined to construct a large raft, and first, to send away the surviving wounded, with the women and children, in a boat which remained. But as soon as she was brought alongside, there was a general rush, and about a hundred and twenty threw themselves into her. Their weight carried down the boat; next moment an enormous wave broke upon them, and when the sea became smoother, their corpses were seen floating all around. An officer, Adjutant-general Renier, attempted to swim ashore. He plunged into the sea, and was lost.

"Already nine hundred had perished," says Lieutenant Pipon, an officer of the 63rd regiment, who was on board a prisoner, "when the fourth night came with renewed terrors. Weak, distracted, and wanting everything, we envied

the fate of those whose lifeless corpses no longer needed sustenance. The sense of hunger was already lost, but a parching thirst consumed our vitals. Recourse was had to wine and salt water, which only increased the want. Half a hoghead of vinegar floated up, and each had a wine-glass half full. This gave a momentary relief, yet soon left us again in the same state of dreadful thirst. Almost at the last gasp, every one was dying with misery; the ship, which was now one-third shattered away from the stern, scarcely afforded a grasp to hold by, to the exhausted and hopeless survivors. The fourth day brought with it a more serene sky, and the sea seemed to subside; but to behold, from fore and aft, the dying in all directions, was a sight too shocking for the feeling mind to endure. Almost lost to a sense of humanity, we no longer looked with pity on those who were the speedy forerunners of our own fate, and a consultation took place to sacrifice some one to be food for the remainder. The die was going to be cast, when the welcome sight of a man-of-war brig renewed our hopes. A cutter speedily followed, and both anchored at a short distance from the wreck. Then they sent their boats to us, and my means of large rafts, about a hundred and fifty, of near four hundred who attempted it, were saved by the brig that evening. Three hundred and eighty were left to endure another night of misery, when, dreadful to relate, above one-half were found dead next morning."

Commodore La Crosse, General Humbert, and three British infantry officers, prisoners, remained in the wreck till the fifth morning, and all survived. The prisoners were treated with the utmost kindness; and in consideration for their sufferings, and the help they had afforded in saving many lives, a cartel was fitted up by order of the French government to send them home, without ransom or exchange. They arrived at Plymouth, on the 7th of March following. The admiralty awarded head-money to the frigates for the destruction of the *Droits de l'Homme*. As there were no means of knowing her compliment with certainty, Sir Edward wrote to Commodore La Crosse, to request the information, telling him that it was the practice of his government to award a certain sum for every man belonging to an enemy's armed vessel, taken or destroyed. The commodore answered, that the *Droits de l'Homme* had been neither taken nor destroyed, but that the ships had fought like three dogs, till they all fell over the cliff together. Her crew, with the troops, he said, was six hundred men.

The gallant captain of the *Amazon*, Captain Reynolds, was soon after exchanged, tried by a court-martial for the loss of the frigate, most honourably acquitted, and appointed to another ship. He perished at length by a not less distressing shipwreck. At the end of 1811, being then a rear-admiral, he was returning from the Baltic, in the *St. George*, a ship not calculated to remain so long on such a station. After having received much damage in a former gale, she was wrecked on Christmas-day, as well as the *Defence*, which attended her, and only eighteen men were saved from the two line-of-battle ships. Rear-admiral Reynolds and his captain remained at their post till they sunk under the northern winter, when, stretched on the quarter-deck, and hand-in-hand, they were frozen to death.

In this gallant action, which commenced at a quarter before six, p.m., and lasted (excepting at short intervals) until four, a.m., the sea was so high, that the people in both ships were up to their middles in water on the main-deck. Some of the guns on board the *Indefatigable* broke their breechings four times over; others drew the ring-bolts from the sides; and many, from getting wet, were repeatedly drawn immediately after loading.

The loss sustained on board the *Indefatigable*, was only nineteen wounded—among the number was Mr. Thompson, the first-lieutenant. Twelve of the others had wounds of no great consequence, consisting chiefly of violent contusions from splinters. The *Amazon* had three men killed, and fifteen badly wounded.

More than a hundred of the enemy were killed in the action. From the crowded state of the decks of the *Droits de l'Homme*, and the unprecedented length of the engage-

ment, her loss might have been expected to be more; but the darkness, the heavy gale, and the consequent motion of the ships, necessarily made the firing slow and uncertain. On board the Indefatigable nobody was killed.

We have derived part of the above description from Osler's admirable life of Lord Exmouth; and seldom, perhaps never, has an officer been placed in similarly distressing circumstances, as his lordship was on the trying occasion above narrated.

After ten hours' hard fighting, to be partially deprived of the advantages and honours of such heroic exertions, by an enemy over which man has no control, was mortifying.

THE LOVER AT SEA.

BY W. LAW GANE.

"None but the brave deserve the fair."

HUNDREDS of delighted spectators crowded the shores of the noble estuary formed by the junction of the Orwell and the Stour, where their united waters fall into the ocean, after forming a boundary between Essex and Suffolk. The banner of Britain floated victorious in the breeze: again had her ocean sons forced the foe to own that Britannia reigns supreme on her watery domain. Slowly and majestically the Drake frigate glided along the harbour, followed in her wake by the Daphne, a French seventy-four. The guns of Landguard fort thundered forth a salute to honour the heroes of the Drake, and were responded to by the batteries on the opposite heights. The bells of the churches rang merry peals, and joy and triumph beamed on every countenance.

The ships soon reached the anchoring ground, and proudly the heart of the patriot throbbed at the sight of his country's glory; he beheld her ensign waving triumphant over that of her ancient enemy, and felt a delight in reflecting that, so long as her wooden walls stand, so long may she defy the world. May they exist for ever! to guard our sea-circled land, to protect our commerce, to defend our rights! but may no foe in future dare their vengeance; may their triumphs be those of peace and humanity, and may the banners of freemen float united on the gale, and together bear to the remotest corners of the world the blessings they themselves enjoy—civilization to the savage! liberty to the slave!—But to our story. The Drake was commanded by Captain Gardiner, a young and rather mad-brained officer; but withal, one of the brightest ornaments of England's gallant navy, and who would expect, or even wish to see the straight-laced rhapsodist, or the dreamy philosopher in a sailor? Sailors are sailors; and they are not so good but they might be better, nor so *bad* but they might be a great deal worse.

Great attention would naturally be shown to the young captain and his brave officers and crew at Harwich and the neighbouring places: balls and dinners followed each other in rapid succession, and everything was done to make their stay agreeable. They often visited Landguard fort, at that time under the command of General North, and were always kindly received by the eccentric old governor. Frequently they strolled along the charming beach that surrounds the fort in every direction, and on one of these occasions they observed on the extreme part of the coast, a female collecting shells. The captain, who was in advance of his comrades, proceeded towards her alone; she did not perceive him until he stood close by her side; she started, and appeared rather alarmed at being surprised in so lonely a situation by a stranger. She answered to the captain's salutation with a bow and a blush, and collecting together her shells, hastily returned towards the garrison.

Shall we attempt to describe what the captain felt at this moment, for the lady was young and very beautiful? He felt as almost every one has, doubtless, at some period of their lives. His sensations were those of a warm susceptible young fellow, who glances suddenly on an unknown, but lovely countenance; in such a moment our feelings are too delightful to admit of description; we experience a buoyancy of spirit which puts us in good humour with every thing around us, and we anxiously endeavour to catch a second glance: if the coy maiden renders this difficult, on we walk, cursing bonnets great and small, and hoping their inventor was hanged. The

ensuing night we may probably dream of the beautiful unknown, but this is generally as long as our fickle, treacherous emotions live—the next day we behold a fresh fair face, and the former is forgotten.

The impression made on Captain Gardiner was rather stronger and more durable. He returned to his ship in an unusually serious mood, and got well rallied; he retired, however, to his cabin to read Werter, and to muse upon the sweet damsel, who, if met under similar circumstances by a poet, would doubtlessly have been mistaken for a sea-nymph: the captain hoped she was something more tangible; at all events he resolved to attempt an elucidation of the mystery.

Behold the gay captain, transformed to a very demure, lover-like sort of person, preparing to accept an invitation from General North to dine at the fort.

The boatswain has piped up the crew of the barge, and they are waiting alongside for the captain. At last he came, jumped into the boat, and in a few minutes was landed on the beach a little way below the fort.

No sooner was he gone, than the coxswain, having hitched up his trousers, and adjusted sundry other matters, turned to the man of the after oar, and ejaculated, with astonishment in his looks—"Oh Lord!" He took time to consider what should come next, and continued—"Well, shiver my ribs, if the skipper ar'n't turned out dandy-rigged." Jack Seagull, I've been to sea, as they say, ever since I was hatched, but if that there warn't the wonderfulest sight as ever I see'd, I'm blowed."—"Yes, yes;" answered Jack Seagull, who seemed to have taken the matter deeply into consideration, "'twas as the grim-faced old domino said at the Portsmouth theatre, 'most prodigious!' Why coxswain, them there things he had on in the place of trousers, seemed blank spank new, and my eyes, they were made of dainty white silk, and came down as no lower nor my knee, and I thinks as how they were braced round with red ribbon, which hung down his legs like Bill Toplin's love-locks."

An arch-looking rogue in the bow of the boat now put in his opinion. "I'll tell you as how I think the commodore is patterning after them d—mounseers we gave such a drubbing to t'other day: only think of them bright shiners in his shoes! I hope as how he didn't find any of his fine rigging stowed away in the Daphne's lockers."

This unjust insinuation on their commander put a stop to the conversation, and not another word was spoken on their way back to the ship. We are in utter ignorance of the cause which induced Captain Gardiner to dress in a manner which appeared so unusual to him. He perhaps supposed that he should meet the unknown lady at the general's table. Be that as it may, his garb afforded matter for speculation to the whole crew of the Drake.

The captain was welcomed in a very friendly manner by the governor, who, in a few minutes led him into the dining-room: a part of the company was already assembled, but the object of his wishes was not there, and he began to fear that his hopes would be disappointed. His suspense, however, was soon ended; the general desired a servant to inform Miss Ellen that dinner waited, and almost immediately Ellen came, and with no little emotion the captain beheld in her the lady, who, to tell the truth, held possession of his heart. She was introduced as the daughter and only child of the general. Miss Ellen appeared strangely confused at the captain's salutation; she blushed and could scarcely speak, but in this she was not singular, for Captain Gardiner was fully as mute and embarrassed as herself; however, in the hurry of seating and preparing for dinner, this passed unobserved, save to one of the guests, who fixed his attention on the young lady in a manner that bespoke him to be interested in her conduct, and, at which he by no means appeared pleased. The clatter of knives and forks admonishes us to pause, and while the process of mastication is going on, we will attempt a brief sketch of the gentleman who so peculiarly honoured Miss Ellen with his attention.

Mr. Vampem (such was his name) stood about four feet ten inches in height; he was tolerably well made, except about the shoulders, which projected rather higher than his ears,

and the legs, which, when not in motion, formed a perfect O. His face was certainly not one of the most beautiful—we mean, to ordinary observers: flat, with a profusion of flesh and bone; small sunken eyes; a nose almost hidden between mountain cheeks, but its loss amply compensated in a most capacious mouth; altogether, his countenance bore a striking resemblance to that of an Esquimaux, and we must not forget to add that, for its further adornment, it was most liberally marked with the small-pox. His calling was the occupation which St. Crispin patronizes, he was moreover a captain in the local volunteers, and a suitor for the hand of Miss North, and strange to say, was favourably received as such by her father.

The dinner being over, the ladies retired from the table. The general and Mr. Vampem followed their example. After the glass had circulated for a time among the gentlemen who remained, a ramble round the garrison was proposed, and that the ladies should be invited to accompany them. This was acceded to, and the captain had the good fortune to obtain Ellen for a companion. They soon contrived to escape beyond the observation of their friends, and it was a very little time before, with all the bluntness of the sailor, that the captain declared to Ellen the emotions of his heart, the passion she had inspired him with, and in short, acted his part so well, that he soon obtained a confession from her to the effect that she did not regard him with indifference. He threw himself on his knees, and passionately implored her immediately to become his. The sweet Ellen gently chided his violence, and commanded him to rise, reminding him that they were strangers to each other, and adding, that he should certainly ask her father's consent before he desired her to take so important a step. She, however, informed him that she did not think he would obtain it, her father being so strangely prepossessed in favour of Mr. Vampem, but she declared her determination to sacrifice everything, even her life, rather than become the wife of a person she so utterly detested, and scrupled not to say, that if her father was found to be obstinately bent on thwarting her happiness she would not remain inexorable to his wishes. This perfectly satisfied the gallant sailor, and he promised to be entirely guided by Ellen, who appeared to possess as much discretion as beauty.

Almost unconscious whither they rambled, the lovers found themselves in the burial ground of the garrison. They approached a newly made grave, and the captain observed a tear to start from the eye of his companion. He affectionately inquired the cause of her sorrow: "In this grave," she said, "rests the remains of a friend—of an estimable and accomplished gentleman: but a few days since and he was in the prime of life, in health and happiness. He was united to an amiable, and now heart-broken lady, whom he tenderly loved, and every comfort the world could bestow was theirs. Alas! a domestic affliction came to disturb their happiness; for a moment his head acknowledged not the guidance of his heart! his error was soon discovered; but his honour was too sensitive to permit him to bear the reproaches and sneers of the world, and in a paroxysm of grief, he raised his hand against his life. Wonder not that I mourn his untimely fate; I was honoured with the friendship of himself and his amiable lady—Heaven have mercy upon his noble soul."

Turning from the captain to hide the tears which freely flowed, she beheld Mr. Vampem standing by her side, and her father at a distance hobbling towards them. She did not speak, but had nearly fallen to the ground, overcome with surprise and alarm at the sudden appearance of this hated individual.

The captain was silent, but cast a stern glance on the heroic Mr. Vampem, who was the only one that appeared not to have lost the use of his tongue. He ejaculated—"Impious girl! to dare to invoke heaven to have mercy upon the soul of the suicide. Is it not written, 'Cursed are all they that commit murder?' my exhortations are quite lost on you! you are viler than the heathen—more wicked than the worshippers of stocks and stones."

In order to explain the motives for this extraordinary speech, we must relate that, Mr. Vampem affected great saintliness, and farther, he entertained a rancorous hatred against

the unfortunate gentleman we have been alluding to, and this because he had found it impossible to blind him to his real character and qualifications. Ellen was not like a certain description of persons, who, the more they are abused, the higher their admiration rises for the person who deals out the foul language: she started from Mr. Vampem with terror and disgust, and the captain, who had with difficulty restrained his rage during the delivery of the above gentlemanly and lover-like harangue, when he saw Mr. Vampem pursuing the terrified girl, stepped between them, exclaiming,—"Unfeeling wretch! hideous monster! sheer off, or prepare to sail on your last cruise," and seizing him by the collar, laid him in an instant upon his back, sprawling like a turtle. By this time the governor had come up, and just in time to save his protégée from the further vengeance of the captain.

It would be difficult to say which of the three gentlemen appeared most enraged. Mr. Vampem certainly did not challenge Captain Gardiner, but he invoked other powers to do the business which he himself feared to take in hand; nor did the general, though such a job would have been more in his way: after growling for some time, to the same tune as his friend, he seized hold of poor Ellen, and hurried her home, declaring she should not again see daylight until she had repented of her evil ways, and resolved to amend.

Captain Gardiner was not altogether displeased at this apparently untoward circumstance, though it absolutely precluded the possibility of his gaining the good-will of the general; but for this he cared little, resting perfectly satisfied on the promise of his beloved Ellen, and hoping the adventure might be turned to his advantage by hastening the consummation of his hopes. He returned to his ship, meditating how at the same time to punish his rival and to gain the object of his love.

After being some time on board, having had time to cool and to reflect, the captain remembered hearing, in the course of conversation at the general's table, that Mr. Vampem had to go over to Harwich in the course of the evening on some business of importance. He resolved to take advantage of this, and as soon as it became dark, a gang of men was summoned to accompany him on shore. He gave his instructions to the midshipman, and they started from the ship. Arrived in the town, the men were placed in concealment about the house where it was known Mr. Vampem was sojourning, and the captain took a station from which he commanded a view of the neighbourhood. They had not long to wait; the little gentleman soon made his appearance, supported on the right and left by two portly dames, between whom the brave soldier was scarcely to be seen. The captain gave the signal, and in an instant the group was surrounded by the tars. The women screamed lustily enough; Mr. Vampem informed the sailors of his rank, and bawled loudly for the assistance of men and spirits, but no attention was paid either to his rank or to his calls: no one came to his aid, those who had not lost the use of their legs, flying as fast as they could, well knowing that a press-gang is not to be trifled with. The poor gentleman, left to their tender mercies, had violent hands laid on him, and despite his prayers and tears, he was borne to the boat, and in a short time safely stowed away in the hold of the *Sharper*, a schooner sailing as a tender to the *Drake*. Here for a short time we beg to leave him, being well assured that there is no danger of his escaping beyond our observation.

This exploit so far concluded, Captain Gardiner returned on board, and sat down to write a note to Miss North, and resolved to attempt its delivery himself. He knew that the men belonging to the frigate were treated with great respect, and not only by the male portion of the population, but that, to be "one of the *Drake's*," was a sure passport to the good graces of the girls; ay, and many a heart these brave boys bore away with them when they sailed: he believed he could make this prepossession subservient to his purpose, and assuming the uniform of a gunner, he went on shore. He soon found himself seated in the most distinguished seat in the servants' hall at the general's house, and by the side of the fair Lucy Curler, Miss Ellen's own servant. This was exactly

what he sought, and after singing two or three sea ditties (the general had retired to bed), and saying a few sweet things, he reigned supreme in the heart of gentle Mistress Curlier. He failed not to take advantage of this, and rising, apparently with the intention of going, Lucy, as he expected, opposed his intention, and fondly implored him not to hurry away. He appeared to hesitate; she followed him to the door, and in a manner too tender to be told, sought to detain him. He yielded, but on one condition only; he had, he said, been intrusted with a letter for Miss North from a gentleman on board, and if she would deliver it, he would stay as long as she pleased; and at the same time he slipped two or three gold pieces into her hand. The combined power of love and money was irresistible; she took the letter and delivered it immediately.

With astonishment, but we cannot say with displeasure, Miss North read the following epistle:—
 "Dearest Madam,
 "After what has occurred, I feel that it would be mere folly to think of soliciting your father's consent for the fulfilment of my dearest hopes. I can only rely upon the promise you so recently made me, and trust you will not hesitate to bear me company on the voyage of life. Our acquaintance, I confess, is of a very short standing; but what of that? If an unknown ship, under friendly colours, hove in sight on the eve of an engagement, should I, because I had never seen her before, refuse the aid she brought me? No! our efforts would be united, and the poor devil, our enemy, would soon down with his bunting. In this manner unite with me; the citadel of matrimony is in sight, together let us bear down upon it, and we shall find no difficulty in storming the place. I will have the ship clear, and every arrangement made for action, and will be under your window to-morrow night with a ladder, to receive your orders, and to tow you within gun-shot. I rely upon your coming; and am confident, although we have not been a great while within hail, that we shall manage to sail very comfortably together to the end of our cruise."

"Yours truly, and for ever,
 "H. M. S. Drake. "THOMAS GARDINER."

Long the lady hesitated what course to pursue; she could not conceal from herself that she loved Captain Gardiner, but the step he urged her to take was of such paramount importance, that she dreaded to comply with his request. The conflict between fear and affection, duty and inclination, raged long and violently; but the heart was too powerful to be restrained by the judgment, and the latter force soon effected a retreat, leaving the heart undisputed master of the field. She wrote the following answer:—

"Sir.—Relying on your honour (though well aware I shall be justly condemned for my imprudent conduct), I cannot deny your prayer. In placing all that is dear to me in your power, oh! may I receive at your hands the reward of my unbounded confidence and affection. Yours, &c.
 "ELLEN NORTH."

She immediately despatched this to the captain, who, to the evident regret of Mistress Curlier, broke his promise by instantly hastening on board to read his letter, to meditate upon his happiness, and to arrange for its completion.

In this interval we can, perhaps, find time to give a short account of the adventures of the unfortunate Mr. Vampem. The schooner, to which he was forcibly conveyed, was under orders to sail next day, and as soon as daylight appeared, she weighed, and stood out of the harbour. In vain did the poor man strenuously protest against this treatment; he even so far lost sight of charity, as to threaten the officers with his future vengeance. They contented themselves with stating that his detention for a short time was necessary for the good of his Majesty's service, and promised to make his stay with them as agreeable as wind and weather would permit, a condition, in truth, which was not very likely to be enviable; for there was every appearance of a violent gale, and the schooner would not have sailed, had not intelligence arrived that a privateer was lurking off Lowestoft, and scarcely had they arrived abreast of Orfordness, before they had quite as much

wind as they could bear under close-reefed topsails. This by no means agreed with Mr. Vampem; he soon began to feel yawnish, then squeamish, and in half an hour was in that enviable condition, that he would have given all he possessed to any one who had been humane enough to have tossed him overboard.

About noon, the gale increased to a perfect hurricane; the sails were torn from the yards, and not a stitch of canvass could be made to stand against the storm. Thus, entirely at the mercy of the winds, the *Sharper* drifted along, and was soon in considerable danger, for a few miles to leeward were the Gunfleet Sands, which they were fast approaching, and must inevitably have struck on them, had not the weather slightly moderated.

Poor Mr. Vampem knew nothing of the narrow escape which he had had from death. As the weather became finer, he crept from his cabin, more dead than alive, a perfect picture of misery; we verily believe he would have resigned even Miss North to have been allowed to escape to *terra firma*.

Lieut. M'Donnell, the commander of the schooner, did not fail to take advantage of the poor prisoner's situation, and after bestowing a great deal of condolence, thus addressed him:—"I trust, sir, the little excursion we have taken you, may be productive of good both to your health and happiness; it would, perhaps, have been more in accordance with the rules of politeness, had we asked your consent prior to taking you;—time would not admit of it. But to come to the point, you must naturally wish to be ashore in such weather as this?"

"Indeed I do!" cried Mr. Vampem, interrupting the lieutenant, "I would not hesitate to give you my blessing and forgiveness. Oh! I would give you everything you desire would you safely convey me thither."

"To do this, good sir, is impossible at the present moment"—here the voice of the officer was drowned in the groans of the poor man—"but if you comply with a request which I am about to make, it shall be done as speedily as possible."

Mr. Vampem, seemed struck with some frightful idea: he howled out in a voice of dismay and horror—"Mercy, sir, have mercy—remember!"

"Hold! hold!" cried the commander, "you surely are mad; do you think I am going to cast you into the sea to propitiate the elements? No such thing. To cut the matter short, will you swear to take no manner of notice of this frolic after you get on shore? if so, you shall be there to-morrow evening at the farthest."

Mr. Vampem, though with some reluctance, accepted the terms offered, as he would much worse, had they promised to terminate his captivity, and a few minutes sufficed to sign and seal the bargain. Scarcely, however, had this been got over, when the man in the fore-top gave notice that he saw a strange sail a-head, at anchor. The glasses were immediately in requisition, and it was soon seen she was the very vessel they were seeking—a large corvette, mounting twenty eighteen-pounders.

They were within two miles of the privateer before she was completely under weigh, the crew of the gallant little schooner carrying on her all the sail she could bear that they might be able to exchange a few compliments with the Frenchman before it became dark. Everything was prepared for action in a few minutes,—hammocks up, guns charged, and the standard of Britain proudly wooing the breeze, smiling defiance on the giant enemy.

Poor Mr. Vampem wondered much at the cause of the deafening uproar which had prevailed for the last hour or two; but being within gun-shot, a broadside from the schooner, instantly responded to by the superior metal of the enemy, gave him to understand what was going on. Terror mastered his sea-sickness, and starting up in his hammock, he pitched out, and fortunately, fell on his head, and lay insensibly until the action had concluded.

After mutually giving and receiving a few broadsides, the privateer, not liking the *Sharper's* method of doing business, sheered off, and escaped in the darkness, leaving two fine brigs, which she had captured a day or two before.

Mr. Vampem, with the aid of the surgeon, was restored to

animation, and nothing material happened to him until the next morning, when he was safely landed at Southwold, and left to find his way home in the best manner he could.

The time appointed by Captain Gardiner for his adventure having arrived, he went on shore, taking with him half a dozen men on whom he could place reliance. All-powerful gold had gained from the general's gardener the key of one of the garden gates, which fortunately opened upon the beach, and not more than fifty yards from the sea. A few minutes before twelve, it was cautiously unlocked by the captain, who proceeded towards the governor's house, two men following him with a ladder, the others keeping watch, prepared to act in case of a surprise. The coast being quite clear, after taking a survey of the house, the ladder was placed against Miss North's window; the captain gently tapped against the glass; it was soon opened:—"Dear Ellen," he cried, "I wait; everything is arranged, and in a very few hours you will be my own."

Miss North was excessively agitated; she almost repented the promise she had given, and dreaded to venture on the perilous undertaking; but a flood of tears came to her relief, and without saying a word, she descended the ladder. On their way to the boat, the lovers had too much to think upon to indulge in conversation; they soon reached the frigate, and those who were to accompany them, the chaplain of the frigate and two officers, having got into the boat, they proceeded to their destination. They were landed at Shotley-le-fry, a small village on the Suffolk shore, and two carriages being in waiting, they galloped off to Holbrook, another village four or five miles distant. Having arrived there, the captain and one of his companions hastened to a small cottage near the road, and knocking loudly at the door, a head head was thrust out of a chamber window, and the cause of the uproar angrily demanded. The captain answered that they were a party come to view the church, and commanded him instantly to produce the keys: the poor man was sorely alarmed, and, much against his will, threw the keys from the window. They now made the best of their way to the church, and having let themselves in, locked the door, and proceeded to the altar. Bridesmaids were dispensed with, and an old tar, who had weathered the gales of sixty years, had the honour of giving the fair Ellen away. The chaplain immediately commenced reading the service, a license having been procured the previous day; he had not, however, proceeded far in his task, when a most alarming tumult was heard outside the church; but this did not hinder them from proceeding. It appeared, the moment the poor old clerk had given up the keys, he became excessively alarmed at what he had done, and moved at the reproaches of his spouse, he ran from house to house, rousing the cottagers with his doleful cries, and imploring them, if they valued the *safety of the church*, to come to his aid, for he believed it to be in imminent danger. The poor people, as much alarmed as their ecclesiastical officer, hastened to render him all the assistance they could; dress was scarcely thought of in this moment of peril, and many started from their beds, and so went forth.

A truly ludicrous group assembled around the church, knocking and clamouring for admittance; but those inside taking no notice of their importunity, their patience was quite exhausted, and they clambered up to the windows, and were forcing an entrance through them at the moment the ceremony concluded: seeing how harmlessly the intruders were occupied, they became calmer, and a small quantity of money distributed among them to drink the bride's health, sent them quietly home—the major part to dress.

Everything being thus far arranged, and the old clerk who, now understood the matter, having produced the books, the customary entries were made, and after satisfying the old man, who most humbly apologised for his conduct, and with all the dignity of office complimented the bride and bridegroom, the parties entered their carriages, and drove to Ipswich, where they breakfasted, and about the middle of the day embarked on the Orwell to return. After a delightful sail of three hours down that beautiful river, the runaways again found themselves alongside the frigate.

At this moment the gentle Ellen felt more distressed than at any former period of the day; the excitement had sustained her spirits, but the thought of having to meet her father after what had taken place, very powerfully affected her. She felt, however, that the moment must come, and yielding to the intreaties of the captain, it was determined to hasten it as much as possible. Behold then, the fugitives on their way to the fort, both wishing the intended interview well over: they soon entered the house of the general, but it was long before he could be prevailed on to see them: yielding, at last to the entreaties of his daughter, he came.

At his appearance, Ellen shrank to the arms of her husband, almost overcome with fear; but recovering, like dutiful children the pair approached him, implored his blessing and forgiveness, and promised never to do the like again.

For a considerable time he remained deaf to their prayers. His sorrow had been intense; to say that he grieved at his daughter's flight, would be to convey but a faint picture of his actual condition; with all his foibles she was the darling of his soul, and her absence had nearly driven him mad; had she not soon returned, it would doubtless have deprived him of his senses.

Affection like this could not long be restrained; he raised them from the ground, and tenderly embraced the pair, assuring them of his entire forgiveness, and was giving them some seasonable exhortations, when he was interrupted by Mr. Vampem, who burst into the room, half dead with fatigue and vexation. We may feel assured that the scene which met his view did not tend to his relief. The truth now first flashed on his mind, for he had been at a loss to discover the motive for his detention; he began bitterly to lament, and reviled the poor captain in a most merciless manner, for, though love was unknown to the good man, he sorely grieved at losing the snug inheritance of Miss North: Captain Gardiner, up to this moment, was not aware that she possessed either a shilling or an acre. The general was filled with astonishment, and his daughter with mirth, at Mr. Vampem's narration, but the former interrupted him by saying, "On this subject we will commune in private," and led him out of the room, though evidently against his will. So far, all was settled; the general, by his future conduct, ratified his forgiveness, and became extremely fond of his son-in-law. Poor Mr. Vampem, however, took the matter much to heart; in his despair, a few months afterwards, he threw up his military command, and ever after stuck to his too-often forsaken lapstone. When we bade the parties farewell, the captain and his bride were being conducted to their room by the smiling Lucy Curler.

A SAILOR'S FROLIC.

IN Greenland, as in other places, the destruction of a vessel liberates its mariners from subordination; and, from the impossibility of saving any part of its stores for the owners, they are considered legitimate objects for plunder. The men, therefore, who had escaped from this lost bark began to rifle her of whatever they considered valuable, soon as they perceived she was fixed by the ice, so as to render boarding her free from danger. Those who were prudent selected such articles as might render them welcome to the captain of a neighbouring whaler, in which they intended to seek refuge. Some were seen traversing the intermediate floes with coils of rope round their necks; others were provided with as many pieces of pork as they could carry. Nautical instruments, rolls of canvass, rounds of hung beef, cheeses, hams, and in short every object which might prove an acceptable offering to the skipper, were borne off by different parties, and procured the admittance requested, without the usual grumbling from that potentate, at the inconvenience, and even risk, of shipping more men while he was beset, and obliged to put his former messes upon short allowance.

Two of the crew of the cast-away vessel, however, seemed to care very little for the reception they might have met with upon applying for passage to the more fortunate ship. They engaged themselves in rolling the rum-punchen out of the store-room to the main hatch, after which they fixed a tackle to it, and by slow degrees, as it was three-fourths

empty, hove it upon deck, and from thence swung it over the rough trees to the ice. Here, having landed it, they placed it upright beside a hummock, which shielded them slightly from the wind, and beat in its head to get more readily at its contents.

They then called upon their busy shipmates to join them, and stand by the good creature while it lasted, vowing they should never want liquor while there remained a drop, and that, when it was out, the best thing they could all do would be to go "tail up for old Greenland," through the flaw, one after another, like seals. This proposal, made by men rather more under the influence of rum than reason, was received with but little cordiality. Most of the stragglers, however, had sagacity enough to acquiesce till they had imbibed the spirituous arguments of their comrades pretty liberally; they then dropped off by degrees, and left their jovial partners, in search of more comfortable quarters.

Jack and Tom, being at length left alone, perceived themselves stationed one on each side of the rum-puncheon, not a human being within hail, and a desolate field of ice stretched round them on every side. The lasts of their guests had endeavoured to prevail upon his comrades to accompany him to the ship, offering a share of his spoils in order to render them less objectionable visitors; but, true to their resolutions, they had rejected his persuasions with scorn, and he now could be seen afar off, travelling over flats of snow and hummocks of ice, on his way to the strange vessel, which lay at a great distance from their wreck. For some time after his departure the two sailors amused themselves with dipping their pannikins into the puncheon and drawing out bumpers, which they crowned with the healths of their favourite lasses, and with various effusions of nautical melody. At length, the warmth they had acquired from the energy of their exertions in heaving out the cask, yielded perceptibly to the influence of a brisk gale, which had been for some time sweeping the ice with increasing violence, and, though the liquor they swallowed would have been sufficient under other circumstances to throw them into a burning fever, its powers sunk before the intense force of the Arctic blast.

One of the sailors experienced this loss of heat more quickly than his companion, and felt his age leaking out most wofully. He gazed for a short time at the refugee traversing the distant floe, then turned to his mate with blue looks, and shirking his shoulders, and, twisting up his trousers by the waistband, exclaimed,

"Blow me, Jack! here we stands, like the Lion and Unicorn over the door of the King's Arms, at Hull, facing all weathers, just to get fellows to drink, and arter all, you see, they sneak off without paying their shot! But I say, Jack, I am getting dreadfully cold, and don't half relish the idea of going tail up into the flaw. By the time the rum is out, I shall be frozen as stiff as a poker."

"As for that, Tom, we shall have bailed out the cask, and then if you ben't able to heave a flipper, why I'll hold you, my boy, as far as your hole, and pitch you in head foremost myself; so don't let that consarn you."

Tom, who was a cunning fellow, at length persuaded his friend, that if they performed the feat out of sight of the vessel, their acquaintances would say they never did it at all!

"Oh, never mind that, just now, interrupted Tom, "but, do you take me on your shoulders, as you kindly promised, for we've little time to lose."

"Did I kindly promise?" cried Jack, astounded at this assertion, yet not quite convinced of its fallacy, for he felt his ideas, both of the past and the present, less free from confusion than was desirable.

"That you sartainly did," replied Tom, boldly, for, as he observed, there was no time to be lost if he meant to be saved.

"Then I'll not break my word—that's as sartain," returned Jack, immediately advancing to assist his companion to get upon the hummock, from whence he might transfe himself to his back. "But," continued he, "you must promise to let me go tail up first."

"That," replied Tom, without any hesitation, "I do so-

lemnly promise," and the contracting parties moved off towards the ship, beset on the other side of the floe.

After a long staggering and reeling march over the ice, the sailors became visible from the deck of the vessel, in the shape of an unknown body moving through a slight shower of sleet, which eddied in the wind. As they first appeared, rising over the ridges, and sinking into the concealed furrows that crossed their path, some of the seamen on the look-out took them for a strange monster making his way towards the ship; while others cried out, that an enormous bear, running away with a man in its fore paws, like an ape, was in sight. All hands turned out to behold the wonderful and fearful spectacle, and guns and whale lances were prepared for an encounter; but at length it grew evident that the terrible animal was a compound of two cast-away mariners, toiling across the floe. There was Tom on the shoulders of Jack, rolling and heaving about like a porpoise in a storm. The assembled crew cheered the luckless pair with shouts, and bawled out with ludicrous exhortations to them to steady their helm, brace their yards up tight, strike their top-gallant mast, and so forth, according to the fancies of their speakers, and the actions of the parties in distress; and, in proportion as the difficulties of Jack were augmented by the increasing torpor of his burden, and his own weariness, the mirth of the beholders grew more obstreperous and high. During this erratic pilgrimage, however, Jack persevered in upholding his comrade, and in getting forward by hit and by wit, and by hook and by crook, and by every way possible and almost impossible, with the laudable determination of accomplishing his supposed promise.

At their commencement, these rebukes were just audible to Tom, who, taking them for the growls of a bear, roused himself up occasionally, and exhorted Jack to browse away like a jolly tar, but, after a little while, the soporific influence of the cold deadened his ears to all the animadversions and execrations of his friend; and, instead of returning answers, he continued to drop his head from side to side, perfectly unconscious of his situation.

Nothing, however, could provoke Tom to speak, or induce him to refrain from dropping his head as before; and this contumelious conduct worked Jack into such a fury, that he began to run forward that he might more quickly enjoy the pleasure of pummeling his insolent rider before the whole ship's company. The admiring crew, beholding this new prank of the stray couple (for poor Tom now swung most terribly out of balance), set up a loud jesting shout, while Jack, still more exasperated by the outcry, hurried furiously along, thinking himself an object of derision, for allowing himself to be ridden like a Shetland pony. Many a hair's-breadth escape he made over hills and hummocks, and many an unmeasurable sprawl threatened to bring him on his face, but he surmounted every difficulty, and was in full career towards the ship's side, when a wide chasm in the ice appeared before him.

He stopped suddenly short on the brink of this gulf, for it was too broad to leap; but his burden, actuated by the jerk it received, pitched forward over his head, and disappeared beneath the floe. Jack hesitated for a moment, as if he waited to see his comrade rise again to the surface, then swore a violent oath, and exclaimed—

"If that's the way he sarves me, arter all this trouble, I'll be smothered if I'll go to old Davy along with such a rascal! Do you know," continued he, addressing the crew that now gathered around him, "he promised most solemnly he would let me go tail up first, if I would bring him to your ship here, and, besides, he knew I wanted to lick him, and yet you see he has bilked out of both, as well as riding me like a night-hag. I'll not go tail up at all, that I am posity, 'specially arter such a trashey, loosey, parjurious varmint!"

SUFFERINGS OF SIX DESERTERS.

ON Dec. 12, 1799, a court of inquiry was held at St. Helena, before Captain Desfontain, president, Lieut. B. Hodson, and Ensign Young, when the following extraordinary and affecting narrative of the sufferings of six deserters from the ar-

tillery of the island of St. Helena, was made to them on oath, by John Brown, one of the survivors:—

"In June, 1799, I belonged to the first company of artillery, in this garrison, and on the 10th of that month, about half an hour before parade time, M'Kinnon, gunner and orderly of the second company, asked me if I was willing to go with him on board of an American ship, called the Columbia, Captain Henry Lelar, the only ship then in the roads. After some conversation I agreed, and met him, about seven o'clock, at the play-house, where I found one M'Quin, of Major Seale's company, another man, called Brighthouse, another named Parr, and the sixth, Matthew Conway.

"Parr was a good seaman, and said he would take us to the island of Ascension, or lie off the harbour till the Colum-

bia could weigh anchor and come out. We wen down about eight o'clock to the West Rock, where the American boat, manned with three seamen, was waiting for us, and took us alongside the Columbia. We went on board; Parr went down into the cabin, and we changed our clothes, after having been on board half an hour.

"Brighthouse and Conway proposed to cut a wha'e-boat out of the harbour, to prevent the Columbia from being suspected. This they accomplished, taking in her a coil of rope, five oars, and a large stone by which she was moored.

"We observed lanterns passing on the line towards the Sea-gate, and hearing a noise, thought we were missed and sought for. We immediately embarked in the whale-boat, with about twenty-five pounds of bread in a bag, and a small

SUFFERINGS OF SIX DESERTERS FROM THE ISLAND OF ST. HELENA, IN A WHALE-BOT.

keg of water, supposed to contain three gallons, and one quadrant, given to us by the commanding officer of the Columbia.

"We then left the ship, pulling with two oars only, to get ahead of her. The boat was half full of water, and we had nothing to bale it out. In this condition we rode out to sea, and lay off the island at a great distance, in hourly expectation of the American ship taking us up.

"About twelve o'clock the second day, no ship appearing, by Parr's advice we bore away, steering N. by W., and then N.N.W. for the island of Ascension, using our handkerchiefs as substitutes for sails. We met with a gale of wind, which continued two days; the weather then became very fine, and we supposed we had run about ten miles an hour. M'Kinnon kept a reckoning with pen, ink, and paper, with which, together with maps and charts, we were supplied by the Columbia.

"We continued our course till about the 18th in the morning, when we saw a number of birds, but no land. About twelve that day, Parr said he was sure we must be past the island, accounting it to be eight hundred miles from St. Helena. Each of us then took off our shirts, and with them we made a small spritsail, lacing our jackets and trousers at the waistband to keep us warm; and then altering our course to W. by N., thinking to make Rio de Janeiro, on the American coast. Provisions running very short, we allowed ourselves only one ounce of bread, and two mouthfuls of water for twenty-four hours.

"On the 25th all our provisions were expended. On the 27th M'Quin put a piece of bamboo in his mouth to chew, and we all followed his example. On the night of that day it was my turn to steer the boat, and recollecting to have read of persons in our situation eating their shoes, I cut a piece off one of mine; but being soaked with salt water, I

was obliged to spit it out, and take the inside sole, of which I ate a part, and distributed the remainder to the rest; but we found no benefit from it.

"On the 1st of July Parr caught a dolphin, with a gaff that had been left in the boat. We all fell on our knees, and thanked God for his goodness to us. We tore up the fish, and hung it to dry; about four we ate part of it, which agreed with us pretty well. On this fish we subsisted till the 4th; about eleven o'clock, when finding the whole consumed, Parr, Brighthouse, Conway, and myself, proposed to scuttle the boat, and let her go down, to put us out of our misery; the other two objected, observing, that God, who had made man, always found him something to eat.

"On the 5th, about eleven, M'Kinnon proposed that it would be better to cast lots for one of us to die, in order to save the rest, to which we consented. William Parr, being seized two days before with the spotted fever, was excluded. He wrote the numbers, and put them into a hat. We drew them out blindfolded, and put them in our pockets. Parr then asked whose lot it was to die; none of us knowing what number we had in our pocket, it was agreed that number five should die, and the lots being unfolded, M'Kinnon's was the fatal number.

"We had concluded that he on whom the lot fell should bleed himself to death, for which purpose we had provided ourselves with sharpened nails, which we got from the boat. With one of these M'Kinnon cut himself in three places; in his foot, hand, and wrist; and praying to God to forgive his sins, he died in about a quarter of an hour.

"Before he was quite cold, Brighthouse, with one of the nails, cut a piece of flesh off his thigh, and hung it up, leaving his body in the boat. About three hours afterwards we all ate of it, but only in a very small quantity. We dipped the body every two hours in the sea to preserve it. Parr having found a piece of slate in the bottom of the boat, he sharpened it on the large stone, and with it cut another piece off the thigh, which lasted us till the 8th; when it being my watch, and observing the water, about break of day, to change colour, I called the rest, thinking that we were near the shore, but saw no land, it being not quite daylight.

"As soon as day appeared, we discovered land right ahead, and steered towards it. About eight in the morning we were close to the shore. There being a heavy surf, we endeavoured to turn the boat's head to it, but, being very weak, we were unable. Soon afterwards the boat upset. Parr, Conway, and myself got on shore, but M'Quin and Brighthouse were drowned.

"We discovered a small hut on the beach, in which were an Indian and his mother, who spoke Portuguese; and I understanding that language, learned that there was a village, about three miles distant, called Belmont. The Indian went to the village, with the information that the French had landed; and in about two hours the governor of the village, a clergyman, and several armed men, took Conway and Parr, tied them by their hands and feet, and slinging them on a bamboo stick, conveyed them to the village, I being very weak, remained in the hut some time, but was afterwards taken.

"On our telling them we were English, we were immediately released, and three hammocks provided, in which we were taken to the governor's house, who resigned to us his own bed, and gave us milk and rice to eat; but as we had taken no food for a considerable time, we were jaw-locked, and continued so till the 23rd. During this time our host wrote to the governor of St. Salvador, who sent a schooner to Porto Seguto, to take us to St. Salvador. We were conducted on horseback to Porto Seguto, passing through Santa Cruz, where we remained about ten days. We afterwards embarked; and on our arrival at St. Salvador, Parr, on being questioned by the governor, told him, that our ship had foundered at sea, and that we had saved ourselves in the boat; that the ship's name was the Sally, of Liverpool, that she belonged to his father, and was last from Cape Corse Castle, on the coast of Africa, to touch at Ascension for turtle, and then bound for Jamaica. Parr likewise said that he was the captain.

"We remained at St. Salvador about thirteen days, during which time the inhabitants made up a subscription of £200 each man. We then embarked in the Maria, a Portuguese ship, for Lisbon; Parr as mate, Conway as boatswain's mate, and myself, being sickly, as a passenger. In thirteen days we arrived at Rio de Janeiro. Parr and Conway sailed for Lisbon, and I was left in the hospital.

"In about three months, Captain Elphinstone, of the Diamond, pressed me into his Majesty's service, giving me the choice of remaining in that station, or to proceed to the admiral at the Cape. I preferred the latter, and was put, with seven suspected deserters, on board the Ann, a Botany Bay ship, in irons, with the convicts. When I arrived at the Cape, I was put on board the Lancaster, of sixty-four guns. I never entered, but at length received my discharge; since which I engaged in the Duke of Clarence, as a seaman. I was determined to surrender myself the first opportunity, in order to relate my sufferings to the men of this garrison, and to deter others from attempting so mad a scheme."

This is, perhaps, one of the most extraordinary accounts upon record, and shows, in a forcible manner, the folly of attempting such enterprises without any corresponding incentive.

A GALLANT CHASE.

We were within a few days of our destination, and were rolling down the trades, when, at six in the morning, a strange sail was discovered on our starboard quarter, apparently in chase of us; we immediately hauled to the wind. This manœuvre disenchanted the golden visions of the stranger, and finding us likely to prove an awkward customer, he likewise hauled upon a bow-line. The chase now began. The lower yards of the pursued (evidently a man-of-war brig) could only be seen from the main-top; but her manœuvres, and the cut of her sails, at once announced her nation. As the sun rose in the heavens, the wind increased, and we had already gained considerably on the chase, when she was under the necessity of reefing in consequence of the strong squalls and fiery trade wind. This was just the weather in which the old Pompee shone to the greatest advantage, and we hailed the increasing gusts with pleasure. All hands were kept upon deck ready to shorten sail at an instant's notice. The brig being to windward was a certain guide to us as to the strength of the squalls, and we were prepared to act accordingly. By noon we had her hull up from the deck; she carried on most nobly; her spars bent like bows before she yielded to the blast. As soon as her topsails were observed coming down, every man was on the alert; and the instant the squall struck us, the topgallant-sails were furled, and the topsails down in a trice. The moment its force was expended, up they flew to the mast heads, and the upper sails were again expanded to the breeze. It was one of the most beautiful and soul-stirring chases it has been my fortune to witness.

The little craft was clearly overpressed; not the vantage ground of a hair's breadth was lost on our side. In one of the heavy squalls her lee main-top-sheet was carried away and the sail fluttered in ribbons. We made sure of our prey—"She is ours to a certainty,"—when that certainty vanished by the smartness of the Frenchman, who, in double-quick time, bent another main-top-sail. The Pompee's men had scarcely taken in another reef, when our skillful foe was observed sheeting home, and hoisting away again. It required no great sagacity to discover that her commander was a practically good seaman, who knew full well how to manage his dashing little barks. In a short time away went both his fore-top-sail sheets. "She cannot escape now—it is impossible."—"By heavens! he has secured his canvass this time. There, he is hauling home his sheets again."—"Well done—gallantly done, Johnny Crapaud; the devil favours his own offspring."—"Blow, good breezes, blow," (the wind was beginning to lull). Shake out a reef of the topsails."

And now the fears of losing the brig began to assume a palpable form, as she was observed to hold her own. No

sooner were our men laid out upon the topsail-yards, than the brig's men appeared to be occupied with the like duty. "He is determined to give us a run for it!" "Blow breezes, blow," was again heard murmuring around; and, by way of coaxing the airs of heaven, the master and first lieutenant were whistling to the wind, in tune something similar to that adopted by ostlers to their horses. All our whistling and coaxings failed in propitiating the wind deities. The sun declined, the wind dropped, and the Frenchman remained upon the gaining side; there was no moon, and the distance too great between us to admit of the hope of keeping him in sight when night should close in. The ship was kept wrapt full to get on her beam, as affording us the best chance of seeing her with the night-glasses. Not a vestige of the chase could be discovered an hour after sunset. A further pursuit was considered both hopeless and unprofitable by the disappointed officers.

We expected the hammocks to be piped down, and the ship to be kept on her course again; but Captain C— had acquired too much experience of our cunning adversary's shiftings and doublings to resign, prematurely, a quarry in every way worth our attention. The plan he pursued displayed the sound judgment that always guided his conduct in cases of difficulty and uncertainty, at once inspiring hope, security, and confidence, in those around him. He noted the spot where he had first fallen in with the brig, and her precise situation, when last seen; and concluded that the wary Frenchman would stand on under all sail till nine o'clock, then tack, and bear up before the wind to take his original position. Accordingly, at the hour he expected the chase to tack, we went aboard, and shortened sail to the topsails. The wind had previously fallen to a light breeze. In due time we edged away to meet him, on the supposed line of his course. All hands were ready stationed to make sail in an instant; the main-deck guns were cleared away; officers and men were peering in all directions, endeavouring to penetrate the darkness that surrounded the vessel. Meanwhile the captain, who had retired for a few minutes to consult the chart, upon which he had marked the expected point of meeting, returned to the quarter-deck. "Keep a sharp look-out on the weather bow," said he; and turning round to the officers, added, "if my conjectures are correct, we ought to be close on board of her."

"Take the night-glass forward, Mr. B—, and keep sweeping the horizon about four points on the bow."

"Ay, ay, sir."—But before the officer had reached the fore-castle, the welcome cry of a strange sail to windward was heard from the cat-head. In an instant the outlines of her extended canvass were visible, standing forth in strong relief from the dark back-ground of a mass of vapoury clouds. The top-gallant sails and foresails were speedily set, and the *Pompee* in a line with the stranger. The enemy was thus brought immediately under the muzzle of our guns. At the first shot he prudently let fly every tack and sheet, and hove to; we were equally expeditious, and both vessels were laying so close, that every attempt on the part of the brig to escape would have subjected her to certain destruction. The first boat brought on board the captain, who was minus an arm by our countrymen on a former occasion. The prize was a fine man-of-war brig *Le Pylade*, carrying sixteen thirty-two-pound carronades, and one hundred and nine men. She had run successfully the whole of the war, had just left Martinique, and was an excellent sailer, of which qualification we had incontestible proof. She had afforded us a chase that might have inspired and interested the most fastidious amateur in these matters. Both vessels were so admirably managed, the possible loss and probable advantages so nicely balanced on both sides, that I do not think either of them could be said to win upon the other in point of skill during the whole of the morning's manoeuvres. Stratagem eventually favoured us, and the neat finale to the pursuit was sagaciously planned and successfully executed.

The under-writers at Lloyd's had paid dearly for the various depredations of this industrious little brig. The poor Frenchman, it appeared, did not perceive us till we were actually alongside of him, and the whistling of the shot be-

tween his masts dispelled his dreams of security. At the very moment they fell into our power, they were congratulating themselves upon their escape. On looking over a log-book belonging to one of the officers, in which his hopes and fears during the day had been carefully registered, I observed that at five o'clock, when the wind had fallen and the brig appeared to have rather gained upon us, the Frenchman had written down, "Dieu merci, nous ne serons pas pris aujourd'hui. Adieu, Jean Boull—adieu, ros bif!"

CAPTURE OF THE BIRD GALLEY, BY PIRATES.

CAPTAIN SNEELGRAVE commanded the Bird galley, of London, in the year 1718, bound to Holland for a cargo, and from thence to a coast of Africa. He was detained at Helvoetsluys until the 10th of December, where, with other vessels, he was driven high and dry on shore in a violent storm, and left embedded in the sand, but received no material damage. Peasants were hired to dig a canal for the ship to the water, and she was made ready for sea again about the end of January.

The vessel now set sail, but a second gale coming on forced the captain into Spithead, from whence, on sailing again, the ship was driven seventy leagues to westward of the Lizard, and they were forced to lay by under a reefed mainsail for twenty-four hours. At length the gale subsided, and they pursued their voyage, with the loss only of their figure-head. They met with squalls, and were in the end forced to run for Kinsale in Ireland. In that port they refitted, and then had a fine run to the river of Sierra Leone. Here the misfortunes of Captain Snelgrave began; for the ship fell into the hands of pirates, who were at anchor in the river, three in number. They had captured ten English vessels.

It was about eight o'clock in the evening, when a boat was heard rowing towards the ship. In consequence of the sound of the oars, the first mate was ordered to send twenty men, armed, upon deck, to be prepared, in case the strange boat should prove an enemy. The second mate hailed, and was answered, "The Two Friends, of Barbadoes, Captain Elliott." They were hailed a second time, and replied, they were from America; and this was accompanied with a volley of small arms. Captain Snelgrave now called upon the mate to fire, which was not done; that officer reporting that the crew refused, to the captain's great astonishment. It was afterwards discovered that the mate had prevented the men from firing, having himself been in the interest of the pirates.

The boat naturally came alongside the ship unopposed. The pirates boarded the vessel, and fired several guns into the steerage, by which a sailor was mortally wounded. The people now called out for quarter, which was granted. The chief of the pirates then demanded how Captain Snelgrave dared ordered his men to fire upon them. He replied, he had thought it his duty to defend his ship, if his crew would have fought. Upon this the pirate presented a pistol at his breast, which he was just able to parry before it went off, and the ball passed between his side and arm. The villain then struck at him with the butt end of the pistol, which knocked him down upon his knees. Quickly recovering himself, the captain ran upon deck. There he encountered the boatswain of the pirates, a desperate character, who cut at him with a broadsword, declaring no quarter should be given him, because he had offered to defend his vessel. Captain Snelgrave evaded the blow by stooping below the quarter-deck rail, which it cut into an inch deep, and the sword broke. The fellow then took a pistol, and was going to beat out the captain's brains, but was prevented by the remonstrances of his crew. The pirates then turned upon the crew, whom they cut and maimed in a terrible manner. The chief pirates next came upon deck, and ordered the hands of Snelgrave's crew to be tied, telling the captain his life was safe, if none of his own crew complained against him. This the captain did not fear they would do, as he had given them no reason to do so. The pirates now fired several volleys of small arms, as a rejoicing at the capture of a prize.

The pirate captain ordered them to dress a quantity of the victuals on board the prize. The heads of the fowls, ducks,

geese, and turkeys, were cut off, and the wing feathers drawn out, but the ruffians would not wait for plucking them. They flung them in that state into a great furnace, designed for cooking the meals of 500 negroes, when the ship had taken in her cargo. Several Westphalia hams were added, and a large sow with young emboweled. The ship's cook was then commanded to boil them all directly.

Leave was obtained for the surgeon to dress the wounded men; and the quarter-master sending to know what was the hour by Captain Snelgrave's watch, he sent it, saying, it was a very good going watch, gold cased. The pirate held it up by the chain, and then laying it on the deck, gave it a kick, remarking it was a very good football. On this one of his crew took it up, saying he would put it in the common chest, to be sold before the mast; such was the wanton humour of men case-hardened in every species of vice.

Captain Snelgrave was now taken on board the pirate ship, where he was now asked about the quality of his ship, and her rate of sailing. He replied, that she sailed well. They told him she would make a fine pirate man-of-war.

The captain's situation was by no means an agreeable one, even under these circumstances, as ferocious men are generally capricious. He now fared very hard, enduring great fatigue with patience, and submitting resignedly to the Almighty will.

Soon after the captain was on board the pirate ship, a tall man, well armed, came up to him, and told him his name was Jack Griffin, one of his old school-fellows. Upon Captain Snelgrave appearing not to recollect him, he mentioned many pranks of their youth together. He said, he was forced into the pirate service: he had been chief mate of a Bristol vessel. He declared he was forced to act as master of the pirate. The crew he described as most atrocious miscreants. Griffin, who was well armed, promised to watch over the captain's safety, as the pirates would soon get intoxicated with the liquors on board their prize.

Griffin now obtained a bowl of punch, and led the way to the cabin, where a carpet was spread to sit upon, as the pirate ship was always kept clear for action. They sat down cross-legged, and Cocklyn, the chief or captain, drank Snelgrave's health, saying, his crew had spoken well of him. The pirate then gave the health of James III., meaning the Pretender, which seemed to indicate that he was one of the worthy adherents of the fallen dynasty. A hammock was slung for Captain Snelgrave at night, by the intercession of Griffin; but the pirates "lay rough," as they styled it, because their vessels, as already observed, were always cleared for action, their chief not being allowed a bed, but faring as the rest did. Having at length got into his hammock, the captain could not sleep for the oaths and horrible imprecations around him.

Griffin, true to his promise of guarding his old school-fellow while asleep, kept near the captain's hammock, sword in hand, to protect him from insults. Towards morning, while the pirates were carousing on deck, the boatswain came towards the hammock in a state of intoxication, swearing that he would slice the captain for ordering the crew to fire, dragged him from his hammock, and would, no doubt, have executed his savage threat, if it had not been for Griffin, who, as he pressed forward to stab him, cut at the fellow with his sword; and, after a sharp struggle, succeeded in beating him off. At length the wretches fell asleep, and Snelgrave was no longer molested. Griffin the next day complained of the boatswain's conduct, and he was threatened with a whipping. However, Snelgrave wisely pleaded for him, by saying he was in liquor.

That day ten of Captain Snelgrave's men, and the first mate, entered with the pirates. To this man Jones, the non-resistance of the crew of the galley was justly ascribed, he having prevented them from taking the arms out of the chests.

The following morning they ransacked Snelgrave's ship, throwing quantities of goods overboard, of which they could make no use. By the evening, they had in this manner wasted the cargo to the extent of three or four thousand pounds in value. They were anxious only for the money and

articles of clothing. Remonstrance on this waste would have been dangerous, as the pirates had not forgiven Snelgrave for desiring his men to fire into their boat.

All this time Captain Snelgrave was in the pirate vessel. It happened, that there resided at Sierra Leone a Captain Glynn, who, although he had suffered by pirates, was on good terms with them, and yet kept his hands free from their guilt. He was intimate with two other pirate captains in the river, one of whom, named Davis, kept his crew under strict discipline. Glynn and Davis went into the vessel in which Snelgrave was, and remonstrated on the ill-usage pursued towards him. In consequence, he was permitted to go on board his own ship, where the havoc was irreparable. His escrutoires were broken open, and robbed of their contents. Books, utterly useless to the pirates, were taken out of the chests and flung overboard.

The captain had now the chagrin of sitting down in his own cabin, and seeing all around treated with his liquors, and other good things from his private stores, which set the pirates in excellent humour. A quarrel, however, arose, and the pirates were going on board their own ships to prepare for action with each other. They were with difficulty prevented by the interposition of their captive.

Captain Snelgrave had a second time a narrow escape from the boatswain, who flashed a pistol at him, which luckily missed fire; but the pirate carpenter taking the prisoner's part, beat the fellow so severely as almost to kill him. The boatswain having been sent on board his own ship, Captain Snelgrave slept undisturbed. The next day he had the mortification to see the waste of property resumed. Nothing could more strongly picture the conduct of the lawless banditti, than what was exhibited at this time. Half hogshheads of claret and brandy were hoisted on deck, the heads knocked in, and cans and bowls dipped into them, until the depredators were satisfied; and then they threw the contents at each others by bucketsful. When what was on deck was thus emptied, they hoisted up more; and in the evening washed the deck with what remained in the casks. They demolished the bottled liquors by striking off the necks with their cutlasses. In a short time the waste was so great, that only a little French brandy remained of all the ship's stock. The stores of sugar, butter, and cheese, were also soon gone in this scene of mad riot. Some of them stumbling over a bundle of the captain's necessities, which the chief pirate had allowed him to secure, it was flung overboard, "because it lay in the way."

One of the pirates observing a packet in which was a black suit of clothes belonging to the captain, would see what was in it, and took up the things, together with a good hat and wig which were with them. Captain Snelgrave in vain told him he was allowed to have them. The fellow struck him with the flat of his sword, and cautioned him never to dispute a pirate's will, signifying, he might take his life for it. The pirate then put on the clothes, and in half-an-hour afterwards took them off and threw them overboard, his comrades having drenched him with buckets of claret. This man, named Kennedy, ended his career at Execution Dock.

Soon after Captain Snelgrave obtained leave to go on shore, to the house of Captain Glynn, where the three pirate captains received him with civility, and promised they would do all in their power to obtain his necessities for him. He was so much in want, that he was obliged to borrow a shirt from Captain Glynn, having been three days without a change in that burning climate. On the following day the captains went on board with their prisoner, and one of them persuaded Cocklyn to address the pirate crew in his behalf. The result was, that they agreed to give Captain Snelgrave a ship which they intended to quit, together with what remained of his cargo; and they proposed also to add a large quantity of goods from other prizes, which were of no use to them. This was a delicate thing to accept, as the goods were the property of others; and, by the interposition of Davis, the pirate captain, Snelgrave was allowed to decline the offer. One of the pirate vessels, which they intended to abandon, was then placed alongside Captain Snelgrave's ship: a considerable portion of the cargo was saved, and hoisted into it by

some of his own crew; but his private adventure, consisting of cloths, liquors, and fine goods, were destroyed. Pieces of fine holland had been opened upon the deck, on which the pirates had lain down half drunk. Buckets of claret thrown over them in this state stained the linen, and then it was flung into the sea.

Captain Snelgrave now got leave to sleep in a ship commanded by Captain Elliot of Barbadoes, and had leave to go on shore when he pleased. On board that ship he slept four nights, until the vessel given him was laden. During this period, the pirate who had fired at him when his ship was first boarded, was attacked with fever, and desired to see him alone, and implored forgiveness. Some of his comrades then came in to ask him how he did, and he ordered his boy to give Captain Snelgrave the key of his necessities, and let him take what he choose; which the captain did not hesitate to do, as he stood so much in need of them.

This man fell into a delirium the same night, and died before the morning, cursing God his Maker in such a frightful manner, that it affected several of the pirates who were yet novices in that mode of life; and they came privately, in consequence, to obtain Captain Snelgrave's advice how they should get out of their evil course. A proclamation of pardon had been issued to all pirates who surrendered before the 1st of July, 1719, and the captain advised them to embrace the pardon so tendered.

Three laced coats among the plunder having given origin to a dispute, during which Captain Snelgrave was threatened by one of the pirates named Williams, that he should be cut to pieces, a singular instance of vanity was exhibited, in his following the advice of Captain Elliot, and addressing the fellow as "captain," a thing so gratifying to the scoundrel, that the flattery made him a friend, and he sent Captain Snelgrave a keg of wine.

A French ship having come into the river, was captured and run on shore. In the meantime, Captain Snelgrave landed his cargo from the ship into which it had been shifted; and the pirates made him dine with them, to commemorate their fitting out his own vessel as a freebooter, on which they broke their glasses and fired the guns. They called her the Windham Galley. She had two flush decks. The scuttle of the powder-room happened to be open, when some cartridges near the aftermost guns took fire. The danger was imminent, for in a room under there was stowed twenty thousand pounds weight of gunpowder.

The pirates at this time burned the *Rising Sun*, the ship they quitted to go on board the *Bird* galley. Snelgrave now requested Captain Davis to obtain for him his liberty. Davis accordingly interfered, and eventually succeeded.

Captain Davis insisting on Snelgrave going to sup with him it would have been unwise not to obey. In the midst of supper, about eight in the evening, a cry of fire was heard on board. The crew were the greater part of them drunk, and there were more than fifty prisoners on board at the time. Great confusion prevailed, and the more sober part of the people on board only thought of getting off in the boats. The guns were fired to oblige them to return, for the flames increased rapidly. There were thirty thousand pounds weight of gunpowder now below, and the fire was making a-head in the hold. One fellow, who was very active amid the universal confusion, put his head up the hatchway, and called for blankets and water, which, he declared, if not brought directly, the ship must blow up. Captain Snelgrave caught up all the blankets and rugs which he could find, and this bold fellow placed them against the bulk-head of the powder-room. Water was poured on them from buckets to prevent the fire from catching. The night was dark, the crew drunk, and no hope of mastering the fire seemed to remain; to spring into the water was certain death, from the sharks hovering around the vessel. Captain Snelgrave therefore took a quarter-deck grating, and lowered it with a rope, hoping to get away upon that, as several persons had got into the boats again, and gone off with them. While the captain was thus meditating his escape he heard a shout from the main-deck, "For a brave blast to go to hell with." On which, some of the newly entered pirates near him be-

lieving the ship must blow up in a few minutes, lamented their entering on that vile course of life, with bitter exclamations against the old offenders on the main-deck. Fifty of the crew got on the bowsprit and spritsail yard, in the vain hope that they might escape destruction there. All was panic and confusion. A man named Taylor, and fifteen more, laboured to subdue the flames in the hold until they succeeded; and never flinched, though they were all terribly burned. A negro, it appeared had gone to draw rum with a candle, and set the spirits on fire, together with those in a second cask close by; fortunately, twenty other casks of rum near, and as many of tar and pitch, escaped, or the vessel could not have been saved. The services of Captain Snelgrave gained him the good will of the pirates. They sent him word when the necessities were to be sold before the mast, and many of them bought things which had belonged to him and returned them. He speedily got to the shore with his purchases, and was advised now to escape into the woods until the pirates sailed, which he did not fail to do. When they had left Sierra Leone, he returned to Captain Glynn's, freighted a vessel with all the plundered goods which he could get back, and set sail for Bristol, with six masters of ships whose vessels had been destroyed, and no less than sixty passengers, where he arrived August 1, 1719.

A RECOLLECTION OF THE HERO OF TRAFALGAR WHEN MIDSHIPMAN.

(From the *Fortunes of Frank Fairfield*).

THE young officer returned to his ship, and the next day she was sailing down the Thames, and Nelson (who had commanded the admiral's tender at Chatham, and gained a complete knowledge of both rivers), pointed out to his messmate the various shoals and sands, and the marks for clearing, them, the entire distance from Woolwich to the Downs. This alone, in one of his age, showed that he was no ordinary character, for the navigation was extremely intricate and dangerous, and the pilot declared that Nelson was perfectly correct. They remained one night in the Downs, and then proceeded to Portsmouth, where having received final orders, the "Seahorse" ran out through the Needles' passage (so named from a range of sharp-pointed rocks, that extend some distance into the sea, from the westernmost extreme of the Isle of Wight), and made all sail down Channel.

As the evening advanced, the weather became thick and misty, so that it was impossible to see the length of half a cable from the ship. The wind was fair and steady, and the frigate was going at the rate of seven miles an hour, with the water as smooth as a mill-pond. The two friends (Nelson and Fairfield) contrived to be appointed to keep watch together, under one of the finest old seamen in the service,—Mr. Weatherwise, the master. He had been brought up in a rough school; was well acquainted with the taste of "tarred gingerbread;" (that is, had been often beaten with a tarry rope), and had been thrashed from childhood into almost manhood, by a stern and severe commander, engaged in the slave trade. Still he had persevered, till he was made mate of a West Indiaman, but the ship being wrecked, he was picked up in the streets of Plymouth, by a press-gang, and conveyed on board a man-of-war, where he served before the mast. His good conduct and seaman-like qualities, caught the attention of his noble captain, Viscount Howe (who afterwards became the celebrated Admiral Earl Howe), and as he never allowed merit to go unrewarded, Weatherwise was raised to the quarter-deck; and went through the usual gradations, till he was appointed master of the frigate they were then in. He was partial to the lads, and had more than once or twice assisted them in their attempts to learn their duty.

It was the first watch (that is, from before eight in the evening till midnight) and, as I said before, very hazy. The master had charge of the deck, and as a mark of favour the two young watchmates were suffered to walk by his side, whilst he related to them many circumstances in his early life, connected with the atrocious dealers in human flesh—

the slavers. He was telling them of "a young negress, who was a mother, and had an infant with her, of which she seemed very fond, but her condition preyed so bitterly upon her spirits, that she either could not or would not dance, when ordered to do so for the purpose of exercising her limbs. The whip was applied to her bare back, but she continued resolute, and crouched on the deck, holding the infant in her arms, without uttering a word. The captain, a hard-hearted man, by way of arousing her, as well as punishing her, ordered the child to be taken from her, which was accordingly done, and it had the instantaneous effect of calling her energies into action; she struggled for her baby like a tigress, and though repeatedly struck down, again sprang upon her assailants, and with loud shrieks, tried to tear the poor little thing from the cruel men who had deprived her of it. But even a mother's strength was nothing compared with that of her persecutors. The child was carried away, and the young female throwing herself violently down, beat her head against the deck till the blood ran in streams down her black skin, from the injuries she inflicted upon herself."

"It must have been a distressing sight, sir," said Frank (Fairfield), shuddering, as fancy contemplated the picture; "I cannot think how men's hearts can be so devoid of humanity."

"There is but little feeling in a slave-ship," observed Mr. Weatherwise; "self-interest does much, but humanity is an unknown article among the stores of a slaver. It was indeed a pitiable spectacle; and there, poor creature, she was suffered to lay, bleeding and insensible," as the captain said "the loss of blood would serve to tame her, and while she was unable to move, she could do herself no harm." At last she began to revive, and then iron shackles were put upon her hands, and upon her legs, and her wrists and ankles drawn close together. At first she was very desperate, but after a time grew more composed and quiet; but it was only considered the artifice of a nigger—and a cunning set of beings they are, I can assure you. Well, it was only considered to be an artifice; and there they kept her through a long dreary night, without a soul to speak or to say a word of comfort to her, for the rest of the niggers were locked up below. She asked for water, but no one would give it to her; and all this punishment was inflicted because she refused to dance."

"But was it not a strange and unnatural thing, sir, to try and force a poor unhappy negress to dance, especially in the situation in which she was placed?" asked Frank; while Nelson, though somewhat agitated, did not utter a word.

"It was not for their own pleasure that they danced," answered Mr. Weatherwise; "but when they first got to sea, they were always terribly sullen, and moped like idiots, refusing to eat their food, even with the lash laid across their shoulders; many would have starved themselves to death, or lost the use of their limbs through inactivity and cramp; and as money was to be made of them, means were resorted to that prevented them from becoming unsaleable. It was with this intention that the whips were got up, and the unfortunate wretches made to skip about in wild antics. Some captains were more brutal than others; ours was a monster, for he took pleasure in tormenting his victims."

"I wish I had him here now," exclaimed young Nelson, as he clenched his fist, and stamped his foot; "I would, if it was in my power, make him feel the sufferings himself that he has inflicted upon others."

"He is enduring greater torments," muttered the master; "at least, my ideas of retribution lead me to think so. He is dead, young gentleman—scratched off the muster-book of life by his own hand; for the next voyage after I left the ship the niggers mutinied, and gained possession. The mates and crew were killed by the exasperated blacks; but the captain, fearing to fall into their merciless power, fired a pistol-ball through his own head, and died with murderous guilt upon his soul. What hope, then, could there be for him?"

For three or four minutes not another word was spoken, and each seemed absorbed in his own painful meditations; till at length Frank broke the silence by inquiring what had become of the negress of whom he had been speaking.

"Oh, ay!" returned the master; "general matters had drawn away my thoughts from that particular object, but I will tell you. Let me see: I said she had been kept lashed almost neck and heels together for the whole of a dismal night, and her moans were distressing to hear, only there were very few who cared anything about them,—they were accustomed to the thing; and yet I think there was not one amongst the ship's company who would have behaved in the same manner to a dumb animal! Unlimited and irresponsible authority is at all times dangerous, even in the hands of good men; how much more, then, is it so, when exercised by tyrants; and it is a melancholy fact, my young friends, that men are more ready to oppress their fellow creatures than to inflict injury upon animals. As for the poor black girl, she had done no hurt or wrong; but, torn from her quiet home by marauders, and perhaps her only protector, the father of her child, slain (for he was not on board), she was sold to an agent on the coast, and shipped with others, to be sent to a place where they imagined they would be fattened and then killed for a feast. It was no matter of surprise that horror and despair took possession of their minds. Whether she really entertained this supposition or not, I cannot take upon myself to say, but I have known it in many, many instances; at all events, if the Creator had given her reasoning faculties and feelings,—and it would be presumption to say that one so wise and good had withheld them—then, however ignorant, her soul must have been wrung with anguish; for I need not tell you the difference between even a hut with a plot of garden ground, where nature was spontaneously distributing the simple necessities to support existence, and the wide expanse of the rough and pathless ocean that had never before been tried. She had suffered, and was still suffering, injustice and cruelty. What will not a mother do for her child? and her infant had been wrested from her! Well, young men, I told you that she grew more satisfied, and at length appeared to be cheerful, and it puzzled me, ay, pained my heart, to see that a woman could so soon forget the babe that she was suckling; even older heads than mine were deceived by it, and after some hours' confinement, she was released, and ate her allowance with avidity; but she happened to hear her infant cry, and then she got restless again, and by signs promised to do all that was required, if they would but restore it; she even capered on the deck to show her willingness. 'I thought so,' said the captain; 'we've tamed her at last—she's cowed enough now—you may give her the brat, and let's see how she will behave.' I myself took the child to her, and she looked so gratefully in my face, as she clasped it to her bosom, that even I, Tom Weatherwise, hardened by such scenes, and the kicks and cuffs I got from every one, I could not help pumping water into my eyes, for which I got a crack on the side of the head—but from use, that was nothing to me; and I couldn't help feeling pleased to see her fondle the poor little naked innocent. She sat upon the deck, humming over it a low, mournful tune, that was like the sighing of the wind mingling with the moaning of the waves; and thus she continued for a couple of hours, when suddenly springing up, at a moment when nobody was near to her, she got upon the bulwark, and before any soul could prevent it, she pressed the infant closely to her, and dashed into the waves. The ship was running six knots (miles), and before they could shorten sail and bring her to, the sea had closed for ever over the mother and the child. Never shall I forget—"

"Sail, ho!" uttered young Nelson, in a subdued voice, glad to interrupt the narrative, whilst Frank's eyes were dimmed with tears.

"Where, where?" demanded the master, equally pleased to have his attention drawn to other objects.

"On the larboard (left-hand) beam, sir," answered the young officer, eagerly; "there she is—looming large in the fog, and almost within hail." He ran and fetched the master's glass, and presented it to him.

Mr. Weatherwise looked intently at the stranger, whilst the two young midshipmen noiselessly aroused the watch, every man taking his proper station.

"It is a large lugger," said the master; "port the helm a little; if she is an enemy we must decoy her. Clear away the guns on the larboard side. Keep a bright eye upon her, Mr. Nelson, whilst I go down and report to the captain. Be smart with the guns, Mr. Fairfield, but make no noise. Have the signal lanterns ready, but do not hoist them."

Mr. Weatherwise descended to the cabin, but his absence did not occupy more than three or four minutes, when he again appeared on deck, and once more steadily directed his glass towards the stranger, so as to ascertain that she was running nearly on the same course as the frigate, which they either did not see, or else intended to approach with caution. Every eye was upon the alert—every ear was open—the utmost vigilance prevailed. Frank had got the larboard guns cast loose, and was now occupied with the watch in loosing the opposite ones. The "Seahorse" pretended to widen the distance between them, the master well knowing that if it was an English lugger she would keep on her way, but if a French privateer (as he strongly suspected), they would, in the gloom, take the frigate for a merchant ship. As well as time would admit, some of the men were employed in disguising the "Seahorse," by means of painted canvass that was usually spread over the seamen's hammocks. Young Nelson was very active in effecting this, and, in fact, from the moment the stranger was supposed to be an enemy, he was all excitement, whilst Frank coolly, but effectually, saw that his own duty was fulfilled.

A few minutes brought Captain Farmer upon the quarter-deck. His look at the lugger was but momentary, and without hesitation he declared her to be an enemy, and ordered every soul to be sent up from below by the quarter-masters and the boatswain's-mates, as quietly as possible. The officers were also called, and in a very brief interval every one was at his post. The stranger kept edging stealthily towards the frigate till she got within hail, when Captain Farmer bellowed through his speaking-trumpet, "Ho, the lugger ahoy! from whence came you?"

"The 'Adventure,' of Jersey," replied a voice, in good English; "bound to the Cove of Cork."

"That tale will not do for me," muttered Captain Farmer; "starboard the helm, and close him. Mind how you steer, my man, and stand by there fore and aft to trim sails."

"The lugger is hauling to the wind, sir," said young Nelson, who was keenly intent upon her movements; "shall we give her a gun, sir?"

The captain looked at the stranger for a moment, and then answered, "Be all ready for firing! brace round the yards! starboard the helm!"

Now, whether Nelson had misunderstood the captain's orders, or, with that promptitude for which he was afterwards so famous, he took the responsibility upon himself, certain it is, that he called to Frank, and uttered, in a low tone, "That fellow will hug to windward of us in no time, unless we can wing him; and, after all, if we miss, it is only a few pounds of iron thrown away. Point that next gun, Fairfield; take a steady aim, and when I sing out 'fire,' let fly; it is our only chance."

Frank did as he was bid. Nelson gave the word; the two guns went off with nearly one report, and whilst the smoke was still clinging to the surface of the water, Captain Farmer demanded who it was that dared to fire without his orders.

"It was I, sir," answered Nelson, boldly; "I thought—"

"Thought," repeated the captain, interrupting the finish of the sentence, "who gave you liberty to think, sir? Come aft here directly."

"I'm in for it, Fairfield," said the youth: "do you hold your tongue, and nobody will bring your name in. Never mind; I would do it again, if it was yet to be done."

"But I shall insist on taking my share of the blame," responded Frank, "though I thought you had orders;" and the youths went aft together.

"You may have hit a friend, Mr. Nelson," exclaimed the captain, angrily; "perhaps sacrificed the lives of fellow-countrymen. I am commander here, sir, and—"

Before he had time to finish, "bang, bang," went the guns of

the lugger. There was a crash aloft, and over went the frigate's foretop-gallant mast, with its sails knocked away by the shot. The smoke had now, however, somewhat cleared off, and one of the men shouted, "Her main-lug is down, sir."

"I did that," said Nelson; "and now she will be our own. We shall get out of the scrape this time, anyhow, Fairfield." And they did so, for the captain saw the advantage which it gave him, and was too generous to be severe. The lugger put away before the wind again, but the frigate was too close for her to escape. Several shots were exchanged, with but little effect, till, in about an hour's time, the "Seahorse" got fairly alongside, and at the first threat of sinking her, she hailed that they surrendered. It was a fine French privateer, from St. Maloes, carrying twelve guns and one hundred and twenty men, had quitted her port the day previous, but had captured nothing. Captain Farmer took out the prisoners, bore up for Plymouth with his prize, and having landed the Frenchmen, and placed the privateer under the charge of the port-admiral, he again proceeded to sea.

From that moment young Nelson was treated with great consideration by the captain, and became the pride of the ship's company. But he would not take all the credit to himself; Frank shared his honours, and the friends became more strongly attached than ever. It is true, that something like jealousy arose amongst the other officers, who declared that Nelson deserved punishment for disobedience; nor did he deny the conclusion, but contented himself by observing, that no one was fit for the service of his country if he would not run any risk to capture an enemy. The only notice that Captain Farmer took of the delinquency, was to separate Frank and Nelson from being watchmates, to the vexation of Mr. Weatherwise, who, however, did not, on that account, relax his efforts to give them good instruction.

AN ACCOUNT OF THE OCCURRENCES ON BOARD OF THE FRANCIS AND MARY,

LOST IN HER PASSAGE FROM ST. JOHN'S, FEBRUARY, 1825.

On the 18th of January 1825, the Francis and Mary sailed from St. John's, laden with timber, and on the 5th of February was overtaken by a hard gale: shipped a heavy sea, which carried away the long boat, companion, and tiller; unshipped the rudder, the best bower chain, and washed a man overboard, who was afterwards saved. Another heavy sea struck us, which stove in our stern. We cut away our foremast, and both bower anchors, to keep the ship to the wind. We got the master's wife and a female passenger up, whilst we were clearing away below, and lightening the ship. At daylight we found Patrick Cooney hanging by his legs to the catharpins, dead, from fatigue, and committed his body to the deep.

Feb. 6th, we saw a strange sail standing towards us, and made signal of distress—stranger spoke to us, and remained in company twenty-four hours, but gave us no assistance, making an excuse that the sea was running too high. The next day we saw a brig to leeward, and made the signal of distress, upon which she bore up and showed American colours. Spoke to us, and asked how long we had been in that situation, and what we intended to do—if we intended to leave the ship? We replied we did. He then asked us if we had any rigging! and we answered yes; but night coming on, and it blowing hard, we saw no more of her. About the 11th we saw a large ship to the northward, but did not speak to her. At this time all our provisions were out, and we suffered much from hunger, having received no nourishment for nine days!

On the 21st, James Clarke, a seaman, died, and after reading prayers we committed his body to the deep. We were at this time on half a gill of water a day, and suffered much from hunger. On the 22nd, John Wilson, a seaman, died, and we preserved his body, cut it up in quarters, and hung them up. From this time to the 6th of March, six seamen perished from hunger. Also James Frier, who was working his passage home, under a promise of marriage to the female passenger, who attended on the master's wife; and who, when she heard of Frier's death, gave a loud shriek, then snatching a cup from the mate, cut her late intended husband's throat, and drank

his blood, insisting that she had the greatest right to it, and allowed him to drink one cup to her two!

On the 7th of March, his Majesty's ship *Blonde* hove in sight, and came to our relief.

Words are quite inadequate to express our feelings, as well as those which Lord Byron and our deliverers must evidently have possessed, when they found they had come to rescue six of their fellow-creatures, two of which were females, from a most awful, lingering, but certain death. It came on to blow, during the night, a fresh gale; which would, no doubt, have swept us all overboard. Lieutenant Gambier came in the ship's cutter to bring us from the wreck, and observed to us, "You have yet, I perceive fresh meat," to which we were compelled to reply—"No, sir, it is a part of a man, one of our unfortunate crew! It was our intention to have put ourselves on an allowance, even of this food, this evening, had not you come to our relief."

The master's wife, who underwent all the most horrid sufferings which the human understanding can imagine, bore them much better than could possibly be expected. She was, though much emaciated, a respectable and good-looking woman—about twenty-five years of age, and the mother of a fine healthy stout boy. But what must have been the extremity of want to which she was driven, when she eat the brains of one of the apprentices, saying it was the most delicious thing she ever tasted; and it is still more melancholy to relate, that the person whose brains she was forced by hunger to eat, had been three times wrecked before, but was providentially picked up by a vessel, after being two and twenty days waterlogged; but, in the present instance, he perished, and then became food for his remaining shipmates!

Ann Saunders, the other female, had more strength in her calamity than most of the men: she performed the duty of cutting up and cleaning the dead bodies, keeping two knives in her money jacket; and when the breath was announced to have flown, she would sharpen her knives, bleed the deceased in the neck, drink his blood, and eat him up as usual.

THE SAILOR.

THE sailor sighs as sinks his native shore,
As all its lessening turrets bluely fade;
He climbs the mast to feast his eyes once more,
And busy fancy lends her aid.
Ah! now each dear, domestic scene he knew,
Recall'd and cherish'd in a foreign clime,
Charms with the magic of a moonlight view,
Its colours mellow'd, not impaired by time.
True as the needle, homeward points his heart,
Thro' all the horrors of the stormy main;
This the last wish that would with life depart,
To meet the smile of her he loves again.
Her gentle spirit, lightly hovering o'er,
Attends his little bark from pole to pole;
And, when the beating billows round him roar,
Whispers sweet hope, to soothe his troubled soul.
But lo, at last he comes with crowded sail!
See, o'er the cliff what eager figures bend;
And hark, what mingled murmurs swell the gale!
In each he hears the welcome of a friend.
'Tis she, 'tis she herself! she waves her hand!
Soon is the anchor cast, the canvass fur'd;
Soon thro' the whitening surge he springs to land,
And clasps the maid he singles from the world.

A SAILOR'S FUNERAL.

VERY shortly after poor Jack dies, he is prepared for his deep sea grave by his messmates, who, with the assistance of the sail-maker, and in the presence of the master-at-arms, sew him up in his hammock; and having placed a couple of cannon-shot at his feet, they rest the body (which now not a little resembles an Egyptian mummy) on a spare grating. Some portion of the bedding and clothes are always made up in the pack-

age—apparently to prevent the form being too much seen. It is then carried aft, and being placed across the after-hatchway, the union-jack is placed over all. Sometimes it is placed between two of the guns, under the half-deck: but generally, it is laid where I have mentioned, just abaft the mainmast. I should have mentioned before, that as soon as the surgeon's ineffectual professional offices are at an end, he walks to the quarter-deck, and reports to the officer of the watch that one of his patients has just expired. At whatever hour of the day or night this occurs, the captain is immediately made acquainted with the circumstance.

Next day, generally about eleven o'clock, the bell, on which the half-hours are struck, is tolled for the funeral, and all who choose to be present assemble on the gangways, booms, and round the mainmast, while the fore-part of the quarter-deck is occupied by the officers. While the people are repairing to the quarter-deck, in obedience to the summons of the bell, the grating on which the body is placed, being lifted from the main-deck by the messmates of the man who has died, is made to rest on the lee-gangway. The stanchions for the main-ropes of the side are unshipped, and an opening made at the after-end of the hammock netting, sufficiently large to allow a free passage. The body is still covered by the flag already mentioned, with the feet projecting a little over the gunwale, while the messmates of the deceased arrange themselves on each side. A rope, which is kept out of sight in these arrangements, is then made fast to the grating, for the purpose of hauling it aboard again when the awful ceremony is ended. When all is ready, the chaplain, if there be one on board, or, if not, the captain, or any of the officers he may direct to officiate, appears on the quarter-deck and commences the beautiful service which, though but too familiar to most ears, I have observed, never fails to rivet the attention even of the rudest and least reflecting. The land-service for the burial of the dead contains the following words: "Forasmuch as it hath pleased Almighty God, of his great mercy, to take unto himself the soul of our dear brother here departed, we therefore commit his body to the ground; earth to earth, ashes to ashes, dust to dust; in sure and certain hope," &c. Every one, I am sure, who has attended the funeral of a friend—and whom will this not include?—must recollect the solemnity of that stage of the ceremony where, as the above words are pronounced, there are cast into the grave three successive portions of earth, which, falling on the coffin, send up a hollow, mournful sound, resembling no other that I know. In the burial service at sea, the part quoted above is varied in the following very striking and solemn manner: "Forasmuch," &c.—"we therefore commit his body to the deep, to be turned into corruption, looking for the resurrection of the body, when the sea shall give up her dead, and the life of the world to come," &c. At the commencement of this part of the service, one of the seamen stoops down, and disengages the flag from the remains of his late shipmate, while the others, at the words "we commit his body to the deep," project the grating right into the sea. The body being loaded with shot at one end, glances off the grating, plunges at once into the ocean, and—

In a moment, like a drop of rain,
He sinks into its depths, with bubbling groan,
Without a grave uncoffin'd, and unknown.

JACK AT TRAFALGAR.

A veteran at the battle of Trafalgar, who was actively employed at one of the guns on the quarter-deck of the *Britannia*, had his leg shot off below the knee, and observed to an officer, who was ordering him to be conveyed to the cock-pit, "That's but a shilling touch; an inch higher and I should have had my eighteen-pence for it;" alluding by this to the scale of pensions allowed for wounds, which, of course, increase according to their severity. The same hearty fellow, as they were lifting him on a brother tar's shoulders, said to one of his friends, "Bob, take a look for my leg, and give me the silver buckle out of my shoe; I'll do as much for you, please God, some other time."

THE SHARK.

A FEW days before leaving the station at Cape Coast, the Redwing lost one of her seamen, in a most melancholy and affecting manner. The man had been working hard in the fore-hold, and, being very dirty, lowered himself down on the cable, under the bows, to wash himself: while thus employed, a large shark attacked him, and before he could get out of the water, seized him by the lower part of the belly, and tore great part of his entrails out. Notwithstanding this, the man succeeded in disengaging himself from the monster, and regaining the cable; but before assistance could be procured, the shark returned and took him down. He was again seen to rise with him at a short distance, evidently endeavouring to bear away his prey from the numberless others, who, at-

tracted by the blood, had gathered round the spot, and were all eager to have a share in the spoil. Several of these destructive creatures followed the ship for many days after.

LOSS OF H. M. S. BRAZEN.

"The labouring hull already seems half filled
With waters, through an hundred leaks distilled,
As in a dropsy, wallowing with her freight,
Half-drowned she lies, a dead inactive weight!
Thus, drenched by every wave, her riven deck,
Stripped and defenceless, floats a naked wreck."

IN the evening of January 25, 1800, the wind blew very strong from the south-west, accompanied with heavy rains,

LOSS OF THE BRAZEN, CAPTAIN HANSON, JANUARY 26, 1800.

and the violence of the storm increased so much during the night, that it was soon a complete hurricane.

On the 26th, at six in the morning, an alarm was given at Newhaven, on the coast of Sussex, that a large ship, which was supposed to be a man-of-war, was on shore under the cliffs, about a mile to the westward of that place. An express was immediately despatched to Captain Sproule, of the royal navy, at Brighton, who commanded on that part of the coast; and several people instantly repaired to the place, below the cliffs, near which the ship was said to lay. Day had not yet dawned, and the violence of the wind and rain increased and prolonged the gloom; but it was not difficult to discover the fatal spot, for the cries of the wretched mariners, who screamed aloud for help, were distinctly heard above the incessant roar of the conflicting elements. Unfor-

tunately, just as the vessel struck, the flood-tide was making, and rose so fast while the people were under the cliffs, that they were soon obliged to return without being able to render any assistance. They now dragged to the top of the cliffs two machines, constructed with swing cranes, to hang over the precipice, and a rope reeved in them, to which is suspended a large cage capable of containing three men: these were in readiness to be used when the tide had flowed so high as to prevent any one from passing round the points of the rocks that projected far into the sea. At daybreak, they could see the ship at about half a mile distance from the shore, but her masts were gone, and she lay, to all appearance, a total wreck. Many of the crew, however, were still hanging to those parts that were most out of the water.

They soon discovered that some of the men were struggling

with the waves, and had a chance of being able to reach the shore, upon which two men upon the cliff gallantly jumped into the cage, and were let down a precipice of nearly three hundred feet, perpendicular, for the noble purpose of endeavouring to rescue from the waves those who floated. One man drifted to shore apparently unhurt; but as the two brave fellows were advancing to his assistance, part of a loose sail was thrown over him by a wave, which carried him out to sea, and he rose no more! Another, more fortunate, came to shore on a caronade gun-slide: the men caught hold of him, and placing him in the cage, he was, with themselves, safely drawn upon the cliff. On reaching the top, he appeared in strong convulsions, but soon recovered sufficiently to inform his deliverers that the wreck they saw was the Brazen, sloop

of war, commanded by Captain James Hanson: and it is a circumstance which cannot be regarded otherwise than extraordinary, that this man, who could not swim, was saved, while the most expert swimmers in the ship were drowned.

The sea now broke nearly fifty feet up the cliffs, so that no further attempt could be made to afford them any relief. The anxious spectators could only lament the fate of the sufferers, while they beheld, in silent anguish, that two or three men were yet alive on the wreck, without the slightest chance of escaping the fate of their companions; and, notwithstanding the howling of the wind, and the loud breaking of the sea, their screams for assistance could be distinctly heard.

By this time the wreck had drifted nearer in the shore, and one man was seen to survive, lashed to the stump of the foremast,

every wave which washed over him, covering him many feet deep, and only giving him time to breathe between wave and wave, until about two in the afternoon, when he sunk down totally exhausted and lifeless.

About three o'clock, the ebbing of the tide enabled the people on shore to get under the cliff, opposite to the remains of the vessel, but little could now be saved. The shore was strewn for miles with the wreck of this ill-fated vessel. Ninety-five of the bodies of the crew, which floated ashore, were decently interred at Newhaven, by direction of the Lords of the Admiralty; and a handsome stone monument, or pillar, commemorative of the melancholy event, was erected near the grave which contained their remains, at the expense of Captain Hanson's family, from a very appropriate design by Mr. Henry Rhodes, architect.

The following are the Inscriptions on this Monument:

NO. 1.
SACRED
TO THE MEMORY
OF
CAPTAIN JAMES HANSON,
The officers and company of His Majesty's ship
BRAZEN; who were wrecked in a violent storm
Under the Cliff,
Bearing from this place S.W.
At five o'clock, A.M., Jan. 26, 1800.
One of the crew only surviving to tell the melancholy tale.

By this fatal event
The country, alas! was deprived of 103
brave defenders,

At a time when it

Most required their assistance:

The remains of many of them were interred
near to this spot,

By direction of

The Lords Commissioners of the Admiralty.

"The waters saw Thee; O God!"

NO. II.

The Brazen had been ordered to protect

this part of the coast from the insolent attacks of the enemy;

And, in the evening preceding this sad catastrophe,

Had detained a foreign vessel,

Which

Was put under the care of the master's-mate, a midshipman,
eight seamen, and two marines;

Who were thereby saved from the fate of
their companions.

NO. III.

Names of the officers lost.

James Hanson, Esq., Commander.

James Cook, John Dembry, Lieutenants.

Archibald Ingram, Master.

Patrick Venables, James Hanwell, Midshipmen.

John Braugh, Purser.

Robert Still, Surgeon.

Thomas Whitfield, Boatswain.

Robert Alder Yawle, Gunner.

John Teague, Carpenter.

NO. IV.

The stories of

CAPTAIN HANSON

Caused this monument to be erected,

As a mark of their esteem for a deserving officer,

And a valuable friend:

It was the will of Heaven

To preserve him

During a four years' voyage of danger and difficulty,

Round the world;

On discoveries

With Captain Vancouver,

In the years 1791, 1792, 1793, and 1794,

But to take him from us

When he thought himself secure.

"The voice of the Lord is upon the waters."

THE SHRIFT ON THE RAFT.

(From Ainsworth's Magazine.)

THE terrible storm which ravaged the coast of Norway on the 12th of October, 1715, was remembered in that country long after the hand of time and the industry of man had obliterated the marks of its fury. As sudden as it was tremendous, it arose after several weeks of settled weather, and having wrought more havoc in a few hours than ordinary tempests effect in days, it subsided with corresponding rapidity, leaving upon the minds of the peasants who witnessed its terrors a singular impression with regard to its origin. For years, the herdsman of that rugged land, and the sailor of that dangerous sea, believed that the dreadful storm, which had swept away sheep and shepherd amid the ruin of house and fold, and had dashed the largest craft upon the rocks that received the shattered fishing-boats, was caused by a sudden exertion among the demons of the Pole, who, forbidden by the mandate of Heaven to enter earth while it shall move in its appointed orbit, are perpetually labouring to disturb its charmed circle, that they may rush in to havoc by land and wave.

Strange tales are still told of the events of that fatal day, and of the night which ensued; and the following legend, relating to one of the voyagers who suffered in the storm, bears some evidence of the feeling with which the Norwegians regarded so terrible a visitation; a feeling in which is

mingled some vague recollection of the time when Norway itself was one of the most unfortunate of the stakes in the game played by the great continental powers.

The tempest was rapidly subsiding as dusk drew on, but the cessation of the violent turmoil brought no comfort to the scanty crew of the ill-fated ship *Drontheim*, which had sailed from the port of that name on the preceding day, and had met the wrath of the storm in full career. She had been bound for France; but at the time we speak of, she was a helpless and naked hull, drifting whither the caprice of the wind, which seemed to blow from all points of the compass at once, chose to hurry her. She was now making her rapid but involuntary course northwards; but to the few human beings who yet clung to her decks, the state of her shattered sides, through which the water was forcing its way at twenty wounds, left it a matter of hideous unconcern where they might meet the certain fate which awaited them. It was obvious that many minutes could not elapse before the vessel and all she contained should be sucked into the troubled abyss on which she yet floated. Her smaller boats had long since been carried away by a burst of the storm, which, hurling three or four monster waves across her deck, had swept every moveable thing from its surface, including more than a third of the wretched crew. In the next moment, one of terrified madness, the survivors had crowded the long boat, which had scarcely touched the foaming billows ere it was swamped, and went down with every soul it bore. Not a dozen men remained on the fated vessel, when the sudden and horrible change in motion which announced the foundering of a ship, took place. She ceased to make way; the violent agitation which had for hours rendered it nearly impossible to stand upon her deck was exchanged for a sullen lurch, followed by a second and third; and then the hideous roar of the waters rushing in on every hand, told the frantic crew that all was over. Amid the loud and agonized prayers of a few, and the blasphemous ravings of the rest, the waves of the Northern Sea closed over the *Drontheim* for ever.

As the vortex caused by the sinking of the vessel disappeared, one man alone was struggling in the water in the energy of despair. His rich dress rather encumbered his movements, but he was in the prime of manhood, and a practised swimmer, and was putting forth his full strength, in the hope of finding some relic of the ship on which to float for the chance of life. But his hope waxed fainter with his limbs, for the gathering dusk was rapidly reducing his chance of discovering any object around him, and the waves still ran too high and angrily to allow him a chance of endurance much longer. He still swam, but his despair was almost total when he discerned a dark body at a few yards' distance. He struck vigorously forward, and, to his inexpressible relief, discovered that it was a small raft, on which a human body was lying. A succession of violent strokes, now animated by renewed hope, brought him to its side, and, in a moment or two, the Count de Burigny was clinging to the buoyant mass.

When he had somewhat recovered breath, his next effort was to mount upon the raft itself; but, as he made the attempt, the figure which already occupied it, arose to a sitting posture, and gently repulsed him. Before he could speak, it addressed him in a pleasing voice, which, however, was piercing enough to make itself distinctly heard amid the dashing waters:—

"Stay, my son, you are welcome to all the support my raft will afford you, but for both of us to mount would entail destruction on both."

"Father," gasped the Count, "whoever you may be, you will surely assist me in saving my life."

"Truly son," returned the other voice, "you apply for relief at a most unseasonable time. But I am bound at least to succour you with my advice; and I therefore advise you to swim for some rocks which are distant about a quarter of a league, in the direction in which I am pointing. They are always above water, and in the morning you will certainly be discovered by some vessel."

"Thanks, father," replied the Count; "but I would rather cling here, with the certainty of being safe for the moment

than again risk my life in a struggle with the waves, for a chance of reaching some rocks I may not be able to climb."

"Such is the wisdom of man!" said the other, "ever confident in the present, ever distrustful of the future. But I tell you, my son, that yon rocks are easily accessible, and that if you strike away now you are safe."

"Safe or not, father, I remain here; and I therefore entreat you, if you have the means, to steer us in search of this same rocky platform,—we shall then have the satisfaction of being saved together."

"I am on my own course, my son, and I advise you not to keep my company," said the other voice. The words induced the Count to examine his companion as closely as possible, but the fast falling twilight only enabled him to discern a figure in a priest's robe, the hood of which effectually shrouded the features of the wearer.

"You speak strangely, father," said the Count; "but I hold my intention, fervently wishing I had something easier to hold, for my fingers are numbed, and this wood is slippery."

"I have warned you, my son; but if you insist on remaining, I will do what I can to aid you."

The figure seemed engaged with its dress for a moment. The next, a small, but intensely bright red light appeared by its side, suddenly illuminating the raft, the two speakers, and the surrounding waters, with a lustre which seemed supernatural. As soon as the count could recover from the effect upon his eyes, he eagerly scrutinized the face of the other, who had thrown back his hood, and was fixing a little lamp containing the light into the wood of the raft. The features were calm and regular, and the tonsure on the head added to their dignified character. The stranger was clearly a priest, but his dress offered no aid in the discovery of his rank or country, even to the experienced eye of the Count de Burigny.

"I repeat it, my son, I exhort you to save yourself by swimming, and you are still in time to do so. But, since you are obstinate, this cord will afford you the assistance you desire."

"Thanks, father," said the count, as the priest, gradually creeping towards him, drew the rope, which he had taken from his own waist, under the arms of the former, and attaching one end to a ring in the woodwork, passed the cord several times around the body of the count, and at length secured him so effectually to the raft, that he floated without the least necessity for exertion. The priest then regained his seat in the centre, and for some minutes they were silent. The count was the first to speak.

"I did not see you, father, among us in the unfortunate Drontheim," he said.

"I remained below, at prayer, my son, until tarrying became presumption; I then hurled this raft upon the billows, and departed upon my mission."

"Again you speak mysteriously, father. Might one know what the mission may be which keeps a man on a raft, in the middle of the ocean, as calm as if he were at vespers in his own church?"

The priest smiled. "You forget, my son, that virtue is always tranquil in the hour of trial; and you forget, too, a very important difference in our situations."

"By no means," said the count; "I am aware that I am chilling in the water, while you are apparently at ease, in a cloak against which I see the water strike in vain. I would suggest to you that the virtue you speak of could give a nobler proof of its efficacy, were we to change places for an hour."

"Nay, my son, that idea is selfish and unworthy. I impose a penance upon you for having entertained it, and enjoin you to walk for one hour, fasting, upon the ensuing morning."

"I pray that I may do so," said De Burigny; "and I entreat you to double the penance, if you can thereby double the chance of my performing it."

"Jest not, my son; but remember that you are still in a situation of great danger: a wave may dash your head against

this raft, or may snap the cord which holds you to it, and in either case your own is desperate. It would rather become you to make a confession, and receive absolution while you may."

"I have no objection, father, the less that I have nothing else to do; but I give you fair warning that you will have to wait for your dues till we reach land."

"Hard-hearted, careless scoffer! what if that should not be so certain?"

"Then so much the better for the confessor, father," said the count, whose natural audacity did not desert him even in that hour."

"And how much for the penitent son?" asked the priest, sternly. "But proceed, and that your wretched soul may come the sooner to peace, I will save you the narration of a life of crime, by apprising you that I know you."

"By your mode of describing my history, I think you do," said the other. "I need not tell you, then, that I am the Count Guillaume de Burigny, a faithful servant of his Most Christian Majesty—"

"A faithless husband to a broken-hearted wife—a traitorous friend to a trusting associate—and a treacherous envoy to a betrayed people. You need not. I know the libertinism which ended in a murder committed, if not by your own hand, by your orders, and the object with which you have fled the scene of your guilt. I know that the Count de Burigny, having consummated a career of profligacy by a dastardly crime, which has banished him from France, has sought to purchase pardon for the ruin of a family, by intriguing for the ruin of a nation."

"Ha!" exclaimed the count; "you are aware of my errand to Norway?"

"Ay," said the priest, "the sword of Sweden, whose blow already hurtles in the air, is less terrible to the Norwegians, than is the poison of France which you were sent to mix. This time, however, the cup shall be dashed from your hand. You laugh."

"I do," said the count; "though, heaven knows, this is no place for mirth. You, who have such unexceptionable information upon these matters, are doubtless aware that the cup you speak of is mixed."

"And in a woman's hand, that it may be presented. The Count de Burigny thinks he can safely return to his master, while his beautiful daughter remains to enforce, by blandishment and smile, the dark lesson he has tried to teach. How, if she, too, have left Norway?"

A shudder ran through the count's frame, and all the recklessness of tone had left his voice, as he replied—

"Eugenia—tell me, father, in pity—what know you of Eugenia? I left her in Bergen, in safe watching and charge, though her work was somewhat bold. Nay, speak—whatever else I am, I am her father—you do not know—you cannot have heard aught of her?"

"Nay," said the priest; "I merely asked what Count de Burigny's next intrigue would be, should he hear that a noble and maidenly disposition had been revolted by the task he had given it, and that a daughter had silently left Bergen, and, following in the footsteps of her father, had secretly embarked—"

"Not in the Drontheim—not in the accursed Drontheim, father?" screamed rather than exclaimed the count.

The priest made no reply, but pointed to the water. A sudden and wondrous change had taken place upon its surface. In lieu of the foaming and dashing billows, the sea had become calm as a mountain lake. The roar of the waves was hushed, but in its stead had arisen a low, droning, and distant sound, which brought with it a fear the mind owned, but could not explain. The raft had hitherto been carried swiftly along, but its speed was now increasing tenfold. The consternation of the count became evident, but to all his exclamations the priest gave no answer. That strange droning sound grew gradually louder, but the ear struggled in vain to discover how it was composed. Still the raft hurried on with lightning speed. Darkness was all around it, save the bright red gleam of the priest's lamp.

Suddenly, the thought of his daughter recrossed the count's brain. He gasped—for the swiftness of their course now rendered speaking difficult—

"Father! I implore you, what know you of Eugenia?"

Once more the priest pointed silently to the water, and as the count's eye followed the motion, he beheld a form whirling by his side in a current, the intense fierceness of which rendered its surface smooth as glass. There was the corpse of a pale and beautiful girl, lovely even in death. Long and golden locks clustered around her neck and shoulders, but the locks were wet and tangled, and the alabaster skin was becoming blue with exposure to the water. The eyes were closed—it was well they were so. That form was following the raft, but the increasing velocity of the latter left the corpse behind in a moment; that moment had sufficed for a father to recognize his daughter. He uttered no word, but gazed steadily at the priest.

The terrible and indescribable sound had now increased to a roar, which would have rendered the voice inaudible at the shortest distance. The speed of the raft was now terrific; yet it neither swerved nor swayed, and the priest sat unmoved, returning the stupified gaze of the count! Suddenly one side of the raft became depressed, and in that position it continued its furious career. The roar had now become more hideous than any noise which can be conceived, and yet it was of a nature that baffled the ear. The priest rose slowly to his feet, and preserving his balance, apparently unconscious of the frightful slope of the hurrying raft, he leaned to De Burigny, and in a low tone, which, in spite of the horrible noise around, carried the full meaning of its words to the count's understanding, said—

"WE ARE IN THE MAELSTROM!"

They were indeed in that dreadful whirlpool—the most awful abyss which disfigures the face of creation. That hideous roar, so strange and so appalling, was the sound of the waters which whirl and rage in the unfathomable gulf. Louder and louder still it waxed, until the ear could bear no addition to the noise, and faster and faster flew the raft, but every instant it went deeper down the vortex. The wretched De Burigny struggled with the cord which held him to the raft, and sought to break from it in vain. The link which he had demanded when exertion would have saved him, was now the means of dragging him more surely to destruction. For one instant he looked upwards, and, to his horror, beheld the red light of the lamp, reflected on a sloping wall of raging water, rising a hundred yards above him, down the side of which he was hurrying to an abyss on which he dared give no glance. Then his eye turned to the raft—there was no one upon it; but in the maddening agony of that moment De Burigny heard, accompanied by a hellish laugh, the words—"The priest's dues for thy shrift are paid!" The next instant, the cords gave way, the raft shot violently forwards, and De Burigny was alone—in the Maelstrom.

THE ROYAL REEFER AND BOB CLEWLINES.

It was on one of those December days, when the wind, blowing from the northward, acts almost like a razor on the surface of the skin, and when accompanied by small sharp rain, a mixture of cold and damp produces a chilling effect upon the frame and spirits, that a *Ci-devant* midshipman, his hands in his pockets, and

"Whistling as he went for want of thought,"

crossed London-bridge, which at that time was an asylum to the footsore, the pauper, and the weary at heart. The day had fallen, and everything looked dull and dreary; the foot-path was encumbered with mud, and porters carrying weights, as well as other busy passengers, were jostling each other to obtain a footing on the dirty pavement: a fellow heavy laden came in contact with the *royal-reefer** so powerfully, that he took a lee-lurch, and got foul of one of the seats in the arches. "Avast there; luff up; you lubberly rigged son of a gun," cried middy, "couldn't you hail ship before you were aboard

of us?" The fellow, however, waddled on; but the midddy had to turn about in order to regain his course, when suddenly he beheld a middle aged figure, perishing with cold, a red night-cap on, an old jacket and trousers, a pair of shoes in rags attached to his legs with a rope's end; no shirt, no stockings, nor any other attire; the face was climate-struck, it had braved the equator and the pole, the battle and the breeze, the scorching heat and the petrifying cold—it was, as might be expected, thin, and moreover, almost lost in a profusion of hair on each cheek, so that it would be difficult for the oldest acquaintance to recognise the features after long absence: nature had made the lips to smile, the eyes to beam in kindness, the fine high forehead to command respect; but time and hardships, disease and disappointment, had quenched the fire of the organ of sight and intelligence, the mirror of the soul,—had prematurely furrowed that front of English high spirit and candour, and had taught the lips to fall in dejection and the treasured silence of woe: upon the whole, the figure had something fierce in it, but it was truly manly; the warrior's arms were folded together, and his face, bent towards the ground, was still half up-turned, and seemed to say to rich merchants and venders passing by on foot and in carriages, "There ye are, ye liars upon beds of down, ye feeders upon the poor man's toils; often have you slept secure, and safely enjoyed your wealth, whilst poor Jack rode out the gale, hung on the rigging betwixt life and death, and endured the storm which held him every moment betwixt the chance of clinging to a fragment of the wreck and sinking into eternity: but, now the war is over, smart-money paid for a sharp wound, and neglect and oblivion are the seaman's portion." The expression of his face and eyes seem to speak thus; indeed, it spoke volumes; but its mute appeal was lost on the worldlings, who brushed by him, and who, bent on love of gain, scarcely were aware that their fellow-man was starving by their side, too feeble, and too much an outcast to work, yet too proud to beg: the midddy's heart, however was of that texture that it leant towards a brother-sailor, meet him where it might, and he naturally looked round at poor Jack on his beam-ends; the prince had but one penny in his pocket, and that the plaintive voice of a blind woman had drawn, as if by magic, from its deepest recess. What was to be done?—for he should like to have taken this wreck of a man-of-war into tow. The reflection caused him to examine more closely the shivering seaman, when a small scar, occasioned by a splinter, on the bridge of the nose, brought to his remembrance Bob Clewlines, who had served in the same ship; the tar recognised him also; but so far from making himself known to him, he hid his face in his hand: the reefer however, was resolved to bring him to. "What, Bob Clewlines?" cried he, "do I not hail an old shipmate in you, a quartermaster on board the—, the bravest heart of oak, the best reefer, and the merriest steersman of the whole ship's crew; and," said he audibly, that every one passing might hear and value fallen courage and fidelity, "and as prime a seaman as ever trimmed a sail, or served a gun; why what has broke up your old hulk this way?" The man could not find utterance; remembrance of unrequited services and other associations checked him. The midddy stretched out his hand, which the broken hearted sailor ventured not to take. "Come, Bob," cried the other, "no subordination now: we are all equals on life's quarter-deck, and when my fellow sufferers, he rises a peg in my estimation. Why?—because some unfeeling lubbers slight him. Come tip us your fin. Your hand may be dirty, but your soul is as kind as a new sail in a sunny day. I will show it against any lord's in the land. Come. heave-a-head; follow me old tarry breeches; I will soon set your timbers and rigging to rights; you shall have an entire refit. Come, bear a hand; set all your canvass; it's all in ribands, I see, and shivers in the wind; but I will keep out wind and weather for you."

Thus saying, he walked proudly with the poor tar, astern of him, until he came to a slop-shop, near Wellclose-square: it was a Jew's shop. "Here, Moses," said the midddy, who detected the Israelite's bending looks of disdain and mistrust on the poor man, as if he considered the contents of his shop

* King William, when he was a midshipman.

in danger: "come, Moses, a regular built outrig for this gentleman," laying great stress on the word Gentleman.

This was pitching it strong, but his heart was carrying royals, skyscrapers, moonrakers, and his pulse was sailing at the rate of ten knots an hour at least, so elate was he to serve a brave man in distress, and above all a son of the ocean: "come, let us have everything good, and spic and span new."

"Pray, shair, who's to pay?" says the son of Israel.

"Myself," replied the midshipman.

"O, your honour, that's right."

The poor fellow retired to a back room, and in a little time returned, clad from head to foot, and with two changes of linen, and a pair of shoes, by the midshipman's order, tied up in a handkerchief under his arm.

Bob Clewlines looked with a blush on his old clothes; and at this moment an almost naked boy passed by: the midshipman duly appreciated and truly interpreted one look of the tar.

"Bob, I say, heave that overboard, and let the poor boy pick it up; one good turn deserves another."

The payment was the next. "Three pounds fifteen. Is that the lowest, Mr. Moses?"

"O yesh; I don't gain five shillings by the whole deal."

"Well, then, do you take the case of my gold watch, and weigh it, and give me the produce of it."

"Let ush see: it's vary pretty, but not vary heavy; it's all fashion, you see; indeed, it's a great pity to part the vatch and the caish; vatches are a drug now, or else I'd buy it; but just to oblige you, I'll see what I can give you."

"Don't trouble yourself, Mosey; just do as you are bid; you take the outside case, and I'll keep the vatch."

"I shall lend you four pounds upon it," resumed the Israelite; and you may depend upon my honour to return it to you, when you bringsh me da monish."

"No, you won't Mosey; you'll do just what I bid you."

"It vill spoil the vatch," again replied Moses.

"Not a bit, she must work without her jacket, as my friend has often done in all weathers. I shall sell the outside case to serve a shipmate in distress; but the vatch was left me by a dear friend, so I shall keep her; a metal case will do as well for a little time, and when fortune's breeze springs up again, the case will be altered."

"Vel, shair, you shall be obeyed; five pounds five shillings is just the price of the weight; there's the money."

"Good morning, Master Moses; but do you, Clewlines, set sail again; I want to get you into port, it is only what I owe you. Were you not the kindest creature to me in the world when I was confined to my berth with the yellow fever, and not expected to live a day! Come, come, you must take your cargo in, you must be victualled as well as refitted. I have got a chalk at a house near this, another shipmate who is set up in business in the public line; call for what you want, and and here's some loose change to stow in your pocket until something turns up."

Poor Bob got a good dinner, and a snug hammock that night; and shortly afterwards he obtained a berth in an Indian, and is now doing well.

The royal reefer's heart bounded with joy at performing this noble action, to recover which he put himself on short allowance.

THE PEARL FISHER.

ONE of the most interesting, and apparently most feasible projects of 1825, was the company for pearl fishing off the coast of South America. It was long known that the pearl-oyster was to be found there; but the poverty of the fishers, and the general ignorance of the people, strongly favoured the idea, that European ingenuity might sweep the bottoms of the bays, harbours, and creeks where the oysters lay, and carry to the European market the gathered treasures of many an age. Accordingly, a vessel was fitted out, equipped with all the modern improvements for catching those little bright ornaments of the ears and bosoms of the fair. It was put under the command of Lieutenant Hardy, an intelligent officer, well acquainted with the navigation, and despatched on its errand for this new phi-

losopher's stone, hidden in the bosom of the deep. But how many things are to be considered to gain any one point in this world? The principal instrument on which the whole enterprise depended was a diving-bell of the most complete construction. One thing, and one alone, had been omitted in the calculation—the nature of the ground on which the oysters were to be looked for. It seems to have been taken for granted, that it was a sort of subaqueous bowling-green, or billiard-table. It is possible that no one thought of asking the question.

The vessel reached the coast: the diving-bell was let down, and returned with the report that the bottom, instead of being the smooth bed of sand on which the pearls lay in heaps, was a succession of pointed rocks and deep clefts, where the animal hid itself—and where a diving-bell was of little more use than a balloon. The experiment was made over and over again, with the perseverance of the British sailor, but the oysters would not be found; the machine could do nothing in the midst of those dells and caverns, swept, too, by the currents of the heady ocean; and the expedition was finally abandoned, producing as its only fruits a book by the officer in command, a very spirited and amusing production. Lieutenant Hardy, in the course of his adventures, became acquainted with the native pearl-divers, some of whose exploits he narrates; some of those, too, being instances of remarkable intrepidity.

One of those divers had plunged into eleven fathoms, in the expectation of finding some peculiarly fine pearls. He was pursuing his search, when seeing the water suddenly darken, he looked up, and to his horror beheld at some distance above him a huge shark, leisurely surveying all his movements, and evidently intending to make a prize of him. The diver made a dart forward towards a rock, where he thought that he might elude the eye of the monster, and then spring up to the surface; but the shark shook his tail, and followed quietly, but with the same evident determination to eat him the moment he rose. As under water time is everything, and the diver had only to choose between being eaten alive and being suffocated, the thought suddenly came into his mind to puzzle his pursuer, by a contrivance in which, whether he remembered it then or not, the cuttle-fish has the merit of originality. He threw himself upon the ground, and with the stick which all divers carry, began to muddy the water. A cloud of mire rose between him and the shark; he instantly struck out under cover of the cloud, and when he thought that he had cleared his enemy, shot up to the surface. By great luck, he rose in the midst of the fishing-boats. The people, accustomed to perils of this kind, saw that he must have been in danger, and commenced splashing with their oars and shouting, to drive the shark away; they succeeded so far as to save their companion, and the diver was taken on board, almost dying from the dreadful exertion of remaining so long under water, if his heroism disdained to acknowledge the alarm.

GERMAN BOAT SONG.

ABOARD! aboard! The toll is paid,
By sunset must Coblentz be made;
The sturdy oars again are plied,
Down the rapid stream we glide;
Ober-Wesel looms in sight,
And lofty Schonberg's castled height;
Still the less'ning Pfalz is seen,
Gleaming o'er the waters green.

Like a noble vessel there,
Spreading all its snowy wings,
To woo the breezes light and fair,
Now a rocky headland flings
Its giant form between us—gone—
Are towers and town, and, lo!—a glen
Opens before us—lovely and lone,
As a wizard's breath, our bark hath blown thence
A thousand miles from the haunts of men!

THE FATAL ELOPEMENT.

It was on a cool morning in November, that, having taken my gun on my shoulder, put my spy-glass in my pocket, and whistled out my dogs, I left my own house, situated on a bank overhanging the ocean, and began a walk in quest of game, along one of the most rugged coasts on the mainland of Scotland. I continued, mile after mile, till having filled my game bag, I began to reflect that it must be dark ere I could again reach my own fireside. My worthy housekeeper, too, would probably experience more alarm on so unwonted an occurrence, than even the delight of unpacking my well-filled bag could repay her for, though this was in general an occupation of absorbing interest. And, indeed, I began to wish that I had not rambled so far; for, as I retraced my steps, I perceived all those portentous sights and sounds, which from a long residence near the sea, I knew full well were the sure indications of a heavy storm. The sun was slanting his sickly setting beams from amidst murky clouds on the dark and sullen waters, when I espied a vessel like a dim speck in the distant horizon. On looking at her through my glass, I saw that she was a large merchant brig, apparently heavy laden, and labouring on her course towards a little harbour, two or three miles from my residence. The clouds were fast gathering into a lowering gloom. The sea-birds rose from the rocks with harsh and boding screams, and winged their flight landward—the tide was moving onward, and the waves rolled with a heavy swell, far beyond the usual tide-mark,—a sort of drowsy sound arose from them in hollow cadence—the sea became more dusky and indistinct, and I looked in vain for the vessel. The wind suddenly swept along the ocean, and doleful and melancholy sounds were echoed back from the rocks and caverns, while the storm seemed to be mustering up its powers of destruction. All was black and terrific. I again looked for the ship, but it was now too dark to perceive her. Soon the tempest waxed more and more wrathful—the surges rushed upon the shore with headlong fury, seeming in their thundering incursions, to make the firm earth to tremble; and as I looked upon the boiling deep, and heard the fierce winds contending with it in its bleak domain, a presentiment seized me that she would never more reach a haven.

All was now utter darkness. A furious shower of hail and sleet was coming fast on the wings of the tempest, and I hurried into the house. My dogs, glad to escape from such a night, had got there before me, and my housekeeper, who had aired for me a change of garments, and placed my slippers and a bottle of Fowler's best ale at the fire, was anxiously expecting my arrival. I was tired with my long walk, and tried to take half an hour's nap; but there was no sleep in my eyes. I tried to read, but could not fix my attention. I tried to think on a thousand subjects, but there was one that would keep the lead in spite of me—and that was the ship. I rose, and, going into a room that overlooked the sea, I threw up the sash of the window. All was impenetrable darkness, except the line of white foam at the bottom of the bank, left by the furious waves which broke over it, each higher than the last; while the howling of the wind, the deafening bursts of the sea upon the land, the loud peals of thunder, and the vivid flashes of lightning which continually darted across the wide expanse of sky, showing all the terrors of the scene, told that the storm was still more hideous, and more fiercely raging than before. I was about to shut down the window, when I heard, mingling with the hoarse tones of the blast, shrill and discordant cries, as of human beings, in distress. Buttoning on a rough great-coat, and a pair of thick boots and gaiters, I directed my man-servant to accoutre himself in a similar manner. When this was accomplished, taking the large stable-lantern with us, we descended the bank. The tide was now receding, and the tempest was somewhat abated. The wind was not so high as it had been, the clouds were moving faster, and the moon, newly risen, was making an ineffectual attempt to show herself. The sea was swelling proudly, as if indignant at being foiled in her attempt to overmaster the land, and though slowly retreating, like a brave but vanquished foe, was dealing her parting strokes with unabated fury.

The little bay was divided by a large rock, which rose on

the edge of the common sea-mark, and by a small burn which ran into the sea at its side. This little brook formed a barrier between one side of the bay and the other. It was to this place that I directed my steps; for if there had been scathe, I felt assured it was on the other side of the burn, for there the rocks were most dangerous, and it was from that quarter I had heard the cries. The water of the rivulet ran deep in its channel; and as the lantern was held up, and I saw that it would take me above the middle, I paused for an instant on the brink. My servant, George, was a stout fellow, who did not mind a good drenching, and, holding the lantern above the water, he dashed through it, and shouted out, "A wreck! a wreck!" My fears were confirmed, and I passed the burn, and followed him to where the gravel and the grass were covered with garments of all descriptions.

The moon now peeped forth from among the heavy clouds. We climbed a rock which again divided the bay from the other part of the coast, and there lay beneath us, keel upwards, the huge dark hull of the fated vessel. We descended quickly, and, while searching for her hapless crew, shouted loudly, that if any still remained alive, they might know that help was nigh. It was in vain; no answer was returned; and as the sea had not retired far enough for us to approach the ship, we began to ascend the bank, and had proceeded but a few steps, when we saw a man stretched at the foot of it. The upper part of his body was naked, and we perceived the blood oozing from a wound in his left side. Finding him insensible, we placed him out of the reach of the surf, and by rubbing his limbs, and putting the dry parts of our great-coats about his shoulders, we succeeded in restoring his circulation; but his speech was so incoherent, that we could learn nothing about the wreck. He constantly affirmed that he was the only one left—that all, all had perished; and raved wildly about Jessy and her screams; and when we attempted to move him farther up the bank, till George procured assistance, he expressed his determination to remain where he was, and die with Jessy; but whether this person, who had met with a watery grave, was his wife, his sister, or his sweetheart, it was impossible to guess. He was, however, in no condition to resist; and when George and some men arrived, he was carried into the house. He was put under my housekeeper's care, who dressed his wound, wrapped him in blankets, and having administered some stimulating liquid, kept him quiet, till nature found a short relief in sleep.

In the morning, the beach presented a most appalling picture of desolation. The tide had been at the full, and left behind it, along the shore, clothes, bedding, barrels, chests, masts, cordage, and dead bodies. The latter were put into carts, and removed to the village church, there to remain till their interment.

In the mean time, my good old dame had learned much of the story of her unhappy patient. The vessel had been loaded with slates, on the east coast of Scotland, and was bound for Newcastle. The poor young man was a sailor, a native of the town from whence the vessel had come. He had saved a little money, and had returned to ask the consent of Jessy's parents to her becoming his wife, which was refused. But William had long since won his way to her heart. She loved him passionately, and she could not see him depart again without her. They were to be married as soon as they reached Newcastle; and all would be forgiven when she wrote and told them how happy she was.

On the following morning, the body of Jessy floated ashore, and two women immediately proceeded to wrap it in a white cotton dress. She appeared not more than eighteen, of middle size and delicate form—her eyes were closed, and she looked transcendently beautiful even in death. As I stood gazing at this innocent young creature, I turned round, and beheld the wretched William approaching, with all the haste his stiffened wound and bruises would allow of. As soon as he reached the body, he threw himself by her side, and kissed her lips and cheek, while his heart seemed as if it would burst his throbbing breast. By the time the coffin arrived, the first violent paroxysm of grief had subsided, and he stood quietly by while she was lifted into it. I directed the body to be taken to my house,

but this, however, to my surprise, he opposed, and entreated that it might be carried to the church, and that the lid might not be screwed down. I was surprised at his rejecting my offer, from the idea that he would wish to watch it till it was hid from his sight in the grave. I, however, soon understood his motive; for no entreaties could move him from following her to the church, and remaining there two nights, where he gave full vent to his grief, which he could not restrain. The interment of the bodies took place on the second day from that on which Jessy was found; and they were buried in a retired part of the churchyard, set apart for the friendless drowned. William entreated that Jessy might not be buried there, and through my interest, she was buried in a picturesque corner of the churchyard, beneath a weeping birch, which hung its boughs tenderly over the spot.

The lover supported the head of the coffin, as the representative of those who should have been there, for there was no parent, brother or sister, kindred or friend, save himself, to mourn the fate of her who had been cut down as a flower of the field; and when I looked upon him, as the coffin was lowered into the earth, I saw his was a sorrow which would not soon pass away; and when I again marked his care-worn countenance, I feared that the foundation of a dangerous illness was laid, by his fastings, watchings, and, above all, his overpowering grief. Having this impression upon my mind, I would have had him remain at my house for some time before he returned home, but no persuasions were of any avail. "Let me reach the house of her parents," he said, "and let me hear them say they forgive her, and that is all in this world that I care for." He accordingly departed, almost immediately.

Eight months after, he returned, worn to a shadow; while the bright colour that flushed his cheek, and the brilliance of his dark eyes, full of an unearthly expression, showed that consumption had marked him for its victim. During his absence, nothing had been able to withdraw his attention from the grave of his Jessy; and he had returned, to fulfil his only wish—to be laid by her side. His end rapidly approached; and in a few days his soul went to that merciful Being in whom he trusted, while his mortal remains were laid beside his Jessy.

A SHIP'S CARPENTER.

"SEND for the carpenter," said Leatherlungs, addressing the mate of the watch.

The messenger was despatched for Mr. Maul. Maul, according to the *cognoscenti* of the cockpit (and the denizens of the orlop are seldom in error in matters not immediately connected with the ship's way), was a character—a fish of the first water. In his vocation, he loved to labour, and to labour hard, to work himself, and to work others. He was also a mechanic of all work—for to him all work was alike. Not that he was a jack of all trades: Maul was master of many. Sometimes he might be seen in the skids, performing the part of "top-sawyer," sawing with might and main the heel of an "expended top-mast," or converting a yard-arm piece into "inch or two-inch" of "cappenbar" plank. At other times, repairing a midshipman's quadrant; making a model for a jury-mast; chalking out a "copper" for the ward-room wine; turning a spare wooden leg for the ship's cook; caulking a leak over the captain's cot; vengering a writing-desk for the first lieutenant; or welding, in conjunction with the blacksmith, a heated hoop at the armourer's forge. Of the discipline of his crew he was particularly proud; and, *certainly*, compelled, as we are, to chronicle truth, the "carpenter's crew" was the only portion of the ship's crew at all approximating to anything like an orderly state. At work, Maul never permitted his men to talk. "Words," he was wont to say, "were the adverse winds of work;" and, to prove the truth of this, his favourite "*saw*" he never took tool in hand that he began not to whistle like a thrush. In official intercourse, Maul was provokingly sparing of speech. Questions "on service" invariably met with brief replies, it being contrary to the carpenter's creed to be too explicit or over communicative on mechanical matters. Already was "Chips" in the presence of his superior.

"Mr. Maul," said Leatherlungs, still standing on the gangway, "is the paint of the first cutter yet dry?"

"No, sir."

"How's that?" asked the lieutenant, not a little solicitous for the fate of a favourite green he had been "green enough" to purchase for the public service at his own expense; for Sir Montague, as Leatherlungs was wont to complain, "never launched out a penny on paint." To commemorate his recent marriage, the baronet had, to be sure, contributed the severe sum of thirty shillings to regild and re-touch some portion of the figure-head, which the carver had intended should represent some female form.

"Not yet dry?" repeated Leatherlungs.

"Won't set, sir."

"Why not?"

"'Cause it won't, sir."

"Why won't it?"

"Paint, sir, 's taken a parverse turn."

"Perhaps," said Leatherlungs, "you omitted to insert the proper quantity of drier?"

"No, I didn't, sir."

"Why, how much did you put in?"

"Enough, sir."

"Then, why the devil, sir," said the first-lieutenant, petulantly, "why the devil don't the paint dry?"

"It sulks, sir."

"Sulks?" echoed Leatherlungs.

"Yes, sir, vardigrease often sulks, looks blue, and turns every colour but the colour it ought."

"Was all the rum inserted which I sent you by the ward-room steward?"

"Yes sir."

"Sure of that?" said Leatherlungs, casting at Chips an incredulous leer.

"Sartin, sir."

"Sure it wasn't drained off?"

"Sartin, sir."

"How do you know?"

"Tasted it, sir."

"How did it taste?"

"Rummish, sir."

"Rummish, indeed! You're a rum fellow, Mr. Maul," said Leatherlungs, half-jocularly. "Come, down with you, and tell the sergeant of marines to clap a sentry over the cutter on the quarter; and let him have the strictest orders that nobody goes near the boat till the paint is thoroughly set."

"Ay, ay, sir," said Maul, descending the gangway ladder more than ever convinced that brevity was the soul of wit.

THE FLOATING BEACON.

Why art thou thus, thou lonely bark,

The last on the darkling sea?

Why are thy sails to the night wind spread?

And why shines the light on thee?

Why art thou here, thou lonely bark,

When the other ships are gone?

I deemed thee away with those to-day,

But still thou art sailing alone.

There came a voice from the lonely bark,

Or mine own thoughts answered to me;

Spread is my sail to the midnight gale,

And my light shines lone on the sea;

For my watch is by the shoal and the sand,

And the rock that is hidden by night,

And many a mariner kneels at home,

And blesses the beacon light,

Is not my light like that holier light

That heaven sheds over life's path,

Thought not of, prized not in stillness and shine,

But welcomed in darkness and wrath.

THE INDIAN AND HER CHILD.

An Indian woman and her child, who was about seven years old, were travelling along the beach to a camp a few miles distant. The boy observed some wild grapes growing upon the top of the bank, and expressed such a strong desire to obtain them, that his mother, seeing a ravine at a little distance, by which she thought she could gain the head of the precipice, resolved to gratify him. Having desired him to remain where he was, she ascended the steep, and was allured much farther into the woods than she at first intended.

In the meantime, the wind began to blow vehemently, but the boy wandered carelessly along the beach, seeking for shells, till the rapid rise of the lake rendered it impossible for him to return to the spot where he had been left by his mother. He immediately began to cry aloud, and she, being on her return, heard him, but instead of descending the ravine, hastened to the edge of the precipice, from the bottom of which the noise seemed to proceed. On looking down, she beheld her son struggling with the waves, and vainly endeavouring to climb up the bank, which was fifty feet perpendicular height, and very slippery.

There being no possibility of rendering him assistance, she was on the point of throwing herself down the steep, when she saw him catch hold of a tree that had fallen into the lake, and mount one of its most projecting branches. He sat astride upon this, almost beyond the reach of the surges, while she continued watching him in an agony of grief, hesitating whether she should endeavour to find her way to the camp, and procure assistance, or remain near her boy. However, evening was now about to close, and as she could not proceed in the woods in the dark, she resolved at least to wait till the moon rose. She sat on the top of the precipice a whole hour, and during the time occasionally ascertained that her son was alive, by hearing his cries amidst the roaring of the waves; but when the moon appeared, he was not to be seen. She now felt convinced that he was drowned, and, giving way to utter despair, threw herself on the turf.

Presently she heard a feeble voice cry (in Indian), "Mamma, I'm here, come and help me." She started up, and saw her boy scrambling upon the edge of the bank—she sprang forward to catch his hand, but the ground by which he held giving way, he was precipitated into the lake, and perished among the rushing billows.

LOSS OF THE AMERICAN SHIP HERCULES, CAPTAIN BENJAMIN STOUT, ON THE COAST OF CAFFRARIA, JUNE 16TH, 1796.

LOSS OF THE HERCULES.

It was the intention of Captain Stout to take in a private freight for Hamburg; but not having found one to answer his expectations, he chartered his ship to the English East India Company, who were then busily employed in shipping rice for England; and news being received in India that the

failure of the harvest in Great Britain was likely to produce a famine, the most active exertions were made in India to supply the markets at home with rice, and he received on board upwards of nine thousand bags, with orders to proceed to London with every possible despatch. The crew, having been engaged in India, consisted of Americans, Dutch, Portuguese, Danes, Swedes, but chiefly Lascars, amounting in the whole to

about sixty-four persons; and the necessary arrangements having been completed, the *Hercules* sailed from Sagar Roads, on March 17th, 1796.

Nothing of moment occurred during the voyage, till the 1st of June, when they reached the latitude of 35° S., and 28° $40'$ E. longitude. It then began to blow a gale from the westward, which obliged them to lay-to under their mizen staysail for about six days, during which time the gale continued to increase progressively, until the 7th, when the contentions of the winds and sea presented a scene of horror of which maritime history has few examples. Captain Stout observes, that although bred to the sea from his earliest life, all he had ever seen, or heard, or read of, could give him no adequate idea of the sublime effects produced by the raging violence of the elements, and which, at that tremendous hour, seemed to threaten even Nature herself with dissolution; the ship at one instant raised on mountains of water, was in the next precipitated into an abyss, where she only waited till the coming sea raised her again into the clouds. The perpetual war echoing through the void produced such an awful sensation in the minds of even the most experienced seamen, that many of them were stupefied with fear; while those less accustomed to the dangers of the sea, by their shriekings and exclamations, only added to the scene of misery.

The terrors of the day could only be surpassed by those of the night, when it is impossible for man to describe or imagination to conceive a scene of more transcendent and complicated horror; and as if to fill up the measure of their calamities, a sudden shift of wind, about midnight, threw the vessel into the trough of the sea—it struck her aft, tore away the rudder, started the stern-post, and shattered the whole of her stern frame. The pumps were immediately sounded, and in a few minutes there was four feet of water in the hold; a gang was ordered to the pumps, and the remainder were employed in getting rice out of the run of the ship, and throwing it overboard, to enable them, if possible, to get at the leak. After three or four hundred bags had been thrown into the sea, the principal leak was discovered, through which the water was pouring with astonishing rapidity. In order, therefore, to decrease the influx of water as much as possible, sheets, jackets, shirts, and bales of muslin, with anything of the like description they could lay their hands on, were hastily thrust into the aperture; and had not these exertions been attended with some success, the ship must certainly have gone down, although the pumps discharged upwards of fifty tons of water an hour. As the day advanced, the weather began to moderate, at which time they were about two hundred miles from the eastern coast of Africa. Every exertion was made to keep the ship afloat, the men working incessantly at the pumps.

On the 9th, although the violence of the tempest was considerably abated, yet the swell of the sea was tremendous. The long-boat was ordered out; but the captain having reason to suspect that some of the crew would endeavour to make off with her, directed the second-mate and three seamen to take possession of her, providing them with arms, and giving them express orders to shoot the first man who attempted to board her without his permission; with instructions also to keep astern, and stick by the ship until they came to an anchor.

The men having taken their stations in the boat, a raft was made of all the large spars, which, when lashed together, measured about thirty-five feet in length, and fifteen feet in breadth. The captain, apprehending that the ship would not be able to make the land, and being convinced that in case of her going down all hands could not be received on board of the long-boat, determined to spare no means that presented even a chance of saving the whole of their lives.

When the second-mate was preparing to take the command of the long-boat, the carpenter addressed the captain in a respectful manner, and earnestly entreated him to leave the ship; on being reprimanded for not attending to the pumps, he burst into tears, and declared that the whole of the stern-frame was so shook and loosened, that he expected every hour she would go down. The miserable appearance and affecting tone of voice of this man considerably increased the terrors of the crew; but the captain resolutely declared it to be his

unalterable determination to perform his duty, and remain in the ship, until his own observations convinced him that all hopes of saving her were at an end. The carpenter repeated his solicitations, but he was ordered to his post, and assured that unless he made every exertion to encourage the crew in their duty at the pumps, he should be thrown into the sea. He retired, and exerted himself afterwards with a manly perseverance.

No sooner was the carpenter gone, than the captain was addressed on the same subject by many of the sailors, some of whom were so clamorous that he was very nearly going to extremes with them: this shows the caution which should be exercised by those who are entrusted with the command, in listening to the opinions of their people in time of danger, who are generally for quitting the ship, and taking to boats, and rafts constructed of masts, yards, spars, or whatever timbers they can lash together; and sentiments and prejudices on these occasions differing so widely, it is not to be expected that there should be anything but confusion and misfortune.

A crew, such as composed that of the *Hercules*, consisting of people of various nations, require from their commander a peculiar attention. It may happen, that by humouring their religious prejudices at a particular moment, an essential service may be obtained, which the following anecdote will tend to illustrate.

At a time when the tempest raged with extreme violence, and most of the crew were below labouring at the pumps, the captain observed one of the *Lascars* coming up the gangway with a handkerchief in his hand, who, on being questioned as to what he was about, answered, in a tone of voice that discovered a perfect confidence in the measure he proposed, that he was going to make an offering to his God. "This handkerchief," said he, "contains a quantity of rice, and all the rupees I am worth; suffer me to lash it to the mizen-top, and rely upon it, sir, we shall all be saved." The captain was about to order him back to the pumps; but recollecting that by so doing he might throw both him and his countrymen into despondency, he acquiesced. The *Lascar* thanked him, and he soon beheld this child of prejudice mount the tottering ladder and fearlessly ascend to the dizzy top, without exhibiting any apprehension. He lashed the handkerchief to the mizen-topmast-head, regardless of all danger, and descended to the deck in safety. Confident now that his God was their friend, he communicated the joyful tidings, that he had done his duty, to his companions below; all the *Lascars* seemed transported with joy, embraced their virtuous companion, and laboured at the pumps with an alacrity and perseverance as if they had encountered neither apprehension nor fatigue. To their unceasing exertions on this occasion, may be attributed, in a great measure, the preservation of the people.

The shift of wind which threw the ship into the trough of the sea, was fortunately but of short duration, not continuing above a quarter of an hour; had it lasted many minutes longer, she must have been torn to pieces. The wind, however, came round to its former quarter, and gradually moderated.

After the long boat had been given over to the care of the second-mate, and the raft completed, the captain held a consultation with his officers, who were all decidedly of opinion that it was impossible to save the ship; and that the only chance of preserving their lives, was to make for the land, and run her on shore; which was no sooner communicated to the people, than they seemed to work with renovated spirits; and this disposition was kept up by assuring them, that they would soon be in sight of land, and that by constantly keeping the pumps going, the ship would be kept afloat until they reached the shore.

The ship for sometime had been unmanageable, frequently standing with her head from the land, and which all their efforts could not prevent; the captain got a rudder made out of the topmast, and fixed in the place of one they had lost, but it proved of little use, without the help of the long-boat, which he ordered therefore to be hauled athwart her stern; and this, with great difficulty, served to get her head towards

the shore, the wind being variable from the eastward. A cable could have been got out, that might have answered tolerably well to steer the ship, but they could not spare the crew from the pumps to assist in rousing-in of the tackle and guise, as occasion might require.

On the evening of the 15th they discovered land, at about six leagues distance; and all on board expressed their joy in loud shouts and acclamations, the ship still nearing the shore, with five feet of water in her hold.

On the morning of the 16th, being about two miles from the land, and the wind westward, the captain ordered the anchor to be let go, that a last effort might be made to stop the leaks, and, if possible, save the ship; but her stern was so shattered, that, after a consultation, it was resolved to run the ship on shore, as they were threatened by another gale, and no time was to be lost. The captain ordered his second mate to come on board, and delivered into his custody the ship's register, and all papers of consequence; and after providing him and his three men with water and provisions, ordered him into the boat again, with instructions to keep in the offing, and that after they had run the ship on shore, he might seek for some inlet to run in with safety; they also desired him to look out for signals, which might be thrown out from the shore to direct his course. The mate promised faithfully to obey his instructions, and then returned to the boat.

They were now on the coast of Caffraria, within a few leagues where the river Infanta discharges itself into the sea. A dreadful crisis approached, and they resolved to meet it with becoming fortitude; the captain, therefore, gave directions to set the headsail, to heave the spring well taut, in order to get her head well towards the shore, and then to cut the cable and the spring, which was performed with the greatest promptitude! and after running within about half a mile from the shore, she struck on a cluster of rocks. The swell at this moment was tremendous; and, from the ship plunging so violently, it was almost impossible for the men to hold on. In this situation she remained about three or four minutes, when a sea took her over the rocks, and carried her about a cable's length nearer the shore, where she again struck, and kept heaving in with a tremendous surf, that every moment made a breach over her.

The raft having given way from her lashings, and the spars carried to a considerable distance, they lost all hope from that quarter, till one of the crew, a black, plunged into the waves, and, by exertions which appeared more than human, gained and seated himself on the raft; but he had scarcely been ten minutes in that situation, when the raft was turned over, and the man completely enveloped in the sea. In a few minutes, however, they perceived him in his former situation again. He endured a similar misfortune, and a third succeeded; but still the courageous black buffeted the waves, and gained the raft, until, at length, after suffering two hours of fatigue, which it was believed no human being could possibly endure, he drifted on land, where great numbers of the natives, who had kindled several fires, appeared, mostly clothed in skins, armed with spears, and accompanied by a number of dogs. Immediately on his landing, he was seized by a party of them, and conducted behind some sand-hills, which hid him from their view.

Twelve of the crew now launched themselves on different spars, and whatever pieces of timber they could find, and, braving all difficulties, gained the shore; but no sooner had they landed, than the natives seized them, and conducted them also behind the sand-hills; and as it was impossible for those on board to discover what they were about, and observing several parties of natives unaccompanied by any of those who had landed, they naturally conceived that they had been massacred, and that a similar fate awaited the whole of them. Those who remained on board were obliged to shelter themselves in the fore-castle, as there was no other part where they could remain in a place of security, the sea making completely over her.

During the whole of the night there was nothing but suspense and apprehension: some were of opinion that it would

be more advisable patiently to resign themselves to a watery element, to endure a few struggles, and then life to be no more, rather than to be tortured by the savages, or perhaps thrown into the fires that they had seen on shore; while others entertained different sentiments, and were for making the shore in as compact a body as possible. "We shall then," said they, "attack the savages with stones, or whatever else we can find." But this was overruled as impracticable, as there was no possibility of six men keeping together; and, if by some miracle they could get on shore without being divided, the natives could, with their spears, destroy them in a moment. In such consultations was spent the whole of this miserable night; and as the next sun was to light them to their fate, they dreaded his approach to the horizon.

As soon as morning appeared they looked towards the shore, but not an individual was to be seen. Distraction was visible in every countenance, and what death to choose the principal consideration; but who can describe the delirium of ecstasy which succeeded, when they observed the people who had landed the day before, making towards the shore, and beckoning them to land.

In a few minutes every spar and piece of timber that could be procured was afloat, some occupied by two people, and others by more, according to the size. The captain speedily stripped off his shirt, put on a short jacket, and wrapped round his waist a shawl, in the corner of which he put a gold watch. He then seized a spar, and launched into the sea, where for nearly three-quarters of an hour he preserved his hold, and drifted towards the shore, sometimes cast so near as to touch the rocks with his feet, and then hurried away to a considerable distance; again he was precipitated forwards, and in a moment afterwards carried off by the returning sea. At length a sudden jerk, occasioned by the swell, strained both his arms, and compelled him to quit the spar, while a wave that was rolling rapidly towards the shore, bore him along, and in a few moments left him senseless on the sands, from whence he was rescued by the crew, who conveyed him to a place of security.

The first subject of his inquiry was, naturally, the fate of his men, when he had the heartfelt pleasure of beholding all of them around him excepting those in the long-boat, and one man who perished. He then addressed himself to the natives, among whom there was fortunately a Hottentot present, who had lived with the Dutch farmers, and could speak their language, and the third-mate being a Dutchman, these two served as interpreters.

The spot where the Hercules was wrecked, was at no great distance from the spot where the Grosvenor was lost in 1792, and the captain consequently inquired whether any of the natives recollected such a catastrophe, to which most answered in the affirmative; and ascending one of the sand-hills, pointed to the spot. After obtaining every possible information on this melancholy subject, they employed themselves during the remainder of the day in assisting the natives to save whatever came on shore. The natives sought with persevering diligence for iron, burning it out of the wood. At night they retired, and the crew taking shelter under a sand-hill, appointed part of their numbers to watch while the others tried to repose round a fire. To sleep, however, was impossible; their bodies were on one side heated by the fire, while on the other they were so severely chilled by the intense cold, that the pain was almost insupportable.

Day at length appeared, and the Caffres returned in greater numbers. After having partaken of a repast from a bullock, which the Caffre chief had brought with him, and which they devoured in lumps singed by the fire, part of the crew proceeded to the shore where they saw the long-boat at a considerable distance. The ship was dividing very fast, and the gale increasing, many things were cast on shore which the Caffres were indefatigable in procuring. In the general search on the shore, one of the natives picked up the ship's compass, and not knowing what it was, though pleased with its formation, he took it to the chief, who instantly took it to pieces, and after contemplating the various parts, took the

copper in which it hung and suspended it from his neck, with which he seemed to be highly gratified.

Towards evening, the captain addressed the chief on the subject of their departure, and requested a guide to conduct them through the deserts to the first Christian settlement. The Caffre paused for a moment, and then very coolly replied, "When I consider that matter, you shall be made acquainted with my determination." This made them rather uneasy as to their probable fate, which was increased by seeing them consulting together in parties, and using gestures that might be unfavourably interpreted. Towards the night, the crew were again left to rest under the sand-hills, as before, and where they were again tortured by the cold wind and clouds of sand.

On the first appearance of the sun, they mounted the most elevated of the sand-hills to look out for the long boat, but they could not discover her in any direction. Shortly afterwards they perceived the Caffres approaching, most of them with assaghays in their hands, while the others were furnished with clubs. Many of them were decorated with ostrich feathers, and the chief wore a leopard skin fastened with a pair of knee-buckles, which the captain had given him the day before. They saluted the crew in the most friendly manner, and were accompanied by them to the beach; where the wind, having increased during the night, had thrown several parts of the ship on shore. Not a word passed during the day about the departure of the crew, and the natives retired as usual upon the approach of night. The crew were so fatigued by all being employed to gather wood, that after procuring a sufficient quantity they stretched themselves on the ground, and, in spite of the wind, sand, and cold, slept soundly until the morning.

On the next appearance of day, they again looked out for the long-boat, but she was nowhere to be seen, nor did they ever hear of her again.

The Caffres did not make their appearance this morning until two hours after sunrise. Captain Stout then informed the chief that he intended to take his departure on the following day, and begged that a guide might be appointed for them. "I shall furnish you with two," replied the chief; which was delivered with so much frankness that completely removed all their former suspicions. It was also agreed, very much to their satisfaction, that the Hottentot who had served as an interpreter, should accompany them through the desert.

After making the necessary preparations for their journey, by cutting up another bullock which the chief had presented to them, and which occupied a whole day in dressing, for provision when travelling, they passed another night in less apprehension than before.

On the following morning, the 23rd of June, they took their departure, with every expression of regret from the hospitable chief who had so far materially assisted them. The guides were intelligent men, and gave them to understand that they must on no account travel early, as the wild beasts rose with the sun, and then ranged the deserts in quest of their prey;

notwithstanding, with cautious advice, the people were so desirous of getting on, that they grew uneasy. The guides, however, could not be induced to quit the fires until about nine o'clock, at which time they all proceeded in good spirits.

Not more than three or four of the party were at this time provided with shoes. They had many hundred miles to travel over unknown countries, to ascend mountains of stupendous elevation, penetrate woods, traverse deserts, ford rivers; and yet they were to combat all these difficulties barefooted, not having saved above four pairs of shoes, and those in sad condition.

After travelling for two or three days through a delightful country, from which they could only occasionally obtain fresh water, and escaping the numerous wild beasts which infest the country at night, by the large fires which they kept up, they arrived suddenly at the abode of a horde of Caffres that were distinguished by their own countrymen as a bad tribe.

Having proceeded but a very short way, they were stopped by twelve Caffre men, clothed with leopard skins, and armed with spears. Their guides, alarmed at the appearance of these savages, immediately ran to the bed of the river, which was dry, and having reached the opposite shore, ascended an adjoining mountain with the greatest precipitation. The savages brandished their spears, and appeared by their gestures to menace the destruction of the crew who refusing to part with any of their supply of provisions, instantly proceeded to the river, and crossed it in pursuit of their guides, whom they found standing on the summit of the mountain.

One of the crew had a knife which was slung over his shoulder. A Caffre, perceiving this, made a snatch at the handle, but the owner resisting it, he lost his hold. This so enraged the savage, that he lifted his assaghai with the intention of destroying the object of his resentment. At the moment he stood in this attitude, a more finished picture of horror could scarcely be conceived. The savage wore a leopard's skin; his black countenance was bedaubed with red ochre; his eyes glittering with rage, appeared as if starting from their sockets; his mouth expanded, and his teeth gnashing and grinning with all the fury of a demon. He was however diverted from his purpose, and dropped the fearful weapon he had raised with so bloody an intent.

When they came up, the guides expressed the utmost satisfaction at their escape, and gave them a terrible description of the people they had just left; assuring them that had not the remainder of the horde been out hunting at the time, not a man of them would have survived.

They were so long occupied in observing the beauties of the surrounding country from the top of the mountain, that it was late before they descended. They immediately set to work to cut wood, not only for fuel, but to form a fence or barricade against the wild animals during the night. It was fortunate they did so, as, from the number of elephants passing to and fro almost every moment, they would in all pro-

bability have been trampled to death by these monstrous animals; from which, however, they had the good fortune to escape.

During the next day they travelled about thirty-five miles, and passed the night at the skirt of a small forest which provided them with fuel and a temporary defence as before. In the morning they again set out, but some of them were so worn out with fatigue, that it was thought advisable for those who could travel, to get forward and provide a place where wood and water might be had. The captain was of this party; and all those who remained behind might find their way, he ordered the Caffre guides to set fire to the long grass, to serve during the night as a point of direction. He was also in expectation of their coming up before the morning, but was sadly disappointed. They remained stationary until the morning, and then went on.

Not one of the people that had been left behind appeared in the morning; but the guides were of opinion that they would reach a Christian settlement in the course of the day, and thereby be enabled to send assistance to their companions in the desert. They were, however, obliged to pass the night in a farm-house that had been deserted for some time, in hourly expectation of an attack from the Boschmen; but their own misfortunes were forgotten, and their only consideration during the night, was for their unhappy mess-mates whom they never expected to see again.

About an hour after sunrise they departed to pursue their journey, their numbers so reduced by excessive fatigue, that out of sixty that left the beach where they were wrecked, thirty-six had been left behind. They travelled without a single halt for three hours, when to their almost inconceivable joy, they saw a Hottentot attending a flock of sheep.

Upon their approaching him, he at first seemed alarmed; but perceiving they were mostly whites and unarmed, he stopped until they came up, and upon the request of Captain Stout, directed them to the proprietor of the nearest settlement, who, he said, was a good man, and lived within three hours distance. Their spirits were revived and their strength renewed by this pleasing intelligence, and they set off in high glee till at length they arrived at the house of Jan du Pliesies.

After the alarm occasioned by their first appearance had subsided, the captain told the story of their melancholy disaster, and implored assistance for the relief of the unhappy people who were left behind; to which appeal no time was lost in responding. Du Pliesies' two sons immediately went off in a waggon drawn by eight oxen, with orders to travel all night; while their liberal host had a sheep killed for their entertainment.

Before they had finished their breakfast, on the following morning, their humane benefactor despatched messengers to his neighbours, desiring their assistance to convey the crew to the Cape. Several of them behaved with the greatest liberality, stating, that such as were desirous of remaining in the country until they had perfectly recovered, should be accommodated at their houses, and that they would convey them to the Cape on the first opportunity. Their conversation was interrupted by a Hottentot servant running into the house, declaring the waggon was in sight. All ran to meet it, and the captain had the heartfelt consolation of seeing twenty-three of his unfortunate people, chiefly Lascars, laying down in the vehicle. Du Pliesies' two sons stated that they found them near a wood, perfectly resigned to their fate, having given up all hopes of relief. The preceding day thirteen of their companions had separated from them, but where they had strayed to, they had not the slightest idea. Those poor fellows, after enduring for a long time the most unexampled miseries, all arrived safely at the Cape.

They took their departure from the hospitable mansion of the benevolent Du Pliesies on the morning of the 2nd of July, in a large waggon with two sets of oxen of eight each, and two or three Hottentot servants as drivers. After journeying about thirty-five miles, they reached the second farm in perfect security. The owner, whose name was Cornelius Engelbrocks, they found to be also a beneficent character, who entertained them during the night, and in the morning

generously presented them with nine sheep, regretting that he could not let them have a morsel of bread, as it was a luxury he seldom or never enjoyed.

The four or five succeeding days they travelled from house to house, at all of which they were received with the same disinterested hospitality; and had such plenty of venison at the houses where they stopped, that in six days their stock of nine sheep was only diminished to three.

From the 8th to the 17th of June, their journey was not interrupted by any disagreeable occurrence; on the last-mentioned day they separated, and the captain took with him his chief and third mates, together with one or two more who were solicitous to accompany him. The country, as they advanced, increased in population, and the farm-houses were in several places not more than two hours distance from each other.

On the 22d they arrived at Zwellingdam, and proceeded to the house of the landor, or chief man of the place; his settlement consisted of about sixteen or eighteen houses, surrounded by a delightful country, and producing grain, vegetables, and fruits of almost every description. This gentleman gave them a very hospitable reception, and the next morning furnished the captain with a horse and a guide to conduct them to his brother-in-law at the Cape; he also gave them a very kind letter to his friend, General Craig, commander-in-chief, requesting he would do them every kindness in his power, which he would acknowledge as an obligation conferred upon himself.

They arrived at the settlement of Johannas Brinch, at Stellen Bush, on the fourth day, after travelling a highly-cultivated country. On their arrival, the captain waited on Mr. Brinch, whose reception, he says, can never be mentioned but in terms of the most fervent gratitude and esteem.

Here they remained two days under the roof of this liberal and benevolent gentleman. On the following morning he provided them with a horse and a guide. Their journey was but short, as they arrived the same evening at the Cape in tolerable health and spirits, though very much weakened in constitution.

"HOME, SWEET HOME!"

When the fleet put into the Cove of Cork, I found myself within a few miles of my father's house. You may suppose that the anchor had hardly kissed the mud, before I went to the first lieutenant, and asked leave to go on shore. Now the first lieutenant was not in the sweetest of tempers, seeing as how the captain had been hauling him over the coals for not carrying on the duty according to his satisfaction. So he answered me very gruffly, that I should not leave the ship.

"O bother!" said I to myself, "this will never do."

So I walked to the captain, and touching my hat, reminded him that I had a father and mother, and a pretty sprinkling of brothers and sisters, who were dying to see me, and that I hoped that he would give me leave.

"Ax the first lieutenant," said he, turning away.

"I have, sir," replied I, "and he says that the devil a bit shall I put my foot on shore."

"Then you have misbehaved yourself," said the captain.

"Not a bit of it, Captain Willis," replied I; "it's the first lieutenant who has misbehaved."

"How, sir?" answered he, in an angry tone.

"Why, sir, didn't he misbehave just now, in not carrying on the duty according to your will and pleasure? and didn't you sarge him out just as he deserved—and ar'n't that the reason why I'm not to go on shore? You see, your honour, it's all true as I said; and the first lieutenant has misbehaved, and not I. I hope you will allow me to go on shore, Captain, God bless you! and make some allowance for my parental feelings towards the arthers of my existence."

"Have you any fault to find with Mr. O'Brien?" said the captain to the first lieutenant, as he came aft.

"No more than I have with midshipmen in general; but I believe it is not the custom for officers to ask leave to go on shore before the sails are furled and yards squared."

"Very true," replied the captain; "therefore Mr. O'Brien, you must wait until the watch is called, and then, if you ask the first lieutenant, I have no doubt but you will have leave granted to you to go and see your friends."

"Thank'e kindly, sir," replied I; and I hoped that the yards and sails would be finished off as soon as possible, for my heart was in my mouth, and I felt that if I had been kept much longer, it would have flown on shore before me.

I thought myself very clever in this business, but I was never a greater fool in my life: for there was no such hurry to have gone on shore, and the first lieutenant never forgave me for appealing to the captain—but of that by-and-by, and all in good time. At last I obtained a grumbling assent to my going on shore, and off I went like a sky-rocket. Being in a desperate hurry, I hired a jaunting car to take me to my father's house.

"Is it the O'Brien of Ballyhinch that you mean?" inquired the spalpeen who drove the horse.

"Sure it is," replied I; "and how is he and all the noble family of the O'Brien's?"

"All well enough, bating the boy Tim, who caught a bit of a confusion in his head the other night at the fair, and now lies at home in bed quite insensible to mate or drink; but the doctors give hopes of recovery, as all the O'Briens are known to have such thick heads."

"What do you mane by that, bad manners to you?" said I; "but poor Tim—how did it happen—was there a fight?"

"Not much of a fight—only a bit of a skrummage, three crowner's inquests, no more."

"But you are not going the straight road, you thief," said I, seeing that he had turned off to the left.

"I've my reasons for that, your honour," replied he; "I always turn away from the Castle out of principle—I lost a friend there, and it makes me melancholy."

"How came that for to happen?"

"All by accident, your honour; they hung my poor brother Patrick there, because he was a bad hand at arithmetic."

"He should have gone to a better school then," said I.

"I've an idea that it was a bad school that he was brought up in," replied he, with a sigh. "He was a cattle-dealer, your honour, and one day, somehow or another, he'd a cow too much—all for not knowing how to count, your honour, bad luck to his schoolmaster!"

"All that may be very true," said I, "and pace be to his soul? but I don't see why you are to drag me, that's in such a hurry, two miles out of my way out of principle."

"Is your honour in a hurry to get home? Then I'll be thinking they'll not be in a hurry to see you."

"And who told you that my name was O'Brien, you baste? and do you dare to say that my friends won't be glad to see me?"

"Plase your honour, it's all an idea of mine—so say no more about it. Only this I know; Father M'Grath, who gives me absolution, told me the other day that I ought to pay him, and not run in debt, and then run away like Terence O'Brien, who went away without paying for his shirts, and his shoes, and his stockings, nor anything else, and who would live to be hanged, as sure as St. Patrick swam over the Liffey with his head under his arm."

"Bad luck to that Father M'Grath," cried I; "devil burn me, but I'll be revenged upon him."

By that time we had arrived at the door of my father's house. I paid the rapparee, and in I popped. There was my father and mother, and all my brothers and sisters (bating Tim, who was in bed sure enough, and died next day), and that baste Father M'Grath to boot. When my mother saw me, she ran to me and hugged me as she wept on my neck, and then she wiped her eyes, and sat down again; but nobody else said "How d'ye do," or opened their mouths to me. I said to myself, "Sure there's some trifling mistake here," but I held my tongue.

At last they all opened their mouths with a vengeance. My father commenced—"Arn't you ashamed on yourself, Terence O'Brien?"

"Arn't you ashamed on yourself, Terence O'Brien?" cried Father M'Grath,

"Arn't you ashamed on yourself?" cried out all my brothers and sisters in full chorus, whilst my poor mother put her apron to her eyes and said nothing.

"The devil a bit for myself, but very much ashamed for you all," replied I, "to treat me in this manner. What's the meaning of all this?"

"Haven't they seized my two cows to pay for your tog-gery, you spalpeen?" cried my father.

"Haven't they taken the hay to pay for your shoes and stockings?" cried Father M'Grath.

"Haven't they taken the pig to pay for that ugly hat of yours?" cried my eldest sister.

"And haven't they taken my hens to pay for that dirk of yours?" cried another.

"And all our best furniture to pay for your white shirts and black cravats!" cried Murdock my brother.

"And haven't we been starved to death ever since?" cried they all.

"Och hone!" said my mother.

"The devil they have!" said I, when they'd all done. "Sure I'm sorry enough, but it's no fault of mine. Father, didn't you send me to say?"

"Yes, you rapparee; but didn't you promise—or didn't I promise for you, which is all one and the same thing—that you'd pay it all back with your prize-money—and where is it? answer that, Terence O'Brien."

"Where is it, father? I'll tell you—it's where next Christmas is—coming, but not come yet."

"Spake to him, Father M'Grath," said my father.

"Is not that a lie of yours, Terence O'Brien, that you're after telling now?" said Father M'Grath. "Give me the money."

"It's no lie, Father M'Grath; if it pleased you to die to-morrow, the devil of a shilling have I to jingle on your tomb-stone for good luck, bating those three or four, which you may divide between you," and I threw them on the floor.

"Terence O'Brien," said Father M'Grath, "it's absolution that you'll be wanting to-morrow, after all your sins and enormities; and the devil a bit shall you have, take that now."

"Father M'Grath," replied I, very angrily, "it's no absolution that I'll want from you, any how, take that now."

"Then you have had your share of heaven; for I'll keep you out of it, you wicked monster," said Father M'Grath, "take that now."

"If it's no better than a midshipman's berth," replied I, "I'd just as soon stay out; but I'll creep in in spite of you, take that now, Father M'Grath."

"And who's to save your soul, and send you to heaven, if I don't, you wicked wretch? but I'll see you d—d first, so take that now, Terence O'Brien."

"Then I'll turn Protestant, and d—n the Pope, take that now, Father M'Grath."

At this last broadside of mine, my father and all my brothers and sisters raised a cry of horror, and my mother burst into tears. Father M'Grath seized hold of the pot of holy water, and dipping in the little whisk, began to sprinkle the room, saying a Latin prayer, while they all went on squalling at me. At last, my father seized the stool, which he had been seated upon, and threw it at my head. I dodged, and it knocked down Father M'Grath, who had just walked behind me in full song. I knew that it was all over after that, so I sprung over his carcase, and gained the door.

"Good morning to ye all, and better manners to you next time we meet," cried I, and off I set as fast as I could for the ship.

I was melancholy enough as I walked back, and thought of what had passed, "I need not have been in such a confounded hurry," said I to myself, "to ask leave, thereby affronting the first lieutenant;" and I was very sorry for what I had said to the priest, for my conscience thumped me very hard at having even pretended that I'd turn Protestant, which I never intended to do, nor ever will, but live and die a good Catholic, as all my posterity have done before me, and, as I trust, all my ancestors will for generations to come. Well, I arrived on board, and the first lieutenant was very

savage. I hoped he would get over it, but he never did; and he continued to treat me so ill, that I determined to quit the ship, which I did as soon as we arrived in Cawsand Bay. The captain allowed me to go, for I told him the whole truth of the matter, and he saw that it was true; so he recommended me to the captain of a jackass frigate, who was in want of midshipmen.

"What do you mean by a jackass frigate?" inquired I.

"I mean one of your twenty-eight gun ships, so called, because there is as much difference between them and a real frigate, like the one we are sailing in, as there is between a donkey and a race-horse." Well, the ship was no sooner brought down to the dockyard to have her ballast taken in, than our captain came down to her—a little, thin, spare man, but a man of weight nevertheless, for he brought a great pair of scales with him, and weighed everything that was put on board. I forget his real name, but the sailors christened him Captain Avoirdupois. He had a large book, in which he inserted the weight of the ballast, and of the shot, water, provisions, coals, standing and running rigging, cables, and everything else. Then he weighed all the men, and all the midshipmen, and all the midshipmen's chests, and all the officers, with everything belonging to them: lastly, he weighed himself, which did not add much to the sum total. I don't exactly know what this was for; but he was always talking about centres of gravity, displacement of fluid, and Lord knows what. I believe it was to find out the longitude, somehow or other, but I didn't remain long enough in her to know the end of it; for one day I brought on board a pair of new boots, which I forgot to report, that they might be put into the scales which swung on the gangway; and whether the captain thought that they would sink his ship, or for what, I cannot tell, but he ordered me to quit her immediately—so there I was adrift again. I packed up my traps, and went on shore, putting on my new boots out of spite, and trod into all the mud and mire I could meet, and walked up and down from Plymouth to Dock until I was tired, as a punishment to them, until I wore the scoundrels out in a fortnight.

One day I was in the dockyard, looking at a two-decker in the basin, just brought forward for service, and I inquired who was to be the captain. They told me that his name was O'Connor. Then he's a countryman of mine, thought I, and I'll try my luck. So I called at Goud's Hotel, where he was lodging, and requested to speak with him. I was admitted, and told him, with my best bow, that I had come as a volunteer for his ship, and that my name was O'Brien. As it happened he had some vacancies, and liking my brogue, he asked me in what ships I had served. I told him, and also my reasons for quitting my last, which was, because I was turned out of it. I explained the story of the boots, and he made inquiries, and found that it was all true, and then he gave me a vacancy as master's mate. We were ordered to South America; and the trade-winds took us there in a jiffy. I liked my captain and officers very much: and what was better, we took some good prizes. But somehow or other I never had the luck to remain long in one ship, and that by no fault of mine; at least, not in this instance.

All went on as smooth as possible, until one day the captain took us on shore to a ball, at one of the peaceable districts. We had a very merry night of it; but as luck would have it, I had the morning watch to keep, and see the decks cleaned; and as I never neglected my duty, I set off about three o'clock in the morning, just at break of day, to go on board of the ship. I was walking along the sands, thinking of the pretty girl that I'd been dancing with, and had got about half way to the ship, when three reparaes of Spanish soldiers came from behind a rock, and attacked me with their swords and bayonets. I had only my dirk, but I was not to be run through for nothing, so I fought them as long as I could. I finished one fellow, but at last they finished me; for a bayonet passed through my body, and I forgot all about it. Well, it appears, for I can only say to the best of my knowledge and belief, that after they had killed me, they stripped me naked, and buried me in the sand, carrying away with them the body of their comrade. So there I was—dead and buried.

"But, O'Brien," said I—

Whist—hold your tongue—you've not heard the end of it. Well, I had been buried about an hour, but not very deep, it appears, for they were in too great a hurry—when a fisherman and his daughter, came along the beach, on their way to the boat, and the daughter, God bless her! did me the favour to tread upon my nose. It was clear that she had never trod upon an Irishman's nose before, for it surprised her, and she looked down to see what was there, and did not seeing any thing, she tried it again with her foot, and then she scraped off the sand, and discovered my pretty face. I was quite warm and still breathing, for the sand had stopped the blood, and prevented my bleeding to death. The fisherman pulled me out, and took me on his back to the house where the captain and officers were still dancing. When he brought me in, there was a great cry from the ladies, not because I was murdered, for they are used to it in those countries, but because I was naked which they considered a much more serious affair. I was put to bed, and a boat despatched on board for our doctor; and in a few hours I was able to speak, and tell them how it happened. But I was too ill to move when the ship sailed, which she was obliged to do in a day or two afterwards; so the captain made out my discharge, and left me there. The family were French, and I remained with them for six months, before I could obtain a passage home, during which I learnt their language, and a very fair allowance of Spanish to boot. When I arrived in England, I found that the prizes had been sold, and that the money was ready for distribution. I produced my certificate, and received £167 for my share. So it's come at last, thought I.

I never had such a handful of money in my life; but I hope I shall again very soon. I spread it out on the table as soon as I got home, and looked at it, and then I said to myself, "Now, Terence O'Brien, will you keep this money to yourself, or send it home?" Then I thought of Father M'Grath, and the stool that was thrown at my head, and I was very near sweeping it all back into my pocket. But then I thought of my mother, and of the cows, and the pig, and the furniture, all gone; and of my brothers and sisters wanting praties, and I made a vow that I'd send every farthing of it to them, after which Father M'Grath would no longer think of not giving me absolution. So I sent them every doit, only reserving for myself the pay which I had received, amounting to about thirty pounds, and I never felt more happy in my life than when it was safe in the post-office, and fairly out of my hands. I wrote a bit of a letter to my father at the time, which was to this purpose—

"HONOURED FATHER,

"Since our last pleasant meeting, at which you threw the stool at my head, missing the pigeon and hitting the crow, I have been dead and buried, but am now quite well thank God, and want no absolution from Father M'Grath, bad luck to him. And what's more to the point, I have just received a batch of prize-money, the first I have handled since I have served his Majesty, and every farthing of which I now send to you, that you may get back your old cows, and the pig, and all the rest of the articles seized to pay for my fitting out, so never again ask me whether I am not ashamed of myself; more shame to you for abusing a dutiful son like myself, who went to sea at your bidding, and has never had a real good potato down his throat ever since. I'm a true O'Brien, tell my mother, and don't mane to turn Protestant, but uphold the religion of my country; although the devil may take Father M'Grath and his holy water to boot. I shan't come and see you, as perhaps you may have another stool ready for my head, and may take better aim next time; so no more at present from your affectionate son,

"TERENCE O'BRIEN."

About three weeks afterwards I received a letter from my father, telling me that I was a real O'Brien, and that if any one dared hint to the contrary, he would break every bone in his body; that I should have the best stool in the house next time I came, not for my head, but for my tail; that Father M'Grath, sent me his blessing, and had given me absolution for all I had done, or should do for the next ten years to

come; that my mother had cried with joy at my dutiful behaviour; and that all my brothers and sisters (bating Tim, who had died the day after I left them), wished me good luck, and plenty more prize-money to send home to them. This was all very pleasant; and I had nothing left on my mind but to get another ship; so I went to the port-admiral, and told him how it was that I had left my last; and he said, "that being dead and buried was quite sufficient reason for any one leaving his ship, and that he would procure me another, now that I had came to life again." I was sent on board of the guard-ship, where I remained about ten days, and then was sent round to join this frigate—and so my story's ended; and there's eight bells striking—so the watch is ended too; jump down, Peter, and call Robinson, and tell him that I'll trouble him to forget to go to sleep again as he did last time, and leave me here kicking my heels, contrary to the rules and regulations of the service.

Peter Simple, by Captain Marryatt.

THE TARTAR'S TAILS.

(From the "Jolly Boat.")

THERE was a bustling of feet upon the deck above, and a boy came down to inform Mr. Wildgust that the Commander was coming alongside. The cabin was cleared in an instant, Pearson took his station at the gangway, his shrill pipe sounded cheerily on the night breeze; the side boys with their lanterns were in attendance, and the boat having swept up to her proper position, Lieutenant Bullfit, the Commander of her Majesty's Ship Mercury, ascended, and was saluted by his subordinates. He was a short, stout, burly man, the very essence of good humour, but rather consequential in his manner, offering at times a strange contrast to his usually excellent flow of animal spirits; a worthy officer, an excellent seaman, and a kind hearted man. Bullfit possessed most of the qualifications which a man-of-war's man love, for he was by no means deficient in preserving discipline.

"I'm glad to see every one generally attentive Mr. Wildgust," said the lieutenant, stiffly walking aft on the quarter-deck, "it shows, sir, it shows—"

"The benefit of example, sir," responded the mate, taking up the clue, "allow me, sir, to introduce to your notice three respectable gentlemen whom I have captured," and he waved his hand towards the Tartars who stood grinning between the guns.

"Ha, ha,—I see, I see, Wildgust," said the lieutenant, at once coming down from the high stilts, "prisoners, eh?—and it seems you have taken them bag and baggage," both officers laughed. "Make your report, sir—make your report."

This Wildgust did, relating every circumstance to prove that the fellows were kidnapping; and Pearson and Jack Moberly corroborated the facts. Bullfit ordered the Tartars to be taken below, and well looked after, and he would do summary execution on them the next morning. The night passed away—and about the middle of the next forenoon, the hands were turned up to witness punishment. Every one guessed the object, as speculations were rife as to the real intentions of Lieutenant Bullfit. These, however, were in a great measure ended, when the crew found that a large block, covered with red baize, was placed upon the fore-castle; and by the side of it, with his shirt sleeves tucked up to his shoulders, and his bright, heavy cleaver in his hand, stood the ship's butcher, resting his instrument on the block, and leaning upon it. The officers and crew were assembled—one of the prisoners was brought up, and placed to hear his sentence, which Mr. Bullfit pronounced in some unknown tongue—his motions, however, clearly defining, by his pointing first at the Tartar's cocoa-nut, then at the block, and lastly to the axe, that the fellow was to be decapitated. Scarcely any one had credited that the Commander would carry matters so far, but the energy and solemnity of his manner left no doubt amongst the people, that he designed to deal out the extreme of vengeance; and not a few

shuddered at the thoughts of witnessing a deed of blood, perpetrated in the moment of cool and calm deliberation. As for the Tartar, his terror nearly deprived him of every power except that of his lungs; for when he saw the deadly preparation, he roared most lustily, and, falling on his knees, earnestly implored for his life. But his entreaties were in vain; three or four stout fellows laid hold of him, and in an instant he was prostrate, and held fast, with his neck upon the block.

"Do your duty, my man, and do it well!" exclaimed Mr. Bullfit to the butcher, who thereupon stood over against the prisoner, flourishing his bright cleaver above his head. It was a moment of thrilling horror amongst the crew—and some, in the generosity of their hearts, were half prepared to rush forward and rescue the unhappy criminal—but rigid discipline restrained them, and they stood impatiently awaiting the result. Nor had they long to remain. The butcher still flourished his upraised cleaver—excitement was getting more intense, when the sonorous voice of the Commander was heard to thunder forth—"Strike!" There was a moment of suspense—down came the shining blade—a groan of anguish burst from the crew—down came the blade, and cut off the Tartar's tail—the head having been shined round, at the precise moment, to effect this object. The tars smoked the fun, and laughed heartily, whilst the prisoner was removed out of sight; some red paint and sawdust were rubbed on a piece of old canvas near the block, and the next captive was summoned, who, on perceiving the arrangements, and beholding what he supposed to be the blood of his companion, roared most lustily; he was served in the same way as the first, and placed by himself apart. The third came up, doggedly determined—he did not utter a word, and never flinched, when his neck was laid in due order; but, nevertheless, he was in no small degree gratified, when he found that only his tail was off, and not his head.

A boat was manned, the prisoners were put into it, and their meeting again, when each supposed the other dead, was truly ridiculous.

SONG OF THE MERMAID.

Quit, oh, quit the realms of earth,

And upper air,

Where spleenful mortals, from their birth,

Are slaves to care;

And gently sink into the waters

Calm and green,

To share with ocean's happy daughters

Their lives serene.

Take my hand, and downward glide,

Downward through the lucid tide.

Come unto our coral bowers

Of cool green light,

Where we braid our locks with flowers

With sea-flowers bright.

There each floating sister laves

Her beauties blooming,

Lull'd by the echo of the waves

Above her booming.

Take my hand, and downward glide,

Downward through the lucid tide.

Let my bosom, as we sink,

Become thy pillow;

And when once beneath the brink,

We cleave the billow,

Thou'lt taste the joys that to the sea

Have been allotted,

And all the pains of earth shall be

From memory blotted,

Take my hand, and downward glide,

Downward through the lucid tide.

DESTRUCTION OF THE PRINCE.

On February 19th, 1752, the *Prince*, a French East India-man, commanded by Captain M. Morin, sailed from Port L'Orient, on an outward-bound voyage; but soon afterwards a sudden shift of wind drove her on a sand bank, where she was exposed to imminent danger, and the ship heeled so much, that the mouths of the guns lay in the sea. By lightening the ship, however, accompanied with continued and laborious exertions, she floated with the rise of the tide, and being again carried into port was completely unladen, and underwent a thorough repair.

On the 10th of June they resumed the voyage with a favourable wind, and which for several weeks seemed to promise every success that could be desired.

Nothing particular occurred during the voyage till the 26th of July, when they were in $8^{\circ} 30'$ south lat., and 5° west longitude from Paris. At this time, M. de la Fond, one of the lieutenants of the ship, at the moment of taking an observation, was informed by a seaman, that smoke was issuing from the main hatchway. The first lieutenant, who had the keys of the hold, immediately ordered all the hatchways to be opened, in order to ascertain the truth.

The dreadful fact was too soon apparent to every one on deck, and while the captain hastened from the great cabin where he sat at dinner, Lieutenant de la Fond ordered some sails to be dipped into the sea, and the hatches to be covered with them, in order, if possible, to prevent the access of air, and thus to stifle the fire. He had also intended, as a more effectual remedy, to let in the water between the decks to the depth of

BURNING OF THE PRINCE, CAPTAIN M. MORIN, JULY 26TH, 1752.

about twelve inches; but clouds of smoke issued from the crevices of the hatchways, and the flames were gaining on them more and more by degrees.

In the meantime, the captain ordered sixty or eighty of the soldiers under arms to maintain the necessary discipline, and restrain any disorder or confusion which might probably ensue from such a disastrous calamity; and in this he was ably supported by their excellent commander, M. de la Fouche, who exhibited uncommon fortitude and great presence of mind on the occasion.

All hands were now busily employed in procuring water; all the buckets were filled, the pumps plied, and pipes introduced from them to the hold; but in spite of all their efforts incessantly applied, the rapid progress of the devouring ele-

ment completely baffled all their exertions to subdue it, and augmented the general consternation.

As the yawl was then lying in the way of the people, so as to retard their exertions, it was hoisted out by the order of the captain; and the boatswain, accompanied by three of the seamen, took possession of it. As they were in want of oars, these were quickly supplied by three men, who leaped overboard with them; and although they were desired by those in the ship to return, they only answered, that they wanted a rudder, and desired a rope to be thrown out to them. The progress of the flames, however, soon showing them their only alternative for safety, they withdrew from the burning ship, and she, from the effect of a breeze springing up, passed by.

The utmost activity still prevailed on board the vessel, and

the courage and resolution of the people seemed to be augmented by the increased difficulty of escape. The master boldly went down into the hold, where the intense heat compelled him to return immediately, and had not a large quantity of water been dashed over him, he must have been very severely scorched. Immediately after this, the flames burst with great violence from the main hatchway.

The danger became now so imminent, that the captain ordered the boats to be hoisted out, while dread and consternation enfeebled and appalled the most intrepid. The long-boat had been secured at a certain height, and was about to be put over the ship's side, when, unfortunately, the fire ran up the mainmast and caught the tackle, the consequence of which was, that the boat fell down on the guns bottom upwards, and it was in vain to think of getting her righted.

It now became too evident that the calamity was beyond the reach of human power to remedy it, and nothing but the mercy of the Almighty could effectually interpose between them and destruction. Consternation was universally disseminated among the people; nothing but sighs and groans, and shrieks, that rend the air, resounded throughout the vessel; and even the animals that were on board, as if sensible of the impending danger, uttered the most dreadful cries. The certainty of perishing by either fire or water was anticipated by every human being, and each raised his hands and heart towards an Almighty Providence, in humble, but fervent prayer for mercy.

The chaplain, who was then on the quarter-deck, gave the people general absolution from their sins; and then repaired to the quarter-gallery to extend it yet further to those miserable

wretches, who, in vain hopes of safety, had already committed themselves to the waves. What a horrible spectacle now presented itself! The only object was self-preservation; each was occupied in throwing overboard whatever promised the most slender chance of escape; yards, spars, hencoops, and every thing that was within reach, was hastily seized in the agony of despair, and thus hopelessly employed.

The most dreadful confusion now prevailed. Some wildly leaped into the sea, in anticipation of that death which was about to overwhelm them; others, more successful, swam to fragments of the wreck; while the shrouds, yards, and ropes, along the side of the vessel, were covered with the crew, crowding upon them, and hanging there as if hesitating which alternative of destruction to choose, equally imminent, and equally terrible.

Among the numerous instances of individual distress and mental and bodily anguish, a father was seen to snatch his son from the flames; and, after folding him to his breast, to throw him into the sea, where he himself speedily followed, and they perished in each other's embrace.

In the meantime, Lieutenant de la Fond ordered the helm to be shifted, upon which the ship heeled to larboard, and thereby afforded a temporary preservation, while the flames raged along the starboard side from stem to stern, with unabated fury.

Until this moment, the mind of Lieutenant de la Fond had been engrossed by nothing but adopting every means to preserve the ship; but now, however, the horrors of impending destruction were too apparent to every one. This fortitude, notwithstanding, through the goodness of heaven, never for-

sook him: on looking around, he found himself alone on the deck, and he retired to the round house. There he met M. de la Fouché, who regarded the approach of death with the same heroism which, in India, had gained him so much celebrity. "My brother and friend," he cried, "farewell!" "Whither are you going?" asked Lieutenant de la Fond; "To comfort my friend, the captain," he replied.

M. Morin, who commanded this unfortunate vessel, was overwhelmed with grief for the melancholy state of his female relatives who were passengers with him. He had persuaded them to commit themselves to the waves on hencoops, while some of the seamen swimming with one hand, endeavoured to support them with the other.

The floating masts and yards were covered with men struggling with the watery element which environed them, and many of them now perished by the balls which were discharged from the guns when heated by the fire, and thus presenting a third means of destruction to augment the horrors which surrounded them. While anguish pierced the heart of Lieutenant de la Fond, he withdrew his eyes from the sea; and a moment after reaching the starboard gallery, he saw the flames bursting with frightful noise through the windows of the round house and of the great cabin. As the fire now approached so near, that it seemed every instant ready to consume him, and considering it in vain to attempt the further preservation of the ship, or the lives of his fellow sufferers, he thought it his duty, in this dreadful condition, to save himself, if possible, yet a few hours, that these might be devoted to Heaven.

Having stripped off his clothes, he intended to slip down a yard, one end of which dipped in the water: but it was so covered with miserable beings, shrinking from death, and clinging in the last gasp of mortal agony, that he tumbled over them and fell into the sea. There a drowning soldier caught hold of him: Lieutenant de la Fond made every exertion to disengage himself, but all his efforts were in vain; and though he allowed himself to sink below the surface, yet the soldier did not quit his grasp. The lieutenant plunged down a second time, but he was still firmly held by the man who was now incapable of considering that his death, instead of proving of service to him, would rather hasten his own. At length, after struggling for a considerable time, and swallowing a large quantity of water, the soldier's strength failed, and sensible that Lieutenant de la Fond was sinking a third time, he dreaded being carried down along with him, and loosened his grasp, which was no sooner done, than to avoid a repetition, the lieutenant dived below the surface, and rose at a distance from the place.

This incident rendered him more cautious for the future; he even avoided the dead bodies, which were now so numerous, that to make a free passage, he was compelled to push them aside with one hand, while he kept himself floating with the other, and his mind all the time impressed with the apprehension, that each of them was a person who would seize him and involve him in his own destruction: but his strength soon beginning to fail, he was satisfied of the necessity of some respite to his arduous toil, and soon after fell in with the part of ensign staff, and put his arm through a noose in the rope to secure it. In this manner he swam some little time as well as he could, till perceiving a yard at hand, he seized it by one hand; but observing at the other extremity a young man, who seemed scarcely able to support himself, he quickly abandoned so slight an aid, and one which seemed incapable of contributing in any degree to his preservation. Soon after leaving this, he got sight of the spritsail-yard, but so covered with people, that he durst not attempt to take a place among them without first asking permission, which, however, they cheerfully granted. Some of them were quite naked, others had nothing on except their shirts, and the pity they expressed at the situation of Lieutenant de la Fond, and his sense of their misfortunes, exposed his feelings to a severe trial.

Neither Captain Morin nor M. de la Fouché were known to have quitted the ship, and were most probably overwhelmed in that dreadful catastrophe by which she was de-

stroyed. The spectacle that was now exhibited on all sides was of the most dismal description, and sufficient to have dismayed the stoutest courage; the mainmast, which had the lower part consumed by the fire, had been precipitated overboard, killing some by its fall, and affording to others a temporary refuge. Lieutenant de la Fond now observed it covered with people, and driven about at the mercy of the waves. At the same time, he observed two seamen buoyed up by a hencoop and some planks, and desired them to swim to him with the latter. They did so, accompanied by more of their comrades, and each taking a plank, which they used instead of oars, they and he paddled along upon the yard, until they gained those who had secured themselves upon the mainmast. So many changes of situation only presented to him new spectacles of horror.

At this time the chaplain was on the mast, and from him Lieutenant de la Fond received absolution. There were also two young ladies there, whose piety and resignation were truly consolatory; they were the only survivors of six, their companions having perished in the flames or in the sea. Eighty persons had found refuge on the mainmast, who were constantly exposed to destruction from the repeated discharges of the guns as the flames reached them. In this awful situation, the chaplain, by his discourse and example, taught the duty of resignation, till he lost his hold of the mast, and dropped into the sea. Lieutenant de la Fond lifted him up, but he entreated him to let him go; "for," said he, "I am already half drowned, and it is only protracting my sufferings." "No, my friend," the lieutenant answered, "when my strength is exhausted, but not till then, we will perish together!" and in his pious company he calmly awaited death. After a lapse of three hours, one of the ladies fell from the mast and perished; but she was too far off him to receive any assistance from the lieutenant.

After all hope of deliverance had been so long deferred as to be beyond expectation, the lieutenant, to his great joy, observed the yawl close at hand, and immediately requested to be allowed to participate in their fate. His skill and abilities were too necessary for their preservation for them to refuse his solicitation, and they permitted him to come on board provided he could swim from the mast to join them, as they did not choose to undergo the risk, by approaching the mast, of being swamped by the rest of the survivors. The lieutenant, summoning all his courage, succeeded in reaching the yawl; and the pilot and master, whom he had left on the mast, following his example, were seen and taken in.

The flames still continued to rage, with unabated fury, and as the yawl was endangered by being within half a league of her, she stood a little to windward. The fire soon after this reached the magazine, which immediately exploded; but to describe the terrific effect of it, is almost impossible. A thick heavy cloud interrupted the light of the sun, and amidst the dreadful blackness nothing could be seen but pieces of burning timber thrown into the air, and threatening to overwhelm with destruction the numbers of miserable wretches still struggling in the agonies of death. Nor were the party in the yawl free from danger, as it was not improbable that some of the burning fragments might reach them and precipitate their frail support to the bottom. The Almighty, however, in his mercy preserved them from this calamity; but what must have been their feelings at witnessing the horrid spectacle which the surface of the sea presented, covered for a considerable distance with pieces of wreck, and intermingled with the mangled bodies of their unhappy shipmates, who had perished, and some half consumed, who still retained enough of life to be sensible of the accumulated horrors which were overwhelming them.

Lieutenant de la Fond proposed that they should approach the wreck, in the hope of picking up provisions or articles of use to them, as they were totally devoid of every thing, and exposed to the hazard of a death even more horrible than that which their companions had suffered. They found several barrels which they expected might contain something to relieve their necessities, but what was their mortification on ascertaining that they were part of the powder which had been thrown overboard during the conflagration.

Before night set in, they fortunately discovered a flask of brandy, about fifteen pounds of salt pork, a piece of scarlet cloth, twenty yards of linen, a dozen pipe-staves, and a small quantity of cordage; but they durst not venture to retain their present situation during the night, as they were endangered by the fragments of wreck from which they could not disengage themselves. They therefore rowed away as quickly as possible, bestowing all their care on the management of the yawl.

The whole of them now began to labour with the greatest assiduity to put the boat into proper trim, and everything which could be converted into use was employed; the lining of the boat was torn up for the sake of the planks and nails: fortunately a seaman had two needles, and the linen which they found afforded plenty of thread; the piece of scarlet cloth was converted into a sail, an oar was erected for a mast, and a plank served for a rudder. The equipment of the boat was soon completed, as well as circumstances would allow, notwithstanding the darkness of the night; but a great difficulty remained, for they were without charts or instruments, and being nearly two hundred leagues from land, they knew not which way to steer. Resigning themselves therefore to the Almighty, they fervently prayed for his direction to guide them.

At length their sail was hoisted, and a favourable breeze springing up, Lieutenant de la Fond, and the few survivors of that numerous crew, who were in the yawl, were wafted from amidst the bodies of their miserable shipmates.

Eight days and nights were these hapless adventurers exposed in an open boat to the scorching heat of the sun by day, and intense cold by night, before they discovered land; their throats parched with intense thirst. They received a temporary relief from a slight shower falling on the sixth, which they endeavoured to catch in their mouths and in their hands. They also sucked the sail which was wetted with the rain; but it had previously been so drenched with sea-water, that it imparted the bitterness of the salt to the fresh water. They did not, however, complain at the slightness of the shower, as had it been heavier it might, in all probability, have lulled the wind, in the continuance of which rested their only hope of safety.

In order to ascertain as nearly as possible the proper course they should steer, they made daily observations of the rising and setting of the sun and moon; and the position of the stars at night pointed out how they should steer. Their sustenance in the meanwhile consisted of a small piece of pork, once in twenty-four hours; and this they were obliged to relinquish on the fourth day, from the heat and irritation which it occasioned in their bodies. Their beverage was a glass of brandy taken at intervals; but this only inflamed their stomachs without in any degree assuaging the thirst, which it almost tended to produce. Abundance of flying fish was seen, but the impossibility of catching them only augmented the pain they already endured, though they endeavoured to reconcile themselves to the scanty pittance which they possessed. Still the uncertainty of their destiny, their miserable supply of sustenance, and the turbulence of the ocean, all contributed to deprive them of repose which they so much needed, and almost plunged them into despair. Under such an accumulation of sufferings, it was nothing but a feeble ray of hope which preserved them.

On the eighth night Lieutenant de la Fond had the helm, where he remained for above ten hours, praying to be relieved from their distressed situation, till at length, exhausted by fatigue and privation, he sunk down completely helpless. His miserable companions were equally exhausted by the sufferings they had undergone, and the whole of them now began to be overwhelmed in despair of finding relief.

At last when the united calamities of hunger, thirst, fatigue, and misery, predicted speedy annihilation to these unfortunate few, on the dawn of Wednesday, August 3rd, 1752, to their unspeakable joy, they saw the distant land. None but those who have experienced the horrors of such a situation, can form an adequate idea of the change which was produced. Their strength was renovated, and they were aroused to take the necessary precautions against being drifted away by the

current, in which they succeeded, and thus reached the coast of Brazil in 6° S. lat., and landed in Tresson Bay.

Their first object on setting foot on the shore was to return their most fervent thanks to the Almighty for his gracious and merciful protection of them under such an accumulation of dangers. They prostrated themselves on the ground, and then in the wild transports of their unbounded joy at their deliverance, rolled among the sand.

In appearance, they were the most frightful objects imaginable, nothing human characterised them which did not announce their misfortunes in glaring colours. Some were quite naked, others had only shirts quite rotten and torn to rags. Lieutenant de la Fond had fastened a piece of the scarlet cloth round his waist, in order to give him the appearance of being at the head of his companions. Although thus rescued from imminent danger, they had still to contend with hunger and thirst, and were ignorant whether they should meet men endowed with humanity or not in that region.

While they were deliberating on the course they should pursue, they were accosted by about fifty Portuguese of the settlement, who advanced and inquired the cause of their presence. Their misfortunes were soon explained, and the recital of them proved a claim upon their hospitality. The Portuguese men deeply affected by the account they gave, congratulated themselves that it had fallen to their lot to relieve the strangers, and speedily led them to their dwellings. On their way the seamen were highly rejoiced at the sight of a river, into which they threw themselves, and plunging about in the water drank copious draughts of it to allay their thirst. They afterwards found frequent bathing to be one of the best restoratives of health, and to which all of them resorted.

They were met by the chief man of the place, who conducted Lieutenant de la Fond and his companions to his house, which was situate about half a league distant from the spot where they had landed. He generously supplied them with linen shirts and trousers, and boiled some fish for them, the water of which they relished as delicious broth. Though sleep was as necessary as this frugal fare after their fatigue, yet, having learned that there was a church dedicated to St. Michael within the distance of half a league, they would not rest till they had repaired thither to render thanks to heaven for their miraculous preservation. The badness of the road fatigued them so much, that they were compelled to rest in the village where it stood, and there the narrative of their misfortunes added to the piety which they exhibited, attracted the notice of the inhabitants, that each was striving to be the first to minister something to their necessities. After remaining a short time to refresh themselves, they returned to their kind host, who, at night, generously contributed another repast of fish. Something, however, more invigorating being required by people who had endured so much, they purchased an ox with the quantity of brandy that had been saved from the wreck.

Paraibo was distant about fifteen leagues, and to reach this place they had to travel barefoot with very little chance of finding any provisions on the way; and consequently, they smoke dried their little store, and added some flour to it. They started on their journey in three days' time; and under an escort of soldiers advanced seven leagues the first day, when they were hospitably received by a person who lived on the road, and they passed the night in his house. On the following evening a sergeant and twenty nine men arrived to conduct them to the commandant of the fortress, who gave them a very friendly reception, afforded them supplies, and provided a boat to carry them to Paraibo, which they reached about midnight, where a Portuguese captain attended to present them to the governor, from whom they experienced the most hospitable attentions. Being anxious to reach Pernambuco, where a Portuguese fleet was daily expected to sail for Europe, the governor, after they had stayed three days, ordered a corporal to conduct the party to that port; but at this time Lieutenant de la Fond was so cruelly wounded in the feet through his great fatigues, that he was scarcely able to stand, and on that account was charitably supplied with a horse.

They arrived at Pernambuco in four days, where the lieutenant met with the utmost consideration and attention from different naval and military officers who were there, and he and all his companions had a passage provided for them in the fleet.

They sailed from Pernambuco on the 5th of October, and reached Lisbon in safety on the 17th of December, from thence Lieutenant de la Fond procured a passage to Morlaix, where, having rested a few days to recruit his strength, he repaired to Port L'Orient with his health greatly injured by the dreadful miseries he had undergone, and reduced to a state of poverty, having, after twenty-eight years hard service, lost all he had in the world.

By this deplorable catastrophe, nearly three hundred persons lost their lives.

A GALLEY STORY.

"WHAT! your *Traffiggar* tar? That breed's gone by, my bo'; few are now seen in the sarvis. Your present race are another set o' men altogether, as different, ay, as beer and bilge-water; they're all for *larning* now, and yet there's not one in a thousand as larns his trade; and what's worse nor all, they're all a *larning* from the sogers to rig as lubberly as lobsters. Why I was aboard of a crack craft t'other day, a *stationer* too, three years in commission, as came to be paid off at Portsmouth, and I'm blessed if every fellow, fore and aft at divisions ('twas Sunday, you know, and the ship's company were rigged in their best mustering togs); well, may I never see light, if every chap as toed a line on her deck from stem to stern, hadn't his body braced up with a pair o' *braces* crossing his shoulders for all the world like a galloot on guard.

"Now I speaks as I knows, and knows what I speaks; for you see I was a *Traffiggar* chap myself. Did you ever hear of the *Le Bellisle*? Did you ever hear of *Billy-go-tight*, her skipper? Did you ever hear of her losing her sticks under an infernal fire, and *Billy-go-tight* singing out like a soger—'No, I won't strike—not I—no, never not I!' and Billy being then brought up with a round turn by the captain o' the fore-most quarter-deck gun, turning round and saying to the skipper—'There's no one a' *aving* you, sir!' Well, I've seed that, I've seed myself surrounded with sharks, when 'twas almost a mortal impossibility to escape the jaws of *Port-royal-Tom*; yet I say, I'd sooner see all them there things over and over again, nor it ever should be said Bill Thompson was seen with *braces*, or, more properly speaking, *toppin-lifts*, *topping-up* his trousers: I'm blow'd if I wouldn't rather take three dozen with the thief's-cat. Then, again, your peace-trained tars are all such chaps for holding on the dibs. In my time, when rousing out the rhino, a fellow never looked to see if he pulled from his pocket a shilling or a guinea. Paying for a pint o' purl, a glass o' grog, or a coachee or guard a *travelling*, a fellow stood as good chance of gettin' the one as t'other."

"But then you see, Bill," said one of his auditors, "then, you see, men are beginning to get more 'sperience, to larn more the vally o' things, and to consider themselves as much 'a part o' the people' as now other people do in the world."

"*People*!" returned Thompson indignantly, "I like to see the fellow as dare call me a 'part o' the people,' *Pd* people him! That's your shore-going gammon, your infernal *larning* as capsize your brain till it boils over like a pitch-kettle, and sets fire to all afloat. Is it because you can prate in a pot-house, you're to call yourself 'part o' the people,' and think yourself as big as Burdett or a bishop? no, no, larn your trade; larn to keep your trousers taut in the *seat*, to curse a steamer, and puddin' an anchor, and then, instead o' callin' yourself 'part o' the people,' perhaps you may pass for a bit of a tar."

"Well, but Bill, d'ye mean to say that the present race o' seamen are not just as good men as before *Traffiggar*."

"I does; I means to say they haven't the mind as they had; they doesn't think the same way (*that is, they thinks too much*); and more, they're not by one-half as active aloft as we were in the war: chaps now reefin' topsails crawl out by the foot-ropes, and you now never see a weather-earin'-man fling himself out by the to'-gallant-studdin'-sail haliards."

"Yes, but Bill, perhaps in your day the men were smaller and lighter built."

"Smaller! not a bit of it; I've seen men at a weather-earin' as big as a bullock. No, no, my bo', they were big enough—they'd both blood and bone in 'em, but not so much beef in their heels as the topmen you now see afloat."

"Well, for my part, I likes a light hand aloft."

"Mind ye, I doesn't say," continued Thompson, "that your small men aboard are not mostly the best. They're certainly more active aloft, stow better below, and have far better chance in action than a fellow as taut as a topmast; and yet, a double-fisted fellow tells well rousing aboard a tack, or hauling aft a sheet; and what's better nor all, they're less conceited, and oftener far better tempered nor chaps not half their height."

"Well, I dun know, Bill; I'm not a small man myself," said one of the assembled group; "I'm not a small man, nor yet what you calls a large un, for at the back o' the Pint, they says I'm just what ye calls the reg'lar size; but somehow or other, your undersiz'd fellows always do best in the world, for go where you will, you'll always find a little fellow making up to a lass double his length to give him a lift in life. We'd a chap in the old *Andrew-Mack*, not four feet five at furthest, and I'm bless'd if he was n't spliced to a craft as long as a sky-sail-pole; he was what they calls a reg'lar built dwarf, but he was as broad on the beam as the biggest aboard. He was captain o' the mizen-top, and well they knew it, the boys abaft, for he'd an infernal tyrannical temper. His wife was quite the reverse; a better-hearted cretur never slept under a gun. See them at North-corner or Mutton-cove on liberty together, and you'd see what care she'd take o' her Tom—her 'Tom-tit' as he was christened aboard. Tom liked his drop, but the fellow was so short, 'twould get to his noddle an hour sooner nor a common-sized man. There he'd drop as drunk as a lord—lay in the mud and mire, till his rib (long Kate as we called her) would coil him clean up in her apron, bundle the litte beast on her back, and take him abroad in a waterman's boat; and yet, for the care of her Tom, the short-bodied, bandy-legged beggar, would hide poor Kate by the hour."

"D—n your dwarfs?" interrupted Thompson. "Were you ever in a ship with a giant aboard—one o' the ship's company, you know—a fellow reg'larly borne on the books; 'cause, you see, I sarved in a ship with a giant aboard."

"What! a reg'lar-built giant?"

"Ay, a reg'lar-built giant; a fellow as stood six feet ten in his stockin'-feet, nor a better-built man was never seed for his size—no deck ever seed his equal. Poor Bill!—Bill Muddock—for he kept his name from first to last, knowing 'twas never no use fixin' on a purser's, for go where he would, his bulk would *blow* him. Bill was a Scotchman—a Glasgow man bred and born—and a better seaman or truer tar never commanded craft—for once Bill had the charge of one of his own. But Bill was something like myself, seldom backed by luck, and was more oftener down nor up in the world. We sarved together in the *F—*—frigate. That was the craft for cap'ring kites. Let's see, we used to get ring-tails, water-sails, studden-sails without studden-sails, sky-scrappers, moon-rakers, star-gazers, and heaven-disturbers; never ship could carry such a cloud of canvass. And as for the skipper, 'twas hard to say on which he'd carry longest—his sail or his sermon—for sure as Sunday came, there was strike out for a sermon three times a day; and as sartin as Monday would follow, there was crack on the kites from daylight till dark. Yet the skipper was a plucky chap, and a man as knowed well his work; and I'll say that for him, he never was a man as spared himself. Report a strange sail in sight, and he was the first at the mast-head, glass in hand; and what's more, blow high, blow low, there he'd stick till he made her clearly and cleverly out. I've seen his glass fixed to his eye, resting on the cross-trees, for more, ay, more nor six hours on a stretch. What d'ye think o' that! a skipper of a frigate acting look-out-man aloft under a six hours' sun! As sure as a hauline-line came down for the captain's grub (for his dinner went reg'larly aloft in a hand-basket), so sure you'd hear a hubbub below. The 'twix-decks had it in a crack—

'A prise! my bosc,' now you'd hear fore and aft—'the skipper's grub's gone aloft.' But he wasn't a man as liked his lickor—six-water-grog was strong, to what we used to call his 'look-out-aloft swizzle'; but take him on one tack as well as the t'other, and he was a smart little man: Bill and he, to be sure, had sometimes a bit of a breeze, though when we laid at Cork, and company com'd to the skipper, Bill was the man as amused the ladies. Whenever Bill seed a boat-ful o' muslin pulling off to the ship, and the whip (chair-tackle for hoisting ladies on board) getting ready for the ladies, down he'd dive, off with his muzzle-lashing, and on deck in a crack in his best must'ring rig; for as sure as dinner was done in the cabin, the skipper would send for Bill, and make some sham-Abraham excuse about the water bein' bad, or the likes o' that, just for the purpose o' givin' the ladies a treat in showin' 'em a giant.

"But though Bill was a scholar, he wasn't a man as took to the trash of tracts as was sent aboard by some o' the skipper's *she* Methody parsons. Nor could Bill always bring his Bible to book whenever we went to divisions, for you know, at three bells every forenoon, there was beat to divisions and muster Prayer-books and Bibles. As for myself, in the Bible bisness I managed the matter very well, and moreover, with the skipper I was a bit of a fancy-man; for you see my Bible (as captain o' the mess) was always kivered in baize, nor never was opened, you know, nor pawed by tarry paw; there wasn't, no, not as much as the sign of a soil to be seen inside or out. The skipper reg'larly overhauled the books himself, and one morn, going round at divisions, I says to myself, 'Come this is too bad, by Joe!—here's my Bible been bag'd in baize for three years and upwards, and the skipper's never once *noticed* the kelter she's in; so here's try him on a wind,' says I to myself. 'Here she is, sir,' says I, pulling out the book from my green-baize bag, just as he comes to my elbow; 'here she is, sir, just as *clean*, you see, as if she'd com'd bran-new out o' the mint.' 'That's a *good* man,' says the skipper, givin' me a friendly tap on the shoulder—'that's a *good* man—come down to my cabin,' says he, 'as soon as divisions are over.' Well as soon as the drums beat retreat, you may well suppose I wasn't long divin' down to get my drop; but when I enters the cabin, there wasn't, no, not the sign of a glass to be seen. There was the skipper alone at the table, fumbling a newland (a bank-note) in his fist, and seemin' as shy o' me as I was of him. 'Come here, my man,' says he, 'come here, Thompson, you're a very *good* man,' says he; 'take this,' says he, shoving a five-pound newland into my fist; 'take this, and recollect,' says he, 'I give it for preservin' so well the Word o' God.' Well, you may be sure after this, the Bible sees less daylight nor ever; and there wasn't a fellow, fore and aft, even Murdock himself, as didn't bag his book in baize.

"Howsomever, to try back to Bill—poor Murdock! I think I now sees him on his beam-ends, trying to take a caulk (a nap on the deck) in the bay below—I think I sees him lying at full-length, looking, for all the world, like a South Sea whale, sleeping on the sarfs. Poor Bill! I think I never seed his like. He did his duty as captain o' the hold, for 'twould never have done to've let a two-ton fellow like Bill aloft; moreover, he was a capital hand in the hold. Why he'd take a butt o' water on his knees, and sup out o' the bung-hole easier, ay, by far, easier nor I could out of a beaker. But poor Bill had a crack in his head—a wound in his pate, as got him in many a scrape: it made him reg'larly mad whenever he drank; but keep him from lickor, and there wasn't his fellow afloat. A nicer mannered man never Sallyport seed, and a prettier spoken chap never entered a top. Though big and bulky as a bullock, his voice was as mild as milk, and no foot afloat trod lighter the deck, big as he was. Keep him from drink, and, he'd sing a stave 'ould win, ay, the first lady in the land; sober the skipper himself wasn't better behaved; he hadn't the heart to hurt a fly; he'd take off his hat to the smallest reefer aboard, and as for the young gemmen, they'd a-gone to h—ll for Bill. I'm blest if he didn't live more in the midshipman's berth nor ever he did in his own. Bill could amuse both man and boy; he was as much a child as

any child in the ship, and sartinly more of a *man* nor any ten together. He could converse with the best aboard, but, though a monster in a mob, I never heard that he called himself '*port o' the people*.' But he was a scholar; he know'd figures well, the rule-o'-three better; could hail a foreigner (and that too when the skipper couldn't) in any tongue; no matter, Dutch, or Algebra, or even Maltese; he could make himself understood in any lingo, that is, he could ax 'em 'where they were from?' and 'where bound?' and the likes o' that. He could spin, too, a capital yarn. He was shipwreck'd twice, once as mate and once as master; and such a chap at *chequers* I never seed in my day. In short, Bill was a man in a million; but with all that, Bill was the devil in drink; one glass more nor his allowance, and stand clear fore and aft. 'Twasn't the *frigate*, nor yet any *three*-deck'd ship in the sarvis as could hold him, once poor Bill had his beer aboard. I've seen him, ay, I may say, more than twenty times, clear the bower, main-deck, and folksel. There you'd see midshipmen, marines, every blue-jacket below, tumbling up the hatchways, and flying from Bill, as if, for all the world, a thund'ring Senegal tiger had been reg'larly turned adrift on the deck. A topmaul had better fall on your pate than his fist; and once catch a fellow in his flipper, and he'd fling him from side to side, or stem to stern, making no more of a middle-sized man nor a middle-sized man would make of a cat. The sing out, '*Murdock adrift!*' was worse afloat nor the cry of '*Murder!*' ashore. The sick and lame, and chaps as couldn't bend their backs with the 'bago, would fling themselves out o' their hammocks, and fly upon deck, clear of his clutches. You'd sometimes see the bow-prit reg'larly lined with men, and the riggin' swarming wi' fellows scuddin' from Murdock's grip; the officers never, never could quiet him. 'Twas worth more nor the best o' their commissions was worth to make the trial, for they know'd to a man they might as well try to capsize St. Paul's, as try to level Bill in his beer. In these here fits a frightful sight never was seed: he'd foam and froth at the mouth, tear his hair, and gnash his teeth in a terrible way; and yet, poor Bill! how soon I've seed him *calmed* by a cap. The sight of a petticoat would *tame* him in the turn of a quid. The weakest girl aboard had nothing to do but to face him full in front, and down like lightning, on all-fours, poor Bill would drop, clinging to the lass's petticoats, and licking her feet for all the world like a lady's lap-dog, though I'm blest but he look'd a precious sight more like a dancing elephant."

"What! d'ye mean to say, interrogated the last interlocutor, 'that a lass like Bet Bowles could manage a monster like Murdock?'

"Yes, I does; a child (providing she was a *she* child) could manage him easier, ay, nor a party o' marines under ball and bagnet—once caught up by the cap, and all was calm in a crack—the fire in his eye and froth of his mouth (as soon as the girl swabbed with her apron the foam from his bows) was lost in the sudden lull, and in less than a minute there wasn't no,—no, not so much as a ripple o' rage to be seen on his phiz.

"Well, after the lull o' the lickor, there wasn't to be seen a more down-in-the-mouth man for a month; why, the old Royal Billy herself (Royal William), said to be one hundred years old when broken up; the Billy buffetin' about the Bay of Biscay in a breeze, wouldn't a-felt more shook and shattered, more pulled to pieces, nor poor Bill 'oud be after coming out of his heavy nor-westers; not a limb could be lift for a week; he'd shake like a leaf; and the sight of an officer would set him a tremblin' worse, ay worse nor a fellow in a Flushing fit. 'D—n that infernal age; d—n the Dutch and their dirty dikes; I'll never be the man as I was.' But mind ye, it wasn't the dread o' the cat as made Big Bill afraid of an officer; for I'm sartin and sure the skipper would sooner a-seized up himself, nor ever 'ave brought poor Bill to the gratin'. No, no, 'twasn't the thought o' the gratin' as galled him, but 'twas the thought of offending mortal in lickor; you'd sometimes see him backin' and filling and boxing about a bit of a boy, a reefer not twelve years old, afore he'd go up to the child, to 'hope he didn't offend him in his fit. 'I

wouldn't,' he'd say, 'I wouldn't, young gemman, offend you, no, not for a butt o' beer, much more hurt a hair o' your head; and then he'd take and tug the fore locks as was left on his pate, and curse th' unfortinet crack on his scone, as made him,' he'd say, 'made him worse and wickeder nor a baited bull;' he'd write to the skipper, to the first lieutenant, to the mate o' the-grog-tub, and to all the gemmen as had weight in the ship to 'mollify;' yes, that was the word, to 'mollify,' as he called it, 'the mischief he made.' He'd lay down the law as nat'ral as life, argufy the matter in a manner that would soften the heart of a hangman—and mind ye, there was never nothing like snivelling—no double allowance of *larning*—no sayin' a-one thing as unsaid the t'other, and usin' words as went for nothing—for ten, let's see, was it ten?—no, for six days he took his reg'lar bob on the book never to touch the taste of lickor, not as much as the dew of a drop lit on his lip; yes, for six days, he suffered that tortur. One time at Port-royal, on a Patrick-day, he goes reg'larly aft, and axes permission to be clapt in the bilboes—'Please sir,' says he, turning as red as a soger's coat as he faces the first-lefteenant, 'please sir,' says he, 'I axes your pardon, I hope no offence; but if so be,' says Bill, 'it's all the same to you, sir, I'll be glad if you'll class me for four-and-twenty hours in irons.' 'In irons!—what for?' says the first-lefteenant. 'What for?' says *Sprinkle-and-seab*, for that was his name with Bobby below. 'What for?' says Bill, heavin' a bashful glance at the first-lefteenant; for, you see, Bill was ashamed to say for *why*. 'Yes, what for?' again says *Sprinkle-and-seab*. 'Well,' says Big Bill, 'if you must—must, sir, know for *why*—to be moored out of mischief's way; for, you know, sir,' says Bill, 'I darn't, darn't trust the drop.' Well, seeing Bill was bent on the bilboes, in course, *Sprinkle-and-seab* sends for the master-t-arms, and orders poor Bill both legs in limbo. But Bill was the boy for a brush in the boats; one time we'd a cuttin'-out job in the bay, 'twasn't in the *F*—frigate, for Bill and me, and the first twenty-five on her books were drafted together into the *Saucy-go-where-she-will*—the lee *L*—, she was the ship for the bout. Crappo's craft was a brig—an armed brig, anchored off the Isle of Jew (Isle Dieu), tho' I never afore heard of a Jew who had been found in France. Well, she was lying all a taunto, royal yards across, and moored head and stern close under a six-gun battery. As soon as the fun was fixed, and the word '*volunteer*,' gets wind below, in course Big Bill must make his way aft to clap down his name for the fray. Then see Bill comin' aft, scratching his pate, with a smile on his mug as seemed to say, 'here I am, more nor a barge's crew in myself,' was better, ay, better by half nor a reg'lar built play. At first he dodges about the bits afore he takes courage to face the lefteenant; one Smith was first-lefteenant, a very good man in his way, but he hadn't the manners o' Bill. He'd a shore-going, sneerin' manner of callin' a man as Bill could never abide. 'Well, *Mister* Murdock!' says Smith. 'What do you want?' says Smith. Well, this *mistering* the man was near the capsize of Bill, it fairly floored him, and no wonder, for where's the tar in togs as likes to be *mistered*—why, 'tisn't worse to be called '*Part o' the people*.' 'Well,' says Smith, in a mockin' manner, 'so you *Mister* Murdock, you must come aft to give in your name.' Well, this *youing* the man was worse to poor Bill nor calling him *Mister*. 'I hopes, sir,' says Bill, 'I only comes aft like a man.' 'A man,' says the first-lefteenant, 'a precious sight more like a monster! Besides, Mr. Murdock,' says Smith, 'you're *nothing*, you know, when sober, and drunk, your courage is *Dutch*!' Big as he was, a child would 'ave floored him; poor Bill! To touch his pluck was more nor the man could stand; his mouth as was playful and cheerful afore, felt tant and stiff, and his lips were glued together; his eyes seemed fairly to fill, but he disdained to drop a drop; he knew well he was a man, and knew well he was *more* nor a man; he looked like a fellow as felt 'twas better to feel within nor to show what he felt without, so Bill bolted it all till the skipper comes up to look at the list. 'I hopes no offence, sir,' says Bill, brightening up at the sight of the skipper, and a ring of good humour again breakin' round his mouth, for you soon could see what Bill was bent on; 'I axes your pardon,' says he to the skipper, 'I'm sorry to

say, sir, sorry to say, Mr. Smith won't let me go, he thinks me too *sober*, and says, 'I'm nothing unless I've my beer aboard.' 'Well, no more you *are*, sir,' says Smith, snapping at Bill, 'no more you *are*, and you *know* it.' 'Very well, sir,' says Bill, 'if that be the case, just give me an *extra* allowance, and I'm blow'd,' says Bill, thumping his fist on the capstan, 'if another soul in the ship need be sent!' 'No, no,' says the skipper, trying to smother a smile, 'no, no, my man,' (for a man was a man with the skipper, and he never, no never, *mistered* a man); 'no, no,' says he, 'we want you for better work, your day's to come as well as my own, go below, my man, go below,' says the skipper, trying to comfort Bill. Well, Bill goes below; but seed he was not the whole day long, he kept outstight in the hold, refused his dinner, refused his supper, and, as we all atwix-decks a-thought, took the thing too much to heart, entirely too much.

'Well, the time drew nigh—the boats were manned and armed—each man with a white stripe on his left flipper to mark him from Crappo's crew—all was ready; the thing was managed in a manner of silence never afore seed or since—hands were shook to be sure, but more was said by a squeeze, more *felt* by a fist nor ever was said or *felt* by any of your palav'ring parliament chaps. Well, the word 'shove off!' was given—the oars all muffled, and away slipt the boats out o' sight like craft as were sliding in slush. The jolly was the last that left, for she was the hospital-boat, and the doctor's mate, one Mullins, an Irish chap, was the only officer in her. The doctor was ordered to keep out of fire, and to do no more nor dress the wounded and patch their pates. Well, when the jolly shoved-off, there wasn't a breath to be heard aboard, nor as much as the glimmer of light to be seen in the ship; a church-yard at night was never so still, never so dumb and dark.

'Twas exactly one bell after twelve when the jolly shoves off—the bell didn't strike in course, but the glass was turned. Yes, 'twas exactly one bell, for I had it from old Jack Martin, the quarter-master o' the watch at the time; exactly one bell, when they hears a thund'ring of a row in the jolly. She'd hardly gone twice her own length when they hears the bowman singing out like a fellow as was fairly mazed, 'Halloa! halloa! what the h—ll have we *here*? a thund'ring grampus by G—d! my wig, the boat's capsized!' 'Silence, silence,' says the skipper, not more in the dark nor this in the boat. 'Oh, for shame! for shame! Mr. Mullins,' says the skipper, singing out to the doctor's mate, 'for shame, sir, making such a shocking noise at a moment like *this*!' for Martin said often, the skipper was in a terrible takin'. 'Pull away, sir, pull away!' 'By heaven!' says the skipper, for he never swore by never nothing but heaven; 'if you're in sight another second, I'll try you by a court-martial for cowardly conduct!' Jack Martin often and often repeated the skipper's identical words. Well, you know this here court-martial threat was quite enough to put Pat Mullins on his mettle, not that he disliked a fray, for the fellow liked fun as well as the best, so the jolly was off from the ship in a crack.

'Well, no sooner we in the barge, pinnace, and cutter pulls up alongside of the brig, nor we gets, one and all, a dose as sends us all staggering astarn. Empty bottles was heaved at our heads, cold shot thrown into the boats, and the fire of musketry Crappo kept up was the most infernallest fire as ever was seed; we made three attempts, twice on the starboard side, and once on the larboard, each time the boats were beat back. Well, just as we intended to try a fourth, we hears Mr. Smith sing out, 'What boat's *that*?' and the answer we hears was, '*Dutch*—courage my bo!—I'll show you the way!' 'Big Bill! Big Bill, by the Lord!' was the cry in the boats. 'Hurrah! hurrah! Big Bill aboard, and she's ours!' And soon Big Bill was aboard, and if he didn't soon clear her decks, there's never no snakes in Virginny. 'Jabble, jabble,' you'd hear Crappo cry. 'Jabble,' you know, means devil in English, and a-course the French thought the *devil* himself was adrift. She soon was ours, and no sooner she was, nor Bill comes aft to the first-lefteenant and says, 'Mr. Smith,' says he, 'I think for a *sober* man I've not done amiss.'

'Well, but Bill, how did he get in the boat?' interrupted one of Thompson's auditors, impatient to come at the sequel.

"How did he get in the boat? why you may depend he hadn't side-ropes goin' over the side, nor he wasn't whipped in by the lady's chair; no, no, he did this tho'—lowered himself over the bows of the ship, and swam quietly off to the jolly. It was then as they thought in the jolly they'd grappled a grampus—come, spell oh;—the watch is out."

LOSS OF THE BROTHERS AND SISTERS,

CAPTAIN J. COULSON, FEBRUARY 8, 1821.

On the 8th of February, 1821, the sloop *Brothers and Sisters*, of Boston, J. Coulson, master, and Mr. Hornbuckle, owner, suddenly went down in seven fathoms water, abreast of Ingoldmells, at four o'clock in the morning, and was totally lost. Whether the vessel sprung an instantaneous leak by striking upon a sunken rock, or whether her bottom was entirely forced out by the unusual pressure of her cargo of cliff-stone, has not been ascertained. It is well known that the shipwrecked mariner, when returning to the port to which he belongs, is apt to console himself for all his sufferings by anticipating the endearments of home. This consolation, however, Captain Coulson had not. His wife and two children had been for some time the companions of his voyage and the inmates of his cabin, where the eldest child was at the moment of the alarm being given; and so sudden was the sinking of the vessel, that it could not be brought up. The other infant was in the arms of its mother, who, at the moment she came out of the cabin, was, together with the object of her fondest care, instantly swept away by an overwhelming surge, and sunk in the deep to rise no more! When the crew perceived that the vessel was about to sink, they jumped into the boat, which then went down, together with the sloop. Yet, shielded still by providential care, they were all restored from the depths of the sea; for the boat, being loose, rose with them again; so that they were enabled to lash it to the mast, and by that means preserved from being buried by the waves. Our duty to the public compels us to state, that, while in this dreadful situation, solaced by the hope of decrying some friendly sail, they were bitterly tantalized by some Cromer men, who approached in their cobbles very near the vessel, and then, unlike the good Samaritan of old, unfeelingly passed by on the other side, and left them to their fate. In this disastrous situation they remained nine hours, when, about one o'clock, the crew of a fishing-boat, belonging to Scarborough, on its return from Boston, kindly tendered their aid, landed Captain Coulson, his mate, and a boy, on the neighbouring shore, and supplied them with money to purchase provisions on their way to Boston, where they arrived on Friday. Since the inherent benevolence of true-born British tars will not allow them to abandon a brother sailor in distress, we wish we could mention the names of these men, whose humanity deserves the tribute of praise. They, however, will find their reward in their own breasts.

DESTRUCTION OF THE PERSEVERANCE,

AND MURDER OF CAPTAIN JOHNSTONE, HIS OFFICERS, AND CREW, IN 1805.

The *Perseverance* sailed from Penang on the 19th April, in company with two other ships, and his Majesty's brig *Albatross*, bound to Pegue; and in three days they parted company. Between ten and eleven o'clock on the night of the third day, the gunner, a Manilla man, and four Manilla seacunnies, went on deck, and knocked down and murdered Mr. Baker, the chief mate. They afterwards went to the cabin of Mr. Mathewson, the second officer, and murdered him also.

Captain Johnstone, being awakened by the noise, came to the cuddy door, armed with a hanger, at the moment that the villains were about to enter, and slightly wounded one of them, but was quickly overpowered and disarmed; he then came on the quarter-deck, begging for mercy. Alas! mercy was unknown to such sanguinary wretches! for the instant that the gunner had promised to spare him, one of the villains came behind, and struck him on the back of the head with some weapon that felled him to the ground, when another severed his head from his body with a hatchet.

The next object of their murderous attack was an American passenger, who came on deck, and whom they instantly killed; they next went below, and murdered Mr. Garey, the third officer, and Mr. Palmer, a gentleman of Calcutta, passenger for Pegue. The lascars, who were on board, they ordered to remain quiet, and go down into the hold, which the poor men readily obeyed. The only person whose life they spared at this time, was an Armenian gentleman, named Gregory Joahnes, from whose account this narrative is taken.

They next proceeded to break open and plunder Captain Johnstone's trunks, in which they found nearly 1000 dollars, and about 700 dollars which were the property of the officers and passengers; they then hoisted out the yawl, and put into it the money and other valuable articles, and ordered into her the only persons whom they chose to save, which were Mr. Joahnes, the old serang, Captain Johnstone's butler, a Malay girl, and two lascars: when, as if to fill up the measure of their infamy, they set fire to the ship, and abandoned her, leaving the wretched lascars, who had been confined in the hold, to perish in the flames. The next morning Mr. Joahnes says he saw the ship all in flames, and by the following morning she had disappeared.

The yawl proceeded for the nearest land, which was supposed to be Brothers Island, or Pulo Lancury, and reached it in three days. Here Mr. Joahnes escaped by hiding himself in the jungle; and after suffering extreme hunger and distress, he obtained a passage, in a fishing prow, to Quedah. The king of Quedah received him with great kindness and humanity, and finally sent him to Penang, where he arrived on the 27th of May, with fervent gratitude to the Almighty disposer of events, who had thus so signally rescued him from such an unheard-of scene of brutal butchery.

THE GALLANT ENGLISH TAR.

There's one whose fearless courage yet has never fail'd in fight,
Who guards with zeal our country's weal, our freedom, and our right;
But though his strong and ready arm spreads havoc in its blow,
Cry "Quarter!" and that arm will be the first to spare his foe.
He recks not though proud glory's shout may be the knell of death,
The triumph won without a sigh he yields his parting breath,
He's Britain's boast and claims a toast! "In peace, my boys, or war,
Here's to the brave upon the wave, the gallant English tar."

Let but the sons of want come nigh, and tell their tale to him,
He'll chide their eyes for weeping while his own are growing dim.
"Cheer up," he cries, "we all must meet the storm as well as calm"—
But turning on his heel Jack slips the guineas in their palm.
He'll hear no long oration, but tell you every man
Is born to act a brother's part, and do what good he can.
He's Britain's boast and claims a toast! "In peace, my boys, or war,
Here's to the brave upon the wave, the gallant English tar."

The dark blue jacket that enfolds the sailor's manly breast,
Bear more of real honour than the star and ermine vest.
The tithe of folly in his head may wake the landsman's mirth,
But nature proudly owns him as her child of sterling worth.
His heart is warm, his hand is true, his word is frank and free,
And though he plays the ass on shore, he's lion of the sea.
He's Britain's boast and claims a toast! "In peace, my boys, or war,
Here's to the brave upon the wave the gallant English tar."

LOSS OF H.M.S. NAUTILUS, CAPTAIN PALMER, JANUARY 5, 1807.

In consequence of a misunderstanding having arisen between the government of Great Britain and the Ottoman Porte, a powerful squadron was ordered to proceed to Constantinople, for the purpose of enforcing compliance with the terms proposed. The object, however, proved abortive; and the expedition terminated in a way which did not tend to enhance the reputation of Great Britain.

Sir Thomas Louis, who was commander of the squadron sent to the Dardanelles, having despatches of great importance to send to England, entrusted them to Captain Palmer of the Nautilus; and the vessel got under weigh on the 3rd

of January, 1807. A fresh breeze from N. E., carried her rapidly out of the Hellespont, and soon after she passed the island of Tenedos, off the north end of which two vessels of war were seen. They hoisted Turkish colours, and in return the Nautilus displayed

"The flag that's braved a thousand years,

The battle and the breeze."

In the course of the day they came in sight of many of the islands abounding in the Greek Archipelago, and in the evening approached the island of Negropont, lying in 38° 30' north lat., and 24° 8' east long., where the navigation became more intricate, from the great number of small islands, and from the narrow entrance between Negropont and the island of Andros.

LOSS OF THE NAUTILUS, CAPTAIN PALMER, JANUARY 5, 1807.

The wind still continued to blow fresh, and as night was approaching, with the appearance of being dark and squally, the pilot, who was a Greek, wished to lie-to till morning which was done; and the vessel continued her course at daybreak. They steered for Falconera, in the track so beautifully described by Falconer in his inimitable poem, and made that and the island of Anti Milo in the evening; but they could not see the extensive island of Milo, which is about fifteen miles farther off, on account of the thick and hazy weather which prevailed.

As the pilot had not been beyond the present position of the Nautilus, and declared his ignorance of the farther bearings, he relinquished his charge, which was resumed by the captain. Every possible attention was paid to the navigation; and Captain Palmer having seen Falconera so

plainly, and being anxious to fulfil his mission as expeditiously as possible, resolved to stand on during the night. He made himself confident of clearing the Archipelago before morning, and he pricked the course himself, from the chart, which was to be steered by the vessel, and which he pointed out to his coxswain, George Smith, of whose ability he entertained the highest opinion. He then had his bed prepared, as he had not had his clothes off for the three preceding nights, and scarcely any sleep from the time they left the Dardanelles.

The night that followed was extremely dark, the horizon repeatedly lighted up with vivid flashes, which only inspired the captain with greater confidence, as he thought it would enable them to see much better at intervals, so that in the event of the ship approaching any land, the danger would be discovered in sufficient time for them to avoid it.

The wind still continued to increase, and though the ship carried but little sail, she went at the rate of nine miles an hour, being assisted by a lofty following sea; which, with the brilliancy of the lightning, made the night particularly awful. At half-past two in the morning high land was distinguished, which those who saw it believed to be the island of Cerigotto, and therefore thought all was safe, and that the danger had been left behind. The ship's course was altered to pass the island, and she continued on her course until half-past four, at the changing of the watch, when the dull monotony of the night was suddenly interrupted by the cry of the man on the look-out, "Breakers ahead!" and instantly the vessel struck with a most tremendous crash. The shock was so violent that the people were thrown from their beds, and on coming upon deck were obliged to cling to the cordage. Everything was now thrown into confusion, and all was hurry and alarm; the crew hastened upon deck, which they had scarcely reached, when the ladders below them gave way, and indeed left many persons struggling in the water, which already rushed into the under part of the ship. The captain, it appeared, had not gone to bed, and immediately came upon deck when the *Nautilus* struck; when, having examined her situation, he immediately went round, accompanied by his second-lieutenant, Mr. Nesbitt, and endeavoured to quiet the apprehensions of the people. He then returned to his cabin, and burnt all his papers and private signals. In the meantime each returning sea lifted up the ship, and then dashed her against the rocks with irresistible force; and in a short time the crew were obliged to resort to the rigging, where they remained for more than an hour, exposed to the fury of the surges, which were incessantly breaking over them. Dismayed at the distresses they endured, they broke out in the most passionate exclamations, lamenting for their wives, their children, and their kindred. The night was so dark and the weather so hazy, that the rocks could be seen at only a very small distance, and that only two minutes before the ship struck.

The lightning had by this time entirely ceased, and the night was so intensely dark, that the people could not see the length of the ship from them; their only hope rested in the falling of the main-mast, which they trusted would reach a small rock which they discovered very near them. About half-an-hour before day-break the main-mast gave way, and providentially fell towards the rock, whereby they were enabled to gain the land.

The struggles and confusion consequent upon this occurrence may be conceived, but cannot be described: several of the crew were drowned. One man had his arm broken, and several were cruelly lacerated; but Captain Palmer refused to quit his station as long as any individual remained on board: and not until the whole of his people had gained the rock, did he make any exertion to save himself. At that time, in consequence of his remaining by the wreck, he had received considerable personal injury, and must inevitably have perished, had not some of the seamen ventured to his assistance, through a most tremendous sea. The boats were staved in pieces, though several of the people endeavoured to haul in the jolly-boat; but this they could not succeed in accomplishing.

The hull of the vessel being to windward of them, sheltered the shipwrecked crew a long time from the beating of the surf; but as she broke up, their situation became every moment more perilous, till at last they found that they should be obliged to abandon the small portion of rock which they had reached, and wade to another, which appeared somewhat larger. By carefully watching the breaking of the seas, the first-lieutenant succeeded in reaching the larger rock in safety, and the rest resolved to follow his example; but scarcely was this resolution formed and attempted to be put into execution, than the people encountered an immense quantity of loose spars, which were immediately washed into the channel they had to cross. Necessity, however, would admit of no alternative but to attempt the passage, when many were severely wounded; and they suffered more in this undertaking than in gaining the first rock from the ship. The want of shoes was particularly felt, as the sharp rocks tore their feet in a dreadful manner, and many of them had their legs covered with blood.

The appearance of daylight only served to disclose the horrors by which these unfortunate creatures were surrounded. The sea was covered with the wreck of their ill-fated vessel: many of their unhappy companions were seen floating away on spars and pieces of the wreck; and the dead and dying were mingled together without a possibility of the survivors being able to afford assistance to any that might still be rescued. Two short hours had been productive of all this misery—the ship destroyed, and her crew reduced to a state of wretchedness and despair. Their wild and affrighted looks exhibited the dreadful sensations by which they were agitated; but on being recalled to a sense of their real condition, they had nothing left but resignation to the will of Heaven.

They now discovered that they had been cast away on a coral rock, almost level with the water, about three or four hundred yards long and two hundred broad. They were at least twelve miles from the nearest islands, which were afterwards found to be those of Cerigotto and Pera, on the north end of Candia. At this time it was reported that several men had escaped in a small boat; and although the fact was true, the uncertainty of her fate induced those on the rock to confide in being relieved by any vessel accidentally passing in sight of a signal of distress they had hoisted on a long pole.

The weather had been extremely cold, so much so, that the day preceding the wreck, the ice had lain on the deck; and to resist its inclemency a fire was kindled by means of a knife and flint, preserved in one of the sailor's pockets, and some damp powder from a small barrel which was washed ashore. They next constructed a small tent with pieces of old canvass, boards, and such things as could be got from the wreck; and were thus enabled to dry the few clothes they had saved. But notwithstanding this slight alleviation, they passed a long and comfortless night, though partly consoled with the hope that their fire might be seen in the dark, and taken for a signal of distress.

When the ship first struck, a small whale-boat was hanging over the quarter, into which an officer, George Smith, the coxswain, and nine men immediately got, and happily escaped. After rowing three or four leagues against a high sea, and the wind blowing hard, they reached the island of Pera. This proved to be scarcely a mile in circumference, and containing nothing but a few sheep and goats belonging to the inhabitants of Cerigo, who came in the summer months to fetch away their young. They could find no rain water, except a little in the hole of a rock, and that was barely sufficient, though used most sparingly. Having observed the fire before-mentioned during the night, they conjectured that some of their shipmates might have been saved, for until then they considered their destruction inevitable. Impressed with this opinion, the coxswain proposed again hazarding themselves in the boat for their relief; and although some feeble objections were raised to it, he continued resolute to his purpose, and persuaded four others to accompany him.

About nine o'clock on the morning of Tuesday, the second day of the shipwreck, those on the rock descried the approach of the little whale-boat; all uttered an exclamation of joy. The surprise of the coxswain and his crew to find so many of their shipmates still surviving, is not to be described. The surf ran so high as to endanger the safety of the boat, and several of the people imprudently endeavoured to get into it. The coxswain tried to persuade Captain Palmer to come to him, but he steadily refused, saying, "No, Smith, save your unfortunate shipmates, never mind me." After some little consultation, he desired him to take the Greek pilot on board, and make the best of his way to Cerigotto, where the pilot said there were some families of fishermen, who would, doubtless, relieve their necessities.

But it appeared as if heaven had decreed the destruction of this unfortunate crew; for soon after the boat departed, the wind began to increase, and dark clouds gathering around, excited the apprehensions of those left behind, of a frightful storm. In two hours it commenced with the greatest fury, and the waves rising considerably, soon destroyed their fire. The rock was nearly covered with water, and the men were compelled to fly to the highest part for refuge, which was the only

place that could afford any shelter. There nearly ninety people passed a night of horror and dismay, and were only prevented from being swept away by the surf, which every moment broke over them, by a small rope fastened round the summit of the rock, and holding on by each other.

The fatigues they had previously undergone, added to what they now endured, proved too overpowering for many, who soon became delirious; their strength was exhausted, and they could hold on no longer. Their afflictions were still further aggravated by the dread that each succeeding wave would sweep them all into oblivion. They were but ill-prepared to meet the terrible effects of famine; their strength enfeebled, their bodies unsheltered, and in despair of all hope of relief. Nor were they less alarmed for the fate of the boat. The storm came on before she could have reached the island, and on her safety their own depended. The scene which daylight presented was, however, still more deplorable; the survivors beheld the bodies of their departed shipmates, and some still in the agonies of death. Those surviving, altogether exhausted from the sea breaking over them all night, and the inclemency of the weather; which was such, that many of them, among whom was the carpenter, perished from excessive cold.

They had now to witness an instance of cold-blooded inhumanity, which must leave an eternal stain of infamy on those who merit the reproach. Soon after daybreak they discovered a vessel with all sail set before the wind, steering directly for the rock. They made every possible signal of distress which their feeble condition would permit, and were at last gratified at seeing the vessel heave-to, and the boat hoisted out. Their joy, as may be imagined, was extreme, for nothing short of immediate relief could be anticipated; and they hastily made preparations for rafts to carry them through the surf, in the full confidence that the boat was provided with relief for their necessities. On her nearer approach, to within pistol-shot, they observed her full of men, dressed as Europeans, who, to their horror and disappointment, gazed at them a few minutes, and then rowed back to their ship. The galling cruelty of this barbarous proceeding was heightened by observing the strange vessel employed the whole day in taking up the floating remains of that vessel which had so lately borne them.

It would surely excite little compassion to learn that the abandoned wretches who could be guilty of such unfeeling brutality, had suffered the just retribution which such inhuman conduct merited. That creatures in the form of men, and apparently Europeans, could wantonly take advantage of misery, instead of relieving it, will scarcely seem credible at the present day.

After this cruel disappointment, and bestowing an anathema which the barbarity of the strangers well deserved, they turned their thoughts during the day towards the return of the boat; but in this, also, they were disappointed, which confirmed their apprehension that she had been lost. They now began to yield to despondency, and had before them only the gloomy prospect of inevitable destruction. Thirst became intolerable, and in spite of being warned against it by the instances of its terrible effects, some of them, in desperation, resorted to salt water. Their miserable companions had soon melancholy experience of its consequences; in a few hours raging madness followed, and exhausted nature could struggle no longer.

Another awful night was to be passed; yet the weather being considerably more moderate, the sufferers had continued hopes that it would be less disastrous than the one preceding; and to preserve themselves from the cold they crowded close together, and covered themselves with the few remaining rags. But the ravings of those who had drank salt water were truly horrible; all endeavours to quiet them were ineffectual, and the power of sleep lost its influence. At midnight they were unexpectedly hailed by the crew of the whale-boat; but the urgent want of those on the rock was water, which they cried out to their shipmates for, though in vain. Eastern vessels only could have been procured, and these would not bear being conveyed through the surf. The coxswain then said that they should be taken off by a fishing

vessel in the morning, and with this assurance they were obliged to be content.

They now anxiously looked forward to the morning; and for the first time since the wreck, the sun cheered them with his rays. Still the fourth morning came, and no tidings either of the boat or fishing-vessel. The anxiety of the people increased, for inevitable death from famine was staring them in the face. What were they to do for self-preservation? The misery and hunger which they endured was excessive, and though aware of those means by which mariners in similar circumstances had protracted life, yet they viewed them with disgust. Still when they had no alternative, they considered their urgent necessities afforded them some excuse. Offering a prayer to heaven for forgiveness of the sinful act, they selected a young man who had died the preceding night, and ventured to appease their hunger with human flesh.

Whether their disgusting repast afforded them any relief or not is uncertain, for, towards evening, death made fearful havoc among them, and many brave men drooped under their accumulated hardships. Among these were the captain and first-lieutenant; two meritorious officers; and the sullen silence now preserved by the survivors showed the state of their feelings. Captain Palmer was in the twenty-sixth year of his age, and amidst his endeavours to comfort those under his command, his personal injuries were borne with patience and resignation, and not even a murmur escaped his lips. His virtuous life was prematurely closed by the overwhelming severity of the lamentable calamity in which he had shared.

During the course of another tedious night, many suggested the possibility of constructing a raft, which could carry the survivors to Cerigotto; and the wind being favourable might enable them to reach that island. As this seemed preferable to remaining on the rock to perish by hunger and thirst, they prepared, at daylight, to put their plan into execution. A number of the larger spars were lashed together, and sanguine hopes of success were entertained. The moment of launching the raft at length arrived, but it was only to distress the people with new disappointments; for a few moments sufficed for the destruction of a work on which the strongest of the party had been occupied for hours. This unexpected failure made several of them still more desperate, and five resolved to trust themselves on a few small spars, slightly lashed together, and on which they had scarcely room to stand. Bidding adieu to their companions, they launched out into the sea, when they were speedily carried along by the strong currents, and vanished for ever from their sight.

The same afternoon they were again rejoiced by the sight of the whale-boat, and the coxswain told them he had experienced great difficulty in prevailing on the Greek fishermen of Cerigotto to venture into the boats, from their dread of the weather. Neither would they permit him to rescue them unless accompanied by themselves. He regretted the sufferings of his comrades, and his not being able to relieve them; but encouraged them with the hope, if the weather remained fine, that the next day the boats might come. While the coxswain was speaking, twelve or fourteen men imprudently plunged into the sea, and very nearly reached the boat. Two, indeed, got so far that they were taken in, one was drowned and the remainder providentially got back to the rock. Those who had thus escaped, could not but be envied by their companions, while they reproached the indiscretion of those who, had they reached the boat, would, without doubt, have sunk her, and have thus consigned the whole to irremediable destruction.

Their thoughts were wholly occupied on these passing incidents, contemplating their forlorn condition, and judging this to be the last day of their existence, when suddenly from the lowest ebb of despair, they became elated with the most extravagant joy, as the approach of the boats was unexpectedly announced. Copious draughts of water refreshed their languid bodies; and never before did they know the blessing which the possession of water could afford; it was to them more delicious and valuable than the finest wines.

Anxious preparations were now made to depart from a place which had been fatal to so many unhappy sufferers. Of one hundred and twenty-two persons who were on board the *Nautilus* when she struck, fifty-eight had perished. It was supposed that eighteen were drowned at the moment of the catastrophe, one in attempting to reach the boat, five were lost on the small raft, and thirty-four died of famine. About fifty now embarked in four small fishing-vessels, and were landed the same evening at the island of Cerigotto, making altogether sixty-four individuals who were saved including those who escaped in the whale-boat. They had passed six days upon the rock, during which time they had not received any subsistence, excepting from the human flesh in which they had participated.

The survivors landed at a small creek in the island of Cerigotto, from whence they had to go a considerable distance before reaching the dwellings of their friends. Their first care was to send to the island of Pera, for the master's mate and his companions, who had been left behind when the whale-boat came down to the rock. It was found that they had exhausted all the fresh water, and had lived upon the sheep and goats which they caught among the rocks, and drank their blood. All this time they had been in a state of the greatest anxiety for the safety of those who had left them in the boat.

Though the Greeks were unable to aid the seamen in the cure of their wounds, they treated them with great care and hospitality; but medical assistance being important from the pain which the sufferers endured, and having nothing to bind up their wounds but their shirts, which they tore into bandages, they were eager to reach Cerigo. The island of Cerigotto, where they had landed, was a dependency on the other; in size about fifteen miles by ten, of a barren, unproductive soil, and that but little cultivated. It was inhabited by twelve or fourteen families of Greek fishermen, who, as the pilot said, were in a state of extreme poverty, living in huts built of clay and straw, and subsisting on bread made of boiled pease and flour, with occasionally a bit of kid; but they made a liquor from corn which had an agreeable flavour, and being a strong spirit, was eagerly swallowed by the sailors.

Cerigo is about twenty-five miles distant, and there they were told an English consul resided. Eleven days, however, elapsed before they could leave Cerigotto, from the difficulty of persuading the Greeks to venture to sea in their frail barks during the tempestuous weather. The wind at last proving fair, and the sea being smooth, they bade a grateful adieu to the kind families who had sheltered them, and who were so tenderly affected by their distresses, that they shed tears of regret on their departure. They reached Cerigo in about seven hours, and were received with open arms. Immediately on their arrival they were met by the English vice consul, Signor Manuel Caluci, a native of the island, who devoted his house, bed, credit, and whole attention to their service; and the survivors unite in declaring their inability to express the obligations under which they were laid by his hospitality. The governor, commandant, bishop, and principal people all showed them equal kindness, care, and friendship, and exerted themselves to render the time agreeable, inasmuch that it was with no little regret these shipwrecked mariners thought of quitting these generous islanders.

After remaining about three weeks, they were informed that a Russian ship of war lay at anchor off the Morea, which was distant about twelve leagues; and immediately sent letters to her commanding officer, narrating their misfortunes, and soliciting a passage to Corfu. The master of the *Nautilus* determining to make most of the opportunity, took a boat to reach the Russian vessel; but was unfortunately blown upon the rocks during a heavy gale of wind, and very narrowly escaped perishing, while the boat was dashed to pieces. However, after great difficulty, he got to the ship, and at length succeeded in procuring the desired passage for himself and his companions to Corfu. To accommodate them, the Russian commander came down to Cerigo, and anchored at a small port called St. Nicholas, at the eastern extremity of the island.

On February 5, the English embarked on board the Russian

ship; but owing to contrary winds, they did not sail before the 15th, when they bade farewell to their generous friends. They next touched at Zante, a small island abounding in currants and olives; the oil from the latter of which constitutes the chief riches of the people. After remaining there four days, they sailed for Corfu, where they arrived on the 2nd of March, 1807, nearly two months after the date of their shipwreck.

FAMINE ON BOARD THE DOLPHIN SLOOP, IN THE YEAR 1759,

And the remarkable preservation of eight persons, who had been one hundred and fifteen days without food.

The account of this remarkable famine is given as follows, by Captain Bradshaw, commander of the *Andalusia*, in a letter dated Halifax, April 30, 1759:—

"On the 27th of February, about two o'clock in the afternoon, we saw a vessel without masts, about three miles to leeward of us, and immediately bore down to see what she was; I found it to be the *Dolphin* sloop, Captain Baron, from the Canaries, bound to New York; they had been from the Canaries ever since Sept. 11, 165 days, 115 of which they had nothing to eat. I sent my boat on board to see what condition they were in; my people called to me and told me they were helpless and starving, and desired to know whether I would take them on board. I ordered my people to put them in the boat, and bring them on board, which accordingly they did. When they came alongside our ship, we were obliged to haul them up with ropes, they were so very weak: there were the captain and seven others, but such poor, miserable creatures sure never were seen, had it been a week longer they must all have died. When I came to examine the captain and the people, they told me, that they had not any provisions for upwards of three months before they saw me; they had eaten their dog, their cats, and all their shoes, and, in short, everything that was eatable on board. On the 10th of January they all agreed to cast lots for their lives, which accordingly they did; the shortest lot was to die, the next shortest to be the executioner. The lot fell upon Anthony Gallatia, a Spanish gentleman, a passenger; they shot him through the head, which they cut off and threw overboard; they then took out his bowels and ate them, and afterwards ate all the remaining parts of his body, which lasted but a very short time. The captain told me they were for casting lots a second time, but it happened very luckily that he bethought himself of a pair of breeches, which he had lined with leather; he soon found them, took out the lining, and cut off, for each man's share, a piece of about an inch and a half square, for the day's allowance; that with the grass that grew upon the deck was all the support they had for about twenty days before I met with them: the grass was in some places four or five inches high. The captain brought on board the remaining part of the leather lining, which I have got, and a piece of the same that was in the allowance of one man for the day. No words in my power to express, are sufficient to describe the truly deplorable and wretched condition these poor unfortunate sufferers were in when I met with them."

A similar famine was endured by the crew of the Spanish ship *Asia*. During Lord Anson's voyage round the world, the Spaniards fitted out a squadron of ships (to traverse the views and enterprises of the English vessels), one of which, the admiral's ship, named the *Asia*, of sixty-six guns, when off Cape Horn, was reduced to such infinite distress, that after every kind of sustenance had failed, the sailors gave four dollars a piece for every rat that could be caught; and some little time previous to this, a sailor, who died on board, had his death concealed by his brother, who, during that time, lay in the same hammock with the corpse, only to receive the dead man's allowance of provisions. In this shocking situation, they were alarmed (if their horrors were capable of augmentation) by the discovery of a conspiracy among the marines, which was to massacre the officers and the crew of the ship, that they might satisfy their hunger by eating their bodies. But their designs were discovered, by means of one of the conspirators and three of the ring-

leaders were put to death. At length, by the complicated misfortunes of sickness, fatigue, and hunger, which could not be alleviated until too late, the greatest part of the ship's company died a lingering and painful death; so that, when the ship arrived at the River de la Plata, out of nearly seven hundred men, only about fifty were remaining alive, and scarcely able to crawl for want of nourishment.

PERILS OF THE WHALE FISHERY.

WHAT is the time requisite for capturing a whale? In answer to this question, Mr. Scoresby states, that he has seen a whale despatched in fifteen minutes, and others alive, after severe treatment, at the end of fifty hours. Much depends on the conduct of the animal itself—much on the activity of the whaler—and much, also, on the nature of the situation and weather. He states, that the average time does not exceed an hour. As bearing on this point, and exhibiting the surprising vigour of the mysticetus whale, we shall here introduce anecdotes related by Mr. Scoresby. In 1817, the Royal Bounty, of Leith, fell in with whales at a distance from land and ice, there being at the same time a brisk breeze and clear weather. The boats were manned and sent in pursuit. After a chase of five hours, one of the boats struck a whale about four, A. M. The captain followed in the ship, and though for a time he lost sight of them, yet he again descried a boat at eight, A. M., with a signal displayed of being fast. Some time after he observed another boat approach the fish, a second harpoon struck, and a new signal displayed. As, however, the fish drew the two boats away with considerable speed, it was mid-day before any assistance could reach them. Two more harpoons were then struck; but such was the vigour of the whale, that, though it constantly dragged through the water from four to six boats, together with the length of nearly a thousand feet of line to each, yet it pursued its course nearly as fast as a boat could row; and such was the terror it manifested on the approach of its enemies, that whenever a boat passed beyond its tail it invariably dived.

All endeavours, therefore, to lance it were in vain. The crews of the loose boats, being unable to keep pace with the fish, moored themselves to the fast boats, and for some hours afterwards all hands were constrained to sit idle, waiting for some relaxation in the speed of the whale. Its general course had been to windward, but its changing enabled the ship, which had previously been at a great distance, to join the boats at eight, P. M.

The vessel took one of the fast lines on board, with the view of retarding its progress. The sails were lowered and furling, but after supporting the ship for a few minutes, head to wind, the harpoon lost its hold. The whale immediately set off to windward with increased speed, and for three hours the ship could not again approach it. Another line was then taken on board, but immediately broke. A fifth harpoon had previously been struck, but its line was speedily cut. Various schemes for arresting the speed of the fish were then resorted to, which occupied close attention for nearly twelve hours; but its velocity was still such that the master, who had himself proceeded to the attack, was unable to approach suffi-

ciently near to strike a harpoon. After a long chase, however, he succeeded in getting hold of one of the fast lines, and attached another line to it. The fish then fortunately turned towards the ship.

At four, P. M., thirty six hours after it was struck, the ship again joined the boats, when, by a successful manœuvre, they secured two of the fast lines on board. The wind was blowing a moderately brisk breeze, and the sails were lowered; but notwithstanding the resistance a ship thus situated must necessarily have offered, she was towed by the fish directly to windward, with a velocity of two knots during an hour, and then, though the whale must have been greatly exhausted it beat the water with its fins and tail in so tremendous a way, that the sea around was in a continual foam, and the most hardy of the sailors scarcely dared to approach it. At length, about eight P. M., after forty hours of almost incessant exertion, this formidable enemy was slain.

A large whale became the subject of a general chase on the 23rd of June. Being myself in the first boat which approached the fish, I struck my harpoon at arm's length, by which we fortunately evaded a blow which appeared to be aimed at the boat. Another boat then advanced, and another harpoon was struck, but not with the same result; for the stroke was immediately returned by a tremendous blow from the fish's tail. The boat was sunk by the shock, and at the same time whirled round with such velocity, that the boat-steerer was precipitated into the water on the side next to the fish, and carried down to a considerable depth by its tail. After a minute or so, he arose to the surface, and was taken up along with his companions into another boat. Some boats of the Aimwell, on the 26th of May, being in pursuit of whales, harpooned one. When struck, this individual only dived for a moment, and then rose again beneath the boat, struck it in the most vicious manner with its tail and fins, stove, upset it, and then disappeared.

The crew, seven in number, got on the bottom of the boat; but the unequal action of the lines, which remained entangled with the boat, rolled it over occasionally, and thus plunged the crew repeatedly into the sea. Four of them, after each immersion, recovered themselves and clung to it; but the other three were drowned before assistance could arrive. The four men being rescued, the attack on the whale was continued, and two more harpoons were struck. But the whale irritated instead of being enervated by its wounds, recommenced its furious attack. The sea was in foams; its tail and fins were in awful play; and, in a short time, harpoon after harpoon drew out, and the fish escaped.

AN INCIDENT AT SEA.

By the Author of "THE KUZILBASH."

AMONG the common occurrences of life, there are few, perhaps, more calculated to interest and animate the mind of a spectator, than the sight of a numerous fleet of gallant vessels, leaving port to proceed upon a distant voyage. But, exclusive of the more elevated feelings which are naturally called forth by reflecting on the spirit and intelligence which are embarked in these noble machines, to bear the name, the riches, and the power of Britain, to the uttermost parts of the globe, the scene

teems with objects of more than ordinary interest. The shore is all astir with hurry and bustle; crowds are seen running from different quarters, all to the same point; groups, equipped for their voyages, throng to the quays or beach, attended by their relatives and friends, who proffer or receive those words of encouragement or comfort, which the party with the strongest nerves never fails to pour into the dull ear of grief. Then may be heard the cheerful, hearty well-wishings of those who, having often successfully braved the winds and waves, think but of the anticipated success and speedy return of those who are departing; the hurried, half-articulated blessings of others, whose fears are all awake to the perils of the mighty deep; the ill-suppressed sobs that choke the half-uttered farewells of some who feel that they are perhaps looking for the last time on those who are their hope, their joy, their everything in life. These, and all the various workings of grief, misery, and despair, may be viewed in close and striking contrast with indifference and recklessness, with gaiety and rejoicing, in full as many and as widely diversified forms. The keen observer may note the downcast, tearful eye—the quivering lip—the fervent, speechless grasp of hands that may never again be joined together; the quick, irregular step of those who have already uttered that heart-breaking word “adieu!” and who hurry from the spot, but still linger to gaze upon the bark which holds the objects of their care. He may trace all this amid the bustle of business and the eagerness of adventure, which characterize others of the multitude, or the idle curiosity or cold indifference which mark the common herd.

But the bustle at length decreases—the throng diminishes. The numerous boats, with their heads directed seaward, which dot the surface of the waters, proclaim that the partings are past—that the adventurers have departed. The groups, now more rarely scattered over the beach, quit it one after another; and retiring to the heights above, gaze on the receding skiffs. The movement, which has diminished on shore, may now be seen commencing and increasing among the stately ships that ride upon the blue waves, full in view of the spectators. The busy sound of human multitudes comes mellowed by distance across the waters; sheet after sheet of canvass drops, as it were by magic, from the long yards, and rises fluttering and spreading along the tall spars of each vessel, until, after a few rapid manœuvres among its complicated machinery, the sails gradually fill, and the ship, yielding gracefully to the influence of the breeze, begins to “walk the waters like a thing of life,” rejoicing, as it were, in her own element.

But, observe yon lofty vessel, anchored far outside of all the rest, conspicuous for the peculiar squareness of her yards, the tautness of her taper masts, and above all, for her long, low, dark hull, with its rakish-looking tier of red ports, scarcely rising above the water, like the half-disclosed teeth of a serpent. The blue-peter at the fore, and the loose fore-topsail, are of themselves sufficient to proclaim her the commodore of the convoy, and one of his Majesty's largest and most dashing frigates, even if her seaward station—protecting, as it were, her charge—the signal-flags, which every now and then ascend, like party-coloured birds, to the several points of her masts and rigging, with the sheets of flame and roar of thunder which occasionally issue from her red ports, should have failed to convey that information to her beholders.

At length the last lagging ship has passed to seaward, and the small boats are once more seen returning to the shore. Another combination of flags now appears on the masts of the frigate; another flash issues from her bow, and her topsails are loosed and sheeted home. In an instant more, down full courses and top-gallantsails, staysails are run up, and royals set; and, in the twinkling of an eye, the noble vessel, like an eagle in full swoop, is seen passing the ships of her convoy, as if they were at anchor; until, having shot far ahead of the foremost, she furls topsail and top-gallantsail, hauls her mainsail up, and, with her three topsails, foresail, jib, and spanker, holds on her course; while, with all the canvass they can pack, her more heavy-sailing charge can scarce keep way with their gallant commodore, but press onward in his wake, like a flock of wild-fowl following their sagacious leader.

A week had elapsed since the frigate and her convoy had left the port of L—; and the wind, which was fair as the heart of seaman could desire, had gradually increased from a pleasant breeze to a hard dry gale; but where is the sailor that does not love the breeze, rude though it be, which wafts him swiftly to his desired port? The weather was hazy; and the few fleecy clouds which drifted across the grey sky, were quickly lost in the dense atmosphere which shrouded every object near the horizon. During the day the ships of the convoy were scattered over a wide expanse of sea; and even the utmost exertions of the commodore were not always successful in collecting them around him within a moderate distance, at nightfall. A close order would not have been desirable, for such was the indistinctness of vision by night—not from the darkness, but the haze—that the best look-out might have proved insufficient to guard against accidents, and to keep the vessels of the fleet from running each other down, in the swiftness of their course, before they could be aware of each other's vicinity. In the evening, therefore, as one after another fell into their respective stations, on either quarter of the commodore, each vessel took in what canvass she could spare—all, except some wretched tubs, which embraced this opportunity of crowding every stitch, to make up the way they had lost during the day; while the stag-like frigate was often forced to furl every inch of canvass, that she might not run out of sight of her charge before the light of morning should render it safe for her to leave-to, and wait for their coming up.

The eighth evening had closed in, on board the frigate, with an increase of wind and sea. Every thing had been made snug for the night; the royal and top-gallant yards were sent on deck; the masts themselves were struck, and every sail was carefully handed; only the goosewings of the main-topsail were occasionally loosened between the squalls, to keep the ship free from the danger of being run foul of by any of the convoy. The log in these squalls would sometimes indicate a rate of eleven knots. The sea foamed and boiled around the ship's broad bows, in whirlpools of brilliant light, while she careered along under the influence of a heavy following sea which struck her alternately on each quarter; and she rolled until the points of her reduced masts described the greater portion of a semicircle in the heavens, and her long yard-arms returned dripping with brine. Every now and then the crest of a huge wave, taking advantage, as it were, of her recumbent position, would break upon her black side, and curling over her quarter or waist, wash the decks clean fore and aft, drenching every thing upon them; while the timbers and straining-tackles of the heavy guns creaked and groaned with the constant and irregular tension.

“A stiff bit of a breeze, this same, my boys,” said young Bill Thomas, as he entered the starboard berth,* about two bells after the first watch had been set, wringing the brine off his rough sea-cap, and handing it, along with his dripping watch-coat, to the boy of his mess. “I take it, some of the old ladies at home are praying for us about this time.”

“There's a fresh hand at the bellows too, just now, I think,” observed another of the youths of the berth; “and the old hooker feels it. How she does groan and crack again.”

“Aye and how she lurches too,” rejoined Thomas: “By the L—d, she took in a sea amid-ships just now, that put the whole main-deck adrift, and set her a-staggering like old Smithers, when he's a cloth or two in the wind. Egad, I have taken a bucketfull on board myself, I think.”

“Staggering, by the hokey, it set more a-staggering than you, or the old hooker either; it sent little Jem, there—confound him—into the lee scuppers, with a good can of stiff grog he was handing to me.”

“Ah, Dick, that was a loss, faith; but that don't signify. By Jove, I must qualify this sea-water a little—my stomach is like an ice-house. Here you son of a sea-cook, take these wet duds forward, and shake the water out of them, and get me a dry jacket; and here, my boy—hand us the stuff. Come, don't be so stingy: now, up with it—there, that's something like.

* The quarters of the midshipmen and master's mates on board a frigate as the cockpit is on board a line-of-battle ship.

"Here's to the ship that goes—the wind that blows," but *avast*, we've enough of that already."

"And pray, what lark might you have been after upon deck, Master Thomas?" interrogated young Ned Connolly, as he just finished a hand at cribbage, which he had been playing with some others of the mess, by the light of the purser's lantern, which hung in a corner of the berth. "Hav'n't you enough of bad weather in your own watch? I'll be bound you was after no good now."

"Why, faith, I can't say much for the good, Ned, and little more for the evil, if you will call fun out of its right name. I was talking a bit with old Gillows: he's down in the mouth, you know, about his wife; and I was spinning a yarn to rouse him up, and make him laugh; but it would'n't do: the fool still throws up his eyes like a duck in thunder, and heaves such savage sighs! I told him to belay, for we had more wind than we knew what to do with already; but he's too hard up just now for a joke; so I went and saw the log hove, and was just coming down, when that confounded sea struck her amid-ships and soused me all over."

"And you deserved it all, Bill, for bothering a poor fellow, who had so much to vex him as old Gillows has already. But what is she going?"

"Eleven knots, by the hokey, and under bare poles too—not a rag upon her: she does spin along, to be sure!"

"And how does the night look?"

"Devilish bad, I think—as black in the face as a blacksmith, —can't see a ship's length on either side for haze; and the sea rising, if any thing, and like a sheet of fiery foam all round. I saw old quarter-master Sims shoving his muzzle to windward, and grinning and snuffing as if he smelt mischief."

"Then mischief there will be, or my name's not Ned Connolly; but let us see—I'll take a turn on deck myself, and bring you my report." With these words he left the berth, to which he was never to return.

Ned Connolly was a jolly master's-mate, on board the good frigate *D—*, a prime favourite with all his messmates; a chief leader in all their amusements and innocent larks (for in no others would he be concerned); the very glass and mirror in which the "young gentlemen" * of the *D—* did fashion their deportment; in short, the life and soul of the starboard berth. No one could sing a song or tell a story like Ned Connolly; his wit and humour were inexhaustible; and for compounding a bowl of punch, or dressing a good hot devil, when the where-withal was to be had, or for helping to discuss such good things when made, there was not his equal in the ship.

But Ned Connolly had other and more valuable qualities. He was an excellent seaman; zealous and active in the discharge of his duty; of an open and generous disposition; a warm-hearted friend, and a dutiful, affectionate son. He was, too, "the only son of his mother, and she was a widow." That mother had daughters, it is true, but this was her only boy—"her beautiful, her brave!"—the image of his gallant father, who had fallen, fighting the battles of his country—under God, her only earthly support. Out of the wretched pittance of the pay to which he was entitled, he still contrived to save a trifle, to add to her comforts; and all his little prize-money was devoted to the same pious purpose. His exemplary conduct had not passed unobserved by his officers, and at this very time he was among the first on the admiral's private list, to be made lieutenant as soon as possible, after arriving at his destined station; this hope was his comfort—that step the height of his ambition for the time. Vain hopes—never was he doomed to reach that station. Never was his fond mother again to clasp her son to her heart.

The frigate was now at every lurch rolling her gun-wales under water, and dipping her main-yard-arms on either side; while ever and anon, in spite of the helmsman's skill, heavy seas would curl over her quarters, and sweep her decks. Such of the watch as were not actively employed, had sought what shelter they could find from the soaking spray; and sat passing the time with tough stories, or singing rude sea-songs: those

on the look-out alone were to be seen at their several stations, gazing heedfully through the murky air, to guard against mischance. The officer of the watch paced the privileged platform of the quarter-deck, or occasionally held on by the capstern, as a fresh fit of rolling rendered his walk too hazardous to be continued; now addressing a question or an order to the quarter-master, and now casting upwards a keen, inquisitive glance, to see that all was right over-head, or to scan the aspect of the heavens.

Suddenly the quarter-master, in the waist, was startled by a piercing shriek, which seemed to issue from the sea itself; it was almost immediately repeated, and the second time he could trace it with certainty to the mizen-chains.

"A-baft, there, aboy!" shouted he; "a man overboard, in the larboard mizen-chains there!" and he jumped aft himself, while the look-out on the larboard quarter ran also to the point indicated, from whence the cries still echoed, when the voice of the sufferer was not quenched by the wash of a fresh sea.

"Holloa, there, keep a good heart!"—"hold on, my lad, we'll soon have hold of you!"—"whereabouts are you?" exclaimed the men, as each strove to gain sight of the poor fellow: but it was too late—no human eye could see, no arm could reach him.

"Oh, God help me! I'm gone," uttered the voice, in half-choked accents, as the driving seas forced him from his hold.

"By heaven! it is Ned Connolly! Lay hold of him, ye lubbers!" exclaimed the lieutenant.

"A boat! Oh, God, a boat!" shrieked the despairing lad, as he whirled past them. They were his last words—the ship was bounding forward like a race-horse in full speed. Another faint and distant cry was borne upon the blast, and sounded like a knell upon the ear of the bystanders, and they heard no more.

"Starboard your helm! starboard! *D—*—n! hard! a-starboard, will ye," shouted the lieutenant. "Bring her to the wind—we're not to let the poor fellow go in this way. Holloa, there! main-top-men, bear a-hand; clear away that boat on the quarter."

By this time the ship, reeling till she fell almost on her beam ends, came up to the wind with a mighty sweep; but miles were traversed in her speed, from the spot where the poor fellow had lost his hold, before her way could be stopped. The rumour, too, had now spread below, and his companions, from the starboard berth, came hurrying upon deck. Gallant and daring, but rash as they were brave, they heeded not the danger—they looked not on the raging sea—they thought not of the space to be traversed against a furious wind—of the impossibility of seeing an object in the water, through darkness, mist, and spray: they only thought of saving their messmate—their friend; he whom they loved like a brother. They sprang into the boat, in a moment, to the number of five or six, and fierce demands for oars and rudder were mingled with cries of "cast loose, men; cast loose, and lower away—lower away, and be d—d to ye—the poor fellow will be gone." But the top-men and quarter-master, more experienced and less excited than the young midshipman, perceived the full peril, or rather the certainty of destruction, in an attempt which must be fruitless; and they were slowly and reluctantly obeying these repeated and peremptory orders, when the voice of the captain was heard, in tones of grave authority, rising above the tumult and roar of the winds.

"Keep all fast, men—keep all fast there, I say: what—are ye mad? Would ye wantonly add to this night's loss? What boat could live a moment in that sea? What hands could pull her to windward a single fathom, if she floated? Secure the boat, men, and return to your station. Lieutenant G., said he, addressing the officer of the watch, as soon as the men had left the quarter-deck, "this attempt should not have been permitted; I reckoned upon you, as an officer of trust and experience. On duty, sir, feeling should never overpower the judgment; and who, in the exercise of his judgment, would have committed the lives of men to the mercy of such a sea? Young men, the motives of your thoughtless conduct excuse you from my censure; but let the peril you have so narrowly escaped be a lesson for the future; learn to distinguish between the resolute courage which befits a man, and the blind fool-hardihood

* The midshipmen are usually termed "the young gentlemen," on board a man-of-war.

which fruitlessly exposes the lives of others with our own: if ye seek to become officers, this is a point of the first importance. No one of you can regret the fate of young Connolly more than I do, but the hand of God was plainly in the matter; and were ye to strive against His might? Return to your duties or your berths. Mr. G. get the ship before the wind again, and keep your regular course."

The frigate once more pursued her rapid way; and on the morrow, poor Connolly's sea-chest, and his little property, were brought up, according to custom, to be examined and inventoried; as is frequently the case on such occasions, an auction was made of such articles of common use as were not likely to be valued by his mother and sisters, the produce of which was held for their behoof. At this sale, each of his messmates purchased some little memorial of their unfortunate comrade, without paying much attention to the price they gave; for they knew well how much it would be needed, and yet how poorly the whole amount, were it ten times as great, could compensate for the loss so irreparable. Their good-will did not stop here: a collection was set on foot, to which every one contributed his mite; and the officers of the ship, desirous of testifying their regard for the deceased, added each what he could spare, for the benefit of the bereaved widow.

Many a glance was directed at the vacant seat of poor Connolly, as the young men assembled at the usual hour at their scanty meals—their customary mirth was clouded; and much, and most sincere regret, was expressed for the loss of so true-hearted a messmate. But the next day his seat was occupied by some other member of the mess; allusions to their lost friend were less frequent; other events occurred, and afforded fresh topics of conversation; and in less than a week, the name of Connolly ceased to be mentioned: he had passed as it seems from their memories, as he had from their presence—like a bubble on the current of human life, which dances gaily and sparkles for a while, then bursts; and is seen no more.

EXTRACT FROM THE LOG-BOOK OF THE BRIG FRANCES,

COMMANDED BY JACOB DRUMMOND, FROM ST. JAGO DE LA
CURA TO PHILADELPHIA.

JULY 31, 1821, Cape Antonio bearing N. about six miles distant; at four, P.M., saw a small sail standing from under the land. At six, P.M., she was sweeping toward us, apparently full of men; judging her to be a piratical vessel, kept away W.S.W., and made all sail to escape. At dark, the chase gaining fast upon us, was nearly astern, and commenced firing. We continued our course until the shot fell thick around us. At four, P.M., hove-to; when she immediately hailed, and ordered our boat on board, which was sent with three men, who were detained on board, and the boat returned full of armed people, who immediately jumped on deck, armed with blunderbusses, cutlasses, and pistols, took possession of the brig, and drove all hands below, cutting and maiming every one within their reach.

They then proceeded to put the brig about, and put in for the land; in doing which, the mate and one man were called up from below to assist in working her, they standing over them with cutlasses, and uttering the most horrid imprecations. Two men armed now went down into the cabin, where Captain Drummond and a passenger were confined, and presenting pistols to their breasts, demanded an immediate delivery of all their money, watches, and apparel on board, on pain of immediate death; and accompanied the threat with severe strokes, and a menace that, in the event of anything being found concealed, a general massacre should take place.

Under this impression and well convinced, from the desperate appearance of the men, that it would be carried into immediate execution; added to which, we overheard their intention of running the brig on shore; we deemed it expedient, for the safety of our lives, and the preservation of the vessel and cargo, to deliver up everything demanded, consisting of four trunks and one chest, containing wearing apparel, &c. to the value of one thousand dollars; cash in dol-

lars, doubloons, and guineas, value of eight hundred dollars; four valuable gold and silver watches, with chains, seals, &c. value of five hundred dollars; also a writing-desk and its contents, a spy-glass, double-barrelled gun, three pistols, a sword, all the clothing, bed and bedding, one complete set of colours, stock of wines, cabin furniture, and cooking utensils, leaving us nothing but the clothes on our back.

This vessel appeared to be a large open boat, black, with two white streaks, two spritsails, squaresail, and jib, the tack of the jib coming down to the stem; the foresail much larger than the mainsail, much resembling a large Havannah passage-boat, and full of men, apparently of all nations, but of the most ferocious and diabolical class. She was full of goods, doubtless plundered from other vessels, as they acknowledged having overhauled a vessel the day before. At eleven P.M., after stripping us to the skin in search of more money, left us, and made for the land in a state of considerable intoxication, with a threat of again returning to massacre every soul, and this we considered highly probable. We immediately took possession of the brig again, tacked, and stood off—saw them no more.

PUNISHMENT ON BOARD OF A MAN-OF-WAR.

WITH a sound that made the flesh of many a stout heart creep, the first lash of nine simultaneous strokes fell on the topman's back, whizzing through the strong breeze that filled the sails of the frigate, and urged her dashing on her course; but beyond the sighing of the night wind through the straining rigging, and the mournful plashing of the water thrown off by her bows, not another sound seemed to be produced by this wanton exhibition of torture. For the stoicism with which it was borne, the sufferer might almost have been deemed some flesh-coloured piece of marble, saving that as the arm of the scourger was raised to repeat the blow there gradually stole over the seaman's honest shoulders the blue livid lines streaked with blood, where the kindred colours of the lantern light fell strongly terrible and bright. "One!" said the master-at-arms, in a deep-bell-like tone, well fitted to knell forth the number of those unjust stripes. No other voice was heard. The seamen seemed to gaze on the unusual spectacle with awe, and the officers with a mixture of surprise, concern, anger, and impotence. But other human sound was there none. "Whiz!" flew the second lash, and a second number of similar lines were scored on the back of the unfortunate fellow, intersecting at every angle and curve those already so direfully written there. "Two!" said the master-at-arms—a third, a fourth, a fifth, a sixth fell—and so on, till the dozen was complete, and the blood slowly trickled down Herbert's back from points more severely wounded than the rest, stood congealed by the cold air in others, which had more escaped the repeated cutting of the last; still not a sound escaped him. He could not even have been noticed to breathe, much less sigh; nor was Indian chief ever more motionless under the tomahawk of a fellow-savage. It was as if his indomitable soul disdained to give the slightest proof that the unjust infliction could at all reach the mind, however it might disport its wantonness on the enslaved body. As soon as the twelfth lash was complete, the master-at-arms moved a step towards the captain, and touching his hat, reported, "One dozen, sir?" "Step forward another boatswain's mate," was the captain's reply. The man who had just given the last dozen resigned his position to a brother executioner. The arm of the successor was already raised to begin the second dozen, when the captain again demanded, "Will you tell me now, sir, who threw that marling-spike out of your top?" "I would if I could, sir," replied Herbert, in a coarse husky voice. "Do your duty, boatswain's mate," said the captain, cutting off by this order any further explanation in this matter. Another dozen followed, and again the same question was put with the same reply. A fresh boatswain's mate, and another dozen was inflicted. Still, though barely able to articulate the denial, Herbert still protested his utter ignorance of the whole affair. After thus receiving these four dozen lashes, he was cast off, and allowed to retire below upon the doctor's hand.

LOSS OF THE FRANCIS AND CHARLOTTE.

Of all the perils of the great deep recorded in these pages, there are perhaps few of such striking interest, or in which the lives of several hundreds of our fellow-creatures were so long in imminent peril, as in the shipwreck of a division of the 78th regiment, on their return from Java, in 1816.

This division was doomed to encounter a more than ordinary share of the perils of the deep. It first embarked on board the Princess Charlotte, and sailed from Samarang Roads for Calcutta on the 18th of September, 1816; but the following day, at three, p.m., that vessel struck on a sunken rock, and carried away her rudder. The boats on being hoisted out, were found so leaky as to be useless, and a raft was formed to hold the troops, in the expectation of her beating to pieces in

the course of the night; but, luckily, before it became necessary to commit themselves to it, the vessel swung off the rock, and was with great difficulty carried into Batavia Roads on the second day after she grounded. On being inspected there she was found to have suffered too much damage to proceed on her voyage, and the troops were therefore removed to the Francis and Charlotte, a vessel of seven hundred tons, commanded by Captain Acres. Some time afterwards, when the Princess Charlotte was undergoing repair at Calcutta, a piece of rock, about half a ton weight, was found to have lodged near her keel, during the time she was ashore; and yet in this state had she, subsequently to this disaster, been again employed to carry troops from Java to Bengal, and had encountered two gales of wind off the Sand Heads.

Had this piece of rock fallen out, which it is next to a miracle

LOSS OF THE SHIP FRANCIS AND CHARLOTTE, CAPTAIN ACRES, NOVEMBER 5, 1816.

it did not, she must have instantly have foundered with all on board. To such frail chances have the lives of our gallant soldiers been too often entrusted.

This ill-fated division, however, a second time set sail for Calcutta on the 29th of September, and enjoyed a pleasant and prosperous voyage till the 5th of November, when, about half-past two in the morning, a drummer of the regiment came from the fore-castle and reported to the officer on watch that he saw the rocks a-head. The vessel was then going before a moderate breeze at the rate of four or five knots an hour. The alarm was immediately given, and she was put about; but while in stays the current carried her rapidly towards the rocks, and she struck on a sunken reef.

At this time there were upwards of five hundred and forty

souls on board, and the boats were scarcely sufficient to hold a fifth part of that number. It soon became evident from the way in which the vessel was striking, that she was not likely to keep together long; and the water having already made rapid progress in her hold, there was obviously no chance of her ever floating again. As yet they were uncertain on what part of the coast she had struck; but when morning dawned the island of Preparis was recognised on the larboard quarter, distant from twelve or thirteen miles; and they found that she had struck on one of the sunken reefs which surround it, and render it so much dreaded by navigators in those seas.

As soon as the land was descried, it became obvious that the only chance of safety rested in the boats being able to

carry off the troops by successive detachments from the wreck; but this of course depended on the weather continuing moderate, and the vessel not going to pieces in the meantime—a prospect by no means likely to be realised. However, though death in all probability awaited those who were obliged to remain, no selfish feeling was animated by the soldiers to secure their own safety at the expense of the more helpless portion of the community. The sick men, with the women and children, were first put into the long boat and cutter, along with as many of the soldiers as she could carry, under the care of Captain McQueen and Mr. Brown, the assistant-surgeon. It was at first no easy matter to get the women to trust themselves to the boats; and it was fortunate that in this emergency the lady of the commanding officer, Mrs. McPherson, possessed sufficient fortitude to set the example by going first into the

boat, on which the rest gained confidence and followed her. In the hurry of starting very few oars could be found, and neither the masts nor sails of the boat could be got out of the hold. At five o'clock, a.m., these two boats set off for the island; the jolly-boat had been stove against the side of the ship, and went down, so that the gig was the only one remaining with those on board the vessel.

As the ship beat very violently, and the sea instantly broke through her ports, and over her upper deck, the foremast, with all sail set, was cut away, and fell over the starboard bow, carrying with it the maintop-mast and mizen-top-gallantmast. When the advance of day lighted up the horrors of their situation, the scene appeared terrific, beyond description. Nothing was visible but breakers and rocks around them in every direction, lashed by a rapid foaming current, which swept every-

thing before it. About fifty yards from the stern, a small rock jutting above the water, appeared the only spot capable of affording temporary relief, in case of the vessel going to pieces before the boats could return, an event which her frail state hourly rendered more probable. With a view of establishing a communication between this rock and the vessel, and thereby placing a portion of the men in greater security, the gig was sent with a rope, which was made fast to the rock, and bound round the mizenmast.

By this time, to their great disappointment and distress, they could see that the boats which had left them, instead of nearing the island, were drifting to leeward, the crews being exhausted with pulling against the strong current which was setting from the shore. The gig was accordingly despatched after the long-

boat, with a sail which had been procured for her out of the hold, and by the aid of which they could observe her at length nearing to the island. During the absence of the gig, some of the men were employed in making a raft from such spars and yards as could be procured, and others in saving bags of rice and biscuit out of the gun-room, so long as the state of the vessel admitted of their exertions. About one hundred men were removed from the vessel to the rock; but as it would hold no more at high water, it occurred to them, that if the vessel went to pieces before the boats could return, many more might be saved by tying rafts to the rock; and as, from the strength of the current, it was found absolutely impracticable to work the one they had prepared, it was made fast there, and connected with the vessel by several strong ropes: and another

raft was also commenced with the same view on the larboard side.

After the gig returned, the long-boat and cutter, which they had previously seen nearing the island, were suddenly lost sight of, and they became much alarmed lest the boats had been lost in the surf when attempting to land. As their sole hopes of rescue rested on their return, the anxiety of their situation can be easier conceived than expressed. To remove the suspense under which they were all suffering, Captain Acres determined to go on shore in the gig, and Major M'Pherson, at the earnest entreaty of the rest, accompanied him. At sunset they left, taking with them about fifteen men, and the remainder were left, in all about three hundred souls, in a vessel of which every timber was giving evident symptoms of breaking up, and rendering it barely possible that, in the absence of rough seas or boisterous weather, they would see the morrow's dawn.

As night set in, the dreariness of their situation was enough to quail the hearts even of the boldest, still the soldiers in general behaved well. A few there were, no doubt, who, in the vain hope of drowning care, and hiding from themselves the horrors of their impending fate, sought refuge in intoxication, of which the means readily presented themselves between decks; and two or three of them in this state proved disobedient and disorderly, conceiving that the approach of death levelled all ranks and distinctions; but the general mass of the soldiers exhibited the most praiseworthy conduct, and, unappalled by the boiling surge which every moment threatened to engulf them in its eddies, continued in their labours of preparing another raft, and saving as much of the provisions as possible from the wreck. The Lascars for several hours had been of no use whatever. They had stowed themselves away in the forecabin, and were busy plundering and drinking.

As the tide rose the men on the rock could not keep their footing, and the waves breaking over it, swept several of them into eternity. Small pieces of rope were therefore sent to them with directions to fasten themselves to the rock, and after that precaution accidents became less frequent. Lest the vessel should go to pieces in the night, they became anxious to get back the raft from the rock, in order that it might take off as many as possible; but in endeavouring to haul it up against the current, which was running at the rate of five or six knots an hour, two of the ropes broke, and the attempt had to be abandoned, as there was but one left to connect it with the vessel.

When the second raft was completed, another attempt was made to haul up the other alongside of it; but it was found impracticable, after the attempt was persevered in for a couple of hours, during which the sea was beating constantly over the party employed; and when the ship rolled on her starboard side she raised the raft on which they were nearly out of the water, and as she rolled over on the other side, buried them in the waves. This working speedily loosened the spars, and all hands were therefore set to work to lash them together, and endeavour to make the raft firm.

There cannot be a more wretched situation imagined than during their exertions on this raft, buffeted by the waves, which broke over them in huge masses at every alternate roll of the vessel, bruised by the boxes, trunks, &c., which were constantly washing out of the port-holes, and obliged to exert themselves to secure and keep together the only frail support they had to trust to, though their footing was so insecure that every moment they were in danger of being swept into the current, or dashed to pieces against the side of the vessel. During this period of eventful exertion, when one by one their fellow-sufferers were swept off by the merciless ocean, the cool and determined demeanour of some was strikingly contrasted with the noisy clamour of others; and in general those who were the most profligate in their habits, were now the loudest in their prayers and lamentations. One of the subalterns on the raft, who was by no means noted on former occasions, either for the fervour of his belief or the ardency of his worship, was so zealous in his supplications to the Almighty for relief, on this occasion, as to induce a smile, even amid the awful nature of the scene around them.

At high water the ship was striking tremendously, owing to

the great body of water in her hold, and as the only hope of keeping her together, it was determined to cut away her mainmast; but the Lascar carpenter could not be found, and they were afraid, unless properly done, it might, in falling, carry away the poop, which was the only place they had to shelter them. However, to keep the vessel from breaking up, they were necessitated to run every risk, and having cut the weather mizen-rigging, a few blows of the hatchet sent the mast over the starboard side, luckily without injuring the vessel. The ship was much easier in consequence, and wearied with their exertions, some of them endeavoured to snatch a little sleep in the mizen larboard chains. While in this situation, they fortunately overheard one of the men who had been left to take care of the raft, propose to his comrades to cut it loose and make the best of their way from the wreck, as it would only hold a few of them with safety when the ship broke up. The idea of being thus abandoned to their fate was quite sufficient to banish all thought of sleep, even fatigued as they were; and to prevent the possibility of so treacherous a proposition being adopted, all the men on the raft were immediately ordered on board.

Often in their anxiety did they cast their eyes towards the island, for it required little reflection to convince them that unless their comrades had been successful in effecting a landing, all their exertions would only tend to prolong a miserable existence for a day or two, but could in no way secure their ultimate safety; and from the boats having been lost sight of so long, and there being no indications of any of them having reached the island, the most gloomy forebodings began to be entertained, both for the fate of those in the boats, and their own. At length, to their inexpressible joy, about four o'clock in the morning, a light was seen on shore, and soon after another, at a little distance from the first, which they conjectured was a signal of their safe arrival, and a lantern was hung out by those on board at the mainmast-head in answer to it.

As day broke they perceived the long-boat under sail, with the cutter in tow, coming towards the vessel, and at length began to entertain some hope of being rescued from the perilous situation in which they had passed the last twenty-seven hours, expecting every moment to be their last. The two boats, however could only carry one hundred and ten of their number, so that the rest had to be left to encounter similar dangers for another night or two; their only safety depending on the continuance of moderate weather, and the ship holding together till then. Still, with this manifest danger before them, was the disembarking party arranged, without any selfish anxiety being manifested by one portion of the soldiers to secure their safety at the expense of the others.

It may easily be supposed, notwithstanding their chance of escaping the perils of the deep, the situation of the party in the boats, was by no means enviable. They had not a drop of fresh water, and, after being exhausted by the exertions of the preceeding night, had to pull against a strong current, a distance of upwards of fifteen miles, exposed to the burning rays of a tropical sun. It was after a day of great fatigue and suffering they landed on the *Preparis* at about four, p.m., where they received the welcome intelligence that fresh water had been found in abundance about a mile from the landing-place, with which they quenched their thirst in copious libations, and ate some shell-fish which had been prepared for them by the ladies, knowing they would be acceptable after the privations they had experienced on the wreck.

About two hours after they landed, a ship was seen to the eastward, standing direct for the island. Every face beamed with joy, for they now thought their relief certain. As darkness set in they collected wood, made a large fire on the top of the highest hill, and hoisted the union-jack there to attract her notice. They laid down to sleep on the sandy beach, near high-water mark, confident that at daylight she would send her boats to rescue them. But when morning broke she was nowhere to be seen, and must have stood away from the island during the night, notwithstanding their signal.

In the course of the night the gig had landed, with an officer and fourteen men from the wreck, who luckily succeeded in bringing off with them some bags of rice and biscuit, which were of great service in their present famished condition.

The island of the Preparis, on which they had been cast, lies about sixty miles from the mouth of the Rangoon river, its length is about three miles, and circumference about eight; it is covered with wood and jungle, and on the south side is a sheet of fresh water, wherein they shot some ducks. At first they were very tame, but after experiencing a few shots, they became wild. They also shot a few sand-larks on the beach, and saw many baboons, but as they were very large and formidable, and they had but one fowling-piece, and no shot large enough to make any impression on them, they judged it prudent to let them alone. A variety of shell-fish was found by searching among the rocks; the smaller kinds were palatable, but the larger were so exceedingly coarse and oily as to sicken many of them, who had been for some time without food.

Seeing that there was no prospect of relief otherwise, it was determined, so soon as all the men were taken from the wreck, and a proper set of sails could be made, to send the long-boat to Rangoon, the nearest port for assistance. Meantime the commanding officer assembled the men, encouraged them to hope for the best, to be obedient to orders, and never in any situation forget their duty and their discipline. Their supply of provisions was inspected, and they were put on the wretched allowance of half-a-biscuit, and half-an-ounce of beef or pork a-day. All shared alike, however, and they endeavoured to eke out this small pittance of food by wandering about in search of such shell-fish, and other resources, as the island afforded.

The weather still continued very moderate, and the long-boat succeeded in bringing off another party of the men from the wreck. Luckily the island lay directly in the track of vessels bound to Rangoon, or coming from the eastward to Calcutta, and they all continued tolerably cheerful in the expectation of another ship again heaving in sight, for which they kept a sharp look-out; nor were they disappointed. About eight, a.m., on the following morning, a vessel was seen to the south-east, which proved to be the Po, from Madras. The captain observing their signal, sent his boat to the wreck, and carried twenty-seven men on board. She continued off the island all day, but in the evening they lost sight of her; and afterwards found that in a second attempt to bring off the sufferers from the wreck, the jolly-boat was swamped from the rush they made into it, and two men perished. The first mate, who commanded her, escaped, but was left on the wreck. This accident and the dread of being surprised by rough weather on so dangerous a lee-shore, probably induced the captain to abandon the attempt of rescuing any more of the party, and to make the best of his way to the nearest port for further assistance. In the morning, to their great disappointment, the vessel had disappeared.

On the following day, however, a ship was seen in the offing, which was supposed to be the same, and they sent off the second-mate in the cutter, who found her to be, not the Po, as they supposed, but the Prince Blucher, bound from China to Bengal. On learning their situation, the captain immediately stood in towards the scene of the shipwreck, and employed his boats in taking the remainder of the men from the rock, on which they had now been exposed for five days, in a situation the most perilous which can well be conceived, the waves at high water, almost covering the narrow ledge on which they were crowded; and even in that moderate weather, scarce a tide passed without some of them being swept off by the current. Had the weather been boisterous, or the tide have risen higher than usual, their destruction must have been certain.

During all this period they had not a morsel of food, but the raw flesh of a cow which drifted to them from the wreck; and most of them, from the accident having taken place in the middle of the night, were exposed almost in a state of nudity to the burning rays of the sun. They were all much cut and bruised by being frequently dashed against the rocks; but from the fortunate precaution adopted of tying themselves to the rock whenever that was practicable, only nine men were washed away out of 110 who landed on it: the rest, in a state of great exhaustion, were carried on board the Blucher, where they received every kindness and attention which humanity could dictate from Captain Wetherall, who commanded her.

Towards evening they lost sight of the ship, and from the

conduct of the two other captains, they began to be uneasy lest this one also should desert them. As night came on they collected large quantities of wood, and kept a fire burning as a signal. Though the Blucher had been obliged, in order to keep off the island, to come to anchor hull down, yet she fired guns during the night in answer to their signals, and cheered them with the assurance that, though unseen, she was still near them. As soon as morning dawned she sent two boats on shore with supplies of mutton, biscuit, beer, and wine; a most acceptable present, it may be supposed, to persons in their famished state. Major M'Pherson and Doctor Brown, with the officers' ladies and children, pulled off in the Blucher's boat at eleven, a.m., and those who were left behind amused themselves by cooking and eating the provisions sent them from the ship; and the amplitude of their meal, which was prolonged for several hours, with the joyous anticipation of getting away from the island next day, put them all in high spirits; every dismal thought fled, and their previous sufferings and privations were forgotten.

Notwithstanding their deliverance was to all appearance so near, many of the poor fellows were doomed yet to encounter a long period of anxiety and privation. By five, p.m., the Blucher's boats had returned. The long-boat was then loaded with sick men, women, and children; and in order that the other boats might make more rapid progress, it was arranged that the officers and men intended for embarkation should walk to the extreme point of the island, which was nearest the vessel, and be taken in there. On their arrival, however, they had the mortification to find that the ship, in consequence of having dragged her anchor and being very nearly on the rocks, had been obliged to get under weigh, and stand out from the shore. It was, consequently, not judged expedient to attempt the embarkation that night, and the boats returned to the landing-place without taking them on board.

At six o'clock the next morning they saw the ship at a great distance to the eastward. The men, women, and children were again embarked in the boats, and in about an hour they started, three of the boats towing the long-boat; but as the sea was running very high, they made but little progress, particularly those in the cutter, which contained fourteen men, eight women, and nine children. Many of the men were sickly, and could not pull, and they had but five oars. By eleven o'clock they had weathered the eastern extremity of the island, when all the other boats were able to make sail towards the ship, which made frequent tacks towards them, and picked them up; but there being no sail in the cutter, a strong wind and tide against them, and the men exhausted with pulling, they speedily drifted to leeward among the rocks and shoals, where the ship could not approach them, and their situation every hour became more critical, as the wind was rising rapidly, and the sea breaking over them so as to require constant baling to keep the boat afloat; and there was not a drop of fresh water on board to refresh the men, who were panting and worn out by excessive exertion. The women and children, too, were in a most melancholy state; nor was it possible to keep them from drinking the salt water, though it tended rather to increase than allay their sufferings. About six o'clock they had neared the ship a little, and all of them being very much exhausted by their exertions, they hoisted a handkerchief as a signal of distress, in the hope she would send boats to their assistance; but as it unfortunately happened, she was at this time dragging her anchors, and in danger of running on the rocks, so that instead of affording assistance, they had the disappointment of seeing her set sail, and stand away from the shore. When she had got clear of this danger, she shove-to, and as night was fast setting in, and a heavy sea rising, they mustered all their energies to reach her; but when they had considerably lessened the distance, she was again under the necessity of making sail, and standing away to avoid the rocks.

Darkness had now set in, and she was soon lost to their sight; the gale was increasing, and the sea beating over them with redoubled fury. Their signal fire was now seen burning on the island, and several of the men, in despair of reaching the vessel, and of the boat living in such a sea, proposed steering for the island in the direction of the fire; but this was

firmly opposed, as there was but one safe landing-place in the island, it was by no means likely they would be able to make it in the dark; and even if they did, it was only accessible when the weather was fine and the water smooth; consequently, in such a gale as then blew, it could not be attempted but with the certainty of destruction. It was therefore determined to follow the ship and keep to sea, as their only chance of safety: and fortunate it was that they did so; for about eight o'clock the Blucher hoisted a light and sent a boat to their assistance, which soon brought them alongside, and they all got safe on board, dreadfully exhausted, as may be supposed, with pulling a heavy cutter from seven in the morning, without a drop of water or a morsel of food. All their sufferings were now, however, forgot; the humanity and attention shown by Captain Wetherall soon revived them; and the women, who, an hour or two before, had been most furious in their desire to return to the island, at all hazards, were now loud in their expressions of gratitude that their original course had so fortunately been maintained.

Their dangers were not, however, as yet at an end. There were still about ninety Europeans and sixty Lascars on the island, whom Captain Wetherall was determined, if possible, to bring off with him; but towards midnight the gale increased, one of the long-boats astern was stove, and had to be cut adrift, and one of the Lascars perished in her. Towards morning the weather moderated, and the vessel again stood for the island; but at eight, p.m., another heavy gale came on, accompanied with thunder and lightning. The ship was carried rapidly towards the breakers, and it was only by a press of sail they were enabled to clear them. In doing so, however, several of the sails were blown into ribands; the foremast sprung, another of the boats lost, and they were obliged to cut away one of their bower-anchors, which broke loose from the lashing. The vessel was very light, and as the sea broke very heavily over her, apprehensions were entertained that she would go over on her beam ends. The Lascar seamen became terrified and were of no earthly use; and but for the exertions of the soldiers on board she would have been inevitably lost. Owing to the damaged state of the vessel, it was not judged safe to remain any longer off so dangerous a lee-shore in such tempestuous weather, and they were therefore reluctantly compelled to give up the prospect of rescuing their comrades in misfortune, and steer directly for Bengal.

They arrived there in nine days, and immediately forwarded a despatch to government announcing their shipwreck, the sufferings they had undergone, and the necessity for immediate relief to those that had been left behind. Lord Hastings ordered two Company's cruisers to proceed instantly to the island to bring them off, and with proper supplies of provisions and clothing for their use. They were found, on the thirty-sixth day after the shipwreck, in a very weak state. Latterly there had been no shell-fish procurable, and the men were too much exhausted to search for them at low water with their usual diligence. They were desponding, too, of all hopes of relief, from the apprehension that the Blucher had perished during the gale, and that they would be left to die of starvation. Several of them were in so exhausted a state that they expired shortly after being taken on board the cruisers, and the sudden change of diet from privation to plenty, proved fatal to many others.

From the quantity of yards, masts, boxes, &c., which were found on the sea shore at various parts of the island, it would appear that many ships must have been wrecked upon its dangerous coast, though probably none of the sufferers had the same good fortune in escaping from it. In order to provide a supply of food for any who might encounter a similar misfortune, the cruisers left a few goats, geese, and fowls on the island, which may probably increase, and afford the means of sustenance to future sufferers. In remembrance of the event a pole was stuck up at the landing-place, on which a bottle was fastened, containing a piece of parchment with the names of the sufferers interred on the island, the date of the shipwreck, and final departure. The total number on board the Francis and Charlotte at the time of her shipwreck was as follows:—

Officers, non-commissioned officers, soldiers, camp-followers, &c.	390
Lascars, forming the crew	110
Soldiers' wives, children, &c.	40

540

The precise number who perished cannot be accurately stated from memory; but considering their perilous situation, it was much fewer than might have been expected. The vessel luckily did not go to pieces till the sixth day after the wreck, when the men were all removed; and had not the weather been remarkably moderate, during that period, she could not have held together many hours, in which case the greater number of those on board must inevitably have perished.

The following is a list of the officers and their families who were shipwrecked on this occasion; the large proportion since deceased of men who were then in the vigour of life, shows what rapid inroads the mortality of twenty years makes in a small circle of military friends, when exposed to the dangers of their profession:—Major M'Pherson, commanding; Captain M'Queen (since dead); Lieut. M'Rae; Lieut. M'Leod, (since dead); Lieut. Brodie (since dead); Lieut. M'Kenzie (since dead); Lieut. M'Queen (since dead); Lieut. M'Crummen; Lieut. Smith (since dead); Assistant-Surgeon Brown (since dead); Mrs. M'Pherson; Mrs. Brown and child (since dead); Mrs. M'Queen and two children (since dead). This last-mentioned lady, though rescued in this instance, was ultimately doomed to a watery grave, having been lost, with her two children, in the Wemyss smack on the coast of Norfolk.

This island of Preparis had nearly occasioned the shipwreck of another corps. In 1826 the East India Company's ship Ernaad, having on board the 45th Foot, and a number of camp-followers, amounting in all to nearly 800 souls, struck on one of the outer shoals of that island, when on her way from Rangoon to Martaban, and it was only by the greatest exertions that she was got off, and succeeded in reaching the neighbouring port of Amherst Town. Strange to say, Lieut. Smith, one of those who had been formerly wrecked on the island in the 78th, was then on board as Lieutenant in the 45th, and thus narrowly escaped being cast away a second time on the same island in that remote quarter of the globe.

MIKE O'BUCKLEY.

"I be one of those sailors who think 'tis no lie,
That for every Wherefore of life there's a Why;
That, be fortune's strange weather a calm or a squall,
Our berth's, good or bad, are chalk'd out for us all."

WHY as for the matter o'that, what tar is there who doubts it? Every man must have his station, whether he is rigged in the gingerbread gear of lord high admiral, and has his thousands per hang-em, or only obliged to make a shift with a single purser's shirt. What does it signify as long as he does his duty to his country, and stretches out a fin to relieve a friend in distress? We can't all be kings and commodores, and so what's the use of grumbling? 'cause as Jack says—

"If you're a signior, and I'm a signior—
Then who's to pull the boat ashore?"

Who, indeed? Now, d'ye see, I have been in a little boat all my life, going to leeward like smoke; for fortune, like a pig with its starn greased, always slipped through my fingers, and adversity took me slap aback, stand upon what tack I would. But don't think I mean to snivel or whine about it—Lord love you, no; where's the good on't? I might bawl a long while before anybody would jam my mouth with a twopenny loaf, and pipe my eye for a month without getting a bit of 'baccy for my pipe. No, no; old Ben arn't the boy to up-helm at every squall, when, by keeping his luff, he can weather it, as our parson used to tell us—(I dearly loved to hear him overhaul a power of lingo about the Hit-tights and the Cannon-its, and the story of Johnny swallowing the whale)—he used to say, says he, "My men, let Truth take the helm, Prudence trim your sails, and, with the compass of Honesty, enlightened by the lamp of Religion, hard indeed must be that gale, and horribly

dark that night, in which Providence ceases to protect you. Your hulls may be wrecked, and your timbers shattered; but the immortal passenger within must and shall be safely landed in the haven of eternal rest." To be sure, some people float along the stream of time without encountering a single peril. They find it all plain sailing, and never have any occasion to take in a single reef, while others are constantly struggling against the squalls of distress, scarcely able to keep to windward off a lee-shore. This often puzzles me, seeing, d'ye mind me, that the same gracious Providence watches for all. But, mayhap, it's right enough, for I ain't much skilled in the matter; and as for preaching about it, why that's out of my latitude altogether.

Some are born great, others achieve greatness; and I remember one poor fellow of an Irishman who wanted to be great in a hurry. I belonged to the guard-ship at that time lying at Plymouth, and the impressed men and volunteers used to be sent aboard for the regulating captains to dispose of. Well, one day when the new hands were all mustered aft, and the boatswain's mate stood ready with his clasp-knife to dock off the tails of the long-togged coats, and convert 'em into jackets. Among the rest was Mr. Michael O'Buckley, a tall, well-made raw Emeralder, who had never seen a ship before in his life, but had been tempted to enter the service through the promises of a man belonging to the gang.

"Well, my lad," says one of the captains to a respectably dressed young man in deep mourning, and whose face exhibited strong marks of sorrow, occasionally reddened by hectic glows of indignation, "well my lad, and where did you come from?"

"From the grave of a parent," replied the man, in a sunken, hollow tone.

"What profession are you?" inquired the officer.

"A seaman," rejoined the man again.

"Ha, ha!" cried another captain, as well known for his inhumanity as his aversion to the smell of powder and the whistling of shot—"ha, ha! I see how it is: so you've been cruising ashore, and got pressed, eh, and now want, with that methodical countenance, to make us believe you're a saint? But it won't do, young man, it won't do. There, you may walk forward: I'll see that you are taken care of, depend upon it."

"Stop, stop a minute, my lord," said the third regulating officer, a venerable old gentleman, whose very look displayed the benevolence of his heart. "Come here, my man, how came you in this awkward situation?"

The taunts and harshness of the second captain had shed a deadly paleness upon the poor fellow's features; but when the voice of the third sounded on his ears, he felt it thrill to his heart, and the tears started to his eyes.

"Ha! how came you in limbo, eh! my friend? Captain—must hear all about it, and a plausible tale we shall have, no doubt. For my part, I don't see any necessity for being bored with long stories, only to excite compassion; and I hope you will not be long, Captain—, before you have done with him. Only see the number of wretches we have to examine."

"As for exciting compassion, my lord," rejoined the hoary veteran, with a look of contempt, "I am afraid every attempt upon you would be ineffectual."

"What!" cried his lordship, starting up in a passion, and strutting like a turkey-cock; "what, sir, do you apply that to me? Zounds, sir—"

"Come, come, lord—," said the third captain, with the utmost composure, "sit down, sit down: I'm not to be frightened at my time of life by the explosion of a pinch of gun-powder. Fuzzle and smoke have no effect upon me. Attend to your duty now; we can talk of this afterwards."

"There, don't be alarmed, my man," turning to the seaman; "no one shall injure you here while I have power to prevent it. You say you came from the grave of a parent: explain what you mean."

He bowed, and with tremulous agitation began:—"My history, sir, is brief; but 'tis full of anguish."

"Prithce, my good fellow, don't get sentimental," said his lordship, affectedly, and taking a pinch of snuff: "let's have the history by all means, as it will please Captain—; but pray leave out the anguish."

"Would to heaven I could, sir!" replied the man in a voice which made his lordship start; "then, however high my gratitude might be raised by kindness, my spirit wouldn't be wounded by cruelty and oppression particularly."

Here he stopped, for his lordship jumped up, and aimed a blow at the seaman's head.

During the above conversation it was curious to watch the looks of Michael O'Buckley, who seemed intent upon all that passed, yet apparently without being able to comprehend what it was about. Every now and then he would mutter to himself, "Och hone! och hone!" but when he saw the speaking trumpet upraised and the blow about falling, he sprang forward, caught his lordship round the middle, and lifting him over his head, roared out, "Och, by the powers, if you spake a word, I'll brake every bone in your skin, jewel. Blood and oouns, ye coward, d'ye call that fair play to strike a man in the face behind his back?"

The confusion and astonishment which prevailed on this sudden operation of Mike's it is impossible to describe; while his lordship, pale and trembling, elevated eight feet from the deck, dreaded a total annihilation.

"Do spake a word, jewel, and its down I have you. Arrah bad luck to your mother's son."

The marines who were exercising on the poop now came down, and advanced towards the Irishman.

"Arrah stand back: och have at your heart, darling. If you advance, I'll spit him on your skewers."

"Come, come, my man," said the third captain, "do you know what you are about?"

"Fait, and I do, ould gentleman," replied Mike, "by token"—here he stopped short, with a look expressive of abhorrence and disgust, and setting his lordship down on the deck, he gave him a kick behind, exclaiming, "Get out o'dat, ye devil's-skin, do." Away slunk the crest-fallen hero, and Mike was in an instant surrounded and secured.

As soon as his lordship saw that the enemy was boarded, he lunged out his sword, and swore a deadly oath that he'd sacrifice him on the spot.

"Och! botheration, let me get at him!" cried Mike, throwing aside, like children, the marines who held him; "tunder and turf, let me come at him." The tall athletic figure of the Irishman, free from bondage, decided the matter at once.

Away flew his lordship down the companion-hatch, making but one step all the way, and running into the first cabin he came near. The door was instantly locked; but observing his boat alongside, he jumped out at the port, and shoved off for his own ship.

Order being again restored, Mike quietly submitted himself, and stood among the rest, between two marines with drawn bayonets.

"Now, young man," said the venerable old captain, (who no doubt enjoyed the frolic) let me hear what you have to say."

"I scarcely know, sir, what to say: no doubt my fate is sealed. My father, sir, was a master in the navy, and I was the only child of a doting mother;—both are now at rest for ever. My father lost his life on the 1st of June, in the—, seventy-four, under Lord Howe; and my poor mother was reduced to comparative poverty. At a proper age I went to sea in the merchant service, and in a few years was made mate. I now experienced happiness, for my surviving parent, with her pension and my wages, was enabled once more to enjoy not only the necessities, but a few of the luxuries of life. Every prospect was cheerful, and I looked forward with the hope of obtaining a command, until one evening, having landed to pay her a visit, I had just reached the door, when a party of men from the—"

At this moment a lieutenant, who had come on board for orders, looked him full in the face, and then, turning to the regulating captains, exclaimed, "Gentlemen, this man is a deserter from the—frigate; his name is George Davis."

"'Tis alas, too true," said George, mournfully, and hanging down his head; when, seeming suddenly to recollect himself, he uttered, with firmness, "No, sir, I'm no deserter, and I shall leave my cause to the generosity and justice of my country; yes, to that country my father died to defend. When I was

torn from my mother's door, without even the gloomy satisfaction of bidding her farewell, 'twas against my inclination and I was forced on board the frigate, which sailed immediately for the West Indies; nor was it till my arrival there that an opportunity occurred for informing her of my situation. After three years absence we returned, and the first intelligence I heard was that she who gave me being lay at the point of death. I had fondly pictured to myself the pleasure of meeting her in health and with the prize money I had gained, endeavouring to smooth her passage to the tomb. She was dying, and I hastily entreated leave of absence to bid her a final adieu, and perform sad last offices of a son. 'Twas denied me—I had been pressed, and might run away. In vain I urged, implored, and protested; 'twas, indeed, in vain. Goaded almost to madness, in a desperate moment I went overboard, and swam ashore. At midnight, I entered my mother's solitary dwelling, closed her dying eyes, and followed her to the grave. Returning back from this mournful scene, the gang took hold of me, and I am here."

This affecting little narrative operated very powerfully upon all who heard it, but more particularly on Mike, who kept mumbling to himself, "Och, by the powers, and d'ye hear that now? Faith, and its enough to crack the heart of a stone, agra!" while every muscle of his face underwent twenty different changes.

"You may stand on one side," said the senior regulating captain; "and now bring the prisoner aft."

"Pray, sir, where did you come from?" inquired he, as soon as Mike stood before him.

"Is it meself that you mane?" replied Mike. "Why, then, your honour, never a word of a lie will I tell you; its from dare little Ireland I com'd; for a spalpeen tould me, if I entered, I'd be sure to be made a captain directly, or at laste a leftenant of sea-dragoons. Bad luck to his phiz-hoggyme, for I suppose there's no captainship for me."

"Are you aware of what you have committed?"

"Och! don't mention it. I'd be proud to do the same any day."

The captain smiled. "What is your name?"

"Is it me name that you'r wanting? fait, den, you'll be troubled to get it: Michael O'Buckley don't tell his name to everybody: and sorrow the word you'll get from me, jewel."

"I don't know what your opinion may be, my man; but I can only tell that you are in a fair way to be hanged."

"Hanged!" said Mike, with the utmost unconcern: "Och! botheration, and I've no call to it, any how; but if your honour's worship says so, why I suppose it's as good as done."

Finding they could make nothing of him, poor Mike was sent down to the aft cock-pit, to be put in irons. As soon as the bilboes were prepared, he was requested to sit down, which was immediately complied with.

"Now," says the master at arms, "put your legs into this shackle."

"Divil a shackle you'll make of it, honey," replied Mike; "and if you arn't off, out o'dat, fait, but I'll make you skip like a billy goat."

However, Pat was overpowered by numbers, and his legs secured. In the heat of his passion, Lord——would have written for a court martial; but knowing there was a something which he did not wish to be publicly exposed, he contented himself with witnessing the punishment of poor Mike at the gangway. Four dozen was his portion which he took without flinching, merely turning round now and then with an ejaculation of "Och! by the powers!"

George Davis, for the same reason was not tried; and, by the intercession of the humane old captain, was drafted into his own ship where he continued, universally esteemed, till the attack upon Copenhagen in 1807, when he died the death of his father, in the service of his country.

PROVING THE QUALITY.

AFTER Jack had dined in the cabin, he followed his messmates, Jolliffe and Gascoigne, down into the midshipman's berth.

"I say, Easy," observed Gascoigne, "you are a devilish free

and easy sort of a fellow, to tell the captain that you considered yourself as great a man as he was."

"I beg your pardon," replied Jack, "I did not argue individually; but generally, upon the principles of the rights of man."

"Well," replied Gascoigne, "it's the first time I ever heard a middy do such a bold thing; take care your rights of man don't get you into the wrong box—there's no arguing on board of a man-of-war. The captain took it amazingly easy, but you'd better not broach that subject too often."

"Gascoigne gives you very good advice, Mr. Easy," observed Jolliffe; "allowing that your ideas are correct, which it appears to me they are not, or at least impossible to be acted upon, there is such a thing as prudence, and however much this question may be canvassed on shore, in his Majesty's service it is not only dangerous in itself, but will be very prejudicial to you."

"Man is a free agent," replied Easy.

"I'll be shot, if a midshipman is," replied Gascoigne, laughing, "and that you'll soon find."

"And yet it was with the expectation of finding that equality that I was induced to come to sea."

"On the first of April, I presume," replied Gascoigne. "But are you really serious?"

Hereupon Jack entered into a long argument, to which Jolliffe, and Gascoigne listened without interruption, and Mesty with admiration—at the end of it Gascoigne laughed heartily, and Jolliffe sighed.

"From whence did you learn all this?" inquired Jolliffe.

"From my father, who is a great philosopher, and has constantly upheld these opinions."

"And did your father wish you to go to sea?"

"No, he was opposed to it," replied Jack; "but of course he could not combat my rights and free will."

"Mr. Easy, as a friend," replied Jolliffe, "I request that you would as much as possible keep your opinions to yourself; I shall have an opportunity of talking to you on the subject, and will then explain to you my reasons."

As soon as Mr. Jolliffe had ceased, down came Mr. Vigers and O'Conner, who had heard the news of Jack's heresy.

"You do not know Mr. Vigers and Mr. O'Conner," said Jolliffe to Easy.

Jack, who was the essence of politeness, rose and bowed, at which the others took their seats, without returning the salutation. Vigers had, from what he had heard and now seen of Easy, thought that he had somebody else to play upon, and without ceremony he commenced.

"So, my chap, you are come on board to raise a mutiny here with your equality?—you came off scot free at the captain's table; but it won't do, I can tell you, even in the midshipman's berth: some must knock under, and you are one of them."

"If sir," replied Easy, "you mean by knock under, that I must submit, I can assure you that you are mistaken. Upon the same principle that I would never play the tyrant to those weaker than myself, so will I resent any oppression if attempted."

"Damme, but he's a regular sea lawyer already: however my boy, we'll soon put your mettle to the proof."

"Am I then to infer that I am not on an equality with my messmates?" replied Jack, looking at Jolliffe. The latter was about to answer him, but Vigers interrupted.

"Yes, you are on an equality as far as this, that you have an equal right to the berth, if you are not knocked out of it for insolence to your masters; that you have an equal share to pay for the things purchased for the mess, and an equal right to have your share, provided you are not told to hold your tongue. The fact is, you have an equal right with every one else, to do as you can, get what you can, and say what you can, always provided that you can do it; for here the weakest goes to the wall, and that is midshipman's berth equality. Now, do you understand all that; or will you wait for a practical illustration?"

"I am then to infer that the equality here is as much destroyed as it even will be among savages, where the strong oppress the weak, and the only law is club law—in fact, much the same as it is at a public or large school on shore?"

"I suspect you are right for once. You were at a public school: how did they treat you there?"

"As you propose treating people here, 'the weakest went to the wall.'"

"Well, then, a nod's as good as a wink to a blind horse: that's all, my hearty," said Vigors.

But the hands being turned up, "Shorten sail" put an end to the altercation for the present.

As our hero had not yet received orders to go to his duty, he remained below, with Mesty.

"By de powers, Massa Easy, but I lub you with my hole soul," said Mesty. "By Jasus, you really tark fine, Massa Easy; dat Mr. Vigor—neber care for him, wouldn't you lik him—and sure you would," continued the black, feeling the muscle of Jack's arm. "By de soul of my fader, I'd bet my week's allowance on you any how. Nebber be 'fraid, Massa Easy."

"I ain not afraid," replied Jack: "I've thrashed bigger fellows than he;" and Jack's assertion was true. Mr. Bonnycastle never interfered in a fair fight, and took no notice of black eyes, provided the lessons were well said. Jack had fought and fought again, until he was a very good bruiser, and although not so tall as Vigors, he was much better built for fighting. A knowing Westminster boy would have bet his half-crown upon Jack, had he seen him and his anticipated adversary.

The constant battles which Jack was obliged to fight at school, had been brought forward by Jack against his father's arguments in favour of equality, but they had been overruled by Mr. Easy's pointing out that the combats of boys had nothing to do with the rights of man.

As soon as the watch was called, Vigors, O'Conner, Gossett, and Gascoigne, came down into the berth. Vigors, who was the strongest in the berth, except Jolliffe, had successively had his superiority acknowledged, and, when on deck, he had talked of Easy's impertinence, and his intention of bringing him to his senses. The others, therefore, came down to see the fun.

"Well, Mr. Easy," observed Vigors, as he came into the berth, "you take after your name, at all events; I suppose you intend to eat the king's provision, and do nothing."

Jack's mettle was already up.

"You will oblige me, sir, by minding your own business," replied Jack.

"You impudent blackguard, if you say another word, I'll give you a good thrashing, and knock some of your equality out of you."

"Indeed," replied Jack, who almost fancied himself back at Bonnycastle's; "we'll try that."

Whereupon Jack very coolly divested himself of his upper garments, neckerchief, and shirt, much to the surprise of Mr. Vigors, who little contemplated such a proof of decision and confidence, and still more to the delight of the other midshipmen, who would have forfeited a week's allowance to see Vigors well thrashed. Vigors, however, knew that he had gone too far to retreat: he there prepared for action; and, when ready, the whole party went out into the steerage to settle the business.

Vigors had gained his assumed authority more by bullying than fighting; others had submitted to him without a sufficient trial; Jack, on the contrary, had won his way up in school by hard and scientific combat: the result, therefore, may easily be imagined. In less than a quarter of an hour Vigors, beaten dead, with his eyes closed, and three teeth out, gave in; while Jack, after a basin of water, looked as fresh as ever, with the exception of a few trifling scratches.

The news of this victory was soon through the ship; and before Jack had resumed his clothes, it had been told confidentially by Sawbridge to the captain.

"So soon?" said Captain Wilson, laughing; "I expected that a midshipman's berth would do wonders; but I did not expect this yet awhile. This victory is the first severe blow to Mr. Easy's equality, and will be more valuable than twenty defeats. Let him now go to his duty: he will soon find his level."—*Midshipman Easy.*

A CRISIS AT SEA.

ALL hands were called; the main-topsail was hauled up not without much difficulty, and then Captain Truck reluctantly gave the order to haul down the mizen-staysail, to put the helm hard up, and to help the ship round with the yards. This is at all times a critical change, for the vessel is exposed to the ravages of any sea, larger than common, that may happen to strike her as she lies with her broadside to its force. To accomplish it, therefore, Captain Truck went up a few ratlins in the fore-rigging (he was too nice a calculator to offer even a surface as small as his own body to the wind in the after-shrouds), whence he looked out to windward for a lull, and a moment when the ocean had fewer billows than common of the larger and more dangerous kinds. At the desired instant he signed with his hand, and the wheel was shifted from hard-down to hard-up. This is always a breathless moment in a ship, for, as none can foresee the result, it resembles the entrance of an hostile battery. A dozen men may be swept away in an instant, or the ship herself driven over on her side. At first the movement of the ship was sluggish, and such as ill, suited the eagerness of the crew. Then her pitching ceased and she settled into the enormous trough bodily, or the whole fabric sunk, as it were, never to rise again. So low did she fall, that the foresail gave a tremendous flap; one that shook the hull and spars from stem to stern. As she rose on the next surge, happily its foaming crest slid beneath her, and the tall masts rolled heavily to windward. Recovering her equilibrium, the ship started through the brine, and as the succeeding roller came on, she was urging a-head fast. Still the sea struck her abeam, forcing her bodily to leeward, and heaving the lower yard-arms into the ocean. Tuns of water fell on her decks, with the dull sound of the clod on the coffin. At this grand moment, old Jack Truck, who was standing in the rigging, dripping with the spray that had washed over him, with a naked head, and his grey hair glistening, shouted like a Sten-tor, "Haul in your fore-braces, boys! away with the yard like a fiddle-stick!" Every nerve was strained; the unwilling yards, pressed upon by an almost irresistible column of air, yielded slowly, and as the sail met the gale more perpendicularly, or at right angles to its surface, it dragged the vast hull through the sea with a power equal to that of a steam-engine. Ere another sea could follow, the Montauk was glancing through the ocean at a furious rate; and though offering her quarter to the billows, their force was now so much diminished by her own velocity, as to deprive them of their principal danger.—*Homeward Bound.*

THE MARINER.

Soft glides the sea,
Bounding and free
Dance the blue waves as they rush on the shore;
O'er vale and height
Gleams the moon bright,
Gaily the mariner plies the swift oar,
Singing awhile—"Ere the sun lights the main,
Land of my birth, I shall reach thee again!"

Night wears away,
Sullen and grey
Frowns the dark sky o'er the wild, restless deep;
Lightning's red flash,
Thunder's loud crash,
Now quiver and peal. Go, mariner, weep!
Haply, I deem, though the sun lights the main,
Its rays to thy land shall not guide thee again!

Tempests are fled,
Morning hath shed
Light from her eye, and balm from her breath;
All things rejoice—
Where is the voice
Of the mariner now?—It is silent in death!
The vessel went down ere the sun lit the main,
And he trod not the land of his fathers again!

LOSS OF THE MEXICO, CAPTAIN WINSLOW,

OCTOBER 30, 1836.

The barque *Mexico*, Captain Winslow, sailed from Liverpool on the 26th October, 1836, having on board a crew consisting of twelve men, and one hundred and four passengers. She made for the Highland Lights on Saturday night, at eleven o'clock, and on Sunday morning was off the Bar, with thirty or more square-rigged vessels, all having signals flying for pilots, but not a pilot was there in sight.

The *Mexico* continued standing off and on the Hook till midnight; and at dark she, and the whole fleet of ships, displayed lanterns from their yards for pilots: still no pilots came. At midnight the wind increased to a violent gale from the north-west; the barque was no longer able to hold

to windward, and was blown off at the distance of some fifty miles. At this time six of the crew were badly frost-bitten; and the captain, mate, and two seamen, were all that were left to work the ship.

On Monday morning, standing in shore, they made the southern end of the Woodlands, when she was wore round, and head to the north, under a close-reefed main-topstail reefed foresail, two-reefed trysails, and fore-staysail.

At four o'clock the next morning the mate took a cast of the lead, and reported that he had fifteen fathoms water. Supposing from the soundings, as laid down in the chart, that with this depth of water he could still stand on two hours longer with safety, the captain gave orders to that effect; and was the more induced to do it, as the crew were in so disabled a state, and the weather so intensely cold, that it

LOSS OF THE MEXICO, CAPTAIN WINSLOW, OCTOBER 30, 1836.

was impossible for any one to remain on deck longer than half-an-hour at a time. This event has shown that the information given by the mate, as to the depth of water, was incorrect; his error probably arose from the lead-line being frozen stiff at the time it was cast.

Fifteen minutes afterwards the ship struck the bottom, twenty-six miles east of Sandy Hook, at Hampstead Beach, and not more than a cable's length from the shore. For one hour and three-quarters she continued thumping heavily without making any water; the sea, however, breaking continually over her. Her rudder was now knocked off, and the captain ordered the mainmast to be cut away. The boats were then cleared, the long-boat hoisted out, and veered away under her bows with a stout hawser, for the purpose of

filling it with passengers, letting it drift within reach of the people who crowded the beach, then hauling her back again, and thus saving the unfortunate people on board; but this intention was frustrated by the parting of the hawser, which snapped like a thread, as soon as the boat was exposed to the heaving surf. The yawl was next got alongside, and stove to pieces almost instantly. At seven o'clock the ship bilged, and filled with water. Orders followed to cut away the foremast, and that every soul on board should come on deck. In inexpressible agony they thus remained until four o'clock in the afternoon, when a boat was launched from the beach, and succeeded in getting under the bowsprit of the wreck. The boat took off Captain Winslow and seven men, and succeeded in reaching the shore with them in safety. The attempt was

attended with such imminent danger that none could be induced to repeat it. And now the horrors of the scene was indescribable. Already had the sufferings of the unhappy beings been such as to surpass belief. From the moment of the disaster they had hung round the captain, covered in their blankets thick set with ice, imploring his assistance, and asking if hope was still left to them. When they perceived that no further help came from the land, their piercing shrieks were distinctly heard at a considerable distance, and continued through the night, until they one by one perished. The next morning the bodies of many of the unhappy creatures were seen lashed to different parts of the wreck, imbedded in ice. None, it is believed, were drowned, but all frozen to death.

Of the one hundred and four passengers, two-thirds were women and children.

An eye-witness thus describes the appalling scene after the wreck:—

"On reaching Hampstead I concluded to go somewhat off the road to look at the place where the ship was cast away. In half-an-hour we came to Lott's Tavern. Some four or five miles this side of the beach were the ship lay—and here in its barn had been deposited the bodies of the ill-fated passengers which had been thrown upon the shore. I went out to the barn. The doors were open; and such a scene as presented itself to my view, I certainly never could have contemplated. It was a dreadful—a frightful scene of horror.

"Forty or fifty bodies, of all ages and sexes, were lying promiscuously before me, over the floor, all frozen, and as solid as marble—and all, except a few, in the very dress in which they perished. Some with their hands clenched, as if for warmth; and almost every one with an arm crooked and bent, as it would be in clinging to the rigging.

"There were scattered about among the number four or five beautiful little girls, from six to sixteen years of age, their cheeks and lips as red as roses, with their calm blue eyes open and looking you in the face, as if they would speak.

"I could hardly realise that they were dead. I touched their cheeks, and they were frozen as hard as a solid rock, and not the least indentation could be made by my pressure of the hand. I could perceive a resemblance to each other, and supposed them to be the daughters of a passenger, named Pepper, who perished, together with his wife and family.

"On the arms of some were to be seen the impression of the rope which they had clung to—the mark of the twist deeply sunk into the flesh. I saw one poor negro sailor, a tall man, with his head thrown back, his lips parted, and his now sightless eyeballs turned upwards, and his arms crossed over his breast, as if imploring heaven for aid. This poor fellow evidently had been frozen while in the act of fervent prayer.

"One female had a rope tied to her leg, which had bound her to the rigging; and another little fellow had been crying, and thus frozen, with the muscles of the face just as we see children when crying. There was a brother and sister dashed upon the beach, locked in each other's arms; but they had been separated in the barn. All the men had their lips firmly compressed together, and with the most agonizing expression on their countenance I ever beheld.

"A little girl had raised herself on tiptoe, and thus was frozen just in that position. It was an awful sight, and such a picture of horror was before me that I became unconsciously fixed to the spot, and found myself trying to suppress my ordinary breathing, lest I should disturb the repose of those around me. I was aroused from the reverie by the entrance of a man, a coroner.

"As I was about to leave, my attention became directed to a girl, who I afterwards learned had come that morning from the city to search for her sister. She had sent for her to come over from England, and had received intelligence that she was in this ship. She came into the barn, and the second body she saw was that of her sister. She gave way to such a burst of impassioned grief and anguish that I could not behold her without sharing in her feelings. She threw herself upon the cold and icy face and neck of the lifeless body, and thus with her arms around her, remained wailing, moaning, and sobbing, till

I came away; and when some distance off, I could hear her calling her by name in the most frantic manner.

"So little time, it appears, had they to prepare for their fate, that I perceived a bunch of keys and a half eaten cake fall from the bosom of a girl whom the coroner was removing. The cake appeared as if part of it had just been bitten, and hastily thrust into her bosom, and round her neck was a ribbon, with a pair of scissors suspended.

"To observe the stout, rugged sailors, too, whose iron frames could endure so much hardship, here they lay—masses of ice. Such scenes show us, indeed, how powerless and feeble are all human efforts, when contending against the storms and tempests which sweep with resistless violence over the face of the deep. And yet the vessel was so near the shore, that the shrieks and moans of the poor creatures were heard through that bitter, dreadful night; till, towards morning, the last groan died away, and all was hushed in death, and the murmur of the raging billows was all the sound that then met the ear.

"After the storm, the wreck was approached, and here and there were seen columns, pillars of ice, which were formed on the frozen bodies, as the sea broke over them."

SHIPWRECK OF THE GENEROUS FRIENDS.

FROM THE ACCOUNT OF JOSEPH PINTO, SUPPOSED TO BE THE ONLY EUROPEAN BELONGING TO THE SHIP THAT WAS SAVED.

IN November, 1801, the Generous Friends sailed from Macao, steered S. W. by S. for two days, and about ten o'clock at night the ship struck on a reef among high breakers. Next morning it was observed that there was a high sand-bank at a small distance from the wreck, to which the crew waded at low water, leaving Captain Porter, who, with six Manilla sea-cunnies, remained on the wreck during the day and night succeeding the misfortune. In the night one of the sea-cunnies proposed to the other five to put Captain Porter to death, but they would not consent to it; and next morning the captain reached the sand-bank at the same time as the sanguinary sea-cunny; and though the former, who was acquainted with the circumstance, mentioned it to the officers, no steps were taken to bring the villain to punishment.

This sea-cunny afterwards went back to the wreck, and with the other five, who had provided themselves with arms, kept possession of it, and would not suffer any person to approach them. Previous to this, some articles of provision and wine had been taken from the wreck to the sand-bank, but no water had been procured. Upon digging in the most elevated part of the sand-bank, nothing was found but salt water. After remaining some days in this situation, destitute of water, the captain, his officers, and crew, prepared to force their way on board; and on perceiving this, the sea-cunnies put off on a raft they had already prepared alongside, with provisions, necessaries, and some treasure, which they had taken from the wreck.

About fourteen days from the time of the misfortune, two rafts having been prepared, Captain Porter, the passengers, officers, and a greater part of the ship's company left the bank, attended by the jolly-boat, which had been repaired; the long-boat having been staved, when the ship struck. Just at the time Captain Porter left the sand-bank, on which remained about forty of the crew, among whom was the narrator, Pinto, an Italian, a large Chinese boat was seen standing towards the wreck. The jolly-boat went nearly alongside, and returned towards the raft where Captain Porter was, when the two rafts and jolly-boat, with the chief officer on board the latter, steered away to the westward before the wind; the jolly-boat seemed to be about two miles ahead of the raft, when the people on the bank lost sight of them at sunset. About eight o'clock that night it set in to blow strong from the N. E., with dark weather and rain.

Soon after the Chinese boat arrived at the bank, several others came and loaded the boats with the cargo of the wreck, after which they burned the upper works to get the iron. When ready to leave the place, the greatest part of the boat's crew came on shore on the sand-bank, several of them being armed with cleavers, for breaking up wood, and others with

weapons. When they had examined and numbered the Lascars and Sepoys, they proposed to take five at a time to their boats; but the Sepoys appeared distrustful of their intentions, and refused to go with them in small numbers. Some of the latter being a little intoxicated with wine, of which a small quantity remained on the sand-bank, seized two of the small boats belonging to the Chinese, and hauled them on shore. Upon this all the Chinese left the bank, went on board their vessels, and made towards the wreck. The Sepoys followed them in the two boats they had seized, some of them having side arms, and others bludgeons. When they got alongside of the large boats, the Chinese rushed from the boats in numbers upon the Sepoys, and, binding them hand and foot, threw them into the water. In this affair about twelve Sepoys were either killed or drowned.

During the time the Chinese boats had been loading from the wreck, they had daily sent a scanty allowance of rice and water to the Lascars and Sepoys on the sand-bank, but after the affray with the Sepoys, they discontinued this practice. Having nothing left on the bank but a little wine, the latter were reduced to despair, and, as a last resource, constructed a small raft, on which about ten of them attempted to reach the Chinese boats. But the current setting strong to the southward, the raft was carried past the boats, and driven out to sea; and several of the people upon it were observed by those on the sand bank to be washed away before it was carried out of their sight.

The number of those left on the bank was now reduced to eighteen men, who were nearly perishing for want of water and provisions. The narrator and another attempted, at low water, to approach the Chinese boats, by wading on the reef towards the wreck, which they at length reached, almost exhausted with fatigue and hunger. From the wreck they beckoned to the people in the boats to anchor near it, and at last a small sampham was sent towards them. The narrator made signs, desiring to be taken on board the boats to obtain provisions and water. The Chinese in the sampham inquired by the same method, how many people remained on the sand bank, having observed the loss of the people on the raft the day before. The Italian counted on his fingers the number eighteen. The Chinese then sent boiled rice and water to them, and dividing the Lascars into six divisions, took three into each boat.

When in the boats, the narrator saw several of the bars of gold and dollars which the Chinese got from the wreck. He judged they must have remained about three months on the bank, but saw no appearance of any other wreck besides that of the Generous Friends, excepting a few pieces, excepting a few pieces of plank that had been long in the water, and were washed in small fragments upon the sand.

They at length left the bank, with a N.E. wind. In one day they reached three low islands, one of which was composed of sand and stones, the other two were covered with shrubs, and one of them contained good water. Here they remained about a month; the Chinese, in the day-time, employed themselves in fishing. Pinto observes, that the first boat which arrived at the wreck of the Generous Friends kept possession the whole time, and the other boats that loaded from the wreck were obliged to purchase that indulgence from the first, they remained complete masters during the whole of the time. These freebooters, it appears, have established rules to regulate their depredations on wrecks; the first boat on board having sole command, with the privilege of employing what boats they please to assist in securing the wreck of any vessel.

While at these islands, the boats' crews observed a junk sunk on a part of the reef they were surrounded by.

One of the Chinese spoke a little of the Malay language, and made the people belonging to the Generous Friends understand that the boats could not take them any farther, but that they must go away in small samphams, which were provided for that purpose. Accordingly, the narrator and eight Lascars were put into one, and seven Lascars into another, with water, provision, and a sail, and were assured that they would reach Hainan in one day. Being compelled to comply, they quitted the islands, and kept the boat right

before the wind, steering towards the place of the setting sun, and taking notice of the stars by night.

The wind continued easterly from the time they left the island till they arrived on the coast of Cochin-China which was nine days. They landed at a fort, where a mandarin was stationed, and were treated with hospitality. After remaining there some time, they were sent to Dunay, the capital of Cochin-China, in small boats, each having three men to navigate it. On this passage to the capital they were employed a month, steering close along shore in the day-time, and spending the night in some creek or bay, where they obtained such supplies of water and provision as they wanted. From Cochin-China the narrator got on board the Maria, a Portuguese ship, bound to Macao.

The person who gave this account had been several years in India, spoke English, and seemed an intelligent man. His narrative differed considerably from that given by two Lascars who were examined separately. These two Lascars were in the other sampham, and reached the coast of Cochin-China in eleven days, by chance, not knowing how to direct the vessel, but merely keeping right before the wind. The two Lascars being apparently very ignorant, much more dependence ought to be placed on the narrative of the European. The Lascars stated that they saw two wrecks, besides that of their own ship, whereas the European positively declared, that, excepting the sunk junk, no wreck whatever was seen but that of the Generous Friends.

NED DAVENPORT AND ANNA.

ONE of the best and sweetest hopes of a tar is, that, in every hour of danger and of difficulty, "the same gracious Providence watches for all." But there, I am't a going to give you a long rignmarole for a pro-log. No, no; I'll just tell you the story as I've heard it fifty times with my own ears on board the old "Marmaid," commanded by Captain Malcolm, for d'ye see Jem Gantline knew all about it, and many a midnight he's kept us awake by telling it.

It was one beautiful morning in June (says Jem), and the sun was just taking his look-out aloft, that Ned Davenport quitted his native village to become a lonely wanderer upon the wide world, determined to stifle recollection among the busy scenes of life, or amidst the tumult and wild roar of warfare. Yet, on passing through the churchyard, he stopped to shed one last tribute on the grave of his parents. He looked on the surrounding lands and spacious farm which once had been their property, and thought of the time when, overwhelmed with accumulated distress, they had descended to their long home in anguish and poverty. He turned from this to catch a distant view of the stately mansion which contained all that was dear and precious to him in existence; and a sweet girl she was too (Jem would say), for I remembers her, messmates, like a lovely flower blooming on the breast of spring. But, when poor Ned was left destitute; all intercourse was forbidden between them, and the hearts that had throbb'd together from infancy were cruelly torn from each other:—but I lie, messmates, I lie; nothing on earth can separate the hearts that truly love. Howsoever, they parted without the hope of meeting again on the shores of time. Oh, who can paint the sorrows of his soul as he lay prostrate on the grassy mound, and poured forth the anguish of his spirit? I cannot do it justice, messmates, for my scuppers overflow whenever I think of it. That name, that endearing name, he had first learned to lisp in early infancy, "My mother!" burst from his lips, and then he prayed to Heaven for mercy. Mercy was near,—a kindly voice, mild as the gentle breeze on the shores of the Mediterranean instilled the balm of consolation on his wounded mind, and directed him to look up to that wise unerring Being who feeds the young ravens when they cry. 'Twas the curate of the village, who had been passing the night by the humble pallet of a dying cottager, administering the last offices of humanity, and encouraging the departed spirit ere it took its flight to the realms of everlasting rest. He was returning to his little home when he heard the petition for mercy, and, as the servant of that Power to whom it was addressed, he soothed the sufferer's

anguish, calmed the inward tempest of his mind, and they parted—the curate to his modest mansion, and Ned—ay, Ned, to brave the dangers, to feel the contumely of that world to which he was a stranger.

The father of Anna had risen from comparative obscurity to wealth and honours: he was what they call a privy gownseller. I don't know what it is, but they tell me it was something near the king, and so he had no time to devote to his daughter, whose mother died in giving her birth; and the sweet girl grew like a mountain rose-bud, luxuriantly wild, till poor Ned's parents, feeling for her situation, loved and cherished her as their own; and thus was formed that deep, strong, deathless passion, which distance could not shake or time dissolve. I know what love is, messmates, for in my younger days I—but there it's over now, it's over—yet I love to think about it too. She heard of Edward's departure, and struggled with her agony; but the generous man who had softened the sorrows of the youth performed the same kind office for the sinking maid. Her principal gratification was to wander to the lone churchyard, and, sitting on the cold grave-stone near the resting-place of her early friends, she would recall the visions of her childhood, and commune with her own sad heart. Now, messmates,

you shall hear in what manner she kept her vows of truth and constancy; but, poor thing, she couldn't help it. It was one still calm evening that a gallant little 20-gun ship lay under easy sail in the middle of the Atlantic Ocean, to protect the commerce of our country from the attacks of the enemy. Five weeks had already passed on that enchanting station; many of you know it, messmates, no doubt, and our cruise (for I was in her) had been particularly fortunate in making captures and reprisals. The week after we were to report into port for stores and provisions. Well, d'ye see, the hands were turned up to skylark, and every soul hurried upon deck to enjoy the sport. The captain and officers assembled abaft, and shared among themselves in the amusement; but in all their athletic exercises, no one could be found fore and aft to equal the junior lieutenant. This young man had risen solely by merit to the quarter-deck; and his bravery in several actions had recommended him so powerfully to his commander, whose life he had once preserved at the imminent risk of his own, that he adopted him as his son, and obtained him a commission in his own name, for Captain Malcolm himself had come in at the hawse-holes, and had no relations that he knew of in the world. Young Malcolm was beloved, ay, almost idolized, by every man aboard. He was the smart seaman, the brave officer, and without departing from the strict line of duty, he conciliated the esteem and regard of all the men. His face, bronzed by a tropical sun, was seamed with honourable scars, that made him appear much older than he really was. His figure was remarkably neat and trim, firm-built and powerful, and he tried to copy his benefactor in every pursuit.

A match against time had just been made from the deck to the mast-head and down again, and the lieutenant was laying

his hand upon the truck, when, casting his eye round the horizon, he shouted "A sail, a sail, upon the lee beam!"

All was instantly hushed.

"Turn the hands up—make sail!" cried the captain. "Keep her away, boys! Square the after-yards! Stations, men, stations! Masthead there!"

"Sir!"

"Look out when she's right ahead!"

"Ay, ay, sir; starboard a little—there, steady, so, steady!"

In a few minutes every stitch of canvass that would draw a breath of wind was spread and trimmed. We had just light sufficient to make out that the stranger was a large ship, when darkness obscured all farther observation. The breeze freshened, and the officers crowded on the fore-castle to look out for the chase. Eight bells came, and we began to fear that we had missed the stranger.

The captain had just given directions to alter the course, when a marine sung out, "I've got her, sir, I've got her!"

"Got who?" inquired the lieutenant.

"Got her, sir; got the ship," replied the sodger.

"Where, where?" said the captain running aft.

"Here, sir! here, in the starboard waist."

"That's right, my lad, hold her fast," exclaimed a midshipman, while the sail was shortened and the ship hauled to the wind.

We were sufficiently close to discover that the stranger was a heavy frigate, and, as our night signals were unanswered, concluded she was an enemy.

"Give him a shot," cried the captain! it was instantly returned by a whole broadside that laid several of our best men lifeless on the deck, and the action commenced with daring bravery. Well, d'ye see, we kept at it for about two hours when the frigate's

fire began to slacken, and shortly after ceased.

"Sail trimmers to the weather braces," cried the captain. "Boarders on the starboard quarter! Stand by to heave all aback, and, Malcolm, be ready to lead the men."

All this was obeyed; but, just as we got with our yard-arms touching, the enemy poured in a tremendous fire, and Captain Malcolm, with his second lieutenant fell. It would be impossible to describe the sensations of horror which this event occasioned. The young officer ran and raised his generous friend. He was yet living, though the tide seemed ebbing fast; but his poor messmate was a corpse.

"Leave me, Malcolm; leave me, brave lad," faintly articulated the captain; and, pointing to the colours added, "'Tis the flag of England—do your duty. Take her and I die content."

At this moment one of the young midshipmen came to young Malcolm, and told him the first lieutenant talked of striking. Rage and indignation shook his frame. The captain had been carried below senseless, and the command devolved upon the senior officer—that officer, who was about to disgrace himself for ever. The first lieutenant was giving his directions to haul down the colours and the light, when Malcolm rushed aft. Here he found the boatswain standing by the ensign halliards, with his pistol cocked, swearing he would shoot the first man

that offered to touch them. The commanding officer drew his sword, and was in the act of making a thrust, when a shot very unceremoniously walked off with his head, and the sole charge now rested upon Malcolm, who fought the ship with heroic intrepidity, determined not to surrender till every hope was lost. The carpenter appeared, and reported that we were making so much water, that she could not hold out another half-hour. This was appalling news; yet, rousing all the energies of his mind, he called to the master to lay him aboard the frigate. In a few minutes the young officer, followed by his brave crew, were upon the enemy's deck, and the conflict became terrible. In vain we swept away our foes, others instantly supplied their places, and, though our numbers were fast diminishing, yet our hearts were unsubdued.

Twenty minutes had elapsed in hard fighting, when the master, carpenter, and surgeon, were seen on our own decks carrying in their arms our beloved commander—the ship was sinking. This sight operated like enchantment on the men, a wild shout of desperation resounded, and in a few minutes more the frigate was our own. Scarcely had Malcolm received the Dutch captain's sword (for she was a Dutch frigate, laden with specie for the Cape), scarcely had the three officers with their dying burden been assisted on board, than our gallant little bark went down.

In a few hours afterwards our brave captain breathed his last, and we bore up for England, where we anchored in Plymouth Sound, in about eight days' time. The young hero landed, and was ordered by the commander-in-chief to carry his own despatches to the metropolis; at the same time receiving letters of introduction to a nobleman in a high official station. On his arrival he drove immediately to the house and it happened that a large party of nobility were assembled to a sheave-o, as they call it. Now I tell you all this, messmates, for a fact; because, d'ye see, I was with him to take care of his colours and baggage, having sailed with him when he was a youngster, and first taught him his duty as a seaman; but no matter for that: his lordship left the company, and entered the room where Malcolm was waiting to receive him; but when their eyes met, the young officer staggered back upon a chair, and turned as pale as ashes. Recovering, however, he apologised for his behaviour, and attributed it to the effects of his unhealed wounds.

The Dutch captain's sword and the frigate's colours were displayed, and while the lieutenant took some refreshment, Lord N—— returned to the drawing-room and related the particulars. All were desirous to see the intrepid young tar immediately; but his lordship promised to introduce him the following day, as he had no doubt that Malcolm required rest. Among the party were several members of the cabinet—that's a strong box, I believe, messmates,—and every one of the gemmen belonging to it carries a gold key in his pocket, but I ain't sure; howsomever, next morning some of 'em got telling our good old king about it, and he expressed a wish to see the officer.

Malcolm of course was introduced, and appeared before his majesty with his right arm bound round with a black bandage, his left suspended in a sling, while his curly hair, hanging over his forehead, scarcely concealed the covering of a deep wound.

"Make, make, make him a captain," said old George; "shall be a captain, shall be a captain—he deserves it—good officer, brave officer—shall be a captain;" and Malcolm obtained a commission for post rank.

On the same evening he dined with his lordship, but on entering the room his embarrassment and agitation were excessive, as the ladies crowded round, and were almost ready to embrace him. Lord N—— led him first to his daughter, and Anna (for 'twas she, messmates, 'twas she) received him with all the natural warmth and goodness of her heart. I saw it all, for they would drag me up too. I never was so daunted in my life; for all the beautiful creatures said such kind things, I was ready to pipe my eye. I dare say I looked foolish enough, for I scratched my head, shucked up my trousers, and twirled my hat, till at last I dashed my quid into the fire, and offered to kiss 'em. My eyes, how they run! all but a sweet little cherub, who put her arms round my neck, and then—

there don't laugh, messmates, 'twas the sweetest buss I ever had in my life—and says she, "If the brave defenders of our country do not merit our gratitude, what does?"

To see Anna, and not love her, was impossible; and what's a sailor without a sweetheart, eh? Why he's like a ship without stays, and so Malcolm fell in love. When we were alone, he used to talk all manner of things, but I couldn't understand him. Anna's affections, however, were still fixed on him, whom she feared was lost to her for ever. 'Twas true, she felt pleased in the captain's company, for he was so widely different from the airy flutterers that continually buzzed in her ear; but love—oh no, she had sworn never to love but one.

On the following week after our arrival, his lordship proposed returning to his country seat, and we were invited to accompany him; but Malcolm candidly told him the state of his heart, and his lordship with equal candour, related the story of her early attachment and continued fidelity "that, though the captain was unexceptionable, yet he had promised never again to importune his daughter." A circumstance occurred which detained Lord N—— another week in town, during which time the captain passed every spare moment with his beloved Anna, till she became alarmed at his attentions, and yet an indescribable emotion prevented her from checking them. His conduct was so delicate, his manners so engaging, that he appeared to anticipate her wishes with such winning kindness, blended with a marked respect, as excited a deeper interest in her heart than she liked to confess even to herself. Well, d'ye see, at last we commenced our journey early one morning, and the next afternoon arrived at the family seat. After partaking of a sumptuous dinner, his lordship withdrew to arrange some affairs with his steward.

The captain took a stroll in the park, while Anna hastened to her old friend, the curate, who had been prevented by the gout from attending their arrival. After passing some time with that excellent man, she promised to return on the morrow with the captain, and took her leave.

One other duty yet remained—the visit to the lonely churchyard. The shades of evening began to fall heavier and heavier on the landscape, but Anna was superior to fear. Advancing with a light step towards the hallowed spot, what was her surprise and agony to see a man kneeling by the grave in the attitude of prayer! She bounded forward. "It is he—it is he—Edward, my Edward!" and she sunk senseless in the arms of Captain Malcolm, who sprang from the grassy tomb, and caught her to his heart. Yes, it was Edward, her own Edward, that held her to his breast, changed in all but that affection which could never change. He called her his Anna, moistened her lips with kisses, and, as she slowly recovered, heard her sweet voice acknowledge him. The poor lad, who had once implored the mercy of Heaven on that spot, when cast abandoned like a weed upon the ocean, was now—yet, why need I repeat it? Ned Davenport and Captain Malcolm were one. Together they retraced their steps to the curate's cottage, where they poured forth the fulness of their hearts in gratitude and praise. Lord N—— heard their tale, joined their hands, and blessed them.

There, messmates, it's a tough yarn, but 'tis all true, you may depend on't; and some other time I'll tell you all about the wedding, when I got groggy for joy; but it's my next look-out, and so I'll just shut my eyes for the next five minutes, to keep 'em warm.

Here Jem would close his story and his papers together; and, if it only excites the same interest in the minds of my readers as it did upon us, why then, d'ye see I'm satisfied to my heart's content.

MY COURTSHIP.

BY A MARINE.

I HAVE the honour to be one of that class of amphibious animals called in his Majesty's service sea-soldiers; that is to say, I have the honour to hold a commission in the noble, ancient, and most jolly body of the Royal Marines. I am by profession, therefore, as well as by nature, a miscellaneous individual; and circumstances have more than once thrown me into situations where the desire to support the credit of the

cloth, added to my own stock of cheerful impudence, have carried me through, in spite of difficulties which would have appalled another man. I had the misfortune to be employed on board one of the ships of the inner squadron in the Douro during the siege of Oporto. I do not say misfortune out of any disrespect to the commodore, or to the captain under whose command I was immediately placed, or to my brother officers, for a more generous, convivial set of fellows could not be got together; but I speak of the place, and of the people, and of the few opportunities which were afforded to me of showing off a handsome uniform, and, I must say, rather a well-made person, which it enclosed. Besides, I was kept on hard duty; and though there were some pretty women who appeared on Sunday during the cessations, of the usual shower of shells from the Miguelite camp, yet there were so many competitors for their smiles, that I really could not take the trouble of making myself as amiable as I otherwise should, and, as I flatter myself, I could. Don Pedro, the emperor, who now sleeps with his fathers, and whose heart is deposited in the cathedral of Oporto, was then without the society of his imperial and beautiful wife; and, whether it was to set a good example to his court, or to prevent his mind from dwelling on the absence of his true love, he was one of the most active of my rivals, and I protest there was not a pretty face in the whole town that he had not the pleasure of paying his addresses to.

Then there was the Count Villa Flor, and several other martial grandees; not to speak of the generals and colonels of regiments, and the well-built and well-whiskered officers of the British and French Legion, and the captains and the lieutenants of our squadron. I run over this list just to show what difficulties I had to contend with; and that if I did not turn the head of the whole town, there was a numerous list of operative love-makers who shared the market with me.

About this time the senior captain of the squadron determined to establish a signal-station to communicate with the ships of his Britannic Majesty outside the bar; and, no fitting place being found on the Pedreiro side of the river, an application was made to General San Martha, who commanded for the Miguelites, for permission to erect a post on the left bank which permission was most liberally granted.

We had not been long established at this fort, when the batteries which the Miguelites had established at the mouth of the river began to do their work in good earnest, and so effectually to close the bar, that not only was the usual supply of provisions cut off, but strong fears were entertained that the city would be reduced by famine to capitulate. There was an abundance of salt fish, and a superfluity of port wine; but even the best fare will tire on repetition, and you may be assured that salt fish for breakfast, dinner, and supper was not very acceptable either to the officers and men. Our commodore, with the foresight that distinguishes a British officer, had provided for the coming difficulty; and had arranged with the Miguelite general for an abundant supply of fresh provisions, meat, poultry, and vegetables, for all the ships' crews, on the distinct understanding, that no part of it was to be passed over to the besieged city. The squadron, therefore, lived in abundance, while the garrison was half-starved. The private families of the town also began to suffer, and the beauty of many of the most admired sensibly to diminish; salt fish and port wine did not in combination make a healthy chyle: and I could observe that the ladies more carefully than before, wrapped their dark long cloaks about them, to hide the ravages which short commons was daily making in the plumpness of their persons.

The most beautiful maiden at Oporto, was a Spanish girl called Carolina. Her father had died some months before the present period, leaving Carolina exposed to all the privations of a besieged town, and to the temptations of a profligate and military court. I never saw a more lovely creature; her eyes were as dark as night, and her cheeks glowed with a warmth unknown in the cold complexions of the north. Poor Carolina was as good as she was beautiful; and though the emperor and all the gay cavaliers of the camp were ready to throw themselves at her feet, she behaved with a discretion which won her the good opinion of the whole army, not to speak of the fleet, where such remarkable virtue could be fully estimated.

I among the rest of the inflammable multitude had been struck with the magic charms of the angelic Carolina, and devoted every moment of the occasional leave of absence which I procured, to promenading up and down before her window, in the hope of catching a glance of her beautiful eyes. I was as much in love with her as a marine could be, and my hopeless passion became so well known that it was a standing joke at the mess-table, and our wicked wag of a commodore, who I fancied was a little caught himself, never failed to inquire if I had taken my usual walk, and met with the same good fortune.

You can easily imagine my delight when I heard that a scarcity was making such rapid progress in the city, and when I found that even the emperor's table was limited to the ordinary rations of salt fish, black bread, and port wine. I will own that my heart leaped for joy when I ascertained from an emissary employed to watch the house of Carolina that she too was experiencing the pangs of want, and that with her scanty means she was unable to procure the common necessities for her sustenance.

The Miguelites faithfully performed their engagement; and day after day the regular supplies of beef, poultry, vegetables, and fruit came in. The commodore of course respected the contract that he had entered into; and though the emperor made several advances to his favour, and though he was openly solicited on his behalf by various officers of the staff, he refused to allow a pound of meat to be carried into the city.

I therefore set about purloining a capital fowl; and when I had secured it, in defiance of the jealous watch of the steward, I crammed it into my pocket, and asking leave to go on shore, started about the close of day to try whether hunger, which breaks through stone walls would open the oak door of the charming Carolina. I soon found myself in the well-known quarter, and before the house that contained my love; and, after reconnoitring for an instant to see that the emperor or his staff were not in the way, ran up to the first landing, where she lived, and pulled the little bell-string which hung at the door. In an instant I heard the pretty feet tapping along the passage, and the soft voice of Carolina herself exclaiming "Who is there?"

"It is I, a British officer, and a friend of yours," I replied; "I want particularly to speak to you."

"Sir," said Carolina, "I have not the honor of your acquaintance."

"It is true, *senorita*; but I come to serve you, and my good intentions will excuse the absence of ceremony."

"Sir, I must wish you a good day: I cannot accept a service from strangers; I have not asked you for any."

"Stay, beautiful Carolina," I exclaimed; "I adore you."

"Sir, I have the honour to wish you good evening."

"Stay, angelic vision: I am an officer of Marines?"

"What have I to do with the Marines?"

"I come to devote myself to you."

"Sir,—really sir, you carry the joke too far; I must dispense with your unseasonable visit. I have again the honour to wish you good evening."

Carolina was about to close the little slide of the door through which this brief conversation had been carried on, when, growing desperate with vexation, I held the slide open with one hand, while with the other I pulled the fowl from my pocket, and held it dangling before her face. Oh! if you had seen her look!—her eyes were fixed as Hamlet's when he sees his father's ghost, her mouth opened, and two little rivulets of water ran down at each side, as when an alderman gets the first odour of a well-kept haunch.

"*Senorita*," said I, eager to take advantage of the favourable impression the vision of the fowl had made on my beloved; "this bird is a proof of the warm interest which I take in your welfare. I have heard that you were suffering from the severe affliction that has fallen on this city; and, though I risk my character and the safety of his Britannic Majesty's fleet by bringing into Oporto any part of the provision allotted for the crews I could not resist the impulse of stealing the bird, which I now have the honor to lay at your feet."

"*Senor*," said she, "I will accept the fowl, and cannot but feel obliged by the interest you have taken in my welfare."

Good night, señor; it is getting late: I am certain you are anxious to return to your ship." With these words she shut the little slide of the door, and I remained in the passage, gazing with astonishment, confounded with delight, and wondering at the new recipe I had invented for making love. I awaited for some time, hoping that the little wicket would be again opened; but Carolina, I presume, was too much occupied with the present I had made her to think of returning to bid me a second farewell; and I descended the staircase, charmed beyond expression with the result of my stratagem.

I kept, of course, my recipe for making love a profound secret; but I did not venture to put it again into operation for two or three days. I made, however, the accustomed regular survey of the street in which Carolina resided, and watched with much interest for the reception given to my rivals. I cannot express the delight with which I witnessed them all, one after the other, refused admittance to her house. "She is picking the bones of the fowl," thought I; "that is a much better employment than listening to their stupid declarations. I must take care to keep my mistress in good humour, and to improve the favourable opinion she has already formed of me."

I therefore watched my opportunity; secured a duck out of the next basket of poultry, and hastened on the wings of love to lay my treasure at her feet. No sooner did my trembling hand pull the bell-cord, and my eager voice announce my name, than I heard her gentle step in the passage, and soon the little slide of the door was opened, and I felt my heart leap to my mouth as I beheld her beautiful eye beaming me with undisguised satisfaction. To ensure my welcome, and to save the dear creature from the pangs of expectation, I produced the duck, swinging it to and fro before the wicket, as a nurse does a pretty toy that she offers to the longing wishes of the child. Carolina smiled her sweetest smile; and, when I pushed in the prize, she returned me thanks in so endearing a manner that I lost all command of my reason, and poured out upon the staircase a volume of protestations of eternal love which might have served for the whole ship's company. From that hour my affair was done. Carolina could not resist the voice of truth, and the tender proofs of esteem which I alone had the power to offer. She refused to admit me then, but promised to consult her aunt on the propriety of receiving my visits; and that, if the discreet matron permitted it, she would be too happy in my acquaintance. I entreated the dear girl not to delay my happiness, and I fixed the following Thursday for the formidable interview with the aunt.

I lay the whole of the next night awake, thinking over the present which would be most acceptable to the old lady. I finally resolved to purloin a small leg of lamb, which I observed hung up in the steward's pantry; and, in order to make room for it in my pocket, I cut a great hole in the bottom, so that the handle of the leg would hang down, while the thicker part prevented it from slipping through. Armed with my leg, I asked leave to go to Oporto, and received with joy the accustomed friendly nod. I soon landed at the arsenal, and mounted the long hill which led into the town, holding myself as straight as possible, so that the exuberance of my pocket should not be perceived. Unfortunately for me, a score of hungry dogs, which infest all Portuguese towns, were holding a council-of-war at the quay when I stepped on shore; and one of them, getting scent of the end of the leg of mutton which hung through the hole, in my pocket, gave a hint to the rest of the contraband which was going on, and I soon had the whole train after me, sniffing at my tail, and making snaps at the tempting morsel. I would have stopped to pick up a stone, which is the only way of frightening a Portuguese street dog; but I was afraid to disarrange the perpendicular, recollecting that, as I bent down, the end of the leg of lamb would be visible. I therefore bore the annoyance as well as I could, kicking out behind from time to time when my friends were most troublesome.

The next day, when I went on board ship to make the usual report to the captain, I found that a court of inquiry was going on into the disappearance of the very leg of lamb which I had feloniously purloined. The steward had reported the accident to the purveyor of the mess, and he had

called a council-of-war, who thought fit to make an official report to the skipper! so that the readers will readily imagine the agony of my feelings when I was asked to join the board, and to assist in the investigation. Fortunately for me, one of the aides-de-camp of the emperor had that morning come on board to request of the captain some provision for the imperial table, protesting that Don Pedro and his staff had nothing better than salt fish for rations; which request the captain was compelled, by a strict sense of duty, to refuse; and everybody set it down as certain, the instant the circumstance was brought to mind, that it was the aide-de-camp who stole the lamb. He had come wrapped up in his cloak, which was a circumstance fatal to his character; and it was agreed by the whole conclave that the gentleman with the gold-laced hat and large cloak had been the thief. I blushed up to the eyes at the consciousness of my guilt, and the dishonourable part I was playing in allowing an innocent person to be wronged for my misdeed; but I recollected that the young man was one of the party who ridiculed me the day before in the presence of Carolina, and wounded vanity made me disregard the twitchings of conscience.

Afraid of the consequences in case a discovery should take place, I kept quiet for nearly a week together, until a little note, written in a cramped hand, was brought for me to the signal station, from which I found by the confession of the aunt that Carolina was in despair at not seeing me again, and that she was very ill from a salt-fish diet. I was conscience-stricken at the consequences of my neglect, and determined not to lose a moment in carrying provisions to my starving beauty; so, running to a basket that had just been brought in from the Miguelite market to be passed on board the Commodore, I seized a turkey-poult, feathers and all, and thrust it into the same coat-pocket which had been enlarged to hold the leg of lamb. I asked and received leave to go on shore, and pushed as fast as four oars could impel me to the usual landing-place near the old nunnery. I saw some of the idle dogs basking in the sun, but did not heed their presence, so filled was I with the idea of my Carolina; and, jumping out of the boat, I ran along the quay, totally unconscious of the sneers that my presence excited. At last, when I got to the open rope-walk where the market is usually held, the number of my canine assailants became increased; and one of them, bolder than the rest, making a sudden snap at the head of the young turkey, which hung down through the fatal hole in my pocket, dragged its long neck to view, and exposed my shame to the assembled multitude. A crowd immediately gathered round me, and a score of other dogs began to contest the prize with him that held the head of the turkey in his mouth. I was in despair, and drew my sword to rid me of the cursed assailants; when, on the instant, as if to overwhelm me with disgrace, the captain of the ship to which I belonged forced his way through the crowd, and, laying his hand on my arm, told me to consider myself under arrest.

The turkey-poult had by this time been torn from my pocket by the perseverance of my tormentors. It was pulled from one to the other on the ground; while the hungry citizens endeavoured to save its mangled remains, and a running fight was kept up between them and the dogs, which under other circumstances would have been highly amusing. My heart was heavy, and I was incapable of enjoying the most palpable joke. I walked slowly to the quay side, threw myself into the first boat that offered, went on board my ship, gave up my sword to the senior officer, was placed under a formal arrest, and told to prepare myself for a court of inquiry. I must say that I felt more for poor Carolina than I did for myself; and I could not help expressing my anxiety on her account to one of my brother officers who came to condole with me on my situation. The false friend, I was told afterwards, profited by the hint; and, instead of committing himself as I did, he hired a little cottage at the Miguelite side of the river, under cover of the guns of the fleet, where he placed Carolina and her aunt, and soon taught them to forget me. The worst of the affair was, that General Santa Martha sent in a formal complaint to the consul and the commodore of the squadron, and threatened

to stop the usual supply of provisions for the ships' use. A long correspondence took place on the subject, which may be found now in the records of the Foreign Office. I am glad to say, for the credit of the service, that the affair was hushed up in the end, and the Miguelites consented to give us the required rations. I was made the victim of that arrangement, and was glad to retire from the service on half-pay, to escape being ignominiously dismissed by a court-martial. I now live a miserable example of the doctrine of expediency. I entertain a horror of young turkeys and of dogs, and would be gladly informed of some land where neither of those odious creatures are to be met with.—*Bentley's Miscellany*.

AN ADVENTURE AT SEA.

It is a most difficult task for any person to conceive the sensation produced by the ominous words, "*a man overboard*." How much more difficult then must be the attempt to describe it?

In the month of June, 1834, the M—— East Indiaman, 1400 tons, commanded by Captain T—— sailed from London, bound for Calcutta, embarking at Northfleet a detachment, consisting of 8 officers, and 286 rank and file, belonging to H.M. regiment, exclusive of women and children, in addition to which there were already on board between 30 and 40 cabin passengers, mixing with the ship's officers and crew, a total of about 500 souls.

The troops were destined for Madras, which port we reached on the morning of the 1st October following, and on the commanding officer reporting his arrival in the proper quarter, it was confidently anticipated that our disembarkation would take place the same evening; however, such was not the case, for it unfortunately happened that the regiment (which was stationed at Masulipatam at the period of our leaving England) had suffered to such an extent from the unhealthiness of that climate, as to be reduced to a mere skeleton, so that the Indian Government had deemed it necessary to order its immediate removal from thence to Moulmein, a town situate on the frontier of the Burman Empire, and the few who still survived, sailed for the latter place on the 8th of the preceding month (September) which left us perfectly at a loss to conceive how we should ultimately be disposed of; but as a great portion of the cargo was shipped from Madras, together with several of the passengers, some days necessarily transpired in conveying the baggage and merchandise ashore, during which time the government authorities were negotiating with Captain T—— for carrying the detachment direct to the head-quarters of the corps, by which means we were saved the trouble and inconvenience of disembarking from the M—— and re-embarking on board some other vessel.

An agreement was finally entered into, by which the captain undertook to convey us thither at the rate of about £3 per head, so after completing all arrangements at Madras we sailed on the morning of the 10th. The weather was extremely unsettled, being the monsoon; continually raining—very hazy—one moment a perfect calm and the next blowing a hurricane; in fact, I believe we had but one fine day during our passage across the Bay of Bengal. To the best of my knowledge it was on the 16th of the same month—one of those beautiful mornings that are to be seen only in tropical climates, not a cloud was visible—a strong breeze blowing—the sea running very high; but as the wind was now favourable, and the ship going at least ten knots an hour, every soul on board appeared busily engaged, and good humour prevailed around. The ship's officers were pacing the poop with instruments in their hands, occasionally stopping for the purpose of making their observations; the passengers both ladies and gentlemen, whom the fineness of the day had induced to venture on deck, were promenading the quarter-deck; the ship's company and soldiers were actively engaged in hanging their wet clothing (which had been saturated for days from the effects of heavy rains and a boisterous sea) in the shrouds and various parts of the rigging; and the meridian being obtained, the words were given, "Strike Eight Bells," and "Pipe to Dinner" then followed the shrill whistles of the boatswain and his mates, and in quick

succession all hands disappeared as if by magic; the ship's company and troops repaired to their berths waiting the arrival of the cooks and orderlies, who had gone to the "cabouse" for the "salt-junk and duff" belonging to their various messes, while a majority of the ladies and gentlemen, with the officers, retired to the "cuddy" for refreshments.

The men had just finished their repast and partaken of their "grog;" some were lying about the decks, others had gone "for'ard" to smoke their pipes; the cooks and orderlies were washing up and stowing away their "mess-kids, &c." when the fearful cry "*a man overboard*" was reiterated from stern to stern. In a moment the deck was indiscriminately crowded by men, women, and children; fifty different orders emanated from the various officers, and were as promptly obeyed—the "life-buoy" cut adrift—the ship hove to—one of the boats lowered from the "davits," and on a cry of "*Volunteers for the boat*" being raised—such is the noble and generous bearing of British seamen—that a simultaneous rush "*aft*" was made by the whole crew, each one struggling as though for his life to pass through the crowd, preceding him in order that he might prove instrumental in rescuing a shipmate from a watery grave.

In the twinkling of an eye the fourth-mate and ten or a dozen hands were in the cutter, and it is my firm conviction that she would have been swamped by numbers alongside had they not instantly shoved her off, so determined were they all to risk their own lives in attempting to save that of the unfortunate wretch whom they were doomed never to behold again.

No sooner had the boat quitted the ship than the greatest fears were entertained for the safety of those daring and noble-hearted fellows, as the sea was running too high for their frail bark, and nothing short of saving human life would have warranted such an undertaking, but, still on she bounded, gliding over each successive wave, like an Aquatic bird, in the direction of the life-buoy, which had been cut away from the stern the moment the alarm was given, to enable the poor creature, in the event of his rising to the surface and being able to reach it, until more effectual assistance arrived, every now and then disappearing from our view for two or three minutes together. The most breathless anxiety pervaded every soul on board, and many were the fervent prayers offered up to the Almighty not only for *their* preservation, but that their exertions might be crowned with success.

The fore, main, and mizen shrouds and tops were literally covered with human beings, straining their eyeballs in the direction the boat had taken, to catch the first glimpse of her and proclaim the welcome news that she still braved the dangers by which she was surrounded. Once she disappeared for an unusual length of time, which gave rise to the most alarming apprehensions and conjectures. One would exclaim, "Oh! she must have sank;" another said, "She has certainly capsized, otherwise we should have seen them again ere this;" a third cried out, "Oh! I'm afraid they have all gone to the bottom;" and a fourth intimated his fears that we should never behold any of them again. Such were the expressions consequent upon their alarm, and when at last she was descried manfully struggling with the all-devouring element, a deafening shout of applause arose from every part of the ship.

After scouring the surface of the ocean in every direction around the spot where the life-buoy floated, and feeling convinced that any further efforts would be useless as well as dangerous, with heavy hearts they proceeded to pick up the buoy, and turned the head of their boat towards the ship. Her return was watched with the same intense interest as her departure, and as she neared the M——, any one might comprehend, from the sorrow depicted in the countenance of every individual on board her, that their search had proved unavailing. Thus, after being exposed to the dangers of a tempestuous sea for upwards of an hour in a small boat, they were reluctantly compelled to abandon their most praiseworthy exertions; their minds solely absorbed by the melancholy circumstance which had deprived them of their shipmate, without considering for one moment the perils they had endured in attempting to rescue him from the boundless deep.

The unfortunate man was, on that fatal day, "Cook of the

mess," whose duty it was to receive from the ship's steward an allowance of provisions in proportion to the number of men comprising the mess to which he belonged, take the meat to the "caboose," carry the same to his messmates when cooked, and after dinner to clear away the "kids and platters." It appears that he took a bucket, with a loose rope fastened to it, for the purpose of drawing some water from the sea to wash up with. He did not go on deck, which is customary in bad weather, but went to the third or fourth port on the lee side, and passing the other end of the rope several times round his arm, he dropped the bucket into the sea. As soon as the line became "taut," the bucket immediately filled, the weight of which, combined with the ship's rapid progress through the water, dragged him through the port into the sea. The

calamity was so sudden that he had not sufficient time to cast the rope from his arm. An instantaneous outcry was raised by those who witnessed the catastrophe, but he was never seen afterwards.

CAPT. ROSS'S VOYAGE IN SEARCH OF THE MISSING WHALERS.

In the latter part of 1835, the most painful anxiety and deep feelings of sympathy were manifested for the fate and sufferings of the crews of eleven of the ships engaged in the whale-fishing at Davis's Straits, whose protracted absence caused fearful apprehensions for their safety, and were eventually the occasion of a general subscription throughout

NARRATIVE OF CAPTAIN JAMES CLARK ROSS'S VOYAGE, IN THE COVE, IN SEARCH OF THE MISSING WHALERS, IN 1836.

the country, to defray the expense of an expedition equipped with the hope of rescuing the sufferers from their dreadful situation.

The eleven missing vessels were, the William Torr, of Hull; Jane, of Hull; Viewforth, of Kirkcaldy; Middleton, of Aberdeen, supposed to be frozen in the land ice of the west coast of Baffin's Bay, in about latitude 67° N.; the Duncombe, Abram, Harmony, and Dordon, of Hull; Norfolk, of Berwick; Grenville Bay, of Newcastle; and Lady Jane, of Newcastle.

Captain James Clark Ross, R.N., whose experience, gained during six successive voyages of discovery to the arctic regions, well fitted him for the service, having expressed his belief that it was possible to afford relief, and having volunteered to take the command of any expedition the admiralty

might be pleased to send, was despatched to Hull, where his arrival was greeted with the warmest demonstrations of joy and gratitude. The Hull merchants, with the liberality for which they were eminently distinguished, offered to hire and equip any vessel belonging to the port which the captain should consider best adapted to the service, on condition that the admiralty would put on board the necessary provisions and stores, and place her under naval discipline, so conducive to the maintenance of order, and so essential to the success of enterprises of so desperate a character.

After a careful examination of the ships in the harbour, the Cove, of 380 tons, belonging to Messrs. Spivey and Cooper, was selected, and Captain Ross hoisted his pennant on board of her on the 21st of December.

During the interval of time occupied in equipping the Cove

two of the absent ships, the *Harmony* and *Duncombe*, of Hull, arrived in England. The information derived from the masters of those vessels confirmed the accounts previously received, viz., that four of the ships, namely, the *William Torr*, *Jane*, *Viewforth*, and *Middleton*, were frozen in the land ice of the west coast, and that the other four which had been in company with these two vessels were still beset in the pack, and drifting with it to the southward. The eleventh vessel, the *Dordon*, had been wrecked, and her crew received on board the other ships.

In the meantime the admiralty engaged to fortify two bomb-vessels, the *Erebus* and *Terror*, with the greatest possible despatch; and these were to be sent out to Captain Ross, to enable him to cross the main body of the middle ice, and thus

effectually to relieve the crews of the four ships reported to be frozen in the land ice; but circumstances eventually occurred, which rendered the co-operation of these vessels unnecessary, and the Cove was left to accomplish the objects of the voyage alone.

The Cove sailed from Hull on the 5th of January, 1836, and on the morning of the 9th arrived off the Pentland Frith. From a fishing-boat that came alongside, they were told of the arrival of the *Norfolk*, one of the missing ships, on the 2nd instant, at Stromness. The wind and tide being against them, they stood in and anchored in Long Hope Harbour, when Lieutenant Inman was immediately despatched to Stromness to ascertain the truth of the statement, and to obtain the latest information respecting the other ships.

Soon after their arrival a gale came on from the S.W., but abated considerably on the following day; and the wind having changed during the night to the N.E., they weighed on the morning of the 11th, and passing through Hoy Sound, got fairly into the Atlantic Ocean before night.

On the 14th, when in latitude 61° N. and longitude 6° W., they were surprised to see two very large icebergs. A sight so novel within 200 miles of our own shores excited much interest amongst them, as such a circumstance as icebergs so near to England had never before been known. One of these masses could not have been less than seventy feet high, and more than a mile in diameter; the other was higher, but much less extensive.

The weather now experienced can scarcely be conceived but by those who had to encounter it. The rapid succession

of violent westerly gales opposed such obstacles to their advance, as to require the most unflinching perseverance and activity in the officers and crew to contend against them. Gale rose after gale in quick succession, and each seemed to increase in fury and duration; but by carefully availing themselves of every change in the direction of the wind, and spreading all the canvass the ship would bear as the gales abated, they made considerable progress; and by the 24th they had gained the meridian of Iceland in latitude $59\frac{1}{2}^{\circ}$ N. In the evening of that day a violent storm arose and continued throughout the whole of the five following days. About noon of the 28th it appeared to have gained its height. The sea rose in most tremendous waves, whilst the overpowering impulse with which they advanced, threatened every instant to overwhelm their little bark.

The ship, however, rode most beautifully—the wonder and admiration of all on board—until about five, p.m., when a tremendous sea struck her on the starboard bow, carrying away the bowsprit, gammoning, head-knees, bulwarks, &c., besides doing other material damage. Those who were below flew instantly to the deck, supposing from the violence of the shock, that the ship had struck against an iceberg or on a rock, whilst the general consternation was increased by a cry that the “ship’s bows were stove in, and that she was going down.”

The panic was but momentary: the captain, accompanied by the first lieutenant, went forward to ascertain the extent of damage done, and the best means of proceeding. Most providentially, before the gale came on, he had ordered the fore-runners and tackles to be set up as an additional security; and thus the foremast, and probably all the other masts, were saved; but failing in the support, from the bowsprit having gone, it still tottered, and threatening, every plunge the ship gave, to go over the side, it was necessary to get the ship before the sea in order to get it properly secured, and the wreck and rigging of the bowsprit saved. But this was an evolution of the greatest difficulty, and pregnant with the greatest danger. The captain and master, in the main rigging, anxiously watched the most suitable time, and every heart throbbed with anxiety when, after the captain had given the order to “put the helm a-weather,” and the goose-wings of the foresail were loosed, the main-staysail set, and the mizen-trysail hauled down, the ship gradually began to pay off. She again stopped as she got broadside to the sea. This was the time of greatest danger; it was, however, but of a moment’s duration. All was ready to cut away the mizen-mast had it been necessary, but the ship gathering some headway, she again obeyed the impulse of the helm just at the moment when a tremendous wave was seen approaching, which, had it struck her on the broadside, must have completely annihilated the vessel. Before it could reach them the wind had got abaft the beam, the close-reefed main-top-sail was let fall and seated home, and the reefed foresail set. The damage sustained about the bows proved to be much less than was at first apprehended. One iron knee was found to be broken, two beams and fastening-knees in the forehold were loosened, covering-board split, and the deck-ends and several trenails started.

All hands were immediately set to work to secure the foremast, and endeavour to save all the rigging and spars that were in danger from the loss of the bowsprit; and these exertions were continued until the crew, worn out with fatigue, had effectually secured all, as well as the darkness of the night would permit.

A disaster of this nature could not fail to damp the spirits of all on board. To repair the damage at sea was impossible. To return was inevitably necessary, and all sail that the ship could carry was pressed upon her, so that as little time might be lost as possible in resuming their original object.

On the 30th the gale abated, and the officers and crew were employed in securing the masts, and preparing a jury bowsprit, which was put in its place and rigged on the afternoon of the 1st of February. On the 3rd the island of St. Kilda was seen, and on the morning of the 5th we anchored in the harbour of Stromness.

All the shipwrights that could be found were immediately set to work to repair the damage, and by the following Saturday all was completed, and the ship again ready to proceed to sea as soon as the wind and weather permitted. At eleven, p.m., the *Jane*, of Hull, one of the four ships that were reported to be frozen in the land ice of the west coast, arrived and anchored in the roads. In the afternoon the *Viewforth* arrived, and anchored in the harbour alongside. The scene of misery that presented itself on going on board that vessel is quite beyond all description. Her crew originally consisted of upwards of fifty men and twenty-seven of the Middleton’s amounting in all to eighty-four souls. Of these fourteen had died of scurvy, and from the severity of the cold. Many were lying in the last stage of that disease, several never having moved from their beds for three or four months—a

mass of living putridity, their beds rotting beneath from the accumulated filth. The stench was perfectly insupportable, and the whole scene the most appalling and overpowering. Only seven of all on board were able to do duty; and but a few days more at sea, and probably not one on board would have survived. The horrible appearance of the crew so alarmed the inhabitants, that none would receive them into their houses; and had not Captain Ross taken the responsibility upon himself of hiring a large empty house, and fitting it up as a temporary hospital for their reception, it appeared probable they would have been left to die in their misery.

Before the *Cove* sailed, they had the satisfaction to hear that the *Abram*, of Hull, another whaler, had arrived safe, so that the *Lady Jane*, of Newcastle, and the *William Torr*, of Hull, were the only two vessels now missing.

On the 24th of February they stood out to sea, and had fair weather and moderate wind until the 4th of March, at which time they had again reached 30° west longitude, where their difficulties again commenced. The wind changed to the west, and continued to blow violently, with but little intermission for the following twenty-three days, so that at the end of that time, although every possible exertion had been made, and a heavy press of canvass carried whenever it was practicable to do so, they had only advanced about one hundred miles in the desired direction.

After encountering a severity of weather which it has perhaps never been the fate of any ship to have before experienced, the *Cove* arrived at the edge of the ice at 11 a.m., on the 7th April, in about latitude 54° N., and longitude 54° W., being very near the spot where the *Abram* had escaped from the pack; and where it might be expected that, had the other two vessels drifted down in a similar manner, they might hope to fall in with them.

The wind was blowing directly towards the ice, and the snow falling heavily at the time: their approach to the pack was indicated by the temperature of the sea falling from 38° to 29°; and on the fog and snow clearing away, it was seen at the distance of about three miles, extending right across the ship’s bows as far as the eye could discern. It was extremely closely packed together by the late heavy easterly gales.

The whole day was passed in carefully examining the pack, and, before dark, in getting out from amongst the heavy loose ice, which they always found lying several miles off its edge, and from which the ship, notwithstanding the greatest care and attention, frequently received very violent shocks. There were many days that, owing to the thick fogs and snowy weather, they were unable to approach the pack; but the most trying occasions were those in which the easterly gales came on whilst they were at the pack edge. One of these, which occurred on the 27th of April, may be considered the most violent and trying gale, in every respect, that they had experienced.

In the afternoon of that day, whilst engaged in their examination, the wind suddenly shifted to the north-east, and increased so quickly to a gale, that in less than three hours their sail was reduced to a close-reefed main-top-sail and storm-staysails. When darkness closed upon them it was blowing a perfect hurricane; and with the pack under their lee at a distance of only four or five miles, they seemed to have but little chance of escape. The sea rose in mountains over the devoted bark; each successive wave threatening their destruction. The necessity of carrying the storm, fore, and mizen-staysail, in addition to the close-reefed main-top-sail, so buried the vessel, that her lee fore-yard-arm was frequently immersed several feet in the ocean, while the darkness of the night, and the thick spray-drift, that froze as it flew along, prevented their seeing fifty yards before them.

The storm continued with unabated fury until Sunday. Heavy seas had broken over the vessel, and swept away her lee-bulwarks and many articles from the deck; and the hurricane blew with such violence that the main-top-sail, the only sail they had set, was expected every instant to be torn to pieces. Never was daylight looked for with such painful anxiety; and when it came they could see little more than before for the thick falling snow. The ship appeared to be one mass of ice, even to her topmast head; the smallest ropes were

enveloped with the frozen spray of the seas that had broken over them, until their size was increased to that of a stream-cable; and on the lower rigging and backstays the ice had accumulated, and increased the top weight so much, that the vessel lurched so heavily as to threaten destruction to the masts they were intended to support. In the afternoon the gale somewhat abated, and all hands were employed in relieving the masts by breaking the ice off the shrouds and rigging. The sea was, however, still running very high, and this was not accomplished without much danger.

At ten the sea had sufficiently subsided to admit of their setting the close-reefed foresail; and the gale having changed three points more to the northward, all apprehensions of falling down upon the pack were removed; and the next morning they were again enabled to resume the examination of the ice.

On the 15th of May they boarded the *Undaunted*, of Kirkcaldy, and received intelligence of the safe arrival of the *Lady Jane*. In the evening the *Undaunted* parted company, directing her course to the north, whilst the *Cove* stood to the west, to continue their examination of the pack, which they had now completed to the north as far as the 60th degree—a distance of about 400 miles.

On the evening of the 27th, they had arrived in latitude 65°, when they were obliged to discontinue the examination for the purpose of repairing to Holsteinburg. At nine, p.m., soundings were obtained in 210 fathoms, rock and coral. It was hazy at the time, with small snow falling, so that they could not see to any distance. The captain, when he left the deck at four in the morning, told the officer of the watch, Lieutenant Ommany, that if it became clear, he would see the tops of some mountains at the distance of ninety miles. At six in the morning they were seen bearing N.E. at that distance.

On the 30th, the high land about Holsteinburg was in sight; and the ship being becalmed, Lieutenant Crozier was despatched in a boat to that place, in order to communicate our approach to the captains of the bombs, the *Erebus* and *Terror* which were expected at that place. During the day they were visited by the Esquimaux, who are in the habit of trafficking with the whaleships as they pass to the northward every year to their fishing ground. From them they learned that there were no ships in the harbour.

It was not until the evening of the following day that they could reach the harbour, where they anchored at 10 p.m. Lieutenant Crozier joined them a few hours before, and confirmed the unwelcome intelligence they had already heard. For many weeks they had looked anxiously forward to the happiness of receiving tidings from their friends in England, so that the disappointment at not finding the bombs here was severely felt by all.

During their stay here they were treated with the greatest friendship and hospitality by the Danish Governor and other Danes residing at this colony. One of their principal objects in coming to this place, was to ascertain if any of the crew of the *William Torr* had landed upon any part of the coast; but they were at once assured that no stranger could have landed without their knowing it, as they had frequent communications both to the north and south, and no such event had been noticed in the letters they had recently received.

The colony of Holsteinburg is situated at the termination of a small creek, at the extreme point of the north shore of a wide and very extensive fiord or inlet, in lat. 66° 56' 32" N., and long. 53° 34' 28" W. The harbour is spacious and well protected by numerous islets, which, together with the dangerous extensive reef that lies to the N.W. of it, and the numbers of concealed rocks to the south, render the approach very difficult and hazardous for those unacquainted with the proper entrance. In tolerably moderate weather, the Esquimaux immediately come off to any ship they see approaching; and most of them understand sufficiently well the points of danger to act as pilots.

On the morning of the 13th June, they took leave of their kind friends, the Danes, and proceeded to sea. Favoured by a strong southerly wind, they made rapid progress to the north, keeping close along the shore, whose lofty snow-

covered mountains, deeply intersected by numerous valleys and inlets, presented a novel and imposing scene. They reached the south edge of the Riscof reef at 10 p.m., but here few bergs were to be seen; the sea had risen as the gale increased, and broke over these grounded masses in a truly awful manner. As they approached the northern edge of the reef, soon after midnight, the numbers and magnitude of the bergs greatly increased, so that at last there appeared to the inexperienced eye no passage for the ship to pass through, but one seemingly unbroken line of breakers extended across our path as far as the eye could reach. Some of these ice mountains must have been above two hundred feet high; and their varied figures, slowly emerging from the foaming breakers that occasionally broke over their summits, presented a spectacle as appalling as magnificent. The captain and master steered, as under all sail she seemed to fly through the narrow passage between the bergs, impelled by the strong breeze and heavy following sea: and now that the passage was effected, they had but little wind, and perfectly smooth water. Several broken-up streams of heavy ice had collected amongst the bergs, and the main pack was seen at a distance of only two or three miles to the westward.

As they advanced they found the ice much closer to the land, and their progress amongst it more intricate and difficult. After boring through several heavy streams, they again got into clear water; and before noon the *Whale Islands* were in sight at the distance of eight or nine miles. The wind having shifted to the eastward, they were unable to beat up to the anchorage before 11 p.m., at which time they moored in a very snug harbour with hawsers to the shore. A ship was seen in the offing, and Lieutenant Ommany and Mr. Humphrey were despatched in a boat to board her. She proved to be the *Lord Gambier*, whaler; and now, for the first time, they learned that no other ship was coming out, and that despatches had been sent by some of the whale ships, ordering them to return to England. It was supposed that these despatches had been landed at Lively, a Danish settlement on the south extreme of Disco Island, distant about twenty miles, where the governor-in-chief of the northern colonies, Major Fasting, resided. Lieutenant Inman was immediately despatched in a boat to that place; but, owing to bad weather, did not return until the evening of the 18th, bringing with him some private letters that had been left in Major Fasting's charge by Mr. Dring, master of the *Swan*, of Hull, but no official letters were amongst them.

On the next day two other ships, the *eclipse* and *Clarendon*, came off the harbour, and were boarded by the *Cove's* boats. From these vessels they learned that all the official letters were on board the *Lady Jane*, of Newcastle, which vessel was in sight at a considerable distance, and a boat was immediately sent to her. She returned early next morning, bringing the admiralty orders. In the course of the day seven or eight sail hove-to off the harbour; and the masters came on board to pay their respects to the captain. Of these, five of them had commanded ships that were amongst the eleven missing vessels when the expedition was fitted out. Each of them brought on board some contribution to their now exhausted stores—fresh beef, and many other luxuries, of which but few who have not felt the want can possibly understand how duly to appreciate the value, were brought on board as presents to the captain and officers.

A fine quarter of beef, which had been carefully preserved by Captain Taylor, of the *Grenville Bay*, for Captain Ross was issued as extra allowance on the following day to the ship's company; and a portion of the potatoes were also served out; so that the crew also shared in the generosity of their friends.

They were told that some other ships which were with the fleet of whalers, off Four Island Point, had also official letters on board for Captain Ross. It was also rumoured that the *Bon Accord*, Parker, had passed the wreck of a vessel off Cape Farewell, the south extremity of Greenland, with yellow mast-heads; and it was said that the mast-heads of the *William Torr* were painted with that unusual colour. All these circumstances determined Captain Ross to proceed with the ship to the northward, to acquire all the information he could, be-

fore he finally determined to return to England, as the admiralty had given him considerable discretionary power to act according to circumstances. All hands were kept hard at work preparing for sea—mending sails and repairing the bulwarks that had been washed away in the heavy gales. All being completed, they unmoored on the evening of the 26th, and sailed the following day.

The main body of the ice being closely packed against the west shore of Disco Island, obliged them to make their way to the northward, by the intricate and almost unknown passage of the Waygatz Strait, formed by the east side of Disco and the mainland of Greenland. On leaving Whalefish Islands, they stood to the north-eastward; but being much hindered by frequent calms and thick foggy weather, they did not gain the southern entrance of the strait until the morning of the 30th of June.

The land on either side of this remarkable strait rises abruptly to the height of 700 or 800 feet, and in some places to upwards of 1,000 feet; the Greenland shore is in many parts precipitous, and the coast in general very deeply intersected by numerous rivers and ravines. The upper part of the cliffs presents many picturesque and most extraordinary appearances, caused by the projection of grotesquely-formed pinnacles of rock through the perennial snows that clothe the summits of the hills. Beyond these, far to the eastward, lofty snow-covered mountains extend as far as the eye can discern, and attain the height of several thousand feet above the level of the ocean.

The breadth of the strait varies from nine or ten to about twenty miles, and the depth of water is great, excepting in one part near the middle, where some dangerous rocks lie off a considerable distance from the Greenland shore, and where an extensive mud-bank is formed at the mouth of a large river. From some Esquimaux who came off to them in their canoes, they learned that abundance of reindeer and game were to be found along the banks of this river; but being favoured by a light southerly wind and beautifully clear weather, they pursued their course to the northward.

In the course of the day they passed many bergs of large size, and several broken-up streams of ice. Towards midnight the wind gradually freshened up; and at two, a.m., on the 1st of July, it blew a strong gale. Soon after that time a great body of ice was observed from the mast-head, extending from shore to shore, threatening to impede their farther progress; but as the gale was blowing directly upon it, with much sea running, it would have been in vain to attempt to beat off; they therefore continued rapidly to approach it, though under reduced sail. When near its margin they found it more open than it had at first appeared, and clear water being seen beyond, they bored through without much difficulty.

The north entrance of the strait was passed at seven, a.m., whilst scudding before a strong southerly gale under double-reefed topsails and foresail; and at ten, having rove their way through the multitude of bergs that lay aground on an extensive bank to the northward of the strait, a ship was seen bearing down to them before a strong northerly breeze, which shortly after reduced them to close-reefed topsails and foresail. The ship proved to be the *Swan*, of Hull, Captain Dring, belonging to Messrs. Spivey and Cooper, the owners also of the *Cove*.

In the evening they reached Four Island Point, where they found about fifty sail of ships fast to grounded masses of ice, to the southward of the point, which served to protect them from the pressure of the pack, when driven in by westerly winds. Their boats were immediately despatched in-shore to the whalers to collect letters and every information that could be obtained: whilst in the *Cove* they stood to the northward, for the purpose of ascertaining the present state of the ice. Just at this time the pack was closely pressed against the point, by the strong northwest breeze that they had been contending against the whole day; but falling little wind towards midnight, it slowly moved off and left a channel sufficiently wide to enable them to pass the whole of the whalers, who still remained snugly moored to the southward of the point, excepting only the *Swan*, which vessel accompanied them.

At two, a.m., of the 2nd, they were about ten miles to the northward of Four Island Point, and could see that there was

much open water in the large inlet called Jacob's Bight, which they might have easily gained; but the wind was gradually dying away, and the change of tide already bringing the ice down again upon the point, would probably have prevented their return to the south for some time, had they not bore away before the light air that still aided them, but which entirely subsided to a perfect calm as soon as it had carried them again down amongst the ships to the southward of the point.

It continued calm for some hours, and the whalers, believing that by towing the ships they might get round the point, cast off and made the attempt; but the opportunity had been neglected, and nearly all shortly again returned and made fast to the bergs. On a light air springing up from the northward, Captain Ross hoisted the ensign and fired a gun as a parting signal, and several of the ships sent their boats with letters for England. The *Cove* then bore away with the intention of repassing the Waygatz Strait, but a thick fog coming on soon after, it was not possible to make that difficult passage; so they stood in-shore, and made fast to a grounded berg near to the north entrance of the strait, to await more favourable weather.

On the 10th the fog cleared away, and from the mast-head they could see nearly all the ships they had parted with on the 2nd, still fast to the grounded bergs to the southward of Four Island Point. They cast off at ten, a.m., but the wind was so extremely light and variable, that it was necessary to keep all the boats ahead towing to prevent their being driven against the numerous and very large bergs that lay aground at the north entrance of Waygatz Strait, the current setting through amongst them, at times too strong for the vessel to stem it, and at others in such whirls and eddies as to render her almost unmanageable. The mast-heads of the ship sank into insignificance by the side of these lofty icy pinnacles, some of which must have even exceeded fifty feet above the average elevation of the berg. A mass of ice exceeding 2000 feet in thickness, and 10,000 feet in circumference, may be spoken of in intelligible terms, but the mind cannot possibly understand it from a mere verbal statement. It must be seen to be duly estimated. The loftiest precipice of Great Britain does not much exceed 1000 feet in height, and some of its most celebrated mountains would hardly bear comparison with many of these ice islands.

On the 11th of July, at noon, they again reached the Whalefish Islands, and a boat was sent on shore with despatches. On leaving Whalefish Islands they stood directly to the westward, and made the pack edge considerably to the northward of the spot where the *William Torr* was last seen; and here they again commenced a most careful and tedious—because hopeless—examination, pushing the ship as far into the main body of the ice, and again standing out to near its margin, as frequently as the weather permitted. In the course of their progress they met with, and received letters for England from the *Resolution*, *Eclipse*, and *Commerce* whalers, which were endeavouring to effect a passage across to the western shore in about the latitude of the arctic circle; a barrier of very heavy and extensive floes, lying at a distance of about fifty miles from the shore, so closely united as to form almost a solid body, had hitherto frustrated their best exertions; and their prospect at this time of an early passage was by no means promising, although the pack continued to drift in a body to the south. They had been very unsuccessful also in the pursuit of whales, as but very few had been seen by them, owing, as they stated, to their having got into what is termed the West Water, and therefore beyond the reach of their pursuers who were now struggling hard to follow them to their well-known haunts.

Their examination was much impeded, and rendered most difficult and anxious by the thick fogs that prevailed, and the almost continual heavy south-easterly swell that rolled in upon the margin of the ice, whilst the light winds which now generally obtained had not sufficient power upon the heavy-sailing ship to keep her under command; on many occasions, from these causes combined, their situation was equally, if not more critical and dangerous, than during the heavy gales of the

winter season. On these occasions they felt the utter loneliness and sense of abandonment in their one solitary vessel, exposed to such perilous circumstances.

Again favoured by a commanding breeze, the ship was made to enter the pack, regardless now of the heavy breaking surf at its margin. This once passed, they were soon in smooth water, and all their efforts were directed to penetrate, if possible, to the shore, which was occasionally seen as the fog and haze cleared away; but in this they were as frequently defeated by the closely-packed masses that still formed an impenetrable barrier at the distance of about fifty miles from the land.

They had examined the pack as low down as latitude 58° N. by the last week in July, with that degree of care, notwithstanding the extremely unfavourable weather, that it was impossible any longer to entertain the smallest hope of meeting with any of the unfortunate crew of the William Torr and on the 30th, a more favourable opportunity presenting itself, they succeeded at last in penetrating to the shore; and after threading their way amongst numberless islets and rocks that lie off this coast, and render the navigation so very difficult—but in which they were much assisted by the heavy masses of ice that had grounded on the concealed, and therefore most dangerous, shoals and rocks, pointing out to them the places to be avoided—they anchored in the Bay of Okkak, in latitude $57\frac{1}{2}^{\circ}$ N.

The missionaries of the society of *Unitas Fratrum*, who were the only European residents here, received them with the warmth of friendship and affection peculiar to those excellent people. They were much grieved to find that they could learn no account of those of whom they were in search: their last and only hope was now completely destroyed by the assurance of these people, that it was utterly impossible for the ship to have passed near the shore, or any part of her crew to have landed on it, without having been seen by some of the widely-dispersed Esquimaux inhabitants, who would have instantly acquainted the missionaries with any such occurrence; and from the frequent communications that had passed between the settlements, both to the north and south, it was quite evident that none of the crew of the ship could by any possibility have reached that shore.

It was nevertheless most gratifying to them that they had been enabled so effectually to complete their examination of the pack. All that it was possible to accomplish for the unfortunate crew of the William Torr had been done to the utmost; and they could now only console themselves with the hope that the ship might possibly have returned to England during their absence.

Preparations were therefore immediately made for their homeward voyage, as further delay upon this coast could only be productive of great additional and unnecessary expense, without the most distant chance of the smallest benefit resulting from it.

During their brief stay at this place they had a good opportunity of judging of the greatly-improved moral condition of the Esquimaux inhabitants, from the introduction of Christianity amongst them.

Okkak derives its name from the long, projecting, tongue-shaped peninsula on which it is situated—"Okkak," in the Esquimaux language, meaning *tongue*. It was the northernmost point of the land granted to the society of *Unitas Fratrum*, in 1770, for the purpose of converting the heathen inhabitants; but since that period a still further extension of country has been granted, and their northernmost settlement now is Hebron, about sixty miles from Okkak.

The missionaries have establishments at four different places along this coast, about eighty miles distant from each other, and between which constant communication is kept up, summer and winter. There are, altogether, thirty-four European residents, and 920 Esquimaux inhabitants, being more than four times the number of natives that were at these places on the first arrival of missionaries amongst them.

The few days that they remained here were fully occupied in completing their stock of water, and making other necessary preparations for a homeward voyage. The past winter had been one of unusual severity, so much so, indeed, that the Esquimaux, being unable to venture out in pursuit of

game, were reduced to the necessity of eating their boots, and some of them their skin garments, to sustain life; and many were saved from starvation by a judicious, though of course scanty, supply of provisions from the stores of the missionaries. The harbour was much encumbered with ice on their first arrival, but cleared away sufficiently to enable Captain Ross to make a survey, whilst Mr. Mapleton, the second master, sounded all over it. The usual observations for the determination of the exact position of the settlement were taken, and the magnetic experiments completed by the afternoon of the 3d of August. The results were as follows: lat. $57^{\circ} 32' 40''$ N.; long. $61^{\circ} 55' 51''$ W.; dip, $81^{\circ} 33'$ N.; variation, $39^{\circ} 31'$ W.

On that evening they took leave of their kind and excellent friends, with feelings of regret that their acquaintance had been of so short duration; and early next morning, being favoured with clear weather and a fine commanding breeze, they weighed, and made all sail out of the harbour. They passed Saddle Island at noon, and finding the ice much dispersed, had but little difficulty in making their way through it to the open sea, which was seen from the mast-head before dark.

By daylight the next morning they were again in clear water; the land was still in sight, although at a great distance, and some few icebergs were occasionally met with until the afternoon of the 7th of August, when they finally took leave of the ice.

Their passage across the Atlantic was unattended by any occurrence worth noting, except, perhaps, the continuance of strong favourable gales, which carried them so rapidly homewards, that soon after noon of the 17th they passed a few miles to the northward, though not in sight of Rockal.

It is very remarkable, that just at this time the Antilles of Greenock, on her way home from the Mediterranean, and in lat. $45^{\circ} 11'$ N., and long. $13^{\circ} 79'$ W., picked up a large oil-cask, branded "William Torr," and which afterwards proved to be a new cask that had been put on board the vessel, immediately before her departure from England on her truly unfortunate voyage. It was much rubbed, and covered with sea-weed and barnacles; leaving no doubt that the vessel had been dashed to pieces whilst coming out of the pack, and that the melancholy event must have happened many months before. Several other of her casks have since been picked up at sea—but too fully confirming the sad anticipations of the lamentable fate of her unfortunate crew.

Whilst scudding before a strong gale, Cape Wrath was seen at daylight on the morning of the 19th. As the day advanced the gale increased to a violent storm, but the tide fortunately being also favourable, they passed through the Pentland Frith at noon, having been only a fortnight in crossing the Atlantic.

On the 23rd they steered into the mouth of the Humber, to land despatches for the admiralty, and anchored next day in Yarmouth Roads. On the 31st of August they arrived at Hull, and on the 26th of September the ship's company were paid off. On that day Captain Ross assembled all hands on the quarter-deck, and publicly expressed his thanks to the officers, for the cordial, zealous, and able support they had afforded him on many trying occasions; and to the ship's company, for their activity, obedience, and general good conduct during the voyage. He then read a letter from the admiralty, expressing their lordships' satisfaction at the zeal and judgment displayed by him, in the execution of the service confided to him, and at the activity and good conduct of the officers and crew under his command. The crew expressed their gratification by three hearty cheers! and the pennant being hauled down, the Cove was again delivered over to her owners.

SHRIVING A SEAMAN.

"What's the matter, Muster Lawrence?" inquired Dunaney, observing the chaplain suddenly rise from his chair. "I'm certain that none of my patients are in need of spiritual comfort."

"Possibly not," returned Lawrence; "but I always make it a point to comply promptly with the summons of the sick."

At the suggestion of Dunaney, the parson resumed his seat

till a servant was despatched to bring Mr. Bolus back to the ward-room.

"What's the matter with your eye, sir?" asked Dunanney on the re-entry of the disfigured pillman.

"Potter, sir," muttered the miserable Bolus

"And your mooth, too?"

"Potter, sir."

"And who sent ye, sir, for Muster Lawrence?"

"Potter, sir."

"Potter! Potter! What's the fellow pottering about?"

"He says he's dying, sir."

"Who?"

"Potter, sir."

"The scoundrel! *Dying*, indeed!"

"Perhaps, doctor," interrupted the parson, "he's only *dying* to see me."

"No, no, Muster Lawrence, I can't sooffer ye to be tormented by such a soorly, fool-moothered, mutinous pest."

"Deuced good man," exclaimed Leatherlungs, accompanying his blunt remark with a corresponding thump upon the table.

"Capital leadsman," observed the master, following in the leader's wake.

"Keeps his boat in excellent order. He may growl," said the junior lieutenant; "but growl-an'-go was always a good dog."

The chaplain had already entered the sick asylum. The loblolly-boy led him to the hammock of the "dying man," at the side of which had been already dropped a canvass screen. Placing a stool for the reverend gentleman, Bolus retired.

"I axes yer pardon, sir," said Paul, "for dragging ye so far for'ard in such a head-sea; I does indeed, Mr. Lawrence; but ye may depend on it, sir, there's never another parson in the sarvus as I sent for 'sides yourself," he added, offering to his pastor an awkward tender of his heated hand. "Rather warm," said Lawrence, replacing the hand of the patient gently in his hammock. "Still," added the chaplain, "there appears to be little of fever hanging about you." "Ah, sir, a heavier thing nor fever o' a hangin' *here*," sighed Paul, raising his huge, brown, weather-beaten hand to his broad brow. "Oh! come," said Lawrence, cheerfully, "to-morrow I hope we shall find you another man."

"Another man, indeed," reiterated Paul, despondingly. "In course, Mr. Lawrence, ye knows what they calls a reef-p'int as hangs below the yard when the sail's furled? Ye knows what I means, does n't ye, sir?" The chaplain nodded assent. "Well, then, that's the *man*, sir, as you'll find me to-morrow." "Nonsense, nonsense, man, you mustn't indulge this depression of spirits." "I doesn't, sir, but I well knows I could meet my fate the firmer, could I only lighten a little o' this terrible load aloft." "Well, unburthen your mind to me," said Lawrence consolingly. "Possibly we may manage to *lighten* a little of your load." The look which followed these few consolatory words would have puzzled even the pencil of the inimitable George Cruikshank. For several seconds, the starting eyes of the penitent seemed to search the very soul of his spiritual pastor; when, at length, letting loose the sluiceways of his full feeling, he emphatically exclaimed—"Bless yer comfort-talkin' tongue! I well know ye was never the man to refuse a helpin' hand to a feller-creter in trouble; I was sartin ye wasn't. Ah, Mr. Lawrence," he added, with increased emphasis, "there isn't a man nor a boy aboard, no, not even a *soger* in the ship, as wouldn't go—go *by*—."

"No expletives, Potter," exclaimed Lawrence, with uplifted hand, cutting short the fervid deliverance of Paul's adjuration. "I expect you will now," added the chaplain, "reveal to me, without any reserve, every circumstance connected with your troubles. Conceal nothing. Consider me your best friend." For a few minutes, Potter, who had already raised himself erect in his hammock, seemed absorbed in thought. His head hung downwards; whilst his fiddling fingers were in active, though apparently unconscious, operation, plucking small particles of wool from his upper blanket. At length, turning to Lawrence, he exclaimed—"Well, sir, if I must reveal all, without any pre-serve, I thinks I can't do better than begin with the lightest first." "Please yourself, Potter; but pray proceed." "Well, then, first an' foremost, sir," proceeded Paul, "I wishes to ax ye, sir, if ye thinks as the heavin' a contrary cat over-board

much of a crime?" "Cruelty to animals," responded the parson, endeavouring to suppress a smile, "I have ever deprecated. Indeed, I look upon it as very hard-hearted and heinous offence." "There it is, Mr. Lawrence. No one knows the tortur' it brings to my mind at night. Isometimes thinks I feels the cretur's claws clingin' to my hot head, an' every now an' again as if she was scrapin' and scratchin' a hole in my burnin' brain." "But pray, Potter," asked Lawrence, "what reason can you possibly assign for the commission of so cruel an act?" "Well, I tell ye, sir. I b'longs to the Phee-aton frigate at the time. She was a fancy ship, Mr. Lawrence—a reg'lar flyer. She'd think nothin' o' knockin' ye off eleven on a bowlin'. She was a man o' war, Mr. Lawrence. A man was a man in she. Every one know'd his work; and them as *worked* us know'd the business of all aboard—."

"But the cat's business?" interrupted Lawrence. "I'm coming to that, sir." "Well, sir," continued Paul, "we was comin' from foreign at the time. Was ye ever at the Cape, Mr. Lawrence?" "No, never." "Well, sir, we was comin' from *there* at the time; and just as we closes the chops o' the channel, we was catched with just such another bad-gerin' breeze as this here thund'rin' easterly wind. We was six upon four at the time, and terribly short o' water. The people below 'gins to growl, and look black one on the t'other, an' the watch on the deck hauls only half their strength, and works with a heavy heart. For twelve days an' thirteen nights, the wind keeps stiff and steady in the same parvarse, provokin' p'int. In course, every one seed as a spell had got hold o' the ship. Some set it down to the score o' this, others to the score o' that. At last, sir, a young feller o' the name o' Forbes, detarmines the thing in another way. Fred was second captain o' the folksel in the starboard watch; a finer young feller ye never seed. He stood six foot two in his stockin' feet. He 'minds me much o' you, Mr. Lawrence. In course, he hadn't the manners, or larnin', or winnin' way o' *you* sir; but he was a chap as feered nothin' in life, an' the word o' Fred was the will of all aboard. Well, sir, on the twelfth night, just as they relieves the first watch, up comes Fred on the folksel. 'Still,' said Fred, lookin' to wind'ard, an' butt'nin' his monkey athaut his chest, 'still this beggarly breeze! Ah! says he, 'that thund'rin' parlevoo puss is the cause on it all. Yes,' says he, shakin' his head, 'Crappo's cat's a-spittin' her spite; for ye see, Mr. Lawrence, 'twas an *enemy's* cat: we gets her out of a prize, a brig as we captures homeward bound from the Isle of France. 'Come, Paul,' says Fred, fixin' on me to lend him a fist; 'come down with me,' says he, 'I'll soon settle her hash.' Well, in course, sir, 'thout ever givin' the thing as much as the turn of a thought (an' more's the pity I didn't), down we dives together, bread bag in hand, to the heart o' the hawser-tier. There was Crappo's cat (for the ship's corporal lends us his light) kiled in a round kile, an' sound asleep, in the very identical spot as Fred said she was sure to be. Well, sir, the moment Fred gets a grip at her neck she flashes her eyes—spits fire faster nor forked light'nin'—sticks her tail on end, an' strikes out with her four claws in the savagest way ever I seed with brutal beast. Howsomever, sir, we soon bundles her into the bag, brings her on deck, claps a shot in the sack, ties up the muzzle, and sends her w' three hearty heaves flyin' over the lee-cat-head, five or six fathoms to looard o' the ship. There, now, Mr. Lawrence, ye has the whole o' the truth, as far as consarns the cat," concluded Paul, turning to the parson, who had already risen from his seat with his face hidden in his handkerchief.

THE OLD WRECKER.

A TALE.

RETURNING from the Mediterranean, a few years since, about the autumnal equinox, we had reached the British Channel, where our vessel was compelled to beat about for some days, in consequence of thick fogs. At last a brisk breeze sprang up, clearing the atmosphere in its progress, when we discovered a dangerous shore on our lee bow, at the distance of half a mile: our captain immediately ordered the ship *about*, and, as night was approaching, with appearance of storm, the greatest care and vigilance became necessary. To our tars this

was all a matter of course; but to a landsman like myself, the scene was truly alarming.

To sleep appeared impossible under such circumstances; I therefore determined on sitting up. Our chief mate, a Cornishman, and an old sailor, being during his watch, full of direful tales, I was compelled to listen to many a tale of hair-breadth escapes, storms, and shipwrecks, which would elsewhere have been much more entertaining. One was so striking, that I afterwards committed it to paper—it was as follows:

Towards the close of the sixteenth century, a horrid custom still prevailed in some parts of Cornwall, of luring vessels to destruction, in stormy weather, by fastening a lantern to a horse's head, and leading it about on the top of the cliffs, that the bewildered mariner, mistaking it for the light of a vessel, and consequently not apprehending land in that direction, might be induced to shape his course thither; till the foaming breakers gave too late warning of his fate, and the vessel became the prey of a set of ruthless barbarians called "wreckers;" who, to legalize their plunder, frequently murdered those who had escaped drowning, and then called the wreck a "God-send."

In a hovel, on the craggy shore of a deep and dangerous bay, dwelt one of these wretches; an old and hardened desperado, who united in himself the fisherman, smuggler, and wrecker; but to his depraved mind the two latter were the favorite professions, and such was the confidence of his companions, in his experience on these occasions, that he was usually leader, nor did he ever fail in his office. His wife, too, encouraged him in his deeds of iniquity, and sometimes aided him in his exploits. Shocked at the wickedness of his parents, their only son had long since fled his home, and sought a more honourable course of life on board a West Indian trader.

It was at a period when a long and profitless summer had nearly passed away, that Terloggan, like the vulture, ever watchful for his prey, was more than usually observant of the signs of the heavens; nor was any one more capable than himself of tracing the most distant indications of tempest. Nature had several months worn a placid and, to honest minds, a delighted aspect: the soft and azure sky had beautifully tinted the transparent sea, and the expanding waves swept with low murmurings along the sands of the deep bay, in mild and stately majesty, playfully casting up their white foamy margins, gently splashing the feet of the craggy rocks. Not more hateful were the beams of the orb of day to Satan, as described by our poet, than was this quiescent state of nature to Terloggan's dark mind: in his impatience he cursed the protracted summer, and hailed the approaching season as more congenial to his interest. At length he saw, with savage delight, the sun sink in angry red beneath the horizon; he heard with exulting feelings, the hollow murmuring of the wind, and beheld the blackening waves rising in angry roar, lashing the lofty rocks with the ascending spray. As the night advanced in chaotic darkness, the horrors of the tempest increased; and the long and loud blast of the contending elements seemed to overawe any mind but Terloggan's. "Now's the time, boy," said the old hag, his wife; "go thy ways out 'pon the cleaves,—there's death in the wind." Terloggan speedily equipped himself, and ascended the steep promontory at the entrance of the bay; the lantern was displayed in the usual manner, and he soon observed a light at sea, as if in answer to his own signal, which caused the old demon to rejoice in anticipation of speedy success. The light evidently approached nearer, and ere an hour had elapsed, the white close-reefed sails of the vessel could be discerned through the darkness, and the uproarious cry on board, at the discovery of their danger, could be distinctly heard. Signal guns of distress were fired—the loud commands, "All hands on deck," and "About ship," were uttered in a wild despairing tone: every exertion was made to carry into effect the salutary orders; but, alas! the redeeming moment was passed, the vessel was completely embayed, no strength could avert her impending fate. In a few moments, the tremendous crash, the heart-rending, but fruitless cries for help, announced the horrid catastrophe; and the last flashing signal-gun gave a momentary view too shocking to be described. Alas, it was indeed a piteous scene that

followed: the stranded vessel, thrown with reiterated blows against the rugged rocks, soon parted; the broken waves were dashing over her hull with relentless fury, bearing to the shore the scattered cargo, broken pieces of the wreck, and the tattered rigging; while the mingled cries of the drowning and the despairing, with the terrific roar of the striving elements, seemed like Nature's last expiring hour.

There was one, however, in whose eyes such a scene was joyous—in whose ears such sounds were melody—and that was Terloggan. He impatiently waited till the storm had somewhat moderated, and when silence indicated that death had done its work, he descended the well-known cliffs to grasp his prey. Unmoved by the horrid spectacle, he stood awhile and gazed with fiend-like pleasure on the rich booty that lay around him, (for the rising moon now shot forth her light) as if at a loss where to begin his work; but to his surprise and momentary dismay, there was yet one living soul on board, who, should he survive, would bar the wrecker's claim. To dispatch this unfortunate, was his immediate object; then scrambling over the rocks, as if to save him from destruction, he becomes his murderer. He rifled the pockets of his victim, took a ring from his finger, and then, laden with the most portable articles of plunder, bent his footsteps homewards. "Well, feyther, what luck?" exclaimed the old woman, as he entered. "Never better," replied Terloggan; "look, zee manther," pointing to his plunder. He then describes the success that had attended his stratagem—not even withholding the particulars of the murder: after which he displayed some pieces of foreign gold coin, and the ring belonging to the murdered man. As he held the ring near the light, he recognised its form and certain marks on it: he started back, his countenance fell, and he quickly passed it to his wife. She too well knew from whose hand it must have been taken, and no sooner examined it than she exclaimed, "Plaise God, thee'st murdered our son Tom! Oh, my son—my poor dear son!" and sunk on the floor, rolling about in frantic ravings. Terloggan endeavoured to master his feelings, and chid the old woman's hasty conclusion; although he was himself secretly stung to the heart, and but too apprehensive of the dreadful deed he had committed. He lay on his bed, however, and tossed to and fro till morning, when, with the dawn of day, he walked forth to ascertain if he had really been the destroyer of his child. He reached the spot where he had left the body, and soon as his eyes lighted on the countenance, he beheld his only son. Who can describe the deep remorse that now stung his soul—who can point the horror that now pervaded even Terloggan's hitherto callous heart. He returned to his hovel, and having related the doleful news, fled the face of man for ever. For several days and nights he was known to wander among the rocks. Many, who accidentally passed near him, shuddered to behold his horror-struck countenance, and to hear his wild ravings of despair. There was, indeed, a tempest in his soul, black and horrible, the transcript of what he had so lately witnessed: and the dreadful forebodings of his conscience, as to futurity, forbade him to call the grave a hiding place. Thus overwhelmed by despair, and hurried to self-destruction, his mangled body was found dashed to pieces among the rocks, and was buried in the sands, not far from the spot where he had perpetrated his last deed of blood. For a considerable period, the fishermen and smugglers—some of whom had been his companions in iniquity—would feel a chill of horror in passing near the spot, and observed a melancholy silence; while their superstitious fears often traced in the hollow murmurings of the winds and waves, the doleful cries of the murdered son, and the despairing groans of the remorse-stung father.

GENEROSITY.

When Admiral Keppel was in a close engagement with a French ship, and the vessel appeared likely to sink, he gave orders to cease firing. The French, in return for this act of generosity, poured in a smart fire. A broadside or two, however, from the English put them in the most imminent danger, and they struck; upon which boats were sent to their relief by Admiral Keppel, who saved the Frenchmen from perishing, while their ship sank to the bottom.

EXTRAORDINARY EFFECT OF THE EARTH-QUAKE AT LIMA, IN 1828, ON H.M.S. VOLAGE.

At half-past seven o'clock on the morning of the 30th of March, a light cloud passed over the ship; at which moment the noise usually attendant on earthquakes in that country, resembling heavy distant thunder was heard. The ship was violently agitated; and, to use the words of the narrator, felt as if placed on trucks, and dragged rapidly over a pavement of loose stones. The water around "hissed as if hot iron was immersed in it;" immense quantities of air bubbles rose to the surface, the gas from which was offensive. Numbers of fish came up dead alongside. The sea, before calm and clear, was now strongly agitated and turbid; and the ship rolled about two streaks, say fourteen inches each way. A cry of "There goes the town!" called the attention of the crew towards it. A cloud of dust, raised by the agitation of the earth and the fall of the houses, covered the town from view, whilst the tower of the garrison chapel, the only object visible above the dust, rocked for a few seconds, and then fell through the roof; and from the high rock at the north end of the island of St. Lorenzo, a slab, supposed thirty feet thick, separated from the top to the bottom of the cliff, and fell with a tremendous noise into the sea. The wharf, or pier, was cracked three parts across, showing a chasm of eighteen inches wide; the chronometers on shore, except those in the pocket, and most of the clocks stopped, whilst the rates of chronometers afloat were in many instances altered. The Volage's chain-

cables were lying on a soft muddy bottom in thirty-six feet of water; and, on heaving up the best bower-anchor to examine it, the cable thereof was found to have been strongly acted on, at thirteen fathoms from the anchor, and twenty-five from the ship. On washing the mud from it, the links, which were made of the best cylinder wrought iron, about two inches in diameter, appeared to have undergone partial fusion for a considerable extent. The metal seemed to run out in grooves of three or four inches long, and three-eighths of an inch diameter, and had formed (in some cases at the ends of these grooves, and in others at the middle of them,) small spherical lumps or nodules, which, upon scrubbing the cable to cleanse it, fell on the deck. The other cable was not injured, nor was any similar occurrence heard of amongst the numerous vessels then lying in the bay. The part of the chain so injured was condemned, on the vessel's being paid off at Portsmouth, and is now in the sail-field of the dock-yard.

Hark! his strong voice the dismal silence breaks,
Mad Chaos from the chains of death awakes;
Loud and more loud, the rolling peals enlarge,
And blue on deck the fiery tides discharge:
There all aghast the shivering wretches stood,
While chill suspense and fear congeal'd their blood;
Wide bursts in dazzling sheets the livid flame,
And dread concussion rends th' ethereal frame.
Sick earth convulsive groans from shore to shore,
And Nature, shuddering, feels the horrid roar.

VOYAGE IN SEARCH OF THE SURVIVORS OF THE CHARLES EATON,

VOYAGE IN SEARCH OF THE SURVIVORS OF THE CHARLES EATON.

On the 3rd of June, 1836, the *Isabella*, colonial schooner, Mr. C. M. Lewis, commander, left Sydney, New South Wales, in search of the unfortunate survivors of the crew of the *Charles Eaton*, and on the morning of the 19th, was anchored off the north side of Murray's Island. As soon as the vessel was secured, the attention of the crew was directed to the shore, on the beach of which a group of Indians were collected, showing signals of peace, by extending their arms, and displaying gestures similar to the natives of the Main; and among them was plainly distinguished a naked white man. The Indians were preparing to launch their canoes; and as there existed some doubts as to the real disposition of these islanders, every preparation of defence was made on board the schooner; but that the natives might not be deterred from visiting the vessel, the loaded guns were run in, and one half of the crew concealed below, in readiness to repel any attack. To the westward, a canoe was observed under sail.

It was not long before four canoes came off, each of which contained sixteen men. On their approach, they began to make signs of friendship, by rubbing the hand over the abdomen, and calling out in loud voices, "poud, poud," (peace, peace). Their object was to trade; and for that purpose they had brought tortoise-shell, cocoa-nuts, and other trifles; which, as they approached the ship, they held up, calling out "tooree," and "toollick," meaning iron tools, such as knives and axes. It was, however, pretended, by signs, that they were not understood, in the hope that they would bring off the white man to interpret for them; at the same time, some axes were displayed, the sight of which made the Indians so anxious to possess them, that although they might have easily been induced to give up their nearest relations in exchange, yet they showed great reluctance to produce the white man; and it was not until they found that trade would not be allowed, that they sent a canoe to the shore, which returned in an hour with him; but he was not permitted to come on board until some axes were given in exchange. Upon interrogating him, Mr. Lewis was very much gratified to find that he was one of the unfortunate crew of the *Charles Eaton*, his name being John Ireland.

Deferring any further inquiries for the present, Mr. Lewis gave the crew permission to trade with the Indians, upon which, an active barter commenced, and was carried on with great briskness, and in the most friendly manner. The first present which was given them, was some empty glass bottles, which they call "tarpoor," on which a few lines, explaining the particulars and intention of the schooner's visit had been scratched, in order that, should any white people be on the island, they might be informed of the means of escape which was now open to them. Ireland informed Mr. Lewis that he had been treated with great kindness by the Indians generally; but pointed out one in particular, whose name was Duppar, to whom he was indebted for his life and protection, and from whom he had received every parental kindness. A favourable opportunity was therefore afforded of rewarding him for his humanity. He was invited on board, clothed in "fine linen," and loaded with presents, which put the old man in high spirits.

Ireland now informed Mr. Lewis, that the youngest son of Capt. D'Oyley was also on shore. Upon applying to the Indians to go for him, they said he was on the other side of the island, and could not be produced that night, but promised that they would bring him on board in the morning. Fearing, however, that their reluctance to part with the child might induce them to conceal him, all bartering was ordered to be suspended until he was given up; soon after which, the canoes left the vessel, and returned to the shore.

Mr. Lewis had now an opportunity of obtaining from Ireland, the account of the loss of the *Charles Eaton*; but found great difficulty in understanding him; for the boy had forgotten his native tongue, and mixed the Murray Island language so much with his own, that he was at first scarcely intelligible. The following is Ireland's melancholy tale.

On the 15th of August, 1834, on the passage from Sydney to

Canton, the *Charles Eaton* was wrecked on a coral reef, close to Torres Straits. The captain and crew amounted to twenty-six, and the passengers were Captain and Mrs. D'Oyley, and their two children and servant girl, and a young gentleman from Ireland. The vessel went to pieces, and two rafts were constructed, on one of which the master, the surgeon, Captain and Mrs. D'Oyley, their children and nurse, a native of India, Mr. Armstrong, passengers, and two seamen, left them in the night. Those that remained then made another raft of the vessel's top-masts, lashed together with coil rope, and made a sail out of some cloth, which formed a part of her cargo. It took seven days before it was completed, when they launched off, and went with the tide.

After being two days and nights upon the raft, up to their waists in water, and having partaken of very little food, they passed an island, and then saw several more a-head. Soon afterwards a canoe was perceived paddling towards them, containing ten or twelve Indians, who, as they approached, stood up, and extended their arms, to show they had no weapons, and were inclined to be friendly. On reaching the raft the Indians got upon it, and conducted themselves very peaceably; and after a short time proposed that they should leave the raft and go into the canoe, which they at first hesitated to do, until Thomas Ching, a midshipman, said he would go, as he should then have a better chance of getting to England; upon which they all consented, and embarked in the canoe. Before they left, the Indians searched the raft very narrowly for iron implements, but only found a few hoops, which they collected and took with them. They were landed on a small island, called Boydan by the natives, who accompanied them round the island in search of food and water, but they were so exhausted with fatigue and hunger that they threw themselves down on the beach in despair; for it was evident, from the ferocious bearing and conduct of the savages, who stood around the party, grinning and laughing in the most hideous manner, that they were exulting in anticipation of their murderous intentions. In this dreadful state of suspense, Mr. Claer, the first officer, addressing his companions, recommended them to be resigned to their fate, and read to them, in a most impressive manner, several prayers from a book which he had brought from the wreck; after which, commending themselves to the protection of the Almighty, worn out by severe exhaustion, they soon fell asleep. But it was to them the sleep of death. For no sooner had they composed themselves, than, as Ireland describes, he was roused by a shout and a noise, and upon looking up, saw the Indians murdering his companions by dashing their brains out with clubs. The last who met his fate was Mr. Claer, who in the attempt to make his escape to the canoe, was overtaken by his pursuers, and immediately despatched by a blow on the head.

Ireland and another boy named Sexton, were now all who were left alive. The former thus describes his deliverance.

"An Indian came to me with a carving knife to cut my throat; but I grasped the blade of the knife in my right hand, and held it fast, struggling for my life. The Indian then threw me down, and, placing his knee on my breast, tried to wrench the blade out of my hand, but I still retained it, although one of my fingers was cut to the bone. At last I succeeded in getting uppermost, when I let him go, and ran into the sea, and swam out; but being much exhausted, and the only chance of my life being to return to the shore, I landed again, fully expecting to be knocked on the head. The same Indian then came up with an infuriated gesture, and shot me in the right breast with an arrow; and then, in a most unaccountable manner, suddenly became quite calm, and led or dragged me to a little distance, and offered me some fish and water, which I was unable to partake of.

"Whilst struggling with the Indian I observed Sexton, who was held by another of the savages, bite a piece of his arm out; but after that knew nothing of him, until I found his life had been spared in a manner similar to my own.

"At a short distance off, making the most hideous yells, the other savages were dancing round a large fire, before which were placed in a row, the heads of their victims, whilst their decapitated bodies were washing in the surf on the beach, from

which they soon disappeared, having, probably, been washed away by the tide. Sexton and I were then placed in charge of two natives, who covered us with the sail of the canoe—a sort of mat—but paid no attention to my wound which had been bleeding profusely.”

Upon Ireland being asked the reason why their lives were spared, he answered that he has frequently seen the Indians recover themselves in a moment from a violent paroxysm of fury; and he attributes their safety to a circumstance of this nature. The savages, he said, ate the eyes and cheeks of his shipmates in his presence.

The next day the Indians collected all the heads; and, embarking, removed to another island where the native women lived, which they called Pullan. On landing there, Ireland saw Captain D'Oyley's two children, George and William, and the ship's Newfoundland dog, called Porlland. George appeared to be about seven or eight years old, and the other was no more than thirteen or fourteen months old. The eldest told Ireland that the black men had killed his father and mother, and all, except him and his brother. The natives then took them into the open huts, and he saw parts of Mrs. D'Oyley's dress and the steward's watch there.

The number of Indians collected amounted to about sixty; they were merely residing on the island during the fishing season, for their home, as it afterwards turned out, was at a considerable distance off. Their principal subsistence was turtle and small fish, which they caught with hook and line, and shell fish, which abound on the reefs. The island of Pullan is covered with low trees and underwood, and the soil is sandy. In the centre of it is a spring, which supplied the whole party with sufficient water for their consumption. Upon a voyage the natives carry their water in bamboo joints and cocoa-nut shells, as do the Malays.

After remaining at Pullan two months, the Indians separated. One party, taking Ireland and the infant D'Oyley with them, embarked in a canoe, and after half-a-day's sail, reached another islet to the northward, where they remained a day and a night on a sandy beach, and the next morning proceeded and reached another islet, low and bushy, where they remained a fortnight. They then proceeded to the northward, calling on their way at different islands, and remaining as long as they supplied food, until they reached Darnley's Island, which they called Aroob, where, for the first time, Ireland says he met with kind treatment. After a fortnight they again embarked, and returning they came to an island, called Sir-reb (understood to be Marsden's Island), situate near Aureed, where the voyage ended.

“After we were there a few days,” says Ireland, “two ships in company approached very near, and the natives were running backwards and forwards with great curiosity, and they sent us up into the bush along with the women. William D'Oyley used to cry, and they tied him to a tree, and beat him with a bamboo, and they struck at me for trying to prevent them from ill-treating the child. Soon after we had been on this island, but I do not know how long, for I lost all idea of keeping count, Duppar, and Pamoy, his wife, natives of Murray's Island, came over to us on the sands, and purchased us, William D'Oyley and me, for a branch of bananas each, and we went along with our new purchasers, and the other sailor boy and George D'Oyley were taken away by the natives that sold us. At Murray's Island we were treated much better than at the other islands. The natives had small gardens, and grew yams and cocoa-nut trees, and plantains. When I got acquainted with the language, I learned from the natives we were with, that those we had quitted had murdered the other sailor boy and George D'Oyley.”

Duppar, who, it appears, upon hearing that there were two white boys in captivity at Aureed, had embarked in a canoe with his wife, and went for the express purpose of obtaining them by barter, gave little D'Oyley to a native, named Oby, to take care of; a charge of which he faithfully acquitted himself, and both Oby and his adopted child soon became very fond of each other, for, as the child was a mere infant, he soon forgot his mother, and naturally attached himself to his nurse. When at Aureed the Indians had named Ireland, Wak, and

little D'Oyley they called Hass—names which they retained at Murray's Island, and by which they are doubtless known all over the Archipelago.

Ireland lived in the same hut with Duppar and his family; his employment was to cultivate a plantation of yams, and, during the season, to assist in taking turtle and shell-fish. On one occasion he accompanied them on an excursion towards New Guinea, where they went for the purpose of barter and trade, which they frequently did, to obtain bows and arrows, canoes and feathers, for which they gave in return shells, and which, from their scarcity, the New Guinea people prize very much; but as Duppar was fearful the New Guinea people would steal or murder him, he was left at Darnley's Island, in charge of Agge, an Indian, until their return. Duppar and his friends, however, were not long away; for, having stopped at an island called Jarmuth (Campbell's Island), to pass the night, one of the islanders attempted to take away by force, from one of the visitors, his moco moco (a sort of bandage worn round the calves of the legs, made of the bark of bamboo), upon which a quarrel ensued, in which the Murray Islanders used their bows and arrows, and wounded several, one being shot through the body. The Jarmuth people then retreated to their huts, and the others embarked; but instead of going to New Guinea, returned to Darnley's Island, where, in a few days, they received a message from Jarmuth, offering peace; which, however, they would not accept, nor did they afterwards make friends.

“After I had been some time on the island,” continued Ireland, “the ship *Mangles* came in sight and anchored. I went over, along with several of the natives, in one of the canoes, and we dropped under the stern of the vessel. A rope was thrown down into the canoe, but having sprained my wrist a few days before, I was unable to get up by it, and I asked the crew to lower the boat for me, and I would get in. The captain and officers then lowered the starboard cutter, and put into it several cutlasses, swords, and pistols. The sight of these frightened the natives, who thought that they meant to kill me and themselves, and they let go the rope, and paddled towards shore. The boat drew a few strokes after us, but soon turned back. A few hours after the captain rowed to the beach, and one of the sailors showed him the boy, and motioned him to come to them, and he also motioned to them to approach him, but they appeared afraid of each other, and the boat left the beach, soon after which the vessel sailed off.” This concluded Ireland's statement.

Next morning, the 20th of June, at seven o'clock, five canoes came off to the schooner to trade; but as they did not bring the child, no communication was allowed to be held with them. As Mr. Lewis had now the advantage of Ireland's interpreting his wishes, no mistake or misunderstanding could occur in communicating with them. It was evident they were very reluctant to give the child up, and yet they coveted the “toolick” and “toores” so much, that he had great hopes of effecting his object without resorting to force. After waiting for some time without any appearance of their sending for the child, he began to insist upon their giving him up; and opening the ports, ran the guns out, and made a demonstration of using force, which had the desired effect. The natives saw he was in earnest, and accordingly sent a canoe ashore to bring the child off. It returned in a short time, with a message that he was on the other side of the island, but should be given up if he would give “toores” for him, which was, of course, immediately assented to; but then they wanted the payment to be made in advance. As it was evident from the confidence they placed in Mr. Lewis, and the example that had been shown by the payment that was made for Ireland, and the rewards that were afterwards given to Duppar, that the Indians had no intention of completing their part of the bargain, but merely wanted to obtain the “toolick,” he refused to comply with their proposal, and repeated his orders to stop trade.

Shortly after this, upon looking towards the shore, a group of about one hundred Indians, evidently in deep consultation, were seen seated on a hill; and among them a little white child, perfectly naked, playing with others of the same size.

After two or three hours the group began to move down towards the shore, and at four o'clock the child, surrounded by the natives, was brought to the beach in the arms of a young Indian, who seemed by his kissing him to be very sorrowful at the idea of giving him up. He, however, embarked in a canoe, and brought him alongside. The child was frightened, and cried very much at the idea of leaving his sable friend, whose neck he clung round, and pointed to the shore. Oby, however, brought his little charge on board, and descended into the cabin, where Mr. Lewis satisfied him with presents, and dressed him in clothes, at which he evinced no small delight. The bargain having now been completed, the canoes were permitted to come alongside, and the people to trade. They had not, however, much to dispose of: a few yams and cocoanuts, a small quantity of tortoise-shells, bows, arrows, figzigs, and shells, were all they possessed.

Towards evening the canoes returned to the shore, but left Oby and Duppar on board; both of whom, particularly the former, who sobbed very much, were disconsolate at the idea of parting with their favourites. Before leaving the vessel's side, the Indians pressed Mr. Lewis to visit them on shore next day, which he promised to do.

He accordingly landed the following morning, and was immediately surrounded by upwards of one hundred Indians, who expressed great delight at the meeting, by hugging and caressing him, and shaking hands; but in order to prevent surprise, two boats were ordered to lie off on their oars, and be prepared with their arms should any hostility be shown. This movement, however, appeared to frighten the women and children so much, that they ran away to their huts; and it was some time before they mustered sufficient courage to approach. At last they were persuaded by the men, who were evidently amused by their timidity; and an old fat lady gradually drew near and took Mr. Lewis's hand, and held it in one of hers, scratching the palm with the fingers of the other. Confidence being thus restored, the women and children

MUTINY PUNISHED.

As soon as the ship had been hauled to the wind, Jack's ship's company began to think that there was nothing to do except to make merry, so they brought up some earthen jars full of wine, and emptied them so fast that they were soon asleep on the deck, with the exception of the man at the helm, who, instead of thirty-two could clearly make out sixty-four points in the compass, and of course was able to steer with a much greater nicety. Fortunately, the weather was fine, for when the man at the helm had steered till he could see no more, and requested to be released, he found that his shipmates were so overpowered, that it was impossible to wake them. He kicked them one by one most unmercifully in the ribs, but it was of no use; under these circumstances, he did as they did; that is, lay down with them, and in ten minutes it would have taken as much kicking to awake him as he gave his shipmates.

When they were presented with handkerchiefs and toys, which seemed to delight them very much. After remaining two hours with those friendly Indians, Mr. Lewis embarked, with a view of examining the depth of water between the Islands.

Next morning, June 22nd, understanding that there was a water hole near the W. S. W. end of the island, eight casks were sent on shore to be filled. The well was about one hundred yards from the beach, but it only contained enough to fill one cask, and that was so muddy as to be unfit for use. It appears that the island is very deficient in water, and what they use is collected in the wet season in holes, and the valves of the "chama gigas" under the trees. The "chama gigas" is an enormous bivalved shell, the fish of which alone has

frequently been found to weigh upwards of three hundred weight: so that it would take the united strength of three or four men to move the shell when it contains its inhabitant. The valves may perhaps contain as much as three or four gallons of water. For drink the natives use principally the milk of the young cocoanut.

Whilst filling the cask with water, one of the Indians, an ugly fellow, without a nose or mouth (these having been eaten away by a cancerous complaint, which appears to be very prevalent amongst

them), took the opportunity of stealing a cask, and concealing it in the scrub at some distance: it was, however discovered, upon which the thief and his companions scampered off for fear of punishment, for the party was well armed. The Isabella's people afterwards had several opportunities of witnessing their thievish propensities, particularly for any iron tool.

On the ship's return to Sydney, the child, D'Oyley, was taken charge of by Mrs. Slade, a lady who knew Captain D'Oyley's family. It was with great regret that Ireland parted with the poor child he had been with so long. He had used the utmost exertions to save him upon many occasions, and he had no doubt, he said, that but for him he would have been killed.

In the mean time the ship had it all her own way, and not knowing where she was to go, she went round and round the compass during the best part of the night. Mesty had been down with Jack examining the cabin, and in the captain's state-room they had found fourteen thousand dollars in bags; of this they determined not to tell the men, but locked up the money and everything else of value, and took out the key. They then sat down at the cabin table, and it was no matter of surprise, after having been up all the night before, that Jack laid his head on the table and fell fast asleep. Mesty kept his eyes open for some time, but at last his head sank down upon his chest, and he also slumbered. Thus about one o'clock in the morning, there was not a very good watch kept on board of the Nostra Senora del Carmen.

About four o'clock in the morning, Mesty tumbled forward, and he hit his head against the table, which roused him up.

"By de mass, I tink I almost fall asleep," cried he, and he went to the cabin window, which had been left open, and found that there was a strong breeze blowing in. "By de Lord, de wind hab come mofe aft, why not tell me?" So saying, he went on deck, where he found no one at the helm; every one drunk, and the ship with her yards braced up running before the wind. Mesty growled, but there was no time to lose; the top-sails only were set, these he lowered down, and then put the helm a lee, and lashed it, while he went down to call our hero to his assistance.

"This nebber do, Massa Easy: we all go to devil together—dam drunken dogs—I freshen um up any how." So Mesty drew some buckets of water, with which he soused the ship's company, who then appeared to be recovering their senses.

"By heavens!" says Jack, "but this is contrary to the 'articles of war'; I shall read them to them."

"I tell what better ting, Massa Easy; me go lock up all de wine, and sarve out so much, and no more. I go do it at once 'fore they wake up."

Mesty soon returned, with the keys of the provision room tied to his bandana.

"Now," says he, "they not get drunk again in a hurry."

A few more buckets of water soon brought the men to their senses; they again stood on their legs, and gradually recovered themselves.

As soon as the sails were trimmed, the men came aft, and proposed, that if they could find anchorage, they should run into it. Jack consulted with Mesty, who thought it advisable to agree to the proposal. The coxswain offered to go in the boat and examine: and with four men he set off, and in about an hour returned, stating that there was plenty of water, and it was as smooth as a mill-pond, and land-locked on every side. As they could not weigh the bower anchor, they bent the kedje, and running in without accident, came to in a small bay. The sails were furled, and everything put in order by the seamen, who then took the boat and pulled on shore.

"They might as well have asked leave," thought Jack. In an hour they returned, and, after a short discussion, came aft to our hero, in a body.

The coxswain was spokesman. He said that they had had hard work, and required now to have some rest; that there were provisions on board for three months, so that there could not be any hurry; that they had found they could pitch a tent very well on shore, and live there for a short time, and that as there was no harm in getting drunk on shore, they expected that they might be allowed to take provisions and plenty of wine with them; and that the men had desired him to ask leave, because they were determined to go, whether or no. Jack was about to answer with the hand-spike; but perceiving that the men had all put on their cutlasses, and had their pistols at their belts, he thought proper to consult Mesty, who perceiving that resistance was in vain, advised Jack to submit, observing, that the sooner all the wine was gone the better. Mesty then gave them the keys of the provision hatch, and told them, with a grin to help themselves. The men then informed our hero that he and Mesty should stay on board, and take care of the ship for them.

As soon as they had thrown a spare sail into the boat, with some spars to make a tent, and some bedding, they went down below, hoisted up two pipes of wine out of three, a bag or two of biscuits, arms and ammunition, and as much of the salt provisions as they thought they might require. The boat being full, they shoved off, with three cheers of derision. Jack was sensible to the compliment: he stood at the gangway, took off his hat, and made them a polite bow.

As soon as they were gone Mesty grinned with his sharp-filied teeth, and looking at our hero, said,—"I tink I made um pay for all dis—stop a little; by de piper as played before Moses, but our turn come by-and-by."

A narrow piece of salt pork had been left at the gangway; Jack, without thinking, tossed it overboard; being almost all fat it sank very gradually; Jack watched it as it disappeared, so did Mesty, both full of thought, when they perceived a dark object rising under it: it was a ground shark, who took it into his maw, sank down, and disappeared.

"What was that?" said Jack.

"That ground shark, Massa Easy, worst shark of all, you nebber see him till you feel him." And Mesty's eyes sparkled with pleasure.

During the day, the men on shore were seen to work hard, before they abandoned themselves to the sensual gratification of intemperance. The tent was pitched, the fire was lighted, and all the articles taken on shore rolled up and stowed away in their places; they were seen to sit down and dine, for they were within hail of the ship, and then one of the casks of wine was spiled. The evening closed, and all was noise and revelry on shore; and as they danced and sung, and tossed off the cans of wine by the light of the fire, as they hallooed and screamed, and became more and more intoxicated, Mesty turned to Jack with his bitter smile, and only said, "Stop a little."

At last the noise grew fainter, the fire died away, and gradually all was silent.

"Now, Massa Easy, please you come aft and lower down little boat; take your pistols and then we go on shore and bring off the cutter; they all asleep now."

Our hero and Mesty went into the boat and shoved off, pulling gently on shore; the men were in a state of intoxication, so as not to be able to move, much less to hear. They cast off the cutter, towed her on board, and made her fast astern.

"Now, sar, we may go to bed; to-morrow morning you will see."

Mesty was up at daylight, and Jack soon followed him, they watched the party on shore. At last, just as Jack had done breakfast, one or two made their appearance, and walked down to the beach, to where the boat had been made fast; and they walked along the rocks until they were abreast of the ship.

"Ship ahoy!"

"Halloo," replied Mesty.

"Bring the boat ashore directly, with a beaker of water."

"I shall not send the boat," replied Jack.

"You won't—won't you?—then your doom is sealed," replied the coxswain, and walked up to the tent with the others. In a short time all the seamen turned out of the tent, bringing with them four muskets, which they had taken on shore with them. They then came down abreast of the ship, and the coxswain again hailed, and asked if they would bring the boat ashore.

"You must say no, sar," said Mesty.

The plan of the mutineers had been seen by the wily negro; it was to swim off to the boats which were riding astern and to fire at him or Jack, if they attempted to defend them. Some of the men examined their priming and held the muskets at their hips all ready, with the muzzles towards the ship, while the coxswain and two men were throwing off their clothes.

"Stop, for God's sake stop!" cried Jack, "the harbour is full of sharks."

"Do you think to frighten us with ground sharks?" replied the coxswain, "keep under cover, my lad; Jack, give him a shot to prove we are in earnest, and every time he or that nigger show their heads, give them another, my lads."

"For God's sake, don't attempt to swim," said Jack, in an agony. "I will try some means to give you water."

"Too late now, you're doomed;" and the coxswain sprang off the rock into the sea, and was followed by two other men: at the same moment a musket was discharged, and the bullet whistled close to our hero's ear.

Mesty dragged Jack from the gangway, who was now nearly fainting from agonising feelings. He sank on the deck for a moment, and then sprang up and ran to the port to look at the men in the water. He was just in time to see the coxswain raise himself with a loud yell out of the sea, and then disappear in a vortex, which was crimsoned with his blood.

Jack had covered his face with his hands. But the tragedy was not complete; the other men, who were in the water, had immediately turned and made for the shore, but before they could reach it, two more of these voracious monsters,

attracted by the blood of the coxwain, had flown to the spot, and there was a contention for the fragments of their bodies.

"Oh, horrid, horrid!" groaned our hero.

"Yes, sar, very horrid," said Mesty, "and dat bullet at your head very horrid. Suppose the sharks no take them, what then? They kill us, and the sharks have our bodies. I tink dat more horrid still."

The dreadful death of the three mutineers appeared to have a sensible effect upon their companions, who walked away from the beach with their heads down, and with measured steps. They were now to be seen perambulating the island, probably in search of that water which they required. At noon, they returned to their tent, and soon afterwards were in a state of intoxication, hallooing and shouting as the day before.

A few days more passed, and as was expected, the mutineers could hold out no longer. They had put the spile in the second cask of wine so loosely when they were tipsy, that it dropped out, and all the wine ran out, so that there had been none left for two or three days; their fuel had also been expended, and they had latterly eaten their meat raw; the loss of their tent which had been fired by their carelessness, had been followed by four days and nights of continual rain. Every thing they had, had been soaked through and through, and they were worn out, shivering with cold, and starving. Hanging they thought better than dying by inches from starvation; and, yielding to the imperious demands of hunger, they came down to the beach, abreast of the ship, and dropped down on their knees.

"I tell you so, Massa Easy," said Mesty: "d—n rascals, they forget they come down fire musket at us every day: by all de powers, Mesty not forget."

"Ship a-hoy," cried one of the men on shore.

"What do you want?" said Jack.

"Have pity on us, sir!" exclaimed the other men, "we will return to our duty."

"Debbel doubt em."

"What shall I say, Mesty?"

"Tell em no, first, Massa Easy—tell 'em to starve and be d—d."

"I cannot take mutineers on board," replied Jack.

"Well, then, our blood be on your hands, Mr. Easy; if we are to die it must not be by inches; if you will not take us the sharks shall; it is but a crunch, and all is over."

It appeared that the poor fellows had already made up their minds to do this, if our hero, persuaded by Mesty, had refused to take them on board—they shook hands all round, and then walking a few yards from the beach, stood in a line while the man gave the signal—one—two.

"Stop," cried Jack, who had not forgotten the dreadful scene which had already taken place,—*"stop."*

The men paused.

"What will you promise if I take you on board?"

"To do our duty cheerfully till we join the ship, and then be hung as an example to all mutineers," replied the men.

"Dat very fair," replied Mesty; "take dem at their word Massa Easy."

"Very well," replied Jack, "I accept your condition; and we will come for you."

Jack and Mesty hauled up the boat, stuck their pistols in their belts, and pulled to the shore. The men, as they stepped in, touched their hats respectfully to our hero, but said nothing. On their arrival on board, Jack read that part of the articles of war relative to mutiny, by which the men were reminded of the very satisfactory fact, "that they were to suffer death;" and then made a speech which, to men who were starving, appeared to be interminable. However, there is an end to every thing in this world, and so there was to Jack's harangue; after which Mesty gave them some biscuit which they devoured in thankfulness, until they could get something better. The next morning the wind was fair, they weighed their kedge with some difficulty, and ran out of the harbour: the men appeared very contrite, worked well but in silence, for they had no very pleasant anticipations, but hope always remains with us; and each of the men, although he had no doubt but that the others

would be hung, hoped that he would escape with a sound flogging. The wind however did not allow them to steer their course long; before night it was contrary, and they fell off three points to the northward. "However," as Jack observed, "at all events we shall make the Spanish coast, and then we must run down it to Gibraltar: I don't care—I understand navigation much better than I did. The next morning they found themselves, with a very light breeze, under a high cape, and, as the sun rose, they observed a large vessel on shore, about two miles to the westward of them, and another outside, about four miles off. Mesty took the glass and examined the one outside, which, on a sudden, had let fall her canvass, and was now running for the shore, steering for the cape under which Jack's vessel lay. Mesty put down the glass.

"Massa Easy—I tink dat de Harpy."

One of the seamen took the glass and examined her, while the others who stood by showed great agitation.

"Yes, it is the Harpy," said the seaman. "Oh, Mr. Easy, will you forgive us?" continued the man, and he and the others fell on their knees. "Do not tell all, for God's sake, Mr. Easy."

Jack's heart melted; he looked at Mesty.

"I tink," said Mesty, apart to our hero, "dat with what them hab suffer already, suppose they get seven dozen apiece, dat quite enough."

Jack thought that even half that punishment would suffice: so he told the men, that although he must state what had occurred, he would not tell all, and would contrive to get them off as well as he could. He was about to make a long speech, but a gun from the Harpy, which had now come up within range, made him defer it till a more convenient opportunity. At the same time the vessel in shore hoisted Spanish colours, and fired a gun.

"By de powers but we got in the middle of it," cried Mesty; "Harpy tink us Spaniard. Now, my lads, get all gun ready, bring up powder and shot. Massa, now us fire at Spaniard—Harpy not fire at us—no hab English colours on board—dat all we must do."

The men set to with a will; the guns were all loaded, and were soon cast loose and primed, during which operations it fell calm, and the sails of all three vessels flapped against their masts. The Harpy was then about two miles from Jack's vessel, and the Spaniard about a mile from him, with all her boats a-head of her towing towards him; Mesty examined the Spanish vessel.

"Dat man-o'-war, Massa Easy—what de debbel we do for colour? must hoist something?"

Mesty ran down below; he recollected that there was a very gay petticoat, which had been left by the old lady who was in the vessel when they captured her. It was of green silk, with yellow and blue flowers, but very faded, having probably been in the Don's family for a century. Mesty had found it under the mattress of one of the beds, and had put it into his bag, intending probably to cut it up into waistcoats. He soon appeared with this under his arm, made it fast to the peak halyards, and hoisted it up.

"Dere, massa, dat do very well—dat what you call all nation colour. Everybody strike him flag to dat—men nebbel pull it down," said Mesty, "any how. Now den, ab hoist colour, we fire away—mind you only fire one gun at a time, and point um well, den hab time to load again."

The wind now freshened fast, and blew out the green petticoat, but the Harpy was exchanging broadsides with the corvette, and too busy to look after Jack's ensign. The Spaniard defended himself well, and had the assistance of the batteries as he passed, but there was no anchorage until he had run many miles farther. About noon, the wind died away, and at one o'clock it again fell nearly calm; but the Harpy had neared her distance, and was now within three cables' length of her antagonist, engaging her and a battery of four guns. Jack came up again, for he had the last of the breeze, and was about half-a-mile from the corvette when it fell calm. By the advice of Mesty, he did not fire any more, as otherwise the Harpy would not obtain so much credit, and it was evident that the fire of the Spaniard slackened fast. At three o'clock the Spanish colours were hauled down, and the Harpy,

sending a boat on board and taking possession, directed her whole fire upon the battery, which was soon silenced.

The calm continued, and the Harpy was busy enough with the prize, shifting the prisoners and refitting both vessels, which had very much suffered in the sails and rigging. There was an occasional wonder on board the Harpy what that strange vessel might be who had turned the corvette, and enabled them to capture her, but when people are all very busy, there is not much time for surmise.

Our hero, who was tired with excitement and the hard work of the day, thought and thought until he fell fast asleep, and instead of waking at sun-set he did not wake until two hours afterwards; and Mesty did not call him, because he was in no hurry himself to go on board and boil the kettle for the young gentlemen.

When Jack woke up, he was astonished to find that he had slept so long: he went on deck; it was dark and still calm, but he could easily perceive that the Harpy and corvette were still hove to, repairing damages. He ordered the men to lower down the small boat, and leaving Mesty in charge, with two oars, he pulled to the Harpy. What with wounded men, with prisoners, and boats going and coming between the vessels, every one on board the Harpy were well employed; and in the dark, Jack's little boat came alongside without notice. This should not have been the case, but it was, and there was some excuse for it. Jack ascended the side and pushed his way through the prisoners, who were being mustered to be victualled. He was wrapped up in one of the gregos, and many of the prisoners wore the same.

He went aft to the cabin, pushed by the servant, who was giving some orders from the captain to the officer on deck, and entering the cabin where the captain was seated with two Spanish officers, took off his hat and said,

"Come on board, Captain Wilson."

Captain Wilson, evidently much surprised, jumped up and upset the glass before him.

"Merciful God, Mr. Easy. Where did you come from?"

"From that ship astern, sir," replied Jack.

"That ship astern! What is she?—where have you been so long?"

"It's a long story, sir," replied Jack.

Captain Wilson extended his hand and shook Jack's heartily.

"At all events, I'm delighted to see you, boy: now sit down and tell me your story in a few words: we will have it in detail by-and-by."

"If you please, sir," said Jack, "we captured that ship with the cutter the night after we went away—I'm not a first-rate navigator, and I was blown to the Zaffarine Islands, where I remained two months for want of hands; as soon as I procured them I made sail again—I have lost three men by sharks, and I have two wounded in to-day's fight—the ship mounts twelve guns, is half-laden with lead, and cotton prints, has fourteen thousand dollars in the cabin, and three shot-holes right through her—and the sooner you send some people on board of her the better."

This was not very intelligible, but that there were fourteen thousand dollars, and that she required hands sent on board, was very satisfactorily explained. Captain Wilson rang the bell, sent for Mr. Asper, who started back at the sight of our hero—desired him to order Mr. Jolliffe to go on board with one of the cutters, send the wounded men on board, and take charge of the vessel, and then told Jack to accompany Mr. Jolliffe, and to give him every information; telling him that he would hear his story to-morrow, when they were not so very busy.—*Midshipman Easy by Captain Marryatt.*

SUFFERINGS OF CHARLES STURT, ESQ.

On Saturday, September 20, 1800, his Majesty King George the Third, with the Queen and Royal Family, went on board the Cambrian frigate, upon which the St. Lorenzo and Syren saluted. At ten the three frigates slipped and stood to sea, on the larboard tack. About a quarter of an hour afterwards I got under sail, and stood before the Cambrian, on board of

which the standard was flying, kept on her quarter, and at times sailed round her. At a little before eleven passed under the stern of the Cambrian, Mr. Wield's cutter under my lee-bow; his boat being in, and topmast struck, she felt no impediment whatever. My boat astern, I observed, impeded considerably my sailing; the sea running so high, was afraid to hoist her in; however, struck my topmast and made all snug. Both cutters standing to sea about eleven, two leagues from land, by which time the frigates had worn, and were standing into Weymouth Bay. Feeling anxious to beat Mr. Wield's cutter, which I saw I could do, could I get rid of my boat, I proposed to one of my sailors to jump in and take her to Weymouth. He hesitated, and refused to comply, upon which I observed, "You have known me long enough, my lads, to be satisfied I would not order you to do anything I would not readily do myself, therefore reef the sails, slip the mast, I will go myself."

This was soon done, and I took with me my pocket compass. On jumping into the boat, Ben asked me if I would have another coat on. "Oh, no," said I, "never mind, Ben, I can swim in this as well as any I have." I left the yacht, ordered my master to attend, and to do his best to beat Mr. Wield's, hoisted my sail and steered N.N.E. to get clear of the shambles; found a considerable sea running, but not greater than the boat could weather with ease, for she never shipped a thimbleful of water till she came to the shambles.

A very strong ebb tide carried me to the westward, and towards the shambles, which I wished to avoid; put before the wind, but being under very low sail could not stem the tide, daring not to quit the helm to let the reefs out of the sail, for fear of broaching-to. The tide hauling me dead on the shambles, where the sea was running tremendously high, and breaking horribly, there was no time to be lost. Sensible of my peril, convinced that I could get neither to the eastward nor to the westward of them, I prepared to meet my danger; and to make the boat as lively as possible, threw over my ballast, which precaution would prevent her from sinking to the bottom.

I began to hear the dismal sound of the breakers, and soon saw them right a-head. Aware of the danger, and convinced that my boat could not exist many minutes, and that nothing but the interposition of Providence was able to save me, in order to divert my thoughts from the horrid idea of death, I began singing the sea song, "Cease rude Boreas;" at the same time keeping the boat's quarter to the surf. As I was singing the second verse, a dreadful foaming sea took my boat on the larboard quarter, and sheered my helm a-weather. She lost her steerage way, broached-to, and upset, the sea rolling over and over. Recovering from my alarm, without the smallest hope of escaping, I swam to my boat, which was lying on her broadside; with difficulty I got into her, and held her fast. I immediately pulled off my coat, waistcoat, shirt, and cravat, which, as they were wet, I accomplished not without much difficulty. I then began to consider what could be done; no sail near me, a dreadful, hollow, broken sea, running in every direction, and frequently overwhelming me, left me no hope of saving my life. To surrender without a struggle, I considered weak; the thoughts of my wife and children, which at that moment struck my mind so forcibly that I imagined I saw them, together with the recollection of the difficulties I had surmounted two years before, in saving some men from a wreck off my house, and who, I knew were, by the assistance of Divine Providence, saved from a situation as dreadful as my own,—this inspired me with resolution and fortitude to exert myself; I began to clear away the boat's masts and sails, which I at length accomplished, after being repeatedly washed off the boat.

When I had cleared the wreck, I got on her gunwale, and by my weight brought her to right. I got into her, but the violence of the seas, and their rapid return, repeatedly overwhelmed me. The difficulty of regaining my boat against such seas quite exhausted me, and the salt water so affected my sight, that it was some time before I could recover my boat. Looking round for a sail, perceiving none, and my distance from the land increasing, I began to think it a folly to struggle any longer for a miserable existence of a few hours. The love of life, and the hopes of some vessel heaving in sight, however,

prevailed, and I resolved to use every possible means of preserving it, and to continue in the boat. Repeatedly washed off and buried in the waves, I knew that I could not hold out much longer, but must yield to my fate. I then recollected that fishermen, when caught in a gale, frequently let a spar or mast, fastened to a boat's painter, go a-head, by which the force of the waves are broken before they reach the boat. Having been by this time above two hours in the water (for I upset at twelve), I felt myself much fatigued, and that it was absolutely necessary I should contrive some means to relieve myself. I accordingly took my boat's painter, passed it over and under the after seat of the boat; but in accomplishing this I was frequently buried for many seconds beneath the waves, which succeeded each other so rapidly that my breath was nearly gone.

At this period several gannets, a species of sea-gull, hovered close to me, and were so bold as to come within two feet of my head. I suppose they anticipated a good meal of me. However, by hallooing pretty loud, I convinced them that I was not dead. They took to flight, and I saw no more of them. After they were gone, I tried how my scheme answered; when a heavy sea came, I got out of the boat, and swam to the leeward, holding the boat's painter, which I had fastened to her broadside. Being at sea, and bottom upwards, the surf broke with force against her, and only a part came over me. By these means, saving myself from many a heavy sea, my spirits kept up; but, alas! when I could discover no sail in sight, while the sea increased, and it grew towards evening, they began to sink. Having struggled through such difficulties without the smallest hopes of being relieved, I had but little encouragement to persevere, and, having been full three hours in the water, I was much weakened.

About three o'clock I saw two sail near me, about a mile to leeward, but I knew that no exertion of mine could make the people on board hear me, therefore I made none. Having beat about for such a length of time, without the good fortune of any sail approaching, I entertained little hopes of saving my life; being, besides, continually washed off my boat, and repeatedly obliged, in order to avoid the sea breaking, to quit her, and swim to leeward, my strength was consequently diminished.

A quarter after four a brig came within half-a-mile. I hailed her, and stood as far out of the water as I could, moving my hands, and using every possible means to make the crew observe me. I succeeded; I saw the men go up the main-shrouds, and the crew stand close together, but they passed me without offering to lend me the smallest assistance. This, indeed, was sufficient to induce me to resign a life that was no longer supportable; such inhumanity excited in me the strongest emotions of indignation; but, alas! I had no means of redress. I gave up all hopes of being saved.

Being driven still farther from the land, a gale of wind coming on, and the tide carrying me on to Portland Race, I took a valuable diamond watch of my wife's out of my fob, and tied it securely in a handkerchief round the seat of my boat. When I had done this, I made a running knot with the painter, intending to put it round me in my last moments, knowing that my boat, from the direction of the wind, would be driven near my house, or Bridport, and that my watch and seal would lead to a discovery of who I was.

Having done this, I became indifferent. Death was no longer terrible; and, as I saw no chance of being saved, I sat quietly in the boat, patiently waiting for the next wave to put an end to my sufferings. Though immersed two feet in water, still tossed about, sometimes in the boat, sometimes holding on her bottom, washed off, and losing her for several minutes, yet I found that neither my recollection nor strength entirely failed me, for I always raised myself sufficiently by treading water to discover my boat, to which I immediately swam.

About half-past four, experiencing a very hard struggle to recover the boat, I saw eight sail to windward. It was a long time before I discovered whether they were standing from or towards me. At length I perceived they were approaching, which gave me additional strength and spirits. For the first time I saw a chance of saving my life, and that Providence had watched over me through all my struggles.

At five, three or four ships passed without seeing me; nor was I able to make them hear, the sea running high and breaking violently. Three more passed me close to the windward, my voice being too feeble to be heard. I reserved my strength for the only two of eight that had not passed me. A brig came by; I hailed her, lifted up my hands, and fortunately I observed that they saw me, for the men went up aloft to see what I was. They then tacked and stood towards me, but did not hoist out a boat. This alarmed me; and having been before passed by one unfeeling wretch, I almost gave myself up to despair.

There was only one more vessel to pass; it was nearly dark, a dismal sea, and within two miles of Portland Race. If this passed me, all was over. On this occasion I roused myself, and hailed her, stood on the boat's bottom, was washed off, got on her again, and was again washed off. However, life was still desirable, as long as I saw a chance of being saved. After struggling again and again, I was discovered by some of the soldiers: I observed a bustle on board her, saw men running up the rigging, and shortly after a boat let down.

At that moment I was agitated; my firmness seemed to forsake me, for I burst into a flood of tears, and was seized with a violent retching, from the quantity of salt water I had swallowed. As the boat approached I recovered. When she came near, the sea being very high, I desired them not to come broadside to, but stern-on. I untied my handkerchief, threw it into the boat, and endeavoured to spring in myself, but, being unable, the crew pulled me in by the legs. I was humanely received by Colonel Jackson of the 85th, and the whole crew expressed sincere joy for my providential escape. In ten minutes more the vessel must have passed, and I should not have had the smallest hope of existing half-an-hour longer, my limbs being benumbed; having, besides, a violent pain in my side, a dizziness in my eyes, and an inclination to sleep. From the time I was upset until I was picked up, I had been about five hours and a half nearly naked in the water. The ship Middleton came into Portland Roads at eight o'clock, and about nine, Colonel Jackson accompanied me to my friends, Mr. and Mrs. Smith, from whom I received the kindest attention. They thought I was irrevocably lost; so did their majesties, particularly as Captain Ingram declared he saw my boat go down. Their majesties, with their family, on the Esplanade, expressed, in their kindest manner, their very sincere happiness at my being saved; and in short, every soul in Weymouth heartily congratulated me on my providential escape. I was most dreadfully bruised, very weak, and much agitated from the kind solicitude of my friends.

On Tuesday, the 23rd of September, I went on board the Middleton with Colonel Jackson, and distributed fifty guineas between the captain and crew. To Captain Rankin I presented ten guineas and a silver cup; five guineas each to John Jones, John Dayley, James Napier, and John Woodman, the men who ventured in the boat, and to the remainder of the crew twenty guineas.

THE SAILORS' PLEDGE.

ADIEU, my love! to-morrow's sun
Shall find me on the sea:
Give me the cup—the parting one—
I'll drink "Farewell to thee!"

When in the night the watch I keep,
Though sleep's denied to me,
I'll think of home—and oft and deep,
I'll drink "Fair dreams to thee!"

When scarce her way the ship can hold,
With breakers 'neath the lee,
Fond thoughts of love shall make me bold—
I'll drink "Calm skies to thee!"

When cruising in a distant clime,
In fancy oft I'll see
Thine image: and to cheat the time,
I'll drink "Return to thee!"

LOSS OF THE ANTELOPE PACKET, CAPTAIN WILSON, AUGUST 9, 1783.

It is not often that the narrative of a shipwreck, however important in its character and fertile in incident, attracts so considerable a share of public attention as the following. It is marked by features that interest the sensibilities of our nature, and give it a claim to the regard of the philosopher, the patriot, and the Christian. By an accident we have been made acquainted with a people, who, though a little removed from a state of actual barbarism, have evinced a virtue in principle, a refinement in social feeling, and a humanity to our countrymen in distress, that must ever endear them to Englishmen.

The Antelope Packet, a vessel of 300 tons burthen, in the service of the East India Company, and commanded by Captain Henry Wilson, sailed from Macao in China, where she had arrived a few weeks before on her passage homeward, on Sunday, July 20, 1783. She had on board, besides the captain, three mates, a surgeon, one passenger, a gunner, boatswain, carpenter, steward, carpenter's mate and cook, four midshipmen, two quarter-masters, a captain's steward and interpreter, the captain's brother, thirteen seamen, and sixteen Chinese, making a total of fifty persons on board.

On Monday, the 21st, they got clear to sea, having discharged their pilot, and taken leave of several gentlemen who had accompanied them a few leagues. From the 24th to the 8th of August, they had very stormy, unsettled weather,

LOSS OF THE ANTELOPE PACKET CAPTAIN WILSON, AUGUST 9, 1783.

during which their fore-topmast sprung, and all their live cattle died. On the 9th the weather became more moderate; so that by opening the ports they dried the ship, examined their stores and provisions, and proceeded cheerfully on their voyage, flattering themselves that their distress and danger were now fairly past, little apprehending the misfortune that was so soon to overtake them.

Early on Sunday morning, the 10th August, a strong breeze sprung up, attended with heavy rain, and thunder and lightning. The captain had gone to bed about twelve, and Mr. Benger, the chief mate, then commanded on deck. While the seamen were busily occupied in reefing the sails, the man on the look-out exclaimed, "Breakers ahead!" and scarcely were the words uttered when the ship struck. The conster-

nation which ensued from such a sudden shock was indescribable: all who were in bed below immediately hastened on deck to learn the occasion of the noise and confusion, when they became too soon acquainted with their dismal situation. In less than an hour after the ship bulged, and filled with water up to the lower-deck hatchways. During this scene of horror, the men implicitly obeyed the commands of Captain Wilson.

The captain's first orders were, to secure the gunpowder and small arms, and to get on deck the bread, and such other provisions as were liable to be spoiled by the wet, and to secure them from the rain. As the ship took a heel in filling, there was some reason to fear that she might overset; to prevent which they cut away the mizzenmast, the main and

fore-topmast, and lowered the main and fore-yards to ease her. The boats were then hoisted out and filled with provisions; a compass, and some small arms, with ammunition, were then put into each, and two men, with directions to keep them under the lee of the ship, to be ready to receive their shipmates, in case the vessel should part by the violence of the wind and waves, as it then blew a very strong gale.

Everything being now done that prudence could dictate in so trying and distressing a situation, the officers and people assembled on the quarter-deck, that part being the highest out of the water, and best sheltered from the wind and sea by the quarter boards, and waited for the break of day, in the hope of seeing land; for as yet they had not been able to

discern any. During this dreadful interval, the anxiety and horror of which it is much easier to conceive than to describe, Captain Wilson endeavoured to cheer the spirits of his crew.

As they were almost worn out by the excessive labour they had undergone, two glasses of wine and some biscuits were given to each man; and they waited for daybreak with the utmost anxiety, in the hope of discovering land. Meantime, they endeavoured to support each other's spirits as much as possible, and by the captain's direction, put on as many clothes as it was possible to carry with them, in the event of getting safe from the wreck; and, to the honour of the crew it may be mentioned, that the greatest cordiality prevailed amongst them, and in the hour of confusion, none

attempted to touch his neighbour's property, or to taste any spirits.

At daybreak, they discovered a small island at the distance of about three or four leagues to the southward; and as the day advanced, they saw more islands to the eastward. Their apprehensions were now on account of the natives, to whose dispositions they were perfect strangers. However, after manning the boats and loading them in the best manner they were able for the general good, they were despatched to the small island, under the care of Mr. Benger, the chief mate; who was particularly requested to endeavour to establish a friendly intercourse with the natives, if they should find any, and carefully avoid any disagreement, unless caused by the most urgent necessity.

Immediately on the departure of the boats, those who remained in the ship began to get the booms overboard, and to make a raft for their security, in case the Antelope should go to pieces, which was hourly expected: at the same time they were under the most painful apprehensions for the safety of the boats, on which all depended; not only on account of the natives, but also with regard to the weather, as it continued to blow very hard. But in the afternoon they were relieved from their fears by the return of their boats, with the welcome intelligence that they had landed the stores, which they left under charge of five men, that there was no appearance of inhabitants, and that they had found a secure, well-sheltered harbour, and also some fresh water. These good tidings revived the drooping spirits of the crew, and having got another glass

of wine and some biscuit, proceeded with fresh vigour to complete their raft. A very distressing accident, however, happened this day: the mizenmast being discovered near the ship's stern, and part of the rigging entangled with the mizen-chains, Godfrey Minks, one of the quarter-masters, was employed to clear it, when he slipped overboard, and was drowned before any of the boats could get to his assistance.

Having finished the raft, they loaded it, together with the jolly-boat and pinnace, with as many stores and provisions as they could conveniently carry, consistently with the safety of the people. As the day was advancing, the captain ordered the people on board to be summoned; for they were so busily employed in collecting what they could to take with them, that there was reason to fear the mainmast might fall before they were all assembled. The stoutest of the hands were put on board the pinnace, which took the raft in tow, and moved slowly on till they had cleared the reef—their minds filled with the most gloomy and anxious thoughts; while the jolly-boat, which was of little service to the raft, proceeded to the shore and joined their companions that had been left in the morning. They found a tent ready for their reception, and a spot of ground cleared for the stores, &c.

The situation of those on board the pinnace and raft, until they had passed the reef, was terrible indeed. The swell of the waves was such, that they repeatedly lost sight of each other, and those on the raft were obliged to lash themselves to the planks with ropes, to prevent their being washed off; whilst the horror of the scene was enhanced by the shrieks of the Chinese, who were unaccustomed to the perils of the ocean.

When they had fairly cleared the reef, they got into deep smooth water, in the channel running between the reef and the islands; but on approaching the land they found a strong current, which drove them considerably to leeward. They soon found that they were incapable of resisting its impetuosity, and therefore, having brought the raft to a grapple, the men got on board the pinnace to relieve the rowers. Meanwhile, the jolly-boat's cargo having been landed, Captain Wilson returned in her to assist those in the pinnace, and the night being dark, the captain overhearing them at a distance, hailed them. The men in the pinnace were so overjoyed at this near prospect of relief, that they returned the cheer in so shrill and unusual a tone, that Captain Wilson immediately concluded they were natives; and he was the more confirmed in this opinion, from having just learned that there were several appearances of natives having been on the spot very lately: he therefore retreated to the shore with the utmost precipitation. The crew, however, were fortunately soon relieved by the arrival of the pinnace, and all shook hands most cordially. That night they supped on biscuit, cheese, and water; and having obtained light by the means of a pistol, they kindled a fire in the cove, by which they dried their clothes and warmed themselves. The night proved very uncomfortable, the weather being so tempestuous; while the dread of the ship going to pieces before they should be able to save anything more from the wreck, contributed to their distress. They set a watch, and slept by turns, for fear of a surprise.

The following morning, Monday the 11th, as the weather was still very stormy, they could not succeed in their attempt to bring off the raft; but were obliged to leave it, bringing with them the sails and the remainder of the provisions. However, the weather became more moderate in the afternoon, which tempted them to despatch the boats to bring off what they could from the ship, while those on shore were employed in brushing up the small arms.

The evening set in very squally, and as the boats did not return from the ship till nearly ten o'clock, those on shore were much alarmed; nor were they much easier by the intelligence of the chief mate and crew, who returned with the pinnace, that, from the badness of the weather, they did not think the ship could hold together till the morning, as she was beginning to part, the bends, or wales, having already started out of their places.

This melancholy account totally extinguished the ideas which they had fondly entertained, that when a calm succeeded, there might be a possibility of the ship floating again, so that they

might repair her, and by that means return to Macao, or some part of China. The dreadful prospect now darkened around them, and fear magnified every danger, that hope could hardly find an opening through which they might receive one ray of consolation. They were ignorant of where they were, or among whom—separated not only from wives, children, and home, but from all mankind, except, perhaps, a race of savages, as they naturally supposed—without any prospect of relief.

In the morning it blew exceedingly strong, so that the boats could not go off to the wreck; the men, therefore, employed themselves in drying their provisions, and forming better tents from the materials which they had brought from the ship the day before. About eight o'clock in the morning, the people being employed as above, and in clearing from wood the ground which was behind the tents, Captain Wilson, with Tom Rose, a Malay, whom they had taken on board at Macao, being on the beach collecting the fresh water which dropped from the rocks, observed two canoes, well manned, coming round the point into the bay. This created so much alarm, that the people all ran to their arms: however, as the natives were but few, Captain Wilson desired the men to keep out of sight, until they should perceive what reception he met with, at the same time to be prepared for the worst. The natives advanced very cautiously towards them, and when near enough to be heard, the captain desired Rose to speak to them in the Malay language, which at first they did not seem to understand; but soon after, one of them asked, in the Malay tongue, who the English were, and whether they were friends or enemies? Rose was directed to reply, that they were unfortunate Englishmen, who having lost their ship upon the reef, had saved their lives, and that they were friends. On this they appeared to confer for a short time, and then stepped out of their canoes into the water, and came towards shore. Captain Wilson instantly waded into the water to meet them, and embracing them in the most friendly manner, led them to the shore, and presented them to his officers and unfortunate companions. The natives were eight in number, two of whom, as they afterwards found, were brothers to the rupack, or king, of the neighbouring islands, and that one of them was a Malay, who having been shipwrecked in a vessel belonging to a Chinese, had become a resident in the Island of Ternate, one of the same group. He told them, that a canoe having been out fishing, had seen the ship's masts; and that the king, whom he described as a good man and a father to his people, having been informed of it, had sent off the two canoes at four o'clock in the morning, to see what was become of the people who belonged to her, in order that he might afford them assistance.

Being about breakfast hour, Captain Wilson, Tom Rose, and a few others breakfasted with them to prevent suspicion. In the course of their short conversation, a wish was hinted by Captain Wilson that he should like to be informed by what means the Malay they had brought with them had reached their islands. He informed them in the few sentences of Dutch and English, which he could but indistinctly articulate, that he had formerly commanded a Chinese trading vessel, and that about ten months since, on a voyage to Amboyna, he had been wrecked on a neighbouring island, from whence he had come to Pelew; but from his future conduct and behaviour, they had great reason to suspect his veracity. It was, however, fortunate, indeed, an unlooked-for blessing of Providence in the hour of difficulty and distress, that both the English and the inhabitants of Pelew, had an interpreter who could freely converse together in the Malay language.

The Pelew islands, upon one of which they had just found a refuge in the hour of danger, are situate in the western part of the Pacific Ocean, about eight degrees to the eastward of the Philippine islands; and though they lay in the most direct line across, yet Cooke and the other great navigators appear to have gone considerably either to the north or south of that line. They were probably first noticed by the Spaniards of the Philippines, who called them the Palos Islands, from the tall palm trees which grow there in great numbers, and which, at a distance, have the appearance of masts of ships. The word *palos* in the Spanish, sometimes signifying a mast; and at the time of this shipwreck formed a region, of which, generally

speaking, even the name was unknown to the people of Europe.

The natives were of a moderate size, but admirably proportioned and very muscular; their hair was long and black, and rolled up in a peculiarly neat manner close to their heads: with the exception of the king's younger son, none of them had beards, as, in general, they plucked out the hair by the roots. They were quite naked, and their skin of a deep copper-colour; their thighs appearing much darker from being tattooed very closely. The chief carried in his hand a basket of betel-nut, and a very neat bamboo, which contained what they call their *chinam*; this is coral burnt to a lime, with which they sprinkle the leaf of the betel-nut and then chew it; this turns their saliva red and appearing between their jet black teeth, makes a very disagreeable contrast.

They were conducted round the cove, and to the great surprise of the English, they walked on the broken rocks, shells, and thorny plants with the greatest ease, although they were barefooted.

They were now enabled to support a conversation, by means of the Malay on the part of the natives, and Tom Rose on the part of the English, and thus had an opportunity of examining one another as to the different appearances, which occasioned mutual surprise. From this first interview, as well as from what afterwards occurred, it was evident that the natives had never before seen a white man, and were ignorant of even any such existing, their surprise therefore at seeing them may well be imagined. The appearance of clothes was quite new to them, and, for sometime they were at a loss to determine whether the man and his dress were not the same substance. But nothing afforded them greater delight than the two dogs belonging to the ship, at whose appearance they set up a shout of joy and surprise, which may be accounted for by the fact that, except a few grey rats, there were no quadrupeds on the island.

Captain Wilson was particularly anxious to keep them ignorant of the nature and use of fire-arms; but one of them accidentally picking up a small leaden bullet was surprised by its weight, and asked the Malay about it, who requested one of the muskets in order to explain it to him. They seemed very desirous that one of the English should go with them to their king, that he might see what sort of beings white men were, and to this they all agreed; but the difficulty was as to which of them should go: when the captain requested his brother, Matthias Wilson, who readily consented to undertake the office; and about noon one of the canoes left the harbour, taking Mr. Wilson with them; the other canoe, in which were Raa Kook, the king's elder brother and general of his armies, and three other persons, remained of their own accord until the canoe returned with Mr. Wilson.

The captain directed his brother to acquaint the king, as well as he could, with the nature of their misfortune, to solicit his friendship and protection, and permission to build a vessel to carry them back to their own country. He also sent a present to the king, consisting of a small remnant of blue broad cloth, a canister of tea, another of sugar-candy, and a jar of rusk—the last was added at the particular request of the king's two brothers.

The natives who remained, observing that the English had much trouble to procure fresh water, conducted them across a narrow part of the island, where it was most plentiful; and the road to it being rugged and difficult, they carried Mr. Sharp, a youth of fifteen years of age who was sent on this duty, in their arms, over the most difficult places, and so carefully assisted the men, who brought two jars of water from the well.

All the next night the weather remained as bad as ever, but grew better towards morning, and about ten o'clock one of the boats went off to the wreck, when they found that some of the natives had been on board; that they had carried away some iron-work and other things; and that, in particular, they had rummaged the medicine-chest, and disliking the taste of the contents, had thrown them away and carried off the bottles. This circumstance Captain Wilson made known to Raa Kook, as he was fearful of the consequences to the natives from taking the medicines. The countenance of Raa Kook forcibly expressed the indignation he felt at the treacherous behaviour of his coun-

trymen; and he requested, that if they caught one of them again attempting to plunder the vessel, that they would kill them, and he would justify the English to his brother for having done so.

The same evening Captain Wilson made a proposition to his officers, the boldness and wisdom of which, the resolution manifested in its execution, with the unanimity and cheerfulness displayed by the crew in acceding to it, reflect the highest honour on all parties concerned. Captain Wilson having observed the powerful effects of strong liquor, even in moderate quantities, acting upon empty stomachs, and dreading the consequences that might ensue from the want of proper restrictions, submitted to his officers the propriety of obtaining the consent of the people to stave every cask of liquor on board the ship. To this the officers agreed, and the next morning he called all the crew, and addressed them in the most forcible terms he could use, as to the propriety of acceding to a step which would best promote their hope of deliverance; and added, that however reluctantly they might yield to the proposition, yet they must, on reflection, perceive that it was a measure absolutely necessary to be adopted. The moment he concluded, the sailors, to their lasting honour, replied with the utmost unanimity, that however they might suffer from being deprived of their accustomed liquor, they gave their full assent to the captain's proposal, and offered to go directly and stave every cask of liquor on board. This they most conscientiously performed; and so scrupulously did they fulfil their pledge, that there was not a man among them who took a farewell glass of his beloved cordial.

On the morning of the 14th two canoes arrived, bringing with them Arra Kooker, the king's other brother, and one of the king's sons, who informed Captain Wilson that his brother was on his way back, but the canoe in which he was, not being so well able to contend against the wind as theirs, occasioned the delay. They also brought the intelligence, that the king offered them a hearty welcome and full permission to build a vessel in any part of the island which they should choose, at the same time, he and his subjects would give them every assistance in their power. Raa Kook then introduced his nephew to the captain and officers, and afterwards conducted him round the cove, explaining everything, agreeably to the information he himself had just received.

In the forenoon, two boats were sent off to the wreck, where they found a number of the natives in about twenty canoes very busily employed in examining the vessel; these Raa Kook soon despatched; and on this, as well as on every other occasion, did every thing in his power to convince the English of his friendship and protection.

The people in the meantime were highly entertained by the versatile powers of Arra Kooker, who proved to be a most facetious man, and possessing uncommon talents for mimicry and humour. He described, by numerous diverting signs, the terror of Matthias Wilson while at Pelew; who, it seems, had been under very great apprehension. At length, to their great joy, he made his appearance, and gave the following account of his embassy:—

"On the approach of the canoe in which I went to the island where the king resides, a vast concourse of the natives ran out of their houses to see me come on shore. The king's brother took me by the hand, and led me up to the town, where a mat was spread for me on a square pavement, and I was directed to sit down on it. In a little time the king appeared, and being pointed out to me by his brother, I rose and made my obeisance after the manner of eastern nations, by lifting my hands to my head, and bending my body forward, but he did not appear to take any notice of it. I then offered him the presents which my brother had sent to him, and which he received very graciously. His brother then began to talk to him a great deal, the purport of which, I conceived, was to tell him of our misfortune and the number of us; after which the king ate some of the sugar-candy, which he seemed to relish, and distributed a little of it to several of his chiefs; and then directed all the things to be carried to his own house. This being done, he ordered some refreshments to be brought for me.

"A great crowd of the natives had, by this time, surrounded me, who were curious and eager to examine my

clothes and person. Taking off my hat by accident, all who were present seemed struck with astonishment; which I perceiving, unbuttoned my waistcoat, and took my shoes from my feet, in order that they might see that they were no part of my body; as, at first sight, they appeared to entertain a notion that my clothes constituted a part of my person; for when undeceived in this, they came nearer to me, stroked me, and put their hands into my bosom to feel my skin.

"As it was growing dark, the king, his brother, myself, and several others, retired into a large house, where supper was brought in, consisting of yams boiled whole, and others mashed as we do potatoes. There were also some shell-fish, but of what kind I could not determine. After supper I was conducted to another house, at some distance from the first, where I found about forty or fifty men and women; and signs were made for me to sit or lie down on a mat, which seemed to have been spread on purpose for me to sleep on. After all the company had satisfied their curiosity by viewing me very minutely, they went to sleep; and I laid myself down on the mat, and rested my head on a log, which these people use as a pillow, and drew over me another mat, which also seemed laid for the purpose. I was unable even to slumber, but lay perfectly still; and some considerable time after, when all was quiet, about eight men rose and made two great fires at each end of the house, which was not divided by partitions, but formed one large room. This operation, I confess, alarmed me very much indeed. I thought of nothing less than that they were going to roast me; but recollecting there was no possibility of escape, I collected all my fortitude, and recommended myself to the Supreme Disposer of all events: but to my great surprise, after sitting awhile to warm themselves, they retired to their mats and stirred no more till daylight.

In the morning I got up and walked about, surrounded by great numbers of men, women, and children; and in a little time, was joined by the king's brother, who took me to several houses, in every one of which I was entertained with yams, cocoa-nuts, and sweatmeats. I was afterwards conducted to the king, to whom I signified by signs, that I much wished to return to my brother. He understood me perfectly; and replied to me, by signs also, that the canoes could not go out, on account of the great wind. The remainder of the day I spent in walking about the island, and observing its produce, which consisted chiefly of yams and cocoa-nuts: the former they cultivate with great care, in large plantations, which are all in swampy watered ground, like the rice in India. The cocoa-nuts grow chiefly about their houses, as does also the betel-nut, which they chew like tobacco."

This favourable account by Mr. Wilson, joined to the message which the king had sent to the captain by his brother and son, put all the people into great spirits; so that they applied to their avocations with redoubled vigour, and particularly in getting everything they could from the wreck. Thus, by the kindness of Providence, were these unfortunate men rescued from a state of the greatest distress, to a situation at least tolerable; and, indeed, had it not been for the dread of not being able to accomplish the building of another vessel to carry them to China, and thus being for ever, in all human probability, shut out from seeing their friends, their families, and country, they might have spent their time in tolerable comfort.

The next morning, at daybreak, the king's son, accompanied by one of his uncles, launched their canoe, and went off to the ship. A number of canoes were seen approaching the harbour, and the captain was informed that the king was coming. The king's canoe came forward between four others, two on each side, the rowers of which splashed the water about with their paddles, and flourished them over their heads in a very dexterous manner; and as the king passed, the other canoes that had lain-to, closed his train, and followed into the cove, sounding their conch-shells. The king stopped as soon as he was in the bay, and directed one squadron of the canoes, which were all armed, to retire to the back of the island, probably thinking that so great a number of armed people would create an alarm among the strangers. He then advanced with the rest, in great form, as far as the tide, which was then low, would per-

mit them; and it was signified to Captain Wilson, by the king's brother, that he should then go and meet him; on which two of his men took him up in their arms, and carried him through the shallow water to the canoe where the king was sitting on a stage built in the middle of it. He was requested to enter, and he and the king, whose name was Abba Thulle, embraced one another.

The captain then related to Abba Thulle the nature of their misfortune, and repeated his request to be allowed to build a vessel to convey them back to their own country; to this the king replied in a very courteous manner, that he was welcome to do so, either where they then were, or at his own island; but recommended the latter, as the island on which they had landed was unhealthy, which was the reason it was not inhabited. Captain Wilson expressed his acknowledgments for the condescension and goodness which the king had testified towards him and his people, and informed him that it would be very inconvenient to them if they removed farther from the wreck, because they could not then procure from her such things as they might want, without much trouble and loss of time; adding, that they had a person with them whose business it was to cure diseases, and who was very skilful, which made him perfectly easy on that account: but in case any of his people should fall ill during their stay there, he would then avail himself of his goodness, and convey them to the better air of his own island for recovery. To this the king assented; and making signs that he wished to land, the captain was carried on shore by his people, and Abba Thulle, stepping into the water, followed him.

The king was perfectly naked, nor had he any bone on his wrist (which is there a sign of rank, and is worn by the chiefs), or any ornament of distinction. He bore a hatchet on his shoulder, with a head made of iron, which much surprised the English, as all the hatchets they had seen were made of shell. On landing, he looked about him with the same kind of caution and circumspection as his brothers and those who came with them had done on their first visit. Raa Kook met him on the shore, and as he declined entering any of the tents, a sail was spread for him to sit on, which he did, and clearly understood and took it as a mark of respect; the chief minister placed himself opposite to him on the extremity of the canvass, whilst his two brothers, Raa Kook and Arra Kooker, sat on each side, forming a square. The principal chiefs and officers of state who accompanied him seated themselves near; and behind these a large retinue of his own people, to the number of three hundred, not standing, but squatting in such a position that they could rise in an instant. Captain Wilson offered him some tea, of which he drank one cup, but did not seem to relish it. After sitting a little while, he presented him with a remnant of scarlet cloth and some ribbons, with which he seemed mightily pleased, and distributed them among his attendants.

Captain Wilson then introduced Mr. Benger, the chief-mate, to the king, as the first officer under him; Abba Thulle called him *kicharay rupack*—meaning little chief; the rest of the officers were then introduced, and lastly all the private men. The king then inquired for Captain Wilson's badge of supremacy, which made him at a loss for an answer; till, luckily, Mr. Benger slipped his ring into his hand, which, being produced, and the manner of wearing it shown, pleased Abba Thulle, as it bore some affinity to their own mark of dignity.

Raa Kook was particularly attentive in showing the king everything he had seen and inquired into himself; but what seemed chiefly to attract his attention was a grindstone, which was placed behind one of the tents, and fixed on a block. Raa Kook eagerly laid hold of the handle, and began turning it, to let his brother see how well he understood it; while the king remained fixed in astonishment at the rapidity of its motions, and could not but look upon the English as a superior as well as an uncommon kind of being. If, therefore, he felt so much emotion at the sight of a grindstone, what must have been his sensations at witnessing the effect of a musket? In order to give them some idea of this, and at the same time to impress the minds of the natives with a more enlarged idea of the power of the English, Captain Wilson desired Mr. Benger to

have the sailors drawn up on the beach, it being then low water, to go through their exercise, while he explained their motions to the king. The men went through various evolutions with great readiness, marching backwards and forwards, and concluded with firing three volleys in different positions.

The surprise and astonishment of the natives, on hearing the report of the muskets, is not easily conceived; their hoisting, hallooing, jumping, and chattering, produced a noise little inferior to it: and when, a few minutes afterwards, a fowl, part of the live stock of the Antelope, which had been purposely driven across the cove, was shot by Mr. Benger, their admiration knew no bounds—indeed, they seemed lost in wonder and amazement.

Abba Thulle was highly gratified with the various things he had seen; and stated that he intended to go away, and sleep at the back of the island. Presently a loud shriek was given by one of the king's officers, which at first threw the English into some alarm, but the cause of it was immediately evident; for all the king's attendants, to the number of three hundred, though dispersed in every direction, and intently engaged in looking about them, instantly darted, rather than run, to their canoes. No word of command was ever executed with greater promptitude; and the king departed, apparently well pleased with his visit, and gratified by what he had seen.

Raa Kook, the king's son, and several chiefs, stayed with the English, and slept in the tents which Captain Wilson had prepared for the king. Captain W. remained with them for some time after the guard was set and sentinels placed, to show them respect, as well as to testify the confidence he placed in them. Soon after which the following circumstance occurred, which at first occasioned some considerable alarm.

Just as the English were going to rest, the natives suddenly commenced a song, the shrillness and manner of which was so dissonant and harsh, that made them think it was their war-whoop or signal for the king to come from the back of the island, and attack them. Impressed with this idea, the English instantly took to their arms, and Messrs. Barker and Sharp ran to the tent where Captain Wilson was, to see if he was safe, as they supposed him to be in the most imminent danger. They were, however, soon relieved from every anxiety, and attended to the song, which was conducted in the following manner:—Raa Kook gave out the line, which a company next to him took up, and completed the verse. The last line they sung twice over, which was taken up by the natives in the next tent, and they also sung a verse. Raa Kook then gave out another line, which was sung in the same manner, and this continued for ten or twelve verses. They then requested to hear some English songs, which were sung by a lad named Cobbledick, to their satisfaction. The natives soon after went to sleep, although the English had been so alarmed that they could not allow their minds to be speedily composed.

A circumstance now occurred, which presents the inhabitants of Pelew in a light that could not have been preconceived. The English had no other means for again re-visiting their native homes, but by constructing a small schooner; and for this purpose had only a few instruments saved from the wreck, which they carefully concealed from the natives, as they had shown a particular attachment to iron and instruments made of that metal. A chief, by accident, had observed where they were, and requested a cutlass of Captain Wilson, which, though he was loath to part with it, still he thought it best not to refuse to give it, and did so accordingly; but as they went out of the tent, Raa Kook observed it with great displeasure, and taking it from him, returned it to Captain Wilson.

The Malay coming ashore in a few hours, told Captain Wilson he had given offence, by offering a cutlass to an inferior officer, and neglecting the king and his brother. In order to make up the matter, the captain thought it best to present each of the king's brothers with some cloth and ribbons, which were very coolly received, and they still seemed to be unhappy. However, the real cause of their uneasiness was soon made manifest; and never, perhaps, was exhibited

a nobler struggle of native delicacy, and which ranks the inhabitants of Pelew high in refinements. It was a struggle in their own breasts, how they should ask a favour from strangers almost wholly in their own power, without the request having the appearance of a command.

It appeared that a neighbouring nation had injured them, and as they intended in a few days to attack them in battle, they very justly foresaw the advantages that would arise from the presence of a few English with firearms. At length, with evident confusion, Abba Thulle hinted it to Captain Wilson, who immediately assured him that the men were quite at his service, that the English were as his own people, and that the enemies of the king were their enemies. The king immediately made the captain a brother rupack, and concluded by assuring him that the natives were entirely at his service to assist in constructing their vessel, or in anything else they might require. Each strove to show his zeal by wishing to be selected for the proposed expedition, and at last five men were appointed and properly equipped, who were headed by Mr. Cummin, the third mate.

On the 25th the five warriors returned in safety, after having acquitted themselves to the satisfaction of the king, and put his enemies to flight by the terror of their fire-arms; for which service, the Island of Orooloon, where they resided, was given by Abba Thulle to the English.

On the 31st of August, Captain Wilson, accompanied by Mr. Devis, who had been a passenger on board the Antelope, Mr. Sharp, the surgeon, and Harry Wilson, a midshipman, and son of the captain, paid a visit to Pelew in their jolly-boat, accompanied by Raa Kook, and other natives, in a canoe.

On their arrival they were very graciously received by Abba Thulle, who embraced Captain Wilson, and proposed to conduct them to the town, which is about a quarter of a mile from the landing-place where they were. The English, in order to assume some little formality, carried their colours before them, and, on their arrival at the town, were very politely received by the principal officers of state, who presented them with cocoa-nuts and sweet drink, of which they all partook.

Upon retiring to the house which was provided for them for the night, their friend Raa Kook spared no pains to render their habitation as comfortable as possible: they had plenty of mats to sleep on, and large fires were kindled to defend them from the damp and mosquitoes; and he had also ordered some of his own men to sleep at the other end of the apartment, to protect them from any of the natives who might, from motives of curiosity, be led to disturb them. Next morning they were attended, as usual, by Raa Kook, and after walking about for some time, they were ordered to attend the king to breakfast, in the queen's house, where they had been the day before.

The request which had been previously hinted by the king, was now formally made to Captain Wilson, by desire of a council of rupacks, that he would allow ten of his men to accompany them in a second engagement to Artingall, where the victory had formerly been gained; with which request Captain Wilson readily complied, at the same time mentioning that it would be an act of obligation to him not to detain them a longer time than necessary, as it would hinder the progress of the schooner. To this Abba Thulle most willingly agreed.

On Thursday, September 4th, they left Pelew, loaded with presents, and amidst the loud acclamations of a vast number of the natives, and arrived safe in the cove about nine in the evening, when they found all their companions well, and proceeding in their work with the utmost alacrity. The captain immediately informed them of the king's request for ten men: all were anxious to be of the party, and arrangements being made, they were ordered to be in readiness on a call from the king.

Soon after this the contemplated attack was made upon the neighbouring Island of Artingall, and aided by the powerful auxiliary of the English, was of course completely successful; but it exceeds the limits of a work of this nature to relate all the various turns which took place during the contests between the natives of the two states: it will be sufficient to observe,

that Captain Wilson, by the prompt and efficient aid which he afforded to his friends, obtained and deserved their esteem, and experienced their good offices. Soon after his return to Oroolong, he found it necessary to exercise a strict discipline, as, during his absence, the cook had grossly misbehaved himself, appropriating to himself and assistant a great part of the small portion of meat allowed to the crew.

As their present situation made it particularly necessary that the strictest discipline should be observed, Captain Wilson, by a court-martial, ordered him a cobbing.

Raa Kook, who was present on this occasion, displayed in an eminent manner the native tenderness of his disposition. When he saw the man stripped to the waist, and his hands tied against a tree to keep them extended, he earnestly entreated Captain Wilson to pardon him; but, under the circumstances, this could not be granted.

The punishment they called cobbing, is inflicted with a small thin piece of wood, like a battledore; which Raa Kook no sooner saw exercised, and the man patiently bearing it, than he appeared to be reconciled, and stood by encouraging him all the time. Soon after this, a Chinese was punished in the same manner, for wounding one of his countrymen with a stone; but he set up such a hideous cry, that Raa Kook was completely entertained with his cowardice.

The schooner was now in a state of considerable forwardness, and all circumstances seemed to conspire to heighten their prospects. On the 17th of October, Abba Thulle arrived with the pleasing information, that the chief minister at Artingall had been to Pelew with offers of peace, which had been concluded to the great joy of all the natives. A long conversation took place on this visit between the king and Captain Wilson, in which Abba Thulle acknowledged that such had been the great services rendered to him by the English, that he was then at peace with all his neighbours; at the same time, he earnestly requested that the captain would leave ten muskets with him when he left the island. To this Captain Wilson replied, that as Great Britain was then engaged in war with several nations whose ships they might meet on their voyage homewards, when they should require defensive weapons, it would be out of his power to do so; but he promised to spare him five, with which Abba Thulle appeared satisfied.

The captain desired that the king would assure his neighbouring islanders, that the English being deeply sensible of the hospitable treatment which they had received from the inhabitants of Pelew, were determined to return very soon in a much larger vessel, and with a more numerous crew, and fully avenge any insult that might be offered to the natives of Pelew, either by the people of Artingall or any other island. Soon afterwards the king departed for the back of the island, taking with him all his attendants, that the English might pursue their avocations with as little interruption as possible. He had not, however, been there long, before he sent for Captain Wilson, to give him some large fish, part of a quantity which his people had just taken; and, indeed, during Abba Thulle's stay at Oroolong, the English were regularly supplied with fresh and dried fish, which were very acceptable.

By the 27th of October the vessel was breamed, and the outside caulking completed, but they had neither pitch nor tar to pay her with, nor a chance of obtaining any; however, necessity, the mother of invention, taught them to supply this want, by burning coral into a lime, then sifting it thoroughly, they mixed it up with grease, and found it to answer very well as a substitute. Meanwhile, the vessel advanced rapidly to completion, and a consultation was held to decide on the best method of launching her, which was agreed to be by laying ways, rather than by large rollers, as some had proposed.

On the morning of the 6th of November, agreeably to a promise Captain Wilson had previously made to the king, he despatched the jolly-boat to Pelew, under the direction of the surgeon and Mr. Matthias Wilson, who took with them all the iron and tools they could spare. They were instructed to inform Abba Thulle, that they could not spare him the muskets or any more tools until the vessel was completed;

but, in the mean time, they hoped to have the honour of a visit from him, as they expected to sail in a few days. While Captain Wilson was conversing with his ambassadors Madan Blanchard, one of the seamen who had accompanied the natives in their various expeditions, entered the apartment in search of some tools; and immediately took the opportunity of desiring Tom Rose to inform the king that he was determined to stay behind and reside at Pelew. At first it was supposed he was not in earnest; but when the captain was solemnly assured of his intention not to embark, he endeavoured to dissuade him from such an unaccountable resolution. Finding, however, that no arguments could make any impression on his mind, or alter his determination, Capt. W. resolved to make a merit of necessity; and, therefore, when Abba Thulle came to Oroolong to attend the launching of the schooner, he signified to him that as a return for the kindness and hospitality with which he had treated the English, they would leave one of their comrades with him as a perpetual resident, who was able to manage the guns and other things that were to be presented to him at their departure; and the idea was by no means thrown away, for the king was gratified beyond measure.

We now come to contemplate a scene peculiarly interesting. On the morning of Sunday, November the 9th, the English proceeded to make every thing ready for the launch, and about seven o'clock the king and his attendants were desired to be present, when, in a little time after, the vessel was safely launched to the general joy of the spectators; and, by the express desire of Abba Thulle, was named the Oroolong. Never, perhaps, was there a scene more affectingly happy—in which every eye seemed to sparkle with an unusual lustre on the occasion. Every countenance was lighted up by the joy of heartfelt satisfaction, and few being able to utter their feelings, only exchanged looks of congratulation, while every one shook his neighbour's hand with the warmest fervour, and thought of home, wives, parents, children, friends, all of which seemed within their grasp. Nor must we forget the inhabitants of Pelew, whose joy, which was also unbounded, and proved them to be animated by a spirit of true philanthropy. They were about to be separated from those friends whom they valued, by whom they had been so much benefited, and from whom they had learned so much; but they saw their friends happy, and their benevolent hearts participated in the general joy.

After a breakfast, the happiest they had made since the loss of the Antelope, they proceeded to carry everything on board with all possible expedition, and the flood tide coming in, in the afternoon, the ship was hauled into the basin, where they had four or five fathoms water, and the remainder of the stores and provisions were got on board; and the next morning was employed in getting in their anchors, cables, and other necessities, and fitting a rail across the stern of the vessel.

Abba Thulle being now at the watering-place, sent for Captain Wilson; and on his arrival, intimated to him, that the rapacks had determined to invest him with the Order of the Bone, and to create him a rapack of the first rank. The captain having expressed his acknowledgments for the intended honour, the bone, which was a circular one prepared for the purpose, was drawn over his left hand, with great solemnity and some trouble, by the chief minister and Raa Kook, to the great satisfaction of the assembled people. The king then addressing the captain, said, "You are now invested with our highest mark of honour, and this bone, the signal of it, you will carefully keep as bright as possible, rubbing it every day. This high mark of dignity must always be valiantly defended, nor suffered to be wrested from you but with your life."

As a further proof of the confidence which Abba Thulle reposed in Captain Wilson, he proposed to entrust him with the care of his second son, Prince Lee Boo, whom he wished to improve in knowledge, which he observed the English to possess in so eminent a degree; and to render him useful to his native country in future. Raa Kook had also solicited permission to accompany them; but his request was refused by the king, on motives of policy.

Arra Kooker, who from the first had set his heart on the Newfoundland dog, so warmly importuned the captain for his favourite, that they could not resist his solicitations. But the general's intention was far otherwise employed: he was already, in imagination, building a ship; and, to realise his project, begged them to leave their launching-ways, that he might go to work on the same place—a subject of great national importance, and of course deserving the patronage of a good prince.

Permission was asked, and immediately obtained, to hoist an English pennant on a tree near the cove, and, on an adjacent one, to place the following inscription on copper:—

The Honourable
English East India Company's Ship,
The Antelope,

Henry Wilson, Commander,

Was lost upon the Reef, North of this Island,
In the Night,

Between the 9th and 10th of August;

Who here built a Vessel,

And sailed from hence

The 12th of November, 1783.

Captain Wilson explained the purport of this inscription to Abba Thulle, who was greatly pleased with it, and assured the English that it should carefully stand there in remembrance of their visitors.

The conversation was this day principally confined to their approaching separation. "When you are gone," said the king, "I much dread that the Artingalls will redouble their attempts against me; and, deprived of your aid, I shall probably feel the effects of that animosity which they have already shown towards my people; and having no longer the English to support me, I shall not be a match for them, unless you leave the few muskets you promised me."

The captain was perfectly willing to comply with the request immediately; but most of the officers were still so suspicious of the ulterior intentions of the natives of Pelew, notwithstanding their uniform hospitable behaviour towards them, that they were unwilling to give up their arms till the very last moment. Abba Thulle was too quick-sighted not to observe their distrust: and it is not easy to express the agitation which laboured in his breast, when he found that doubts were harboured of his sincerity. "Why," said he, "should you distrust me? I never refused you my confidence. If my intentions had been hostile, you would have known it long ago, being entirely in my power: but on the contrary, you have had my utmost assistance; and yet, at the very last, you suspect me of bad designs!"

The earnestness of his manner spoke his feelings more than his words; nor need it be doubted, that a little reflection brought a blush into the countenances of those whom he addressed. The man who had invariably acted with disinterestedness, such unsuspecting benevolence—the man who freely committed his own son to their care—to be doubted within a few hours of their parting, was a stab which the sensibility of Abba Thulle could ill support. The severity and truth of his reproach, and the noble dignity with which he demeaned himself, presented to the view a most captivating picture of the mild, yet forcible triumph of virtue. Without further hesitation, they sent on board for all the arms that could be spared; and on the boat's return, presented him with five muskets, five cutlasses, more than half a barrel of gunpowder, and flint and ball in proportion. Harmony was once more restored, and Abba Thulle forgot their unkind suspicions.

In the evening the Prince Lee Boo arrived from Pelew, in the care of his elder brother, and Abba Thulle presented him, first to the captain, and then to the officers. His manner was so easy and polite, with so much good humour and forcible expression in his aspect, that every one was prepossessed in his favour. As it was now growing dark, the officers went on board, leaving the captain behind, at the king's request. Neither the king, or any who were with him, enjoyed much rest that night, as this affectionate father employed the time in giving advice to his son, and recommending him to the care

and attention of the captain. "I would wish you," said he, addressing Captain Wilson, "to show my son every thing that is useful, and make him an Englishman. The fine things he may see may probably induce him to slip away from you, in search of less confined gratification; but I beg that you will contrive to calm and subdue the rashness and impetuosity of his youth. I well know, from the different countries he must pass through, that he will be liable to dangers, and even to diseases, that we never heard of, which may kill him; but I also know, that death is the common lot; and whether he dies with you, or at Pelew, is of no moment. I know you are a man of humanity; and am therefore confident that if my son be sick, you will look on him with kindness. But should that happen, which your utmost care cannot prevent, let it not deter you or your brother, or any of your countrymen from returning. I shall receive you in friendship, and rejoice to see you." The captain assured the king that he might rest perfectly satisfied of the care and attention with which his son would be treated.

Early on Wednesday morning, an English jack was hoisted at the mast-head of the Oroolong, and a swivel fired as signal for sailing; which being explained to the king, he ordered all the provisions which he had brought for the voyage to be put on board. A number of canoes also surrounded the vessel, loaded with presents, so that it was with difficulty they could avoid being overstocked. When just ready for sea, a boat was sent on shore for the captain, who then took Blanchard, the man whom they were going to leave behind, and the boat's crew, into a temporary hut that had been erected; and, all kneeling, offered up their heartfelt thanks to that Power whose aid had supported them through so many hazards and toils, and had at last opened to them the door of deliverance.

At eight o'clock the captain went on board, accompanied by Abba Thulle, Lee Boo, the rupacks, and Blanchard. It being doubtful, as the vessel was heavily laden with provision, whether she would be able to get over the reef, it was resolved to land the two six-pounders, and leave the jolly-boat behind, as they had nothing to repair her with, and she was almost worn out. Abba Thulle, was at great pains to procure them a proper canoe in her room.

Captain Wilson had recommended Mr. Sharp, the surgeon, to Lee Boo, as his *sucalic*, or friend; and the young man attended to him with the greatest devotion, accompanying him to whatever part of the vessel he moved to, as his mentor on all occasions. Blanchard now got into the pinnace, in order to take the vessel in tow, and parted with his old shipmates with as much composure, and shook hands with them with the same indifference, as if they were about to sail down the Thames on a coasting voyage.

The vessel now proceeded gradually towards the reef, laden to superfluity with the bounty of Abba Thulle; and surrounded by numbers of the natives in their canoes, each bringing a present for their good friends, the *Englees*. It was impossible to receive their kind offerings; but the refusal brought a repetition of the requests with supplicating countenances, and eyes brimming with tears, while they exclaimed, "Only this from me,"—"Only this from me," with so urgent a tone of generous affection, that a few trifles were accepted from the nearest; while the others paddled a-head, and put their little presents into the pinnace, as they were not aware that she was to return again to the shore. Several canoes went before the vessel to point out the safest track, while others were waiting at the reef to show them the deepest water. From all these precautions, which were by the direction of the king, the reef was fortunately cleared without any accident.

The king now came alongside, and gave Lee Boo his parting blessing, which the youth received with every appearance of respect and tenderness. He next embraced the captain, in much apparent distress, and then cordially shook hands with all the officers, saying, "You are happy because you are going home, and I am happy because you are happy; but still, very unhappy to see you going away. Then, once more renewing his assurances of regard and good will, he left the vessel, and went into his canoe. So deeply were the crew affected by the evident proofs of sensibility and regret on the part of the natives, that it was with difficulty they could summon suf-

ficient resolution to give three cheers at their final departure. Raa Kook remained to see them safely beyond the reef, but was so dejected that the vessel had proceeded a considerable distance before he thought of summoning his canoes to return. As he had been their first friend, the captain presented him with a brace of pistols and a cartouch-box with cartridges; and the moment of separation being come, he appeared so deeply affected, that for some time he was unable to speak, when, pointing to his heart, he hurried precipitately into the boat, and, giving them a last expressive glance, instantly dropped astern. Thus terminated the connexion with the natives of Pelew, after a residence among them from Sunday, August 10, 1783, to Wednesday, the 12th of November following.

The English were now once more on their way to China; and having wiped away the tear of a friendly farewell, proceeded on their voyage with the cheerful hope of being restored to all they held dear.

Their interesting charge, Prince Lee Boo, was a youth of the most promising qualities. He had thrown himself freely on the protection of strangers, deserting his native country, his friends, his all; and trusting to the honour of a handful of men, of whose existence he had but a few weeks before been totally ignorant. He paid particular attention to the captain's instructions as to his decency of appearance and adoption of dress; and his notions of delicacy, from what he had heard and seen, gradually increased, that he would not so much as change any part of his attire, unless by himself. He washed himself several

times a-day, and kept his clothes and everything about him very clean.

Sunday, the 16th, they kept as a day of thanksgiving to the Almighty for their providential deliverance, which they acknowledged with hearts overflowing with gratitude. They now unfortunately discovered a small leak in the vessel, which, as they found it impossible wholly to stop, they were obliged to keep two men constantly at the pump. From the 18th to the 25th, they had variable and disagreeable weather, with heavy squalls, accompanied with thunder and lightning. On the 25th, they came in sight of the Bashee Islands, to the great joy of Lee Boo, who was happy once more to obtain a sight at least of terra firma.

On the 26th, they saw the island of Formosa, bearing N.E.; and on the 27th and 28th the weather being favourable, they

fell in with several Chinese fishing vessels and small craft, and on the day following they came to an anchor near the high land called the Asses' Ears, where, having engaged a pilot to conduct them to Macao, they arrived on the following day. The Portuguese governor paid Captain Wilson and his crew the greatest attention, supplying them with provisions of all kinds, and at the same time informed them that peace was now re-established in Europe. The captain, Lee Boo, and the officers, with the exception of Mr. Benger the chief-mate, who took the command on board, had lodgings appointed them on shore; and an express was immediately forwarded to the company's supercargoes at Canton, with the intelligence of their arrival and situation.

Mr. M'Intyre, an old acquaintance of Captain Wilson's, treated them with great hospitality and attention, and insisted

on their lodging at his house. He had a Portuguese gentleman with him, who invited them to his house on their way to Mr. M'Intyre's, principally on account of Lee Boo; and his surprise on this occasion cannot be easily described. The rooms, the furniture, and ornaments, crowded so many new objects on his mind at once, that he was bewildered in admiration: but it was remarkable that, amidst all his confusion, his behaviour was easy and polite; and as he observed that he excited the same curiosity in others, he permitted them to examine his hands, described the tattooing, and appeared highly pleased with the attention shown to him.

It was late before they reached Mr. M'Intyre's, so that the table was covered for supper, and the room elegantly illuminated. A new scene here burst upon him—the whole appeared the effect of magic. A large mirror for a while rivetted his attention, in which he saw his complete person, and supposed it to be somebody behind, very much like himself. He looked, laughed, and looked again, quite absorbed in wonder, and not knowing what to think. Indeed, the mirror had a surprising effect on more than Lee Boo. The English had each one seen his neighbour's face during all their distress, but not one had seen his own; and the hollow-eyed, long-visaged appearance they now presented, compared to what they recollected of themselves, cast rather a melancholy impression upon their minds.

In a few days Captain Wilson received letters from Canton, the supercargoes desiring him to draw for what money he needed, and ordering the men to be supplied with every necessary in abundance. The kindness shown them on this occasion by all ranks, both at Macao and Canton, were spoken of in the highest terms by all the officers and men. Captain Wilson and his company embarked from Whampoa, in the *Walpole*, Captain Churchill, leaving Mr. Benger to take care of the *Oroolong*, and dispose of her. In a few days they arrived at Canton, having been kept in spirits all the way by Lee Boo, whose admiration at every new object, and sensible remarks at the same time, astonished all who had an opportunity of conversing with him. Indeed he became an universal favourite wherever he appeared, and his agreeable, good-natured, pleasant behaviour, made him acceptable in every company.

As the time was now approaching when the Company's ships would sail for England, Captain Wilson laid before his people an account of the produce from the sale of the *Oroolong* and other articles; and having given to every one an equitable share, he addressed the crew as follows:—"Gentlemen, the time being now arrived, when every one may, to advantage, follow his own inclination, I cannot part with you without testifying my approbation at the spirited, the judicious, and manly conduct you have preserved amidst our trying difficulties; and be assured that, on my arrival in England, I will represent you to the Company as being entitled to their particular regard, and I make no doubt but they will reward your toils."

If mutual adversity will reconcile the most inveterate enemies, surely the sufferings of friends must rivet a more forcible regard for each other, which was the case on this occasion, for a tender concern was manifested in every countenance. So mild and prudent had been the conduct of Captain Wilson, and so animating his example, that every one of them still wished to be under his command. But it was no time to choose, as each one must do the best for himself. Lee Boo, the captain, and his brother, embarked for England on board the *Morse*; the surgeon in the *Lascelles*; while the others returned by different ships.

The *Morse* was commanded by Captain Elliot, with whom Lee Boo made himself very happy; and his conduct during the whole voyage was so courteous and pleasant, that every one was ready to render him any service in their power. His spirit of inquiry concerning the various objects which he saw, began now to be directed more to their utility than formerly; and his method of fixing on his memory the knowledge he acquired was singular. He had a string, on which he made a knot for every object or circumstance he wished to imprint on his memory, and these knots he examined daily, recalling to

his recollection the various circumstances for which they were made.

He was not forgetful of the crew of the *Oroolong*, about whom he made frequent inquiries. Early in the voyage he solicited Captain Wilson to get him a book, and point out the letters to him, that he might be instructed in reading; and all convenient opportunities were allotted to gratify the wish of the young prince, who discovered great readiness in comprehending every information that was given to him. At St. Helena he had an opportunity of riding on horseback, at which he seemed highly pleased: he sat the horse well, and galloped with great ease. Before the *Morse* left St. Helena, the *Lascelles* arrived, so that he had an interview with his first friend, Mr. Sharp, for whom he evinced the grateful sentiments he retained of the attention that gentleman had shown him.

When they approached the British Channel, the number of ships that passed were so numerous that they confounded his journal, and he was obliged to discontinue his memoranda, but was still inquisitive to know whither they were sailing. When the *Morse* got to the Isle of Wight, Captain Wilson, his brother, the prince, and several other passengers, quitted her, and passing in a boat between the Needles, arrived at Portsmouth, July 14, 1784. On landing, Lee Boo was so astonished at the vastness and variety of objects which met his eye on every side, that, absorbed in silent surprise, he ceased to ask any more questions.

Impatient to see his friends, Captain Wilson immediately proceeded to London, leaving Lee Boo under the protection of his brother, who followed him with his charge in a stage-coach, which set off the same evening. On their arrival in London, Captain Wilson introduced Lee Boo to some of the East India Directors, and to most of his friends, and at the same time showed him most of the public buildings, but cautiously avoided taking him to any places of public entertainment, lest in heated places he might accidentally catch the small-pox; for which disease he intended to have him inoculated, as soon as he had learned sufficient of the language to be persuaded of the necessity of submitting to the operation.

After he had been a little while settled, and become familiar with surrounding objects, he was sent to an academy at Rotherhithe, where he was very assiduous in learning to read and write, and soon became the favorite of all his school-fellows for his gentleness and affability. In the midst of Lee Boo's innocent researches, and while proceeding in hasty strides in becoming acquainted with the English language, he was overtaken with that very disease, which with so much caution had been guarded against. On December the 16th he felt himself much indisposed, and in a day or two afterwards an irruption appeared all over his body. Captain Wilson immediately sent for Dr. Carmichael Smyth, as he was apprehensive that it might be the small-pox. Dr. Smyth, with whose professional abilities were united every accomplishment of the gentleman and scholar, went immediately to Rotherhithe; and after descending from Lee Boo's chamber, told the family that there was not a doubt with respect to the disease, and that the appearances were such, as almost totally to preclude the hope of a favourable termination.

After lingering some days, and gradually getting worse, he became sensible of his approaching fate, and fixing his eyes on his friend, Mr. Sharp, who attended him, he said, "Good friend, when you go to my country, tell my father, that Lee Boo take much drink to make the small-pox go away, but he die—that captain and mother very kind—all English very good men—was much sorry he could not tell Abba Thulle the great many fine things the English got."

Soon after this, when the dreadful moment of final separation had at last arrived, he told Mr. Sharp that he was going away; and in a few minutes afterwards yielded his last breath, without apprehension and without a groan, and with that native innocence and simplicity which had marked his every action.

Captain Wilson notified to the directors of the East India Company the unfortunate death of this young man, and re-

ceived orders to conduct everything with proper decency respecting his funeral. He was interred in Rotherhithe churchyard, the captain and his brother attending. All who knew him, particularly the pupils at the academy attended the funeral; and the concourse was otherwise so great, that it appeared as if the whole parish had assembled to see the last ceremonies paid to one who was so much beloved by all who had known him in it. A tomb to his memory was soon afterwards erected by the East India Company.

Among the little property which he had left behind, besides what he particularly requested Mr. Sharp to convey to his father and friends, there were found, after his death, the stones or seeds of most of the fruits which he had tasted in England, carefully and separately put up. And when it is considered, that he was but five months and twelve days, it must be allowed that he was not neglectful of that which, before his departure from Pelew, had been probably pointed out to him as a principle matter of attention.

The evening before the Oroolong sailed from Pelew, Abba Thulle asked Captain Wilson, how long he thought it probable it might be before his return; and being told that it would most likely be about thirty moons, or perhaps extend to six more, Abba Thulle drew from his basket a piece of line, and, after making thirty knots on it at a little distance from each other, left a long space, and then adding six others, carefully put it by.

The East India Company, deeply impressed with the affecting result of Lee Boo's visit to England, and anxious to pay every respect to his memory, and to cultivate continued friendship with the people of Pelew, resolved upon despatching a little expedition to Bombay, and to acquaint the unfortunate father of the death of his son, and assure him of the kindness with which his son, Lee Boo, had been received and treated. For this purpose, the Endeavour and Panther were placed under the command of Captain John M'Cluer, who was accompanied by Lieutenants Wedgeborough and White, who had formed part of the crew of the Antelope, and were well acquainted with the islanders.

The two vessels arrived at Bencoolen on October 10, 1790, and on the 31st set sail for their destination. On the 9th of December they arrived safe, and found good anchorage in the straits between Lomback and Bally, on the south-east coast of Java; when, after taking in a stock of rice and cattle, they made direct for the Pelew Islands, and at midnight of January 21, 1791, the most southerly of them came into view. Soon after three canoes came alongside, when several of the natives recollected Lieutenant White, and a ruckup immediately leaped on board, calling out *White!* and gave him a most ardent and affectionate embrace. Mr. Wedgeborough, who had been sent out in a boat, was not at first personally recognised; but as soon as they heard him speak their language, and say that he was English, they expressed their joy by shouts and gestures little short of madness. They soon pointed to Oroolong and inquired for Lee Boo, when, after some hesitation, they were acquainted with his fate, and they appeared composed and satisfied. At half-past six, Mr. Wedgeborough says, "I had the unspeakable pleasure of being embraced by the benevolent Abba Thulle;" and on their way towards the Panther, Mr. Wedgeborough informed the king of the death of Lee Boo. On receiving this intelligence, his countenance, which before the most evident marks of joy, became serious and thoughtful; but after a pause, evidently taken in order to gain composure, he assured the lieutenant that he had never entertained a doubt of the kindness of the English and of Captain Wilson, and of the tender care they would take of his son; and having long since untied the knots on his line, he concluded that the ship built at Oroolong had not been large enough to carry them to China in safety, especially as they had departed before the good moon set in. He had therefore buried the line, and given up all hopes of ever again seeing either his son or Captain Wilson.

After remaining some days, Captain M'Cluer abandoned his original intention of immediately quitting the islands, and de-

termined to return with the Panther only to China, leaving Captain Proctor of the Endeavour to make a survey of the islands, and as far as lay in their power, to instruct the natives in some of the arts of civilised nations. It was also arranged that several of the Pelew natives should accompany the captain, who left with the king a boy, whom he treated as a son.

The Panther sailed from Pelew, on the 10th February, 1791, and returned from Macao, on the 10th June following, when she was immediately visited and welcomed by the king and a crowd of the natives. The natives who had been passengers in her, had much to do in unfolding to their countrymen the mighty wonders they had seen in their absence. Above all things, they had been amazed by the view of an English line-of-battle ship, which happened to be in the harbour of Canton; and expressed their exaggerated ideas of its hugeness, by pointing to an island about two miles in circumference, and declaring that the ship which they had seen was as large.

On June 27, the vessels, in conformity to orders which they had received, set sail to make a survey of the coast of New Guinea, which they carried on from July to December, with an interval of ten days spent at Amboyna, where the Dutch gave them a very hospitable reception. They then sailed for Bencoolen, where they spent some months, and on the 17th August again set out for the Pelew islands. On their way they touched at the Sooloo Islands, where they took on board as much seed, grain, and cattle, as their ships could hold; and on the 20th of January, 1793, arrived at Pelew. They were not long in receiving intelligence of the death of their worthy friend, Abba Thulle, which had taken place three months after their departure; when he was succeeded by his brother, the Clow Arra Kooker.

Soon after their arrival, Captain M'Cluer despatched the Endeavour to China, where Captain Proctor was ordered to join the Embassy under Lord Macarthey, and had no further connexion with the Pelew Islands.

Not long after this, the people of the Panther having landed the stores and everything which could be useful to the natives, began with some heaviness of heart to make preparations for their final departure. Of the attachment inspired by these friendly and amiable islanders, a much more remarkable proof than ever was now to be given. Captain M'Cluer announced the intention, which he had for some time secretly cherished, of resigning his command and fixing his abode at Pelew. On February 2nd, he wrote a letter to Lieutenant Wedgeborough, desiring him to take charge of the Panther, with all her stores and provisions. Every argument in their power was used by his brother officers, to dissuade him from such a singular resolution; but in vain. He said it was the result of mature deliberation, adopted with a view to benefit his country and the world in general, by enlightening the minds of these noble islanders. He requested that there should be left with him twenty muskets, twelve pistols, and a quantity of ammunition, which the officers agreed to deliver upon the understanding that his attorney should be responsible for them, in case the company should disapprove of their disposal. These stores having been delivered, Captain M'Cluer came on board the following day, and in the presence of the whole ship's company, which had been summoned for the purpose, formerly resigned his command to Lieutenant Wedgeborough.

After ten days spent in preparation, the Panther unmoored and set sail for China, and on the 7th March arrived at Macao, where, having refitted, they proceeded to Bombay, which they reached on August 17, 1793.

Captain M'Cluer, who, in the step which he had taken, appears to have been considerably under the influence of a fickle disposition, soon became so tired of his residence, and non-intercourse with European society, that it drove him to the perilous extreme of setting sail in the little boat that had been left with him, accompanied by five men, three of whom were Malays. His first intention was to go to Ternate, one of the Moluccas, "to hear the news;" but he afterwards resolved to steer for China. The voyage proved very rough; he had no instruments for his guidance, and only one chart; and his sole food was cocoa-nuts and water. Yet, to the great surprise

of the English factory, he arrived safely at Macao, and finding a more cordial reception from M. Van Braam and the other Dutch residents, he took up his abode with them.

After a short residence at Macao, Captain M'Cluer sailed again for Pelew, with a view of removing thence his family and property. Accordingly, he again left those islands with the child that had been born to him there, and several of the natives of both sexes. At Bencoolen he met the Bombay frigate, in which he sent part of his Pelew attendants to Bombay, and sailed with the remainder to Bengal. Thence, after a short stay, he again set sail; but neither himself, nor the vessel in which he embarked, was ever again heard of.

In July 1797, when Captain Wilson came to Bombay, in the Warley, he was informed by Lieutenant Wedgeborough that there were then living in the neighbourhood, three Pelew females of those who had been sent forward by Captain M'Cluer from Bencoolen. After all hopes of that gentleman's return were at an end, Lieutenant Snook and Dr. Helenus Scott had humanely taken them under their charge, and procured a small allowance from government for their support. They were now very desirous of finding a conveyance back to their native country; when, on a representation being made of the circumstances, the Bombay government authorized Lieutenant Snook to carry his benevolent intention into effect. Captain Wilson gave them a passage to Canton in the Warley, where a small vessel was purchased and equipped for the voyage; and in March 1798, the English once more anchored on the hospitable shore of Pelew. The natives were particularly pleased by the return of their countrywomen, and immediately renewed their friendly and cordial intercourse.

Lieutenant Snook, after refitting his vessel, took on board the Chinese whom Captain M'Cluer had carried to Pelew, for the purpose of instructing the natives, when he immediately sailed from the island, and completed his voyage back to Canton and Bombay.

THE LAMENT OF ABBA THULLE.

I CLIMB the highest cliff—I hear the sound
Of dashing waves—I gaze intent around;
But not a speck can my long straining eye—
A speck or shadow—o'er the rolling waves descry,
That I might weep tears of delight and say,
It is the bark that bore my child away.
Oft in my silent cave, when to its fire,
From the night's rushing tempest I retire,
Methought the wild waves said amid their roar
At midnight, "Thou shalt see thy son no more."
Is he cast bleeding on some desert plain—
Upon his father does he call in vain?
Oh! I shall never, never hear his voice!
The spring time shall return, the isles rejoice;
But faint and weary I still meet the morn,
And, 'mid the cheering sunshine droop forlorn.
The joyous conch sounds in the high wood loud—
O'er all the beach, now stream the busy crowd;
And light canoes along the lucid tide,
With painted shells and sparkling paddles glide:
I linger on the desert rock alone,
Heartless and cry for thee, my son, my son.

COST OF A WATCH.

DURING the war of 1796, a sailor went into a watchmaker's shop in the city, and handing out a small French watch to the ingenious artist, demanded how much the repairs would come to. The watchmaker, looking at it, said it would cost him more in repairs than the original purchase. "Oh! if that is all, I don't mind that," replied the sailor; "I will even give double the original cost, for I have a veneration for the watch." "What might you have given for it?" inquired the watchmaker. "Why," said Jack, twitching his trousers, "I gave a French fellow a knock on the head for it; and if you'll repair it, I'll give you two."

PIRATES OF THE ARCHIPELAGO.

A FEW years since, a band of desperate pirates swarmed all the ports of the Archipelago. Reports were constantly being received, of some new example of their daring and success, and too often of their cruelty. They had sprung up suddenly, and had appeared in several quarters at the same time; and it was conjectured, from their numbers and extraordinary audacity, that they must be supported by some high authority, and acting under express directions. They were composed, as far as could be discovered, of individuals of all nations, chiefly Syriac, Egyptian, and Greek. They attacked vessels of all sizes, and bearing all flags.

The following narrative of the capture of a Venetian brig by the pirates, and sufferings of the crew, is by an actor in the scenes he has so ably described:—

Not long since, I had occasion to pass in a Venetian brig from Alexandria to Smyrna, and as I was desirous to take this opportunity of becoming acquainted with the Ægean, the captain, at my request, visited a few of the more interesting islands. One day in May we were lying off the north-east coast of the island of Naxos, enjoying the freshening softness of the evening air after a day of excessive sultriness. At sunset the wind gradually died away, and gave place to one of those dead, motionless calms, so common in these uncertain seas. We had watched with melancholy interest the last gleams of the departing sun, as he disappeared behind the wooded hills of Antiparos, and were enjoying the soft dim lustre of the moon, as she rose upon the lovely scene before us. Syra Delos, and other isles, dimly discernible in the distance, formed the chief features of the landscape, while the rich moon-light softly glimmered on the almost motionless bosom of the waters.

Occasionally, a slight ripple against the sides of the vessel awoke the slumbering phosphorescence of the ocean, and elicited a light which had something of enchantment both in its delicacy and evanescence. There was a stillness—a calmness—a surpassing beauty—a sacred purity—in the scene, which inspired one with the thoughts and the language of another world; and as I gave way to the reveries and remembrances it awakened, I almost lost the recollection of our meaner nature, and forgot that I was still on earth.

In this mood of mind I was leaning over the side of the vessel, when the captain came and tapped me gently on the shoulder, and, with a look of peculiar significance, pointed to an abrupt promontory about two miles a-head of us. I followed his eye, and could distinguish with difficulty two long narrow boats, with three small masts in each, and impelled apparently by nearly twenty oars, making straight for our vessel. As they came more distinctly into view, and we could discern their form, it was such as to leave us no doubt of their nature or intentions. We had heard them described too often and too minutely not to recognise them at a glance: they were a band of those terrible pirates who were then infesting the Ægean, and whose daring and cruelty had struck terror into all the sailors who frequent these seas. I looked at the captain. He was a brave man, I knew, for I had seen him tried; yet now his lip quivered, and a shuddering came over his whole frame, as he saw, in all its horrors, the fate which was probably in store for us. We knew that our chance of a successful resistance was but small; but weak as it was, we had learned enough of the brutality of these wretches in other cases to be aware it was our only hope. Outrage, ignominy, and massacre had been inflicted, according to the varying caprice of the hour; and, in particular, their treatment of the crews of two vessels which had lately fallen into their hands, determined us to fight to the last plank, and then take what fate it might please Providence to send us.

Escape was impossible. There was not a breath of air sufficient even to stir a handkerchief: and these pirates always profit by a calm, which enables them to attack an unwieldy vessel to great advantage. We got all our arms on deck, and each man stood ready at his post. I had laid my sword and pistols on the gunwale before me, and was leaning on my carbine, watching the advance of the enemy. There was a

dead silence through the ship, till we could distinctly hear the splashing of their oars as they gradually neared us—it was horrible to be thus deserted by the elements at our greatest need. There was not breeze or motion sufficient to enable us even to turn the vessel; and there was not one of us who would not thankfully have exchanged our helpless, motionless condition, against the wildest hurricane that ever blew over a tropical sea. We were delivered up to our enemies, as it were, bound hand and foot. This feeling of paralysis grew upon us momentarily, like the horrors of night-mare. Every man seemed afraid to breathe, and we might have heard a pin drop at the furthest extremity of the ship. We were looking death in the face—and I felt that he was indeed the king of terrors.

The boats at length came within hail. I counted thirty men in one boat, and twenty in the other; we did not muster twenty-five in all. They rowed close alongside, one at one side, the other at the other, and summoned us to surrender. The captain returned no answer, but took a deliberate aim with his musket at the summoner, and shot him through the heart. We all followed his example, and our fire was eminently successful. They returned it in haste, and then, without waiting to reload, began to climb the sides of our vessel. We offered them no resistance, but retired to the quarter-deck, where our two small cannon had been placed, and ranged ourselves before them. As soon as the pirates had clambered upon deck, without waiting to form, they drew their heavy cimeters and yataghans, and rushed tumultuously upon us. In a moment we drew a little to either side, and at the same instant our two guns poured their grape-shot, through our ranks, upon the confused mass of our assailants. The effect was tremendous: for a moment we thought the victory was ours, and we rushed upon them to complete our work. But they rallied too quickly, and then began the real contest: it was man to man—hand to hand—sabre to sabre. The pirates were desperate by character—we were rendered so by situation; and the combat was one of such deep and concentrated fury as I trust never to witness again. Two of the combatants, who were firmly grappled, and were slashing each other with their daggers, missed their footing on the quarter-deck, and fell overboard together. But even in the water I could observe that they did not quit their hold; each grasped his antagonist with the frenzy of a dying man, and they sank in each other's arms. How long the battle lasted I know not: it might be five minutes—it might be ten; but I was brought to the ground I scarce knew how, and when I recovered my senses, it was all over.

Myself and six of my companions were the sole survivors: they were all wounded, and tied with ropes to the side of our vessel. The captain was among them. His arms were pinioned behind him, and he was lashed to the mainmast. He was evidently faint and weak from loss of blood, and his pale countenance expressed a sort of hopeless resignation, interrupted at times by a transient shudder of unconquerable horror, as the thought of the fate in store for us rushed across his mind. The pirates, whose numbers had been greatly thinned during the action, were lying on the quarter-deck, some sleeping, and others watching. The first faint streak of morning light was just appearing along the horizon, and our conquerors took advantage of a breeze which sprung up, to direct our vessel towards their port. Just then a ship of considerable size came in sight round the corner of the island, and passed us within a few hundred yards. Our captain, regardless of the consequences, hailed the strange sail, and claimed the assistance of her crew, and at the same moment received a shot which silenced him for ever. The pirates sprung to their feet, and prepared to receive those we had called upon to save us. They had seen our situation, but they turned a deaf ear to our entreaties; they spoke not—turned not—stayed not. The ship of safety speeded on its way; and as it gradually lessened in the distance, our excited hopes sunk into despair, and our hearts died away within us.

I am an observer, both by habit and disposition, even in times of the deepest anxiety and danger; and as a faint gleam of hope, in the shape of an accepted ransom, had already

flashed across my mind, I began to look out, with a sort of throbbing curiosity, mingled with alarm and doubt, for the pirates' den, whither our course was evidently directed. It was not long before we arrived. Six of the pirates immediately proceeded, southward, with our captured ship, for the purpose, as we afterwards found, of selling her at Rhodes, with the inhabitants of which island they kept up a regular traffic of this nature. The remainder of our victors got into their two boats, whither we were compelled to follow them, and pulled towards shore. I despaired of being able to delineate, otherwise than with the pencil, the extraordinary scene we now approached. It was a bold, craggy, almost perpendicular coast; and we soon discovered a vast chasm or fissure, which extended the whole height of the rock, and to a considerable depth inland. Into this chasm we entered, and, after rowing about fifty yards, another considerable fissure opened at right angles with the first. Though at least sixty yards broad at the level of the water, this second chasm gradually diminished in breadth, till at the surface of the island its existence was discernible by a narrow crack, over which an active man might leap with ease. At the end of this extraordinary natural vault, and about twenty feet above the sea, was a cave, narrow at its entrance, but widening considerably as it penetrated deeper into the rock, and by no means dissimilar to the subterranean gallery underneath the citadel of Argos. As the pirates moored their boats at the extremity of this vast cavern (for such, notwithstanding the narrow opening above, it might be called) two of their associates appeared at the mouth of the cave to welcome them, and inquire of their success. A few words were interchanged between them, and my companions and I were then ordered to mount into the cave by means of a ladder of ropes, which was let down to the boat's edge. To one of these unfortunate wretches, the moment seemed to offer a last chance for safety. When his turn came to ascend, he pretended to lose his hold, slipped into the water, dived under the nearest boat, and swam vigorously away. But the effort proved a desperate one; the pirates were two vigilant to be thus deceived; three firelocks were discharged at the unhappy man too deliberately to miss the mark; he gave a horrid shriek, which is still ringing in my ears—stretched forth his hands wildly and imploringly to heaven—then slowly sunk beneath the surface, and the bubbles which ascended one by one from his last suffocating gasp, alone indicated the spot where he had disappeared.

We were all struck with horror. It seemed to us a forbidding of our own fate, and we shuddered as we entered this dark cavern of iniquity. There seemed to be many recesses, in different directions; but the part of the cave where the pirates were assembled was nearly circular, and a rude lamp which was suspended from the damp vault, served to show the dreariness and discomfort of the chamber, and the mats and weapons which formed its only furniture.

I will not detail to you the horrors of our situation, nor the ignominious treatment to which we were subjected, during our abode in the pirates' den. It was living with the devil and his angels. My four remaining companions were taken out of the cave at midnight, about a week after our arrival, and put on board one of the pirates' boats, and I had afterwards reason to believe that they were sold as slaves in some of the ports of Syria. I only escaped their fate from having been able to persuade the pirates, by producing my papers, that if my friends at Smyrna were informed of my situation, they would willingly advance whatever ransom might be demanded; and pledged, at the same time, that I would never attempt to make known their residence. I wrote to Smyrna, and an answer soon arrived. The pirates, impatient for their promised ransom, immediately conveyed me to Scala Nuova, the port of the ancient Ephesus, where my friends met me, and I was delivered up to them on payment of the stipulated sum. It was two thousand dollars.

As I rode towards Smyrna, the world seemed to have opened afresh before me: I was disposed to look upon every thing with a favourable eye. Even the miserable village of Aiasaluck appeared rich and beautiful; all nature was bright

and laughing: and I felt that I had taken out a new lease of life.

The same pirates are now infesting the Archipelago; but I remember my promise, and not even a robber shall have to reproach me with a breach of trust.

SCUD HILL.

"Then haul away, pull away, jolly boys;

At the mercy of Fortune we go;

We're in for it now—'tis a folly, boys,

To be down-hearted, yeo ho!"

"DOWN-HEARTED, eh? Why, ay, what's the use of fretting and grieving? it makes a man neither fairer nor fatter; for if a poor fellow once gives himself up to mollycholics, she'll play the deuse with him before she's done. Let's laugh while we can, take our grog kindly, and throw dull care overboard, as a bait for the sharks. Yet, when I see a poor old messmate hull down to leeward, working hank for hank against the squalls of adversity, with scarce a yard of canvass in his bolt-rope to weather the breeze; his stays stranded, and braces unrove; without a shot in the locker, and a southerly wind in the bread-bag;—it goes to my heart, d'y'e see, especially when old Ben arn't wherewithal to take him in tow. It makes me wish sometimes that I was a king or an alderman, or some't like it. I'd soon have snug moorings for all hands. But I ax your pardon, Mr. What's-your-name, for troubling you so much about sailors; only I think you're a goodish kind of a gemman, and the subject was strongly impressed upon my mind by a circumstance which occurred this morning in Poll-Moll, where the king lives.

"D'y'e see, I had been to wait upon an old commander; but he warn't in town; and so I came strolling back with an empty pocket, and rather a heavy heart, when, just as I was turning round the corner by that engraver's with the comical name, opposite the royal mansion, who should I run foul of but old Jack Transom flourishing his wooden pin (he lost his leg in Duckworth's action in the West Indies) and carrying on a faut press? His jacket and trousers were patched from clew to ear-ring, but remarkably clean; and the remains of a tarpauline hat covered his perry-cranem. Well, just at this moment one of your bishops came along. I knew what he was by his little apron hanging down before, like Adam's fig-leaves. So Jack put his hand to his truck, with a graceful sea-bow. The bishop paused, looked at him for a moment, and then gave him a glance of come-passion, as much as to say, 'My blessing rest upon you, but I've got no coppers,'—as indeed, how should their reverences have anything to do with copper and brass? though they tell me there's a power of 'em first learn to spin their long yarns and moneyfactor their sermons at Brazen-Nose, wheresoever it may be; and I really think some on 'em catches the infection, for, as to their noses being horn-amented with grog-blossoms, is out of the question. Howsomer, that's neither here nor there. I dare say his worship might be a kind génerous soul enough; yet I thought he might as well have given poor Jack a sixpence or so, particularly when he come to consider that the brave fellow had lost his precious limb, while ploughing the ocean to keep him in his see; and so Jack thought. 'Ha ha! says he, 'these stall-fed gemman seldom open their hands, unless it is to receive; but no matter; my ould jacket will get me a berth aloft, as soon as the bishop's white chiselled wig, and lawn sleeves. Howsomer, I arn't quite a-ground; for a gemman gave me some bread and cold meat, and I've got twopence besides; so what's the use of complaining, eh, Ben?"

"He opened his wallet, and took out a piece of a loaf, and a good portion of meat, when a poor miserable object of a female, with two half-famished children, came dragging their wasted bodies along the pavement. The children looked wistfully at the feast Jack held in his hand; and the old tar gazed as earnestly upon them. 'It's hard lines, too,' says he, looking first at the wretched trio, and then at his meal, 'hard lines, indeed! I arn't broke my fast to day—yet these poor children seem to be starving. But what's that to me?' (raising the food to his mouth—and then stopping again;) No, no; I can't, I can't: 'twould choke me. There, take it,

take it, my babes; poor Jack must get a dinner somewhere else to-day. Besides, I shan't starve while I've got twopence.' So he gave them the victuals, and hobbled off upon his wooden pin, without once looking astern. I don't know how it was; but I thought that Jack was the best bishop of the two. Poor fellow! he's an out-pensioner of Greenwich, and picks up what he can in an honest way, to provide for the wants of some half-score of grand children that are left orphans. 'To be sure,' says he, 'I might go into the house, and take care of myself: but then, what's to become of the youngsters, eh? seeing that they are my own flesh and blood as a body may say.' I can remember him as smart a fellow as ever stepped upon a vessel's deck; could crack his joke or his biscuit upon the same head, and point his wit and his gun together, without fear of either missing fire.

"We were at Toulon, along with Lord Hood, and served in the same battery upon Scud Hill—engaged all day firing at the enemy's ramparts, and employed all night, like donkeys, carrying sand-bags. Well, one day, his lordship, attended by the brave Nelson, and several other captains, came riding up to the works on horseback; and so they praised our exertions, and, 'My lads,' said Lord Hood, 'I am very proud of you—very proud indeed; and to reward your conduct, I have given orders, that, as soon as the breach is made, the seamen alone are to storm, with two hours for themselves after entering the place. But if you should fail, the troops are drawn up in the bush, all ready for immediate attack. I need not tell you to be generous conquerors: British seamen were never known to injure or insult a fallen foe. 'Do your duty,' said Nelson, 'and, if possible, I myself will be among you.' 'Hurrah! burst from every heart; and at it we went, hammer and tongs. But the shot seemed to make no impression till the afternoon, when a whole range of the wall came tumbling down, and made a fair opening of twelve or fourteen yards. Down dropped rammers and sponges—up went cutlasses and pistols: and away we set off, the devil take the sternmost. Well, d'y'e see, we mounted the breach just as we'd heard an enemy's ship; and though they peppered us nicely with grape and canister, yet we soon made 'em dowse their colours; and a blue jacket was hoisted at the flag-staff.
